

Project update

June 28, 2016

## Increased noise and activity expected through Friday, July 1 during pump station power upgrade

Starting Wednesday, June 29, King County's contractor for the Murray CSO Control Project will begin connecting the Murray Pump Station to the same electrical power system as the underground storage tank. The connection is needed to ensure a more reliable power source for the pump station when the facility becomes operational this fall. Crews will use a temporary generator to the site to maintain power to the pump station while new electrical connections are put in place. The temporary generator will be placed next to the Murray Pump Station in the southeast corner of Lowman Beach Park.

This work is expected to take 48 hours to complete and will require the temporary generator to run continuously overnight through Friday, July 1. Increased noise levels from the generator are expected. Noise from the generator may be more noticeable at night when ambient noise levels are lower. The contractor will take measures to mitigate the noise emitted by the generator to the extent possible and will monitor noise periodically during the operation. The generator will be placed as far away from the nearest residences as possible.

A small crew will work inside the facility building at night to complete the power upgrade using handheld equipment. Indoor work will be limited to quiet, low-impact activities. You may notice lights on inside the building and crews going to or coming from the facility building.

King County and its contractor appreciate your patience as we work to complete this work. Please direct any concerns or inquiries to the project hotline: 206-205-9186. The hotline will be the best resource for contacting the project team during night work hours.

### What to expect:

- Continuous, low level noise from the temporary generator through Friday, July 1
- A small crew working inside the facility building at night
- Crews on-site to monitor operations and power at the Murray Pump Station at all times
- Regular project work to continue during daytime working hours
- No work on Monday, July 4

*A temporary generator is needed to upgrade the power source to the Murray Pump Station.*
