**Eastside Interceptor Lining Project - update for the week of May 16-22**

The Eastside Interceptor (ESI) is one of the main sewer lines that brings wastewater from eastside homes and business to the South Treatment Plant in Renton. This project will repair about 3,700 feet of the line, which is corroded and nearing the end of its service life (see map, below).

For May 16-22, the contractor is continuing to prepare for lining work slated to start in June:

- **Project staging area**: The contractor continues to mobilize for the project at their Boeing work site, including setting power, bringing in equipment and preparing the intake pit. They are also continuing to work on the bypass system in this area.

- **Bypass intake location**: The contractor is making progress on an intake pit at the Boeing site. This is where the bypass will tie into the ESI pipe. This daytime work includes continued sheet pile installation to form the pit walls, preparing the intake pit for excavation and pump staging.

- **Pipe fusing and installation**: The different sections of the bypass pipe need to be connected or fused together and then brought to where the pipe will be installed along Logan Avenue. Pipe fusing will take place at the work site, both days and nights.

- **Work along Logan Avenue**: There will be temporary, single-lane closures and traffic revisions as the contractor locates utilities and does survey and field work. They will also be setting up barriers to protect the bypass pipe from being damaged.

**Night work on Logan Avenue North will continue as the bypass pipe is installed.** Multi-lane nighttime closures are expected this week. Traffic may be reduced to one lane at times. Locations where you may see lane closures include:

- Logan Avenue N, between N 6th Street and N 8th Street
- West side of the intersection of N 8th Street and Logan Avenue N
- Logan Avenue N, between N 10th Street and Park Avenue N
- At the intersection of 757th Ave and Logan Avenue N

**The bike lane** along Logan between Park Avenue N and N 6th Street is closed due to construction. Please cross over to the east side of Logan Avenue N, or take an alternate route to get around this work area.
• **Burnett Avenue North:** The bypass pipe was brought across North 6th Street and onto the Burnett Ave. work site; Burnett Avenue N will remain closed at North 6th Street. There will be activity at this location this week as workers store and stage equipment.

Thank you for your patience during our project. Visit [www.kingcounty.gov/ESI-02](http://www.kingcounty.gov/ESI-02) for project information, and to sign up for updates.
