Construction update August 23, 2012

Barton Pump Station construction on schedule

The Barton Pump Station Upgrade project, which began construction in June, is receiving upgrades to increase efficiency and capacity and meet the needs of West Seattle's growing population. Construction continues on schedule, and upgrades are expected to be completed by mid-2015.

The construction site is located next to the Fauntleroy Ferry Terminal.

Work to date

Prospect Construction has completed preparation of the project site.

Work completed includes:

- Art removal and storage and relocation of beach driftwood
- Construction of a retaining wall on the north end of the site
- Discovery of an old, unused concrete sea wall and removal of the sea wall to Renton Concrete Recyclers. King County is committed to waste reduction and reuses or recycles all construction and demolition debris when possible.

Upcoming activity

Over the next couple of months, work will include:

- Sewer videos to examine the current state of the sewer line that enters the pump station
- Back fill and compaction near new retaining wall
- Jet grout shoring in preparation for working underground

King County will notify the community once specific dates and details are determined for the upcoming work.

Site preparation work being done at the Barton Pump Station.

What to expect

- Work hours typically 7:00 a.m. – 5:30 p.m. Monday through Thursday
- Flagger to move traffic through site and in and out of ferry terminal entrance
- Heavy equipment on site
- Increased noise and vibration at site during back fill and compaction of site
