

Project Element: Working with Communities

Fall 2013

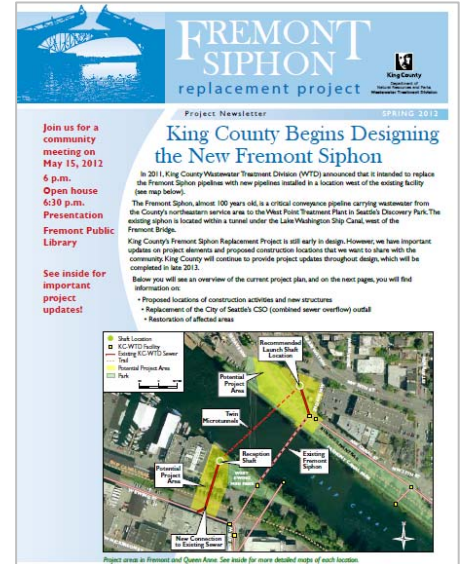

King County is completing design for replacing the Fremont Siphon, a wastewater conveyance system that extends from Fremont to Queen Anne in a concrete tunnel located under the Lake Washington Ship Canal. King County will install two new pipelines in a new crossing under the ship canal just west of the existing siphon pipelines.

King County Works with Communities throughout the Project

During design, King County establishes contract specifications and permit conditions to limit impacts to communities.

Before construction, the community is invited to a community meeting and given an overview of construction work and schedule.

During construction, King County community relations staff is on-call 24 hours a day and works with construction team and contractor to address issues.

Newsletters, mailings and flyers keep the community up-to-date during design and construction

During Construction

King County keeps the community up-to-date and provides advance notice of construction activities via

- Mailings
- Newsletters
- E-mails
- Phone calls
- Flyers
- Project website updates
- One on one meetings

Problem solving during construction

- 24-hour Construction Hotline
- Address access issues for residents, services, and deliveries
- Work with construction management team to address odor, noise, dust, and other
