- **Foreign Born**: 1,632 (23%)
- **Unknown**: 312 (4%)

#### RESIDENCE

- **Seattle**: 4,617 (64%)
- **Other, King Co., excluding Seattle**: 2,545 (36%)

---

1) Data are subject to delays in reporting, thus some data in this report are cut off at the end of 2018, and other data go through mid 2019, as reported through July 2019.

2) The number of people living with HIV in King County changes frequently due to duplication efforts and other investigations. The data in this column include prevalent cases as of 12/31/2018 and new HIV & AIDS diagnoses 7/2018-6/2019.

3) Among people living with HIV and assumed to be King County residents as of 12/31/2018, and excluding those with suppressed viral loads in the first half of 2019.

4) Race/ethnicity is presented in a single category which may be misleading when describing individuals in two or more categories, for instance for the period prevalent cases 7/18-6/19, 81% of American Indians/Alaska Natives and 17% of Blacks are multiracial and/or Latinx and thus not included in the American Indians/Alaska Natives and Black categories.

5) Includes presumed heterosexual cases (females without injection drug use who had sexual intercourse with a man whose HIV status and HIV risk behaviors are unknown).

6) For the recently diagnosed, this number also includes some individuals no longer be residing in King County.
Death diagnoses reporting typically lags behind other reporting, and is not considered reasonably complete for 6 to 18 months after death.

Counts of New HIV and AIDS Diagnoses and Deaths of People Diagnosed with HIV, King County by half year; 2009 to first half 2019

* Death diagnosis reporting typically lags behind other reporting, and is not considered reasonably complete for 6 to 18 months after death.
