

2020 STI Surveillance Data and COVID-19

STI case numbers in 2020 may be affected by the COVID-19 pandemic. The first stay at home orders for King County were issued near the end of quarter 1 and any observed decreases in STIs may be from changes in STI screening and/or changes in sexual behavior during the pandemic.

Trends in STI Morbidity

Figure 2: Quarterly King County STI morbidity among MSM**

**Footnote: Chlamydia case data on gender of sex partners and anatomic site of infection are incomplete for these time periods. For this reason chlamydia cases are not shown for MSM or MSW.

Trends in STI Morbidity

Figure 1: Quarterly King County STI morbidity, women and MSW**

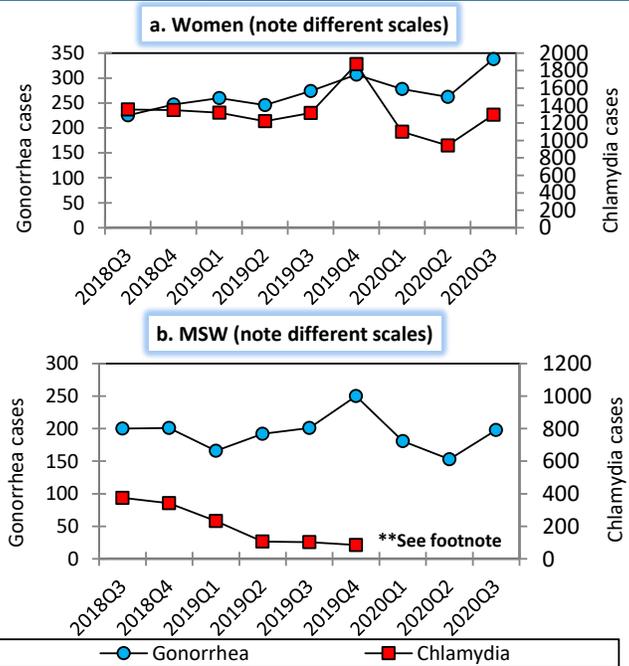

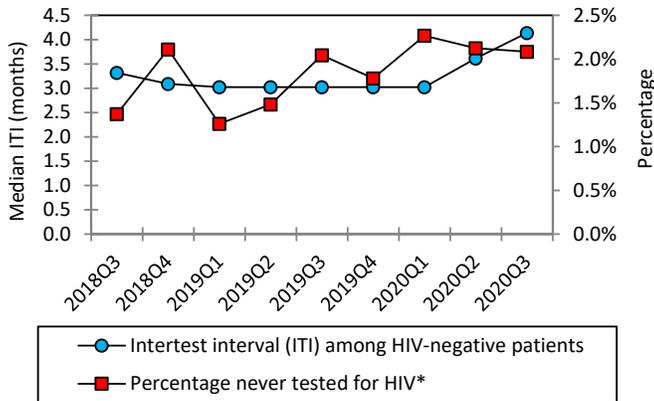

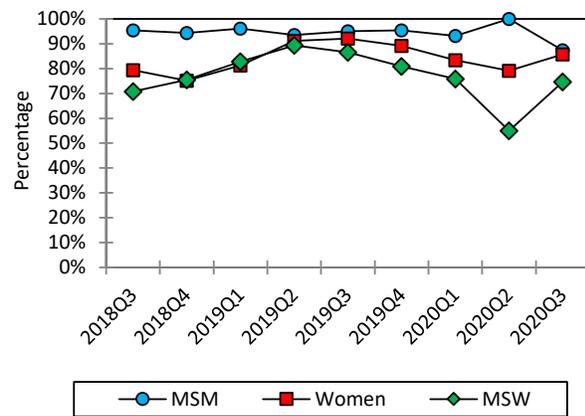

Figure 3: HIV testing among PHSKC Sexual Health Clinic patients, MSM (note different scales)

* Denominator includes patients who reported never testing or negative/unknown results

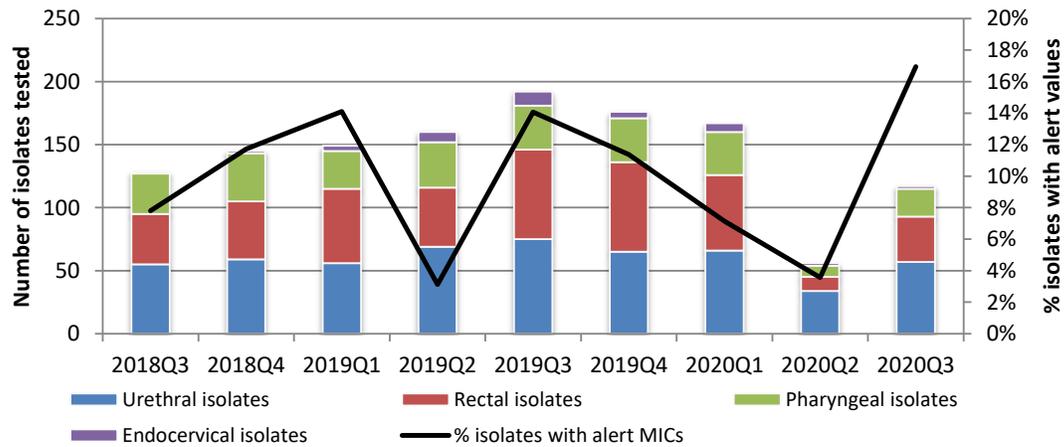

HIV testing should be performed annually on low-risk MSM and quarterly on high-risk MSM^a.

Figure 4: Percentage of King County residents with a bacterial STI tested for HIV (excludes HIV+ residents)

Anyone diagnosed with a bacterial STI should be tested for HIV.

Figure 5: Percentage of SURRG^b isolates with alert values for cephalosporins or azithromycin (note scales)

Alert value = Minimum Inhibitory Concentration (MIC, lowest antibiotic concentration needed to halt bacterial growth) is higher than preset thresholds^c. Alert value MICs represent decreased susceptibility to an antibiotic but may not represent resistance.

Footnotes and Abbreviations:

MSM = Men who have sex with men
MSW = Men who have sex with women

^aHigh-risk = MSM with any one of the following in the prior year: diagnosis of a bacterial STI, methamphetamine or popper use, ≥10 sex partners (anal or oral), or unprotected anal sex with a partner of unknown or discordant HIV status
Low-risk = sexually active MSM who do not meet high-risk criteria

^bSURRG = Strengthening the U.S. Response to Resistant Gonorrhea Surveillance, supported by the Centers for Disease Control and Prevention

^cAlert values:
Ceftriaxone MIC ≥ 0.125 µg/ml
Cefixime MIC ≥ 0.25 µg/ml
Azithromycin MIC ≥ 2.0 µg/ml
