

Eastside Interceptor Project - update for the week of Aug 29 - Sept 4

The <u>Eastside Interceptor (ESI)</u> is one of the main sewer lines that brings wastewater from eastside homes and business to the South Treatment Plant in Renton. This project will repair about 3,700 feet of the line, which is corroded and nearing the end of its service life (see map below).

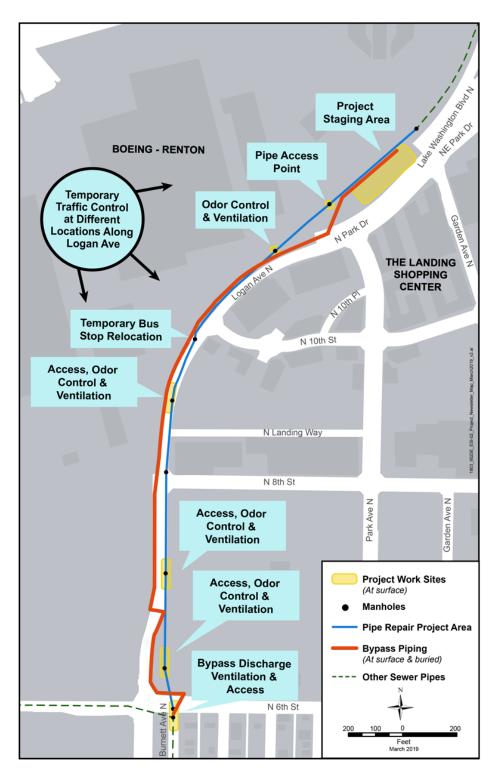

For August 29 through September 4:

- **Project staging area:** The temporary construction bypass system is now operating full time. Noise monitoring measures are in place.
- Work hours and night work: work hours are generally Monday-Saturday, 6:00 am— 6:30 pm. No night work is planned for this coming week; however, some limited night work may be needed for the project.
- Odor control is being utilized for the project this includes odor scrubbers and modifying the air flows in the pipe. Because crews are working in the pipe, fresh air needs to be circulated through the pipe. Some odors will be unavoidable, but we have tried to reduce the odors wherever possible.
- Upcoming and current work: Lining work continues this week.
- There is a temporary lane closure along Logan Avenue just south of North 8th Street, to allow crews and equipment to access the pipe. Traffic control usually occurs Monday-Saturday, 6:00 am 6:30 pm. This is a one-lane closure only.
- **Barriers along Logan Avenue:** This is an active construction area do not touch or cross the barriers or walk through the work area. Please cross the street to find safe areas to walk.
- The bike lane along Logan Avenue between Park Avenue and North 6th Street is closed due to construction. Please cross over to the east side of Logan Avenue or take an alternate route.
- **Burnett Avenue** will remain closed at North 6th Street for several months. Temporary odor control units are now operating here.
