Noise Monitoring in Your Neighborhood

To support design of the Magnolia Combined Sewer Overflow (CSO) Control project, King County will conduct noise monitoring in your neighborhood during the week of September 17th.

This type of monitoring is standard practice during the design phases of many utility projects. Monitoring will provide King County with information about typical residential noise levels over a 48- to 96-hour period. It will help King County evaluate noise levels that are expected to occur during construction.

How Monitoring Will Occur

- King County noise consultants will place noise monitoring equipment at several locations in the right-of-way on 32nd Avenue West.
- The equipment will be contained in black cases and run continuously for the monitoring period.
- Consultants may check equipment during this period, and when the study is completed they will remove the equipment.

If you would like more information about noise monitoring, please contact Hillary Schafer at 206-263-7312 or Hillary.Schafer@kingcounty.gov.
