Construction activities on 32nd Avenue West

September 15 – September 19, 2014

King County's contractor is continuing work on 32nd Avenue West to prepare for installation of a new gravity sewer pipeline that is one component of a new combined sewer overflow (CSO) control facility in Magnolia. A 1.5-million gallon underground tank will store excess flows of stormwater and sewage when heavy rains fill pipes, reducing untreated overflows to Puget Sound.

Next week, King County's contractor will continue preparation work for upcoming drilling activities. Crews will set up heavy drilling equipment and conduct surveying work on 32nd Avenue West. During this work, expect increased activity on the street and construction noise.

People will hear noise from drill pit preparation work, and may feel some vibration near the site. The contractor will be monitoring vibration levels. People are more sensitive to vibration than structures, and while you may feel vibration, it does not mean that problems will occur as a result.

What you can expect during this work

- Work hours Monday through Friday, 7 a.m. to 7 p.m.; Saturdays, 9 a.m. to 5 p.m.
- Flaggers will direct traffic through work zone.
- Increased traffic activity as crews bring equipment on site.
- People should drive slowly through the project area and watch for workers, other pedestrians, bikes, and cars.

Questions or Concerns? Contact our 24-hour construction hotline at

206-205-0968 and leave a message. We will return your call.
