Lloyd Hara
Assessor

Dear Property Owners:

Property assessments for the 2013 assessment year are being completed by my staff throughout the year and change of value notices are being mailed as neighborhoods are completed. We value property at fee simple, reflecting property at its highest and best use and following the requirement of RCW 84.40.030 to appraise property at true and fair value.

We have worked hard to implement your suggestions to place more information in an e-Environment to meet your needs for timely and accurate information. The following report summarizes the results of the 2013 assessment for this area. (See map within report). It is meant to provide you with helpful background information about the process used and basis for property assessments in your area.

Fair and uniform assessments set the foundation for effective government and I am pleased that we are able to make continuous and ongoing improvements to serve you. Assessment Standards information is available on the Assessor's website at:

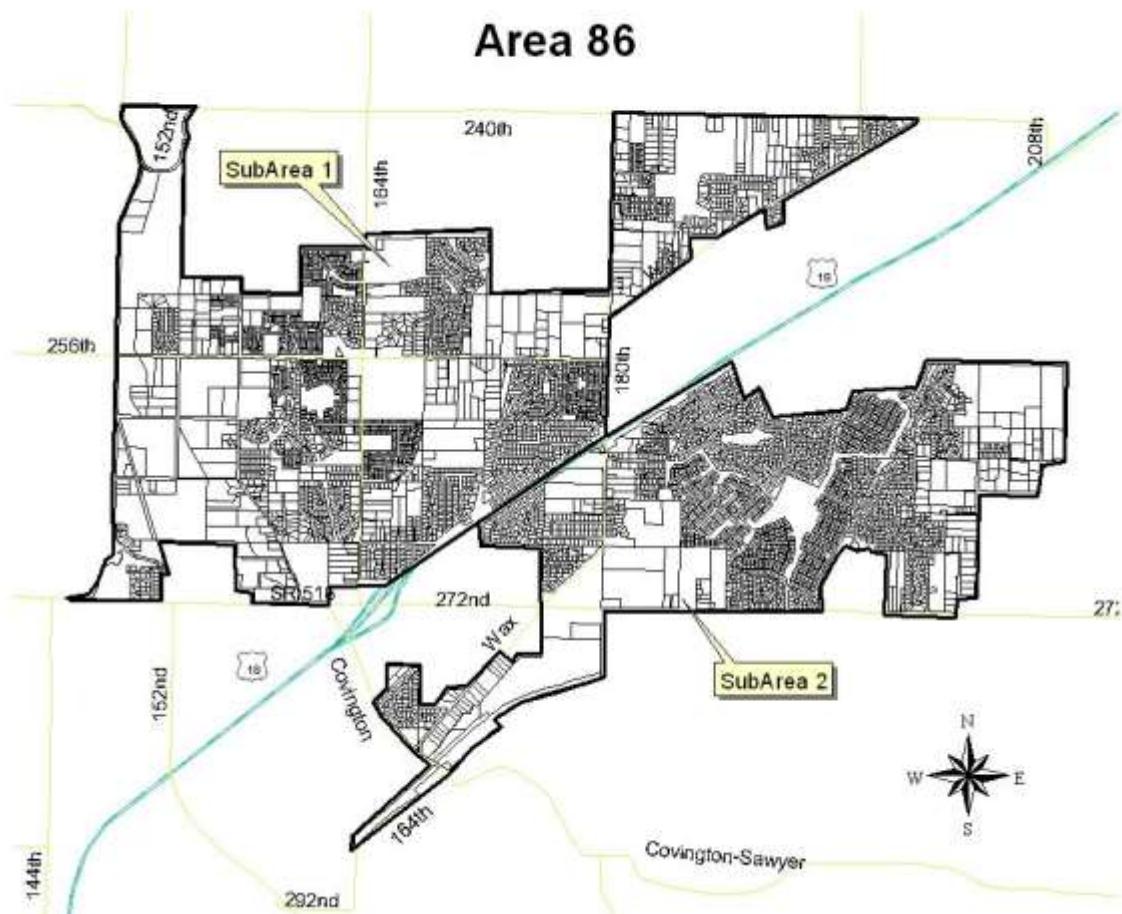

<http://www.kingcounty.gov/Assessor/Reports/AreaReports/~media/Assessor/AreaReports/AppraisalStandard.aspx>

Please feel welcome to call my staff if you have questions about the property assessment process and how it relates to your property.

Sincerely,

Lloyd Hara
Assessor

*Sales are time adjusted to 1/1/2013.

Coefficient of Dispersion (COD) is a measure of the uniformity of the predicted assessed values for properties within this geographic area. The lower the COD, the more uniform are the predicted assessed values. Assessment standards prescribed by the International Association of Assessing Officers identify that the COD in rural or diverse neighborhoods should be no more than 20%.

In the face of smaller overall sales volume, an unstable real property market and an increasing number of financial institution re-sales, the resulting COD meets or exceeds the industry assessment standards.

Population - Improved Parcel Summary:			
	Land	Imps	Total
2012 Value	\$68,100	\$125,600	\$193,700
2013 Value	\$72,700	\$133,500	\$206,200
Percent Change	+6.8%	+6.3%	+6.5%

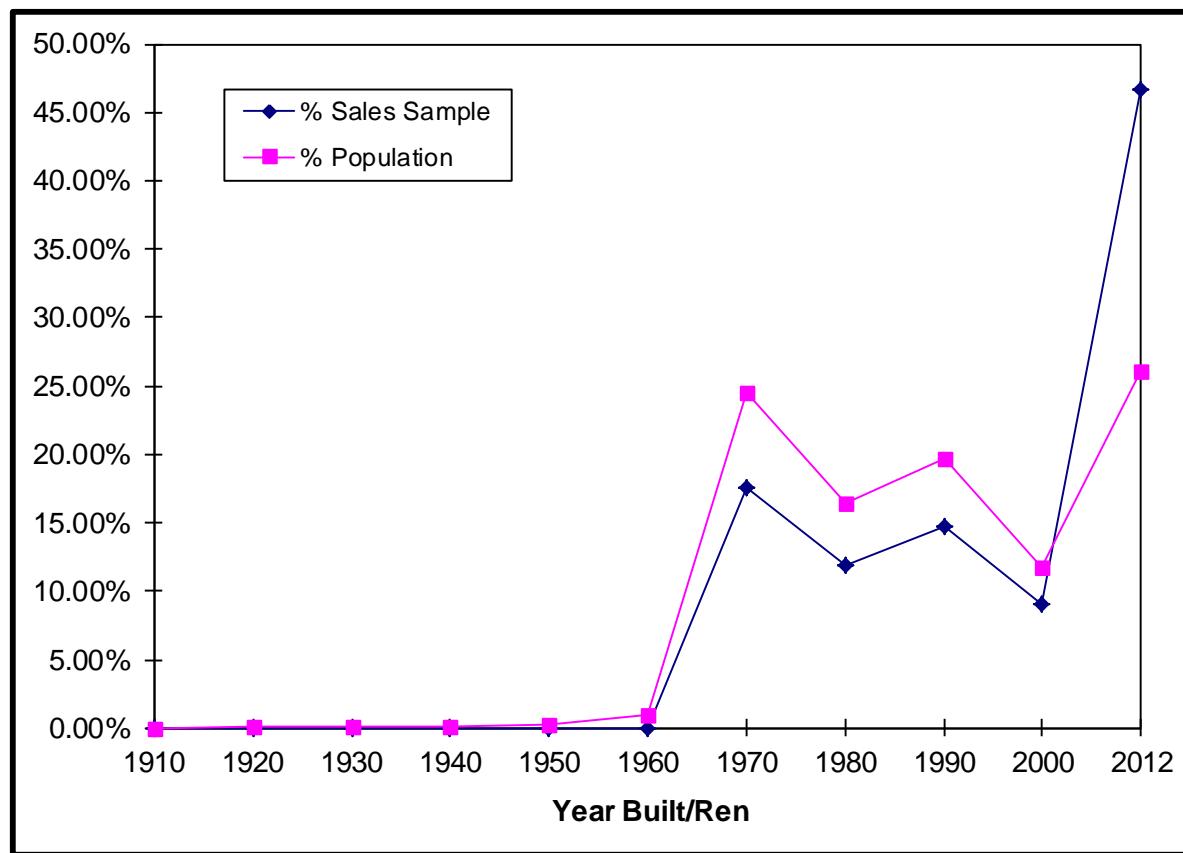

Number of one to three unit residences in the population: 5510

Summary of Findings: The analysis for this area consisted of a general review of applicable characteristics such as grade, age, condition, stories, living area, views, waterfront, lot size, land problems and neighborhoods. The analysis results showed that one characteristic-based variable needed to be included in the update formula in order to improve the uniformity of assessments throughout the area. For instance, parcels that were Low Grade (Grade <=6) were at a higher ratio compared to the rest of the population, which resulted in a downward adjustment. The remaining improved properties in the population will receive an upward adjustment as indicated by the standard adjustment. The formula adjusts for these differences, thus improving equalization.

Sales of new homes built over the last few years are over represented in this sample.
 This is a common occurrence due to the fact that most new homes will sell shortly after completion.
 This over representation was found to lack statistical significance during the modeling process.

Sales Screening for Improved Parcel Analysis

In order to ensure that the Assessor's analysis of sales of improved properties best reflects the market value of the majority of the properties within an area, non-typical properties must be removed so a representative sales sample can be analyzed to determine the new valuation level. The following list illustrates examples of non-typical properties which are removed prior to the beginning of the analysis.

1. Vacant parcels
2. Mobile Home parcels
3. Multi-Parcel or Multi Building parcels
4. New construction where less than a 100% complete house was assessed for 2012
5. Existing residences where the data for 2012 is significantly different than the data for 2013 due to remodeling
6. Parcels with improvement values, but no characteristics
7. Parcels with either land or improvement values of \$25,000 or less posted for the 2012 Assessment Roll
8. Short sales, financial institution re-sales and foreclosure sales verified or appearing to be not at market
9. Others as identified in the sales removed list

(See the attached *Improved Sales Used in this Annual Update Analysis* and *Improved Sales Removed from this Annual Update Analysis* for more detailed information)

Land Update

Based on the 3 usable land sales available in the area, and their 2012 Assessment Year assessed values, and supplemented by the value increase in sales of improved parcels, an overall market adjustment was derived. This resulted in an overall 6.8% increase in land assessments in the area for the 2013 Assessment Year. The formula is:

$$2013 \text{ Land Value} = 2012 \text{ Land Value} \times 1.075, \text{ with the result truncated to the next \$1,000.}$$

Improved Parcel Update

The analysis for this area consisted of a general review of applicable characteristics such as grade, age, condition, stories, living area, views, waterfront, lot size, land problems and neighborhoods. The analysis results showed that one characteristic-based variable needed to be included in the update formula in order to improve the uniformity of assessments throughout the area. For instance, parcels that were Low Grade (Grade <=6) were at a higher ratio compared to the rest of the population, which resulted in a downward adjustment. The remaining improved properties in the population will receive an upward adjustment as indicated by the standard adjustment. The formula adjusts for these differences, thus improving equalization.

With the exception of real property mobile home parcels & parcels with "accessory only" improvements, the new recommended values on all improved parcels were based on the analysis of the 563 useable residential sales in the area.

Sales used in the valuation model were time adjusted to January 1, 2013. The chosen adjustment model was developed using multiple regression. An explanatory adjustment table is included in this report.

Mobile Home Update

There were three sales of Mobile Homes within this area, which indicated that Mobile Homes are already at market value and no change is indicated at this time.

Results

The resulting assessment level is 90.5%. The standard statistical measures of valuation performance are all within the IAAO recommended range of .90 to 1.10.

Application of these recommended values for the 2013 assessment year (taxes payable in 2014) results in an average total change from the 2012 assessments of +6.5%. This increase is due partly to market changes over time and the previous assessment levels.

Note: Additional information may reside in the Assessor's Real Property Database, Assessor's procedures, Assessor's "field" maps, Revalue Plan, separate studies, and statutes.

Area 86 Adjustments

2013 Total Value = 2012 Total Value + Overall +/- Characteristic Adjustments as Apply Below

Due to rounding of the coefficient values used to develop the percentages and further rounding of the percentages in this table, the results you will obtain are an approximation of adjustment achieved in production.

Standard Area Adjustment

7.73%

Low Grade <=6	Yes
% Adjustment	-2.34%

Comments :

The percentages listed are total adjustments not additive adjustments.

For instance, a Low Grade <=6 parcel would *approximately* receive a -2.34% downward adjustment. 824 parcels in the improved population would receive this adjustment. There were 53 sales.

There were no properties that would receive a multiple variable adjustment.

Generally Low Grade <=6 parcels were at a higher assessment level than the rest of the population. This model corrects for these strata differences.

85% of the population of 1 to 3 Unit Residences in the area are adjusted by the Standard Area Adjustment alone.

Area 86 Market Value Changes Over Time

In a changing market, recognition of a sales trend to adjust a population of sold properties to a common date is required to allow for value differences over time between a range of sales dates and the assessment date. The following chart shows the % time adjustment required for sales to reflect the indicated market value as of the assessment date, **January 1, 2013**.

For example, a sale of \$525000 which occurred on August 1, 2011 would be adjusted by the time trend factor of 1.054 resulting in an adjusted value of \$553000 (\$525000 X .1.054=\$553350) – rounded to the nearest \$1000.
