Lloyd Hara
Assessor

Dear Property Owners:

Property assessments for the 2013 assessment year are being completed by my staff throughout the year and change of value notices are being mailed as neighborhoods are completed. We value property at fee simple, reflecting property at its highest and best use and following the requirement of RCW 84.40.030 to appraise property at true and fair value.

We have worked hard to implement your suggestions to place more information in an e-Environment to meet your needs for timely and accurate information. The following report summarizes the results of the 2013 assessment for this area. (See map within report). It is meant to provide you with helpful background information about the process used and basis for property assessments in your area.

Fair and uniform assessments set the foundation for effective government and I am pleased that we are able to make continuous and ongoing improvements to serve you. Assessment Standards information is available on the Assessor's website at:

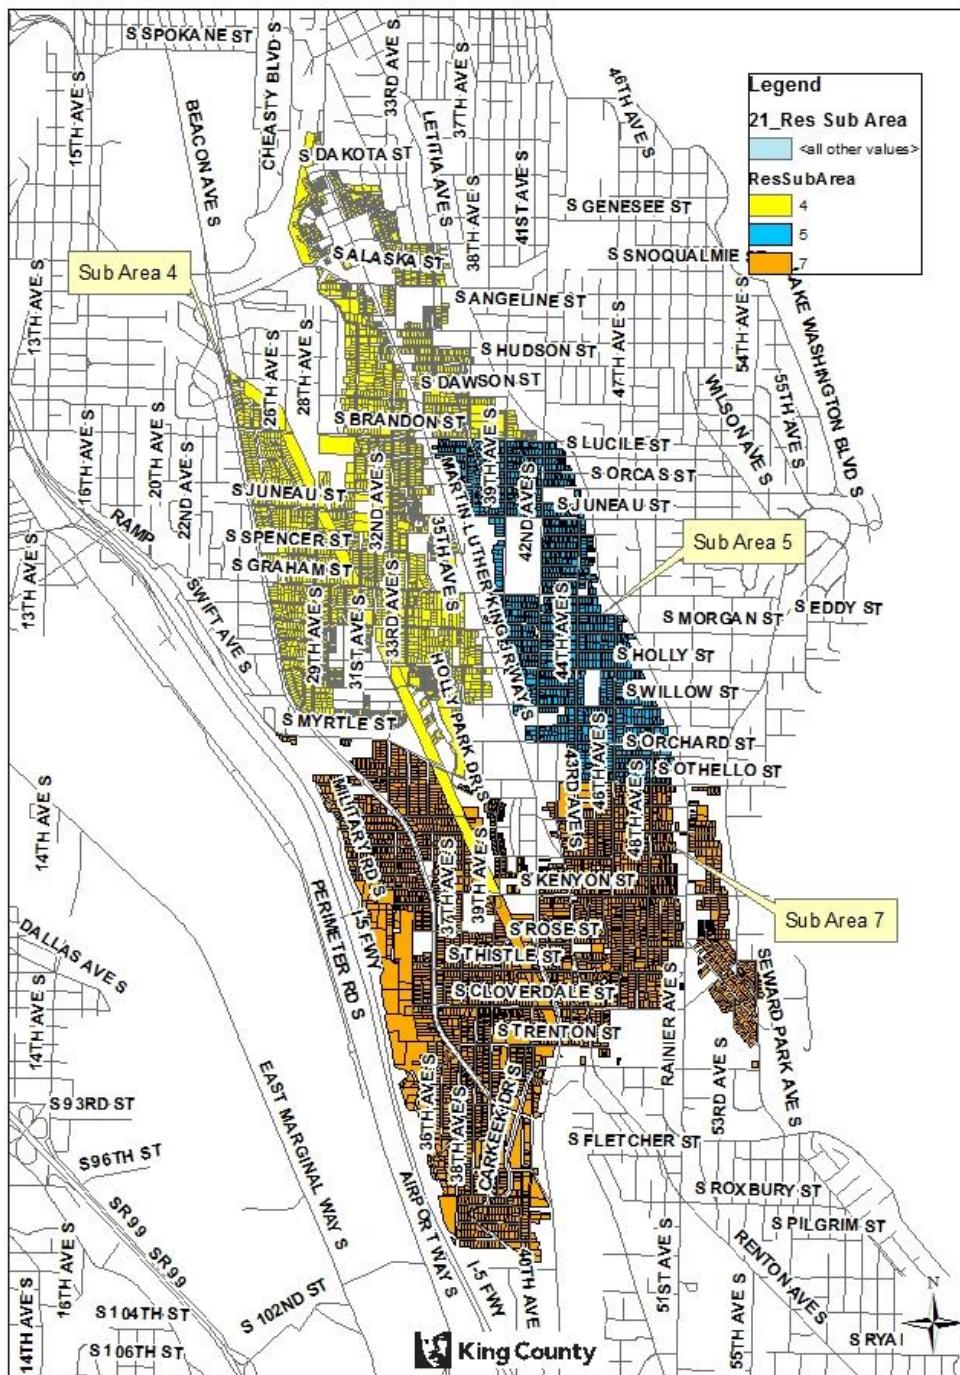

<http://www.kingcounty.gov/Assessor/Reports/AreaReports/~media/Assessor/AreaReports/AppraisalStandard.aspx>

Please feel welcome to call my staff if you have questions about the property assessment process and how it relates to your property.

Sincerely,

Lloyd Hara
Assessor

Coefficient of Dispersion (COD) is a measure of the uniformity of the predicted assessed values for properties within this geographic area. The lower the COD, the more uniform are the predicted assessed values. No characteristic based variables were found, therefore there is no change to the COD. Assessment standards prescribed by the International Association of Assessing Officers identify that the COD in rural or diverse neighborhoods should be no more than 20%.

In the face of smaller overall sales volume, an unstable real property market and an increasing number of financial institution re-sales, the resulting COD meets or exceeds the industry assessment standards.

Summary of Findings: The analysis for this area consisted of a general review of applicable characteristics such as grade, age, condition, stories, living area, views, waterfront, lot size, land problems and neighborhoods. This was a combined area from two previous areas for the current 6 year cycle. Due to diversity of the population and the time differences from prior inspection years between the areas a conservative approach should be taken prior to its upcoming 2014 physical inspection year. Therefore for this area we will be using previous value.

We recommend posting these values for the 2013 Assessment Roll.

Sales of new homes built over the last few years are over represented in this sample. This is a common occurrence due to the fact that most new homes will sell shortly after completion. This over representation was found to lack statistical significance during the modeling process.

Sales Screening for Improved Parcel Analysis

In order to ensure that the Assessor's analysis of sales of improved properties best reflects the market value of the majority of the properties within an area, non-typical properties must be removed so a representative sales sample can be analyzed to determine the new valuation level. The following list illustrates examples of non-typical properties which are removed prior to the beginning of the analysis.

1. Vacant parcels
2. Mobile Home parcels
3. Multi-Parcel or Multi Building parcels
4. New construction where less than a 100% complete house was assessed for 2012
5. Existing residences where the data for 2012 is significantly different than the data for 2013 due to remodeling
6. Parcels with improvement values, but no characteristics
7. Parcels with either land or improvement values of \$25,000 or less posted for the 2012 Assessment Roll
8. Short sales, financial institution re-sales and foreclosure sales verified or appearing to be not at market
9. Others as identified in the sales removed list

(See the attached *Improved Sales Used in this Annual Update Analysis* and *Improved Sales Removed from this Annual Update Analysis* for more detailed information)

Land Update

Analysis indicates land values are at or below current market levels as of 1/1/2013. No additional adjustment to land value is required.

2013 land Value = 2012 Land Value x 1.00. with the result truncated to the next \$1,000.

Improved Parcel Update

The analysis for this area consisted of a general review of applicable characteristics such as grade, age, condition, stories, living area, views, waterfront, lot size, land problems and neighborhoods. This was a combined area from two previous areas for the current 6 year cycle. Due to diversity of the population and the time differences from prior inspection years between the areas a conservative approach should be taken prior to its upcoming 2014 physical inspection year. Therefore for this area we will be using previous value.

With the exception of real property mobile home parcels & parcels with "accessory only" improvements, the new recommended values on all improved parcels were based on the analysis of the 409 useable residential sales in the area.

Sales used in the valuation model were time adjusted to January 1, 2013. The chosen adjustment model was developed using multiple regression. An explanatory adjustment table is included in this report.

Mobile Home Update

There were no sales of Mobile Homes within this area, therefore Mobile Homes received the Total % Change indicated by the sales sample as reflected on the Summary page.

Results

The resulting assessment level is 91.6%. The standard statistical measures of valuation performance are all within the IAAO recommended range of .90 to 1.10.

Application of these recommended values for the 2013 assessment year (taxes payable in 2014) results in an average total change from the 2012 assessments of 0%. There is no change due partly to market changes over time and the previous assessment levels.

Note: Additional information may reside in the Assessor's Real Property Database, Assessor's procedures, Assessor's "field" maps, Revalue Plan, separate studies, and statutes.

Area 21 Adjustments

2013 Total Value = 2012 Total Value + Overall +/- Characteristic Adjustments as Apply Below

Due to rounding of the coefficient values used to develop the percentages and further rounding of the percentages in this table, the results you will obtain are an approximation of adjustment achieved in production.

Standard Area Adjustment

0.00%

Comments :

The analysis results showed that no overall adjustment was needed for this area and we will be using previous value for 100% of the population of 1 to 3 Unit Residences.

Area 21 Market Value Changes Over Time

In a changing market, recognition of a sales trend to adjust a population of sold properties to a common date is required to allow for value differences over time between a range of sales dates and the assessment date. The following chart shows the % time adjustment required for sales to reflect the indicated market value as of the assessment date, **January 1, 2013**.

For example, a sale of \$525000 which occurred on August 1, 2011 would be adjusted by the time trend factor of 1.040, resulting in an adjusted value of \$500,000 ($\$525000 \times 1.040 = \$546,000$) – rounded to the nearest \$1000.

| Market Adjustment to 1/1/2013 | | |
|--------------------------------------|---------------------|--------------------|
| Sale Date | Adjustment (Factor) | Equivalent Percent |
| 1/1/2010 | 0.858 | -14.2% |
