

Public Health - Seattle & King County
Summary of Influenza Syndromic and Laboratory Surveillance

Influenza Update: October 24, 2020

During the week ending October 24, 2020

- There were no new influenza-related deaths and no new outbreaks reported this week. No deaths and no outbreaks at long-term care facilities have been reported this season (since 9/27/2020).
- The percent of positive tests for seasonal respiratory viral pathogens at King County laboratories was below levels observed this time of year during previous seasons and below peak levels observed during the previous five seasons. This data does not include COVID-19.
- During the week ending October 24, the percent of emergency department (ED) visits for influenza-like illness (ILI) was below baseline levels among all ages combined, and among each individual age group.

At a glance

	<u>Week ending</u> <u>10/24/2020</u>	<u>Since 9/27/2020</u>	<u>5-Year Average to Date</u>	
Confirmed cases as of week 43 (ending 10/24/2020)	0	0	0.4	
Respiratory disease outbreaks at long-term care facilities (LTCFs)	0	0	2.4	
Percentage positive influenza tests by PCR ¹	0.0%	Season Peak	0.0%	
Number of labs reporting	6	Weekly Average	9	
Number of specimens tested	343	Weekly Average	338	
Percentage of emergency department (ED) visits for ILI ²	0.49%	Season Peak	0.56%	5-Year Average to Date 1.00%

¹Based on King County hospital laboratory and sentinel provider submissions to CDC's National Respiratory and Enteric Virus Surveillance System (NREVSS).

NREVSS data not available for all previous seasons due to change in reporting procedures. Changes in facilities reporting to NREVSS may impact counts.

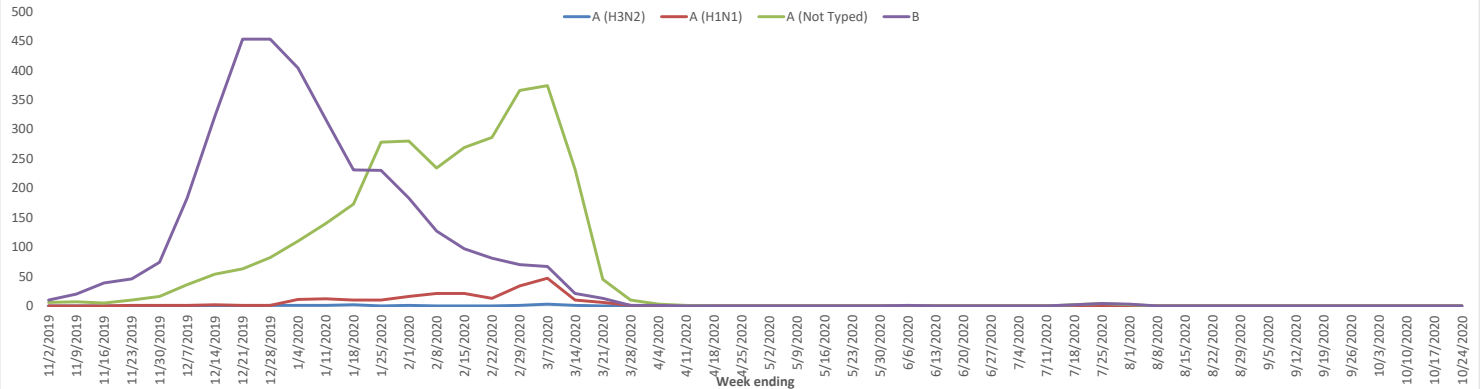

²Based on Public Health - Seattle & King County's syndromic surveillance data representing aggregate percent of visits to King County EDs.

Submissions to NREVSS by King County labs, PCR testing only

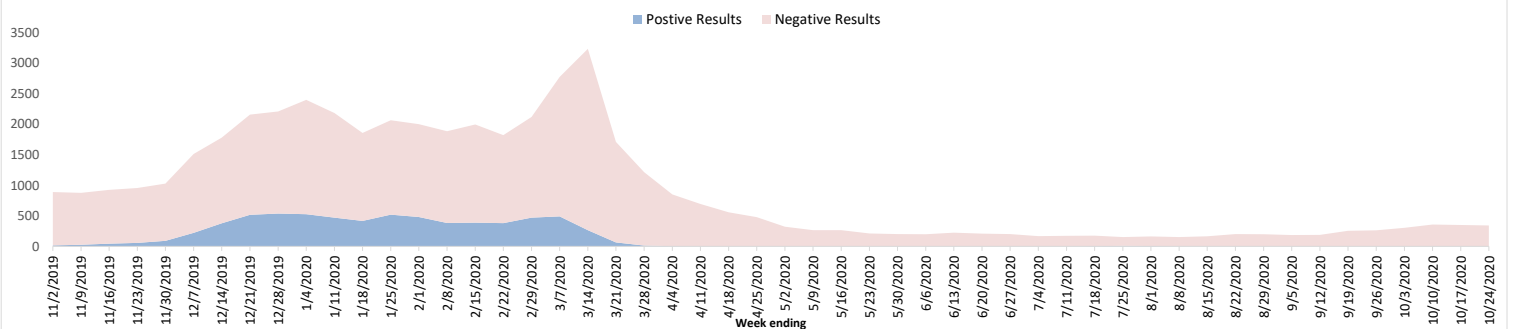

Week #	Week ending	# Labs reporting	A (H1N1)	A (H3N2)	A (Not typed)	B	# Tested	% Flu positive
40	10/3/2020	10	0	0	0	0	302	0%
41	10/10/2020	10	0	0	0	0	356	0%
42	10/17/2020	9	0	0	0	0	349	0%
43	10/24/2020	6	0	0	0	0	343	0%

Influenza results by subtype, PCR testing only (NREVSS)

Positive Influenza Results by Subtype, Using PCR Testing Methodologies

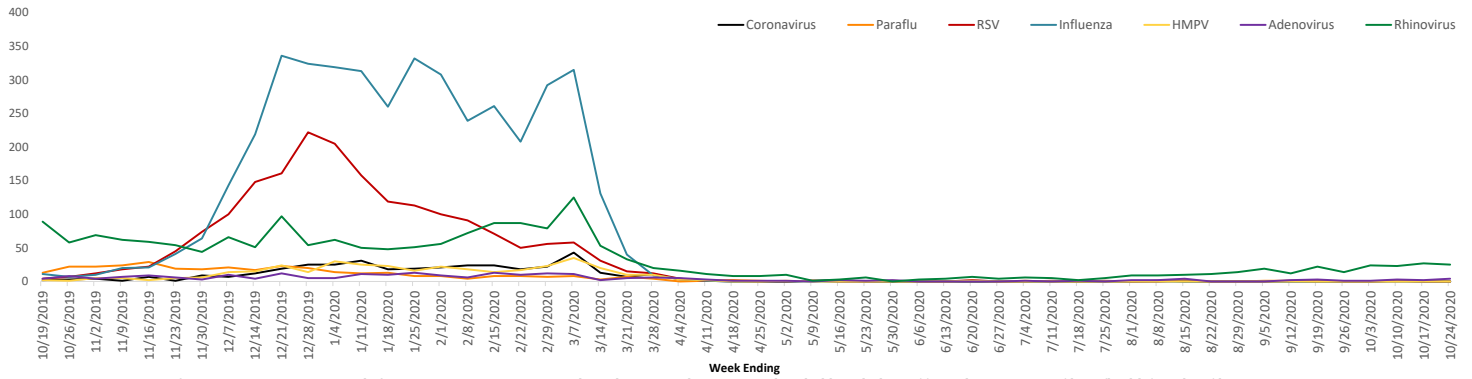

Positive and Negative Influenza Results, Using PCR Testing Methodologies

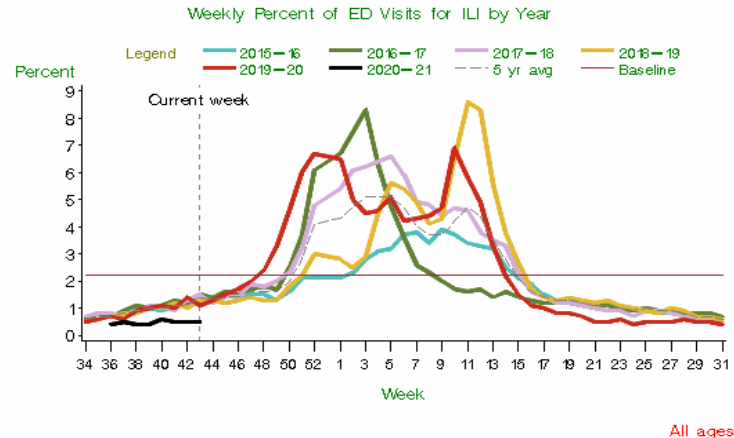

Public Health - Seattle & King County

Summary of Influenza Syndromic and Laboratory Surveillance

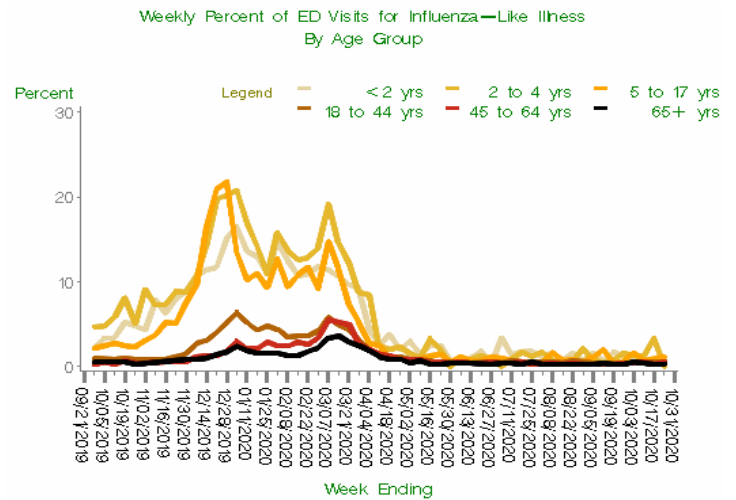

Influenza and other respiratory pathogens, PCR testing only (NREVSS)

King County syndromic surveillance

Note: The change from ICD-9 to ICD-10 codes in October 2015 may impact trends. Last updated Oct 25, 2020 ; 'current week' is week ending Oct 24, 2020. Baseline: Mean % ILI during non-flu weeks for previous three seasons, adding two standard deviations. A non-flu week is a period of 2+ consecutive weeks where each one accounted for <2% of the season's total number of specimens that tested positive for influenza by PCR.

ALLHOSPITALS, Last Updated Oct 28, 2020

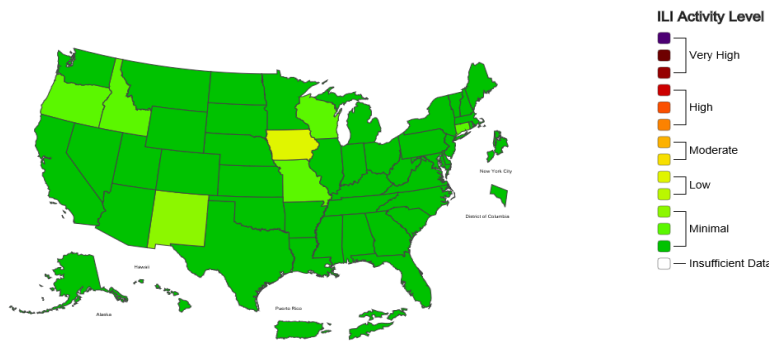

National data from CDC

A Weekly Influenza Surveillance Report Prepared by the Influenza Division
Influenza-Like Illness (ILI) Activity Level Indicator Determined by Data Reported to ILINet
2020-21 Influenza Season Week 42 ending Oct 17, 2020

*This map uses the proportion of outpatient visits to healthcare providers for influenza-like illness to measure the ILI activity level within a state. It does not, however, measure the extent of geographic spread of flu within a state. Therefore, outbreaks occurring in a single city could cause the state to display high activity levels.
*Data collected in ILINet may disproportionately represent certain populations within a state, and therefore may not accurately depict the full picture of influenza activity for the whole state.
*Data displayed in this map are based on data collected in ILINet, whereas the State and Territorial flu activity map are based on reports from state and territorial epidemiologists. The data presented in this map is preliminary and may change as more data is received.
*Differences in the data presented by CDC and state health departments likely represent differing levels of data completeness with data presented by the state likely being the more complete.

Please report any of the following:

- Laboratory-Confirmed influenza-associated deaths
- Patients with novel or unsubtypeable influenza viruses
- Outbreaks of influenza-like illness in a long-term care facility
