

## **East Side Interceptor Lining Project**

### Conveyance System Improvements in Renton

### ***Eastside Interceptor Project - update for the week of Oct 16 – 23***

The [Eastside Interceptor \(ESI\)](#) is one of the main sewer lines that brings wastewater from eastside homes and business to the South Treatment Plant in Renton. This project will repair about 3,700 feet of the line, which is corroded and nearing the end of its service life (see [map](#) below).

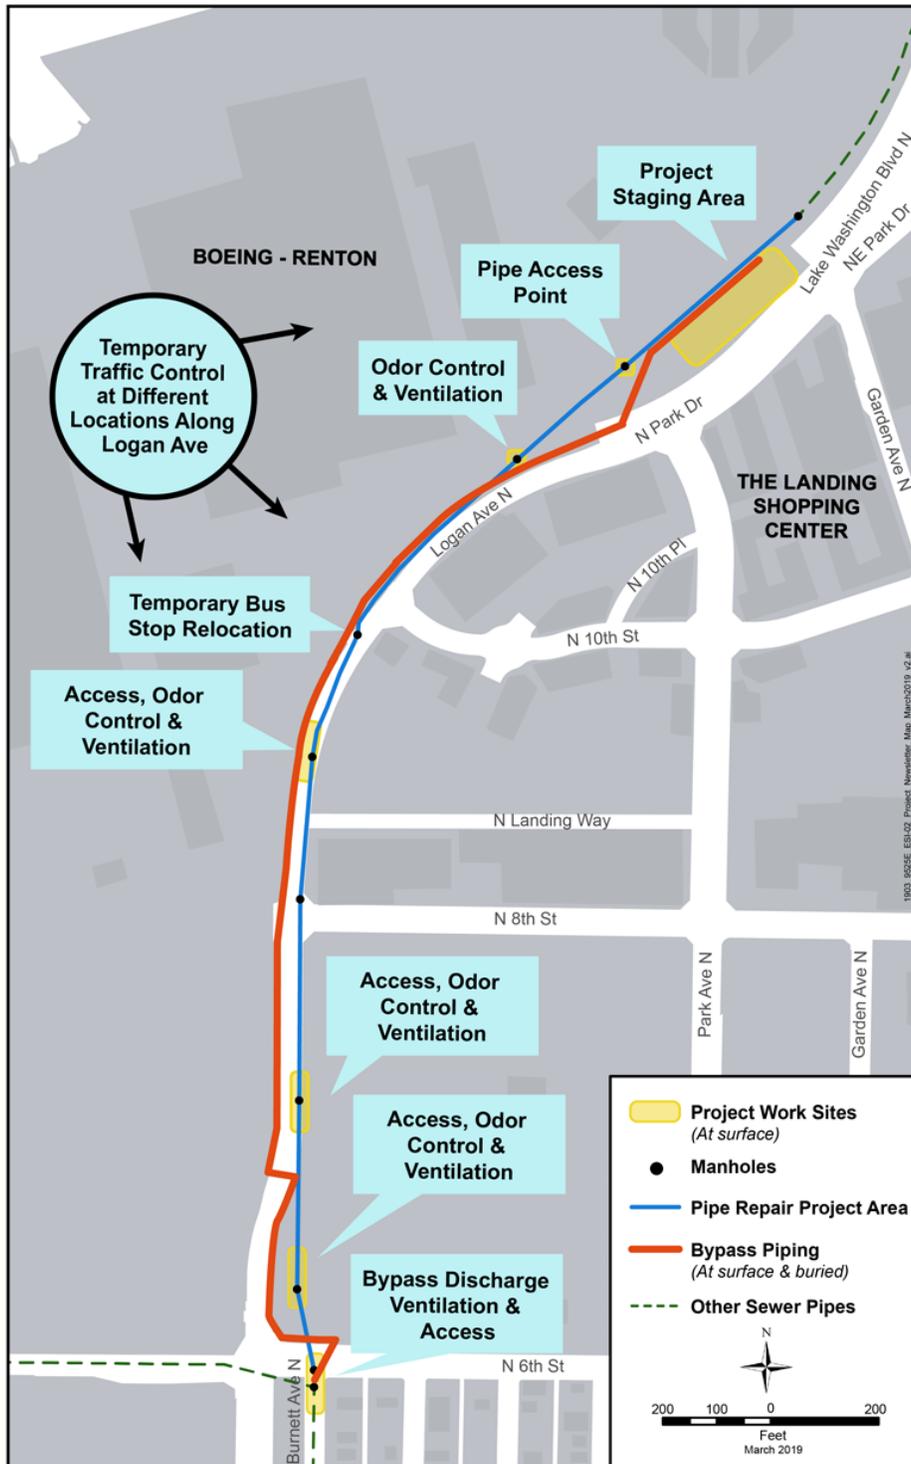

For October 16 through 23:

- **Upcoming and current work:** Lining work is now done. The contractor has begun removing platforms and support equipment from within the pipeline. The temporary construction bypass system is now operating.
- **A temporary lane closure along Logan Avenue continues this week.** This will be around the clock and will allow crews and equipment to access the pipe.
- **Work hours and night work:** Currently work is being done around the clock, with occasional work occurring on Sundays.
- **Odor control is being utilized for the project:** This includes odor scrubbers, modifying the air flows in the pipe, and installing carbon filters. Because crews are working in the pipe, fresh air needs to be circulated through the pipe. Some odors will be unavoidable, but we continue to try to reduce the odors wherever possible.
- **Beginning next week (around October 23), ventilation and odor control equipment will need to be turned on at North 5th St. and Burnett Ave. North. This is expected to last only 1-2 days. People may notice some odors while this equipment is in temporary use.**
- **Barriers along Logan Avenue:** This is an active construction area – do not touch or cross the barriers or walk through the work area. Please cross the street to find safe areas to walk.
- **The bike lane** along Logan Avenue between Park Avenue and North 6th Street is closed due to construction. Please cross over to the east side of Logan Avenue or take an alternate route.
- **Burnett Avenue** will remain closed at North 6th Street for several months. Temporary odor control units and carbon filters are now operating here.
