

Toothbrushing at Sink

Every site is unique and instructions below may need to be modified.

Prepare

- ◆ Each child has their own toothbrush with **name clearly labeled on the handle**. No sharing or borrowing is allowed.
- ◆ Use a **handwashing sink in the classroom** (not bathroom). Clean, rinse, and disinfect the faucet and sink.
- ◆ Children and teachers assisting with activity **wash hands before brushing teeth**. Teachers may also put on disposable gloves.
- ◆ Fill a pitcher with water from a clean water source (i.e. food preparation sink or water dispenser).
- ◆ To eliminate cross-contamination, **teacher dispenses dots of fluoridated toothpaste around rim of cup or plate** (as pictured).
 - 2 year olds → grain of rice-sized
 - 3-6 year olds → pea-sized

Supervise Toothbrushing

- ◆ Teacher takes child's toothbrush from rack, puts a single dot of already-dispensed toothpaste on brush, then hands child their toothbrush along with a paper cup containing a small amount of clean water.
- ◆ Child begins brushing on the biting surface, then around the mouth from left-to-right and top-to-bottom. **Brushing continues for 2 minutes.** (*Exposure to fluoridated toothpaste is beneficial even with unsatisfactory brushing technique.*)
- ◆ Child takes small sip of water from the cup and spits water and toothpaste residue into sink or cup.
- ◆ Child holds the toothbrush over the sink and the teacher pours clean water from the pitcher over the toothbrush to rinse it. (*Never use water from handwashing sink to rinse toothbrush.*)

Clean up

- ◆ Child gives toothbrush to teacher, who puts it in the child's designated spot on the drying rack.
- ◆ Child throws away the paper cup.
- ◆ Children wash their hands after brushing.
- ◆ Sink is cleaned with the 3-step process (clean, rinse, disinfect).
