

# BELLEVUE FORCE MAIN INSTALLATION PROJECT

JULY 2007

To protect public health and the environment, King County will build a new wastewater force main to connect the Bellevue Pump Station to a regional pipeline east of I-405 that transports wastewater to King County's wastewater treatment plant in Renton.

The map illustrates the proposed New Force Main alignment in the Bellevue area. The alignment is shown as a dashed line running east-west, with a solid line indicating the existing force main. Key features include the Medina Siphon, East Side Interceptor, and Lake Hills Connector. The map also shows major roads like 102nd Ave NE, 108th Ave SE, and 118th Ave SE, as well as landmarks such as Bellevue High School, King County Courthouse, and Bellevue Club. A scale bar indicates distances up to 420 feet, and a north arrow is provided for orientation.

## Work Schedule

Engineers will establish monitoring points on or very close to buildings at this address. In some cases, small holes about one-half inch deep may be drilled into the foundation of residences to insert small surveying markers. These markers are necessary to accurately monitor soil conditions throughout the force main installation, and pose no threat to a foundation's integrity.

Surveyors will return to this address to take readings using the monitoring points installed during the week of July 9.

If you have any questions or concerns about the survey work, please call the Bellevue Force Main Installation 24-hour construction hotline at 206-296-4081, or visit the project website at <http://dnr.metrokc.gov/wtd/projects/bellevue/>.
