Influenza activity remained near baseline levels in King County during week 10 (week ending 03/14/2015). Positive specimens from outpatient surveillance and from reporting hospital laboratories have been identified as influenza A, with a small number of influenza B infections also detected. Among specimens submitted to King County Public Health Laboratory, the majority have been typed as A(H3). During the week ending 03/14/2015, there was one laboratory-confirmed influenza death, but no reports of outbreaks of influenza-like illness (ILI) in long-term care facilities (LTCF). This flu season, Public Health has been notified of a total of 32 laboratory-confirmed influenza deaths and 62 ILI outbreaks in LTCFs; during the past five years, Public Health has received 7 - 24 reports of influenza deaths and 7 - 55 reports of ILI outbreaks in LTCFs. The proportion of emergency department visits attributable to influenza-like illness (ILI) remained near baseline levels. During the week ending 03/14/2015, the University of Washington Virology laboratory saw slightly elevated but declining numbers of specimens positive for influenza A and respiratory syncytial virus (RSV).
