

East Side Interceptor Lining Project

Conveyance System Improvements in Renton

Eastside Interceptor Project - update for the week of July 17 - 24

The [Eastside Interceptor \(ESI\)](#) is one of the main sewer lines that brings wastewater from eastside homes and business to the South Treatment Plant in Renton. This project will repair about 3,700 feet of the line, which is corroded and nearing the end of its service life (see [map](#) below).

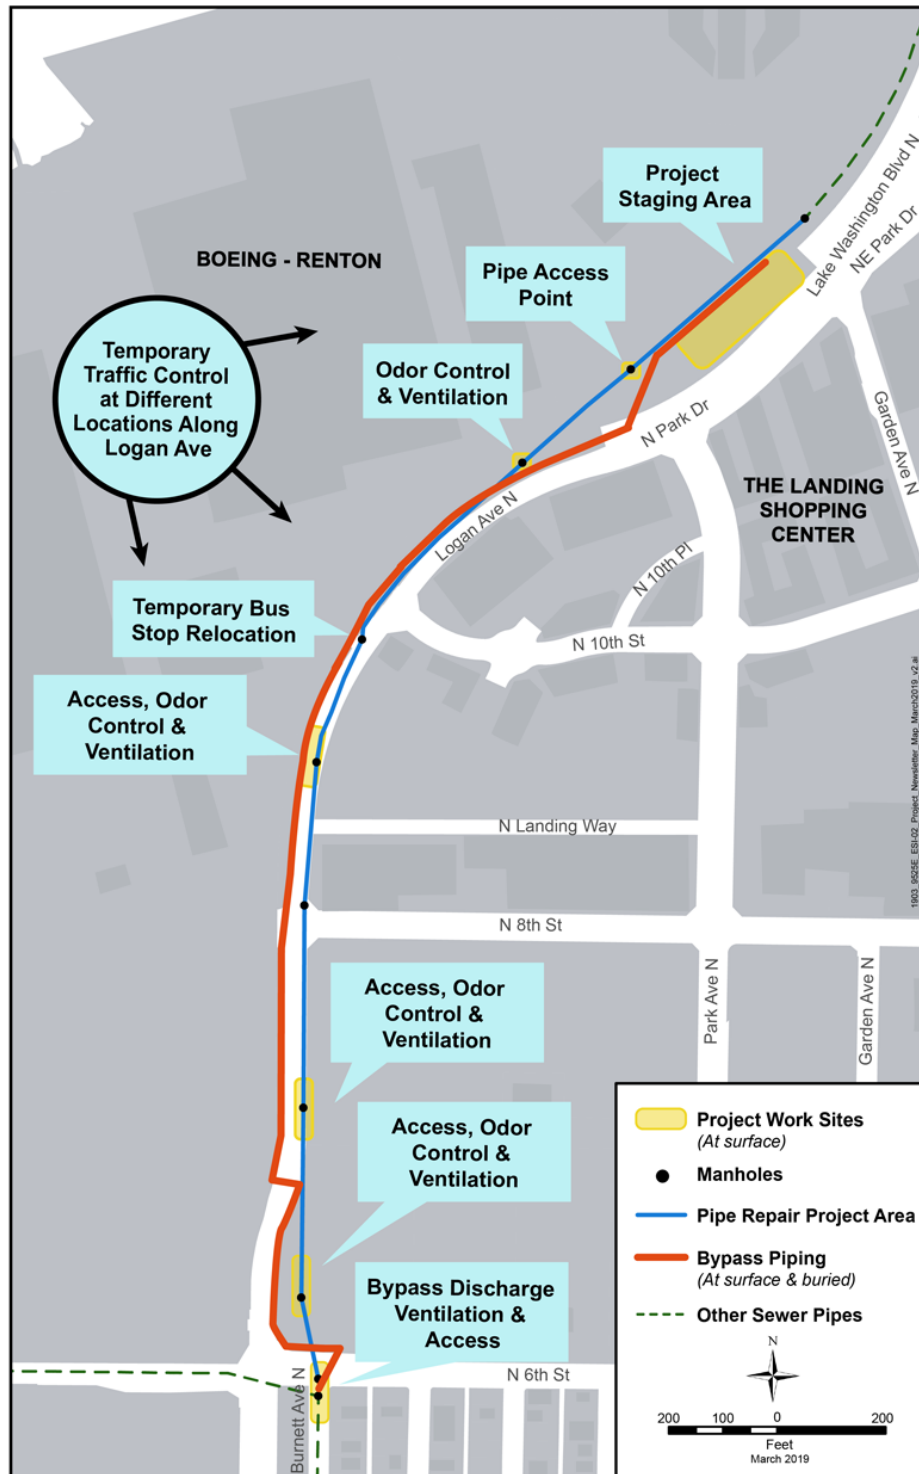

For July 17 - 24:

- **Project staging area:** The temporary construction bypass system is now operating full time. Noise monitoring measures are in place.
- **Night work this week:** there will be night work tonight, July 17. Otherwise, night work will be intermediate and short term.
- **Barriers along Logan Avenue:** This is an active construction area – do not touch or cross the barriers or walk through the work area. Please cross the street to find safe areas to walk.
- **The bike lane** along Logan between Park Avenue and N 6th Street is closed due to construction. Please cross over to the east side of Logan Avenue or take an alternate route.
- **Upcoming work:** Prep work continues inside the pipe, including pipe cleaning and building a platform for workers to stand on when they are inside the ESI pipe.
- Once in-pipe work begins, there will be temporary lane closures on Logan Avenue so crews can access the pipe.
- **Burnett Avenue** will remain closed at North 6th Street for several months. There is a ventilation fan operating here – for blowing air into the pipe – so no odors are expected from this operation.
