Reproductive System, day 2
Grades 4-6, Lesson #12

Time Needed

40-50 minutes

Student Learning Objectives

To be able to...
1. Distinguish reproductive system facts from myths.
2. Distinguish among definitions of: ovulation, ejaculation, intercourse, fertilization, implantation, conception, circumcision, genitals, and semen.
3. Explain the process of the menstrual cycle and sperm production/ejaculation.

Agenda

1. Explain lesson’s purpose.
2. Use transparencies or your own drawing skills to explain the processes of the male and female reproductive systems and to answer “Anonymous Question Box” questions.
3. Use Reproductive System Worksheets #3 and/or #4 to reinforce new terminology.
4. Use Reproductive System Worksheet #5 as a large group exercise to reinforce understanding of the reproductive process.
5. Use Reproductive System Worksheet #6 to further reinforce Activity #2, above.

This lesson was most recently edited August, 2009.
Materials Needed

Classroom Materials:

- OPTIONAL: Reproductive System Transparency/Worksheets #1 – 2, as 4 transparencies (if you prefer not to draw)
- OPTIONAL: Overhead projector

Student Materials: (for each student)

- Reproductive System Worksheets 3-6 (Which to use depends upon your class' skill level. Each requires slightly higher level thinking.)
Activity

1. **Explain the lesson’s purpose.**
   
   We are doing today’s lesson so that people will understand their own bodies better and feel more confident asking questions and discussing bodies with their parents and doctors.

2. **Explain the processes (the physiology) of the male and female reproductive systems.**
   
   Using the transparencies or your own blackboard drawings, respond to the remainder of the “Anonymous Question Box” questions about the reproductive system, especially those on PHYSIOLOGY. If no questions arise regarding the following terms, explain them anyway:

   1. OVULATION
   2. EJACULATION
   3. INTERCOURSE
   4. FERTILIZATION
   5. IMPLANTATION
   6. CONCEPTION
   7. CIRCUMCISION
   8. GENITALS
   9. SEMEN
   10. MENSTRUATION

   Here is suggested language:

   The outside parts of the reproductive system are called your **genitals**. In other words, a guy’s genitals are the penis and scrotum. A girl’s genitals, also called her vulva, are the labia and clitoris.

   Baby boys are born with a sleeve of skin on their penises called the foreskin. Sometimes the doctor removes the foreskin, in a procedure called **circumcision**. The penis is normal either way, whether it’s been circumcised or not.

   **Ovulation** is the releasing of a mature egg (ovum) from an ovary. It happens every 20 to 40 days, more or less. And usually a woman doesn’t know when it happens. A couple of weeks later is when she will menstruate. **Menstruation** is the lining of her uterus (the blood and tissue) coming out through the vagina, so that she can build up a fresh new lining the next month.

   **Intercourse** is the kind of sexual touch when the penis is in the vagina. It is sometimes called “vaginal intercourse” or “lovemaking” … but “lovemaking” can mean different things to different people. **Ejaculation** is what you call it when semen, the fluid carrying sperm, comes out of the penis.

   If he ejaculates during intercourse – or even if he ejaculates onto her labia, without ever putting the penis inside the vagina – sperm can swim up into her uterus and tubes in search of an egg to fertilize. **Fertilization** is what you call it when a sperm cell enters an egg. But there need to be millions of sperm to begin with because that way thousands will find their way into the fallopian tube and hundreds will find the egg and begin bumping into it, gradually wearing away the protein coat, allowing one to finally get inside.

   After the egg is fertilized, it will take a week or so to finish traveling down the tube into the uterus, where it will nest. That’s called **implantation**. The combination of fertilization and implantation is what we call **conception**, meaning a pregnancy has begun.

3. **Use Reproductive System Worksheets #3 and/or #4 to reinforce new terminology.**
Allow students 5 to 10 minutes to complete one or both worksheets individually. Have pairs discuss and correct one another’s papers. Then, go over them aloud; having them read the items will give them additional practice pronouncing the terms.

4. Use Reproductive System Worksheet #5 as a large group exercise to reinforce understanding of the reproductive process.
   Again, students can work individually, then pair, and then walk through it together as a large group, if their skill levels will allow.

5. Use Reproductive System Worksheet #6 to further reinforce activity #2, above.
   The Worksheet will require students to practice what makes a coherent paragraph, while requiring that they think through the chronology of reproduction.

Related Activities for Integrated Learning

A. Language Arts

B. Math
   Students can figure out, if a hypothetical female ovulates, say from age 12 to 47, 13 times a year, how many eggs are released altogether. (Answer: 455 eggs). They can determine, if a hypothetical male produced 150 million sperm a day from age 15 until his death at age 75, how many would have been produced altogether. (Answer: 3,285,000,000,000 sperm in a lifetime or 54 billion, 750 million per year).

Homework

Students’ options:
  • Discuss Reproductive System Worksheets with an adult in the family*
  • Call the Facts of Life Line (206-328-7711) or their family doctor or use the Internet to find answers to questions from the Question Box or to one of the following common questions:
    What does it mean if one breast or testicle is larger than the other?
    How does a person know when to get a checkup of the reproductive system?
    What is the best way to treat pimples?
    What if the penis or vagina is "too big" or "too small"?
    Do all boys have wet dreams and do girls have something similar?
    Do all girls menstruate and do boys have something similar?

IMPORTANT NOTES:
  ❖ If you assign questions from the Question Box for students to find answers to, make sure to type them first, so that a student cannot recognize another student’s handwriting and violate their anonymity.
If you allow students to do their research by Internet, we recommend they start here, to minimize the possibility of their finding commercial and otherwise inappropriate or unreliable sources: http://www.metrokc.gov/health/famplan/studentlinks.htm

*see “Preparing Parents” page 6-7
Reproductive System Worksheet 3

NAME ______________________________________________ DATE ________________

DIRECTIONS: Mark an "M" next to any part of a male's (a boy's or man's) body, an "F"
next to any part of a female's (a girl's or woman's) body, or "E" if the part
could belong to either a male or a female.

So your choices are "M", "F", and "E".

_____ 1. Penis  _____ 10. Urethra
_____ 2. Scrotum  _____ 11. Seminal Vesicle
_____ 3. Cervix  _____ 12. Epididymis
_____ 5. Vagina  _____ 14. Prostate Gland
_____ 6. Testicle  _____ 15. Uterus
_____ 7. Fallopian Tube  _____ 16. Anus
### Reproductive System Worksheet 4

**NAME ______________________________  DATE __________________**

**DIRECTIONS:** Put the letter of each word next to the correct definition of the word.

| a. circumcision | 1. The penis or clitoris filling with blood and getting harder and larger |
| b. conception   | 2. The outside parts of the male’s or female’s reproductive system |
| c. ejaculation   | 3. Ejaculation during sleep (sometimes called “having a wet dream”) |
| d. erection     | 4. The process of fertilization and implantation |
| e. fertilization| 5. A cell from a woman’s body that can start a pregnancy (sometimes called an “egg cell”) |
| f. genitals     | 6. A cell from a man’s body that can start a pregnancy |
| g. implantation | 7. An operation to remove the foreskin from the penis |
| h. intercourse  | 8. The meeting of the sperm and ovum |
| i. menstruation | 9. The penis being inside the vagina |
| j. nocturnal emission | 10. The gland in the brain that triggers puberty |
| k. ovulation    | 11. A ripe ovum coming out of the ovary |
| l. ovum         | 12. Semen coming out of the penis |
| m. pituitary    | 13. The nesting of a fertilized egg in the wall of the uterus |
| n. puberty      | 14. The body beginning to change from a child’s into an adult’s |
| o. semen        | 15. The liquid that carries sperm |
| p. sperm        | 16. The lining of the uterus coming out through the vagina (sometimes called “having a period”) |
Reproductive System Worksheet 5

NAME ____________________________________________  DATE _____________

DIRECTIONS: Fill in the blanks. Then look up each word to make sure you have spelled it correctly.

1. The outside parts of the male reproductive system are the penis and the ________________.

2. The outside parts of the female reproductive system are the labia and the ________________.

3. A female has three openings: the ________________ in the front, the ________________ in the middle (where the blood comes out during her period) and the anus in the back.

4. Sperm are made in the testicles. They are stored for 2-3 months in the ________________ and then they travel through the ________________ and the urethra, which leads out of the penis.

5. The semen is made up of sperm and liquids. The liquids are produced by the ________________, the ________________, and the ________________.

6. In both males and females, urine is stored in the ________________ and leaves the body through the urethra.

7. Both males and females have an opening where bowel movements come out. It is called the ________________. 
8. A baby grows for nine months in the _________________.

9. The scrotum is the sac that holds the _________________.

10. The parts of the body that protect the urethra and the vagina are called _________________.

11. When an egg cell leaves the _________________, it travels through the _________________ on its way to the uterus.

12. The opening of the uterus into the vagina is called the _________________.

Reproductive System Worksheet 6

NAME ______________________________________ DATE ______________

DIRECTIONS: Below are two stories. The events are all out of order. Get a sheet of lined paper. Write "Reproductive System Worksheet #6" at the top. Then choose ONE of the two stories (A or B) and rewrite it. Begin with the title and your name. Find a topic sentence to begin your paragraph. Put the sentences in chronological order. Make sure the last sentence is a good concluding statement.

A) The Menstrual Cycle
   It travels through the fallopian tube.
   The ovary releases the ovum.
   About two weeks later, since the lining of the uterus is not needed for a pregnancy, it comes out through the vagina.
   It is incredible how the female body knows how to prepare for pregnancy!
   If the egg doesn't meet a sperm, it dissolves.
   While the ovum is developing, the lining of the uterus is getting thick and soft.
   Another ovum starts to develop in one of the ovaries and the process begins again.
   An ovum starts to develop.

B) I am produced in the testicles.
   I go through the cervix and the uterus and into the fallopian tubes, in search of an egg cell.
   I develop for two or three months in the epididymis.
   When the penis becomes erect, I leave the epididymis and travel up into the body through the vas deferens.
   As I pass the prostate gland, the seminal vesicles, and the Cowper's glands, fluids are added so that I can live longer and swim more easily.
   Without me, an egg cell couldn't begin the amazing process of reproduction.
   The urethra carries me (along with about 200 million other sperm) out of the penis in a process called ejaculation.
   If I can find the ovum before the other sperm do, I will be the winner: part of a fertilized egg!

MORE DIRECTIONS: After you have finished writing your story, reread it, checking off the sentences on this worksheet to make sure you have used them all. Then read the story aloud to a friend to see whether it makes sense.
Reproductive System Worksheet 3 – Answer Key

NAME ___________________________ DATE __________________

DIRECTIONS: Mark an "M" next to any part of a male's (a boy's or man's) body, an "F" next to any part of a female's (a girl's or woman's) body, or "E" if the part could belong to either a male or a female.

So your choices are "M", "F", and "E".

M 1. Penis
M 2. Scrotum
F 3. Cervix
E 4. Bladder
F 5. Vagina
M 6. Testicle
F 7. Fallopian Tube
M 8. Cowper's Gland
F 9. Labia
E 10. Urethra
M 11. Seminal Vesicle
M 12. Epididymis
F 13. Ovary
M 14. Prostate Gland
F 15. Uterus
E 16. Anus
M 17. Vas Deferens
F 18. Clitoris
Reproductive System Worksheet 4 – Answer Key

DIRECTIONS: Put the letter of each word next to the correct definition of the word.

a. circumcision  d. 1. The penis or clitoris filling with blood and getting harder and larger
b. conception  f. 2. The outside parts of the male's or female's reproductive system
c. ejaculation  j. 3. Ejaculation during sleep (sometimes called "having a wet dream")
d. erection  
e. fertilization  
f. genitals  b. 4. The process of fertilization and implantation
g. implantation  l. 5. A cell from a woman's body that can start a pregnancy (sometimes called an "egg cell")
h. intercourse  p. 6. A cell from a man's body that can start a pregnancy
i. menstruation  a. 7. An operation to remove the foreskin from the penis
j. nocturnal emission  e. 8. The meeting of the sperm and ovum
k. ovulation  h. 9. The penis being inside the vagina
l. ovum  m. 10. The gland in the brain that triggers puberty
m. pituitary  k. 11. A ripe ovum coming out of the ovary
n. puberty  c. 12. Semen coming out of the penis
o. semen  G. 13. The nesting of a fertilized egg in the wall of the uterus
p. sperm  n. 14. The body beginning to change from a child's into an adult's
q. 15. The liquid that carries sperm
r. 16. The lining of the uterus coming out through the vagina (sometimes called "having a period")
Reproductive System Worksheet 5 – Answer Key

NAME ____________________________________________  DATE _____________

DIRECTIONS: Fill in the blanks. Then look up each word to make sure you have spelled it correctly.

1. The outside parts of the male reproductive system are the penis and the
   scrotum

2. The outside parts of the female reproductive system are the labia and the
   clitoris

3. A female has three openings: the _urethra_ in the front, the _vagina_ in the middle (where the blood comes out during her period) and the anus in the back.

4. Sperm are made in the testicles. They are stored for 2-3 months in the _epididymis_ and then they travel through the _vas deferens_ and the urethra, which leads out of the penis.

5. The semen is made up of sperm and liquids. The liquids are produced by the _seminal vesicles_, the _prostate gland_, and the _Cowper’s glands_.

6. In both males and females, urine is stored in the _bladder_ and leaves the body through the urethra.

7. Both males and females have an opening where bowel movements come out. It is called the _anus_.

Public Health - Seattle & King County • Family Planning Program • © 1986 • revised 2009 • www.kingcounty.gov/health/flash
8. A baby grows for nine months in the _uterus__________.

9. The scrotum is the sac that holds the _testicles________. *

10. The parts of the body that protect the urethra and the vagina are called _labia__________.

11. When an egg cell leaves the _ovary__________, it travels through the _fallopian tubes_____ on its way to the uterus.

12. The opening of the uterus into the vagina is called the _cervix__________.

* Note that “testes” is also a correct response.
Reproductive System Worksheet 6 – Answer Key

NAME ___________________________________________ DATE ____________

DIRECTIONS: Below are two stories. The events are all out of order. Get a sheet of lined paper. Write "Reproductive System Worksheet #6" at the top. Then choose ONE of the two stories (A or B) and rewrite it. Begin with the title and your name. Find a topic sentence to begin your paragraph. Put the sentences in chronological order. Make sure the last sentence is a good concluding statement.

B) The Menstrual Cycle
   It is incredible how the female body knows how to prepare for pregnancy!
   An ovum starts to develop. While the ovum is developing, the lining of the uterus is getting thick and soft. The ovary releases the ovum. It travels through the fallopian tube. If the egg doesn't meet a sperm, it dissolves. About two weeks later, since the lining of the uterus is not needed for a pregnancy, it comes out through the vagina. Another ovum starts to develop in one of the ovaries and the process begins again.

C) The Life of a Sperm Cell
   Without me, an egg cell couldn't begin the amazing process of reproduction. I am produced in the testicles. I develop for two or three months in the epididymis. When the penis becomes erect, I leave the epididymis and travel up into the body through the vas deferens. I go from the vas deferens to the urethra. As I pass the prostate gland, the seminal vesicles, and the Cowper's glands, fluids are added so that I can live longer and swim more easily. The urethra carries me (along with about 200 million other sperm) out of the penis in a process called ejaculation. I go through the cervix and the uterus and into the fallopian tubes, in search of an egg cell. If I can find the ovum before the other sperm do, I will be the winner: part of a fertilized egg!

MORE DIRECTIONS: After you have finished writing your story, reread it, checking off the sentences on this worksheet to make sure you have used them all. Then read the story aloud to a friend to see whether it makes sense.
