

Rainier Avenue South to be closed for weekend work between South College Street and 25th Avenue South

August 15, 2016

Starting as soon as August 20th, King County contractors will begin installing shoring in Rainier Avenue South to support their work on the Rainier Valley Wet Weather Storage project. The shoring will hold back dirt and other materials while the construction team works on the pipes that run under the road.

During this work, Rainier Avenue South will be closed in both directions between South College Street and 25th Avenue South. See map on reverse side. The work will take place on at least two weekends.

What to expect:

- *Rainier Avenue South will be closed to traffic and pedestrians between 5:00 PM Saturday evening and 2:00 AM Monday morning.*
- *Traffic will be detoured to South College Street and 25th Avenue South.*
- *Increased noise and vibration*
- *Businesses along Rainier Avenue South will be open during their regular operating hours*

About the Wet Weather Storage project:

King County's pipes in Rainier Valley and elsewhere send sewage and stormwater to a treatment plant in Magnolia to be cleaned. Pipes in the northern Rainier Valley get too much stormwater during storms and spill into the Duwamish River. These spills are called "Combined Sewer Overflows" or CSOs. King County is building new pipes and a new 340,000 gallon storage tank to hold the sewage and stormwater until it can be treated. This project will reduce the number of overflows to 1 per year on average. There are two parts to the project:

- 1) A **new sewer pipe** will be installed near the intersection of Rainier Ave. S. and S. Bayview St. It will send sewage and stormwater from a pipe that gets full during storms to another pipe that has more room.
- 2) A **storage tank** at the intersection of S. Hanford St. and S. 27th Ave. will hold any remaining extra sewage and stormwater until the storm has passed.

Location of new sewer pipe work
