

East Side Interceptor Lining Project

Conveyance System Improvements in Renton

Eastside Interceptor Project - update for the week of July 11 - 17

The [Eastside Interceptor \(ESI\)](#) is one of the main sewer lines that brings wastewater from eastside homes and business to the South Treatment Plant in Renton. This project will repair about 3,700 feet of the line, which is corroded and nearing the end of its service life (see [map](#) below).

For July 11 - 17:

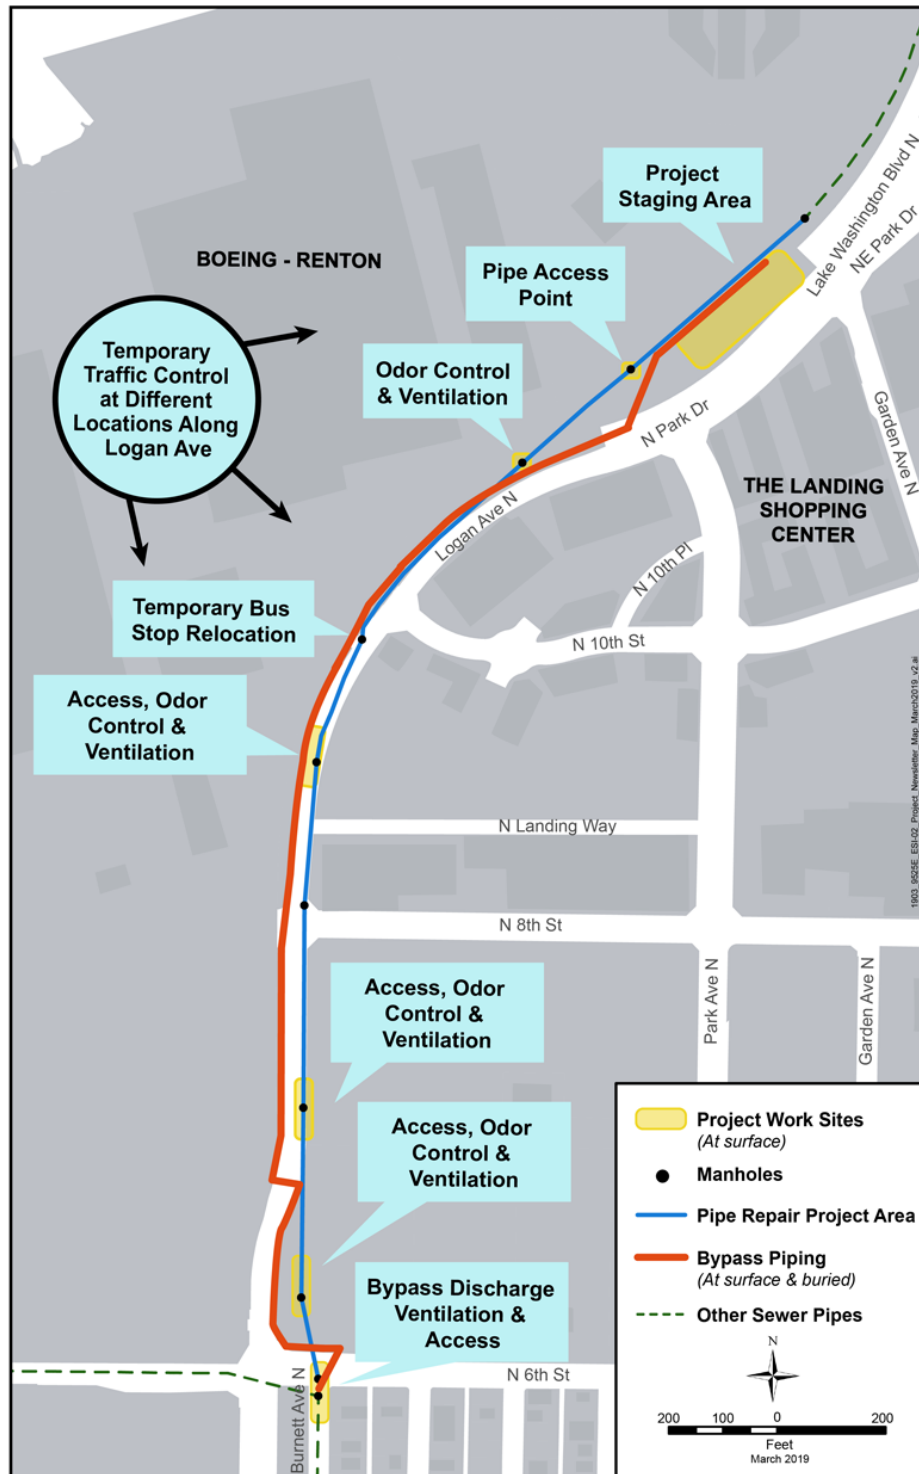

- **Project staging area:** The temporary construction bypass system is now operating full time. Noise monitoring measures are in place.
- **Short-term night work:** Minor night work is currently anticipated for the evening of July 15th on Logan Avenue between North 8th and North 10th streets.
- **Barriers along Logan Avenue:** This is an active construction area – do not touch or cross the barriers or walk through the work area. Please cross the street to find safe areas to walk.
- **The bike lane** along Logan between Park Avenue and N 6th Street is closed due to construction. Please cross over to the east side of Logan Avenue or take an alternate route.
- **Upcoming work:** There is prep work being done inside the pipe, including pipe cleaning and building a platform for workers to stand on when they are inside the ESI pipe. Lining work is expected to start as soon as next week.
- Once in-pipe work begins, there will be temporary lane closures on Logan Avenue so crews can access the pipe.

Burnett Avenue will remain closed at N 6th Street for several months.
