

## East Side Interceptor Lining Project

### Conveyance System Improvements in Renton

### ***Eastside Interceptor Project - update for the week of June 27-July 3***

The [Eastside Interceptor \(ESI\)](#) is one of the main sewer lines that brings wastewater from eastside homes and business to the South Treatment Plant in Renton. This project will repair about 3,700 feet of the line, which is corroded and nearing the end of its service life (see [map](#) below).

For June 27 through July 3:

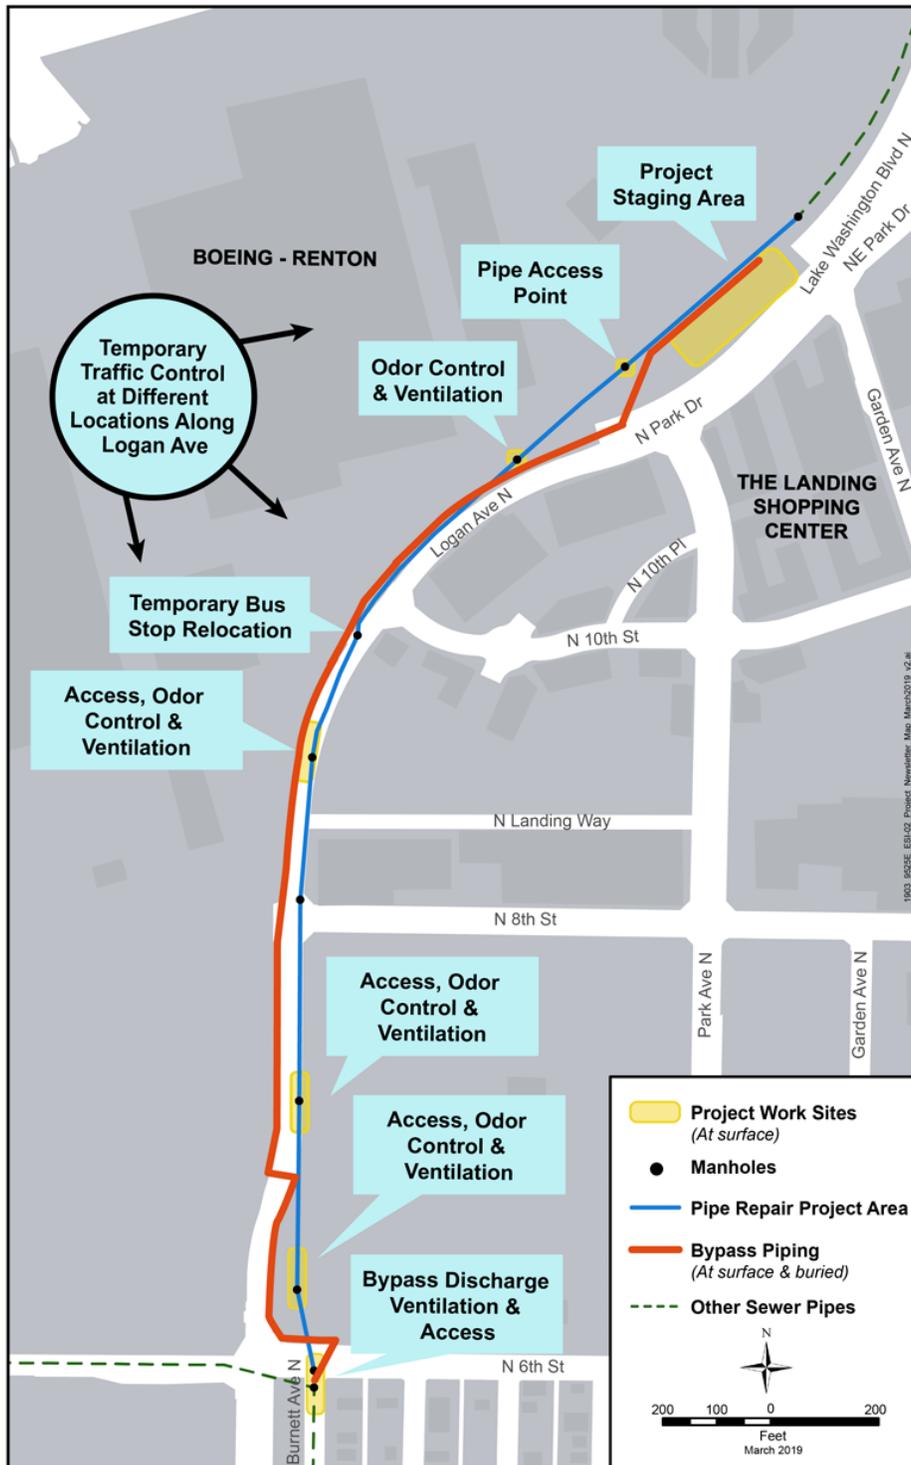

- **Project staging area:** The temporary construction bypass system is now operating and is being tested. The bypass pumps and generators are operating full time. Noise monitoring measures are in place.
- **No night work expected along Logan Avenue:** There is no work planned in the street this week; any night work and traffic control would be for unanticipated work, such as pipe adjustments or repairs.
- **Barriers along Logan Avenue:** This is an active construction area – do not touch or cross the barriers or through the work area. Please cross the street to find safe areas to walk.
- **The bike lane** along Logan between Park Avenue and N 6th Street is closed due to construction. Please cross over to the east side of Logan Avenue or take an alternate route.
- **Upcoming work:** There is prep work being done inside the pipe, including pipe cleaning and building a platform for workers to stand on when they are inside the ESI pipe. Lining work is expected to start as soon as next week.
- Once in-pipe work begins, there will be temporary lane closures on Logan Avenue so crews can access the pipe.

**Burnett Avenue** will remain closed at N 6th Street for several months.
