

King County

2019-2020 CIP APPENDIX BIENNIAL BUDGET

Executive Proposed

Office of the King County Executive
Office of Performance, Strategy and Budget

September 2018

King County

Dow Constantine King County Executive

Casey Sixkiller, Chief Operating Officer

Rachel Smith, Chief of Staff

Whitney Abrams, Chief People Officer

Gary Kurihara, Chief Performance Officer

Office of Performance, Strategy and Budget

Dwight Dively, Director

Michael Jacobson, Deputy Director for Performance and Strategy

Lauren Smith, Regional Planning Director

Office of Performance, Strategy and Budget (budget-related staff):

Van Badzik
Andrew Bauck
Abigail Beatty
Sid Bender
Hannah Burn
Kerri Char
Andrew Cronholm
Kate Davis
Tricia Davis
Shelley DeWys
Helene Ellickson
Ayesha Fountain
Karen Freeman Meyering
Dan Grant
Jutta Joesch
Nanette Lowe
Sondra McCaw
Jeannie Macnab
Anna Markee
Rebecca Maskin
Emmy McConnell
Chris McGowan
Ivan Miller
Pritti Mody-Pan
Mike Morrison
Patty Noble-Desy
Kapena Pflum
Drew Pounds
Jim Record
Katie Ross
Aaron Rubardt

Jillian Scheibeck
Gaukhar Serikbayeva
Elly Slakie
Marcus Stubblefield
T.J. Stutman
Jim Walsh
Karen Wolf

Thanks to other Executive Office staff who worked on the budget:

Shannon Braddock
James Bush
Kelli Carroll
Alex Fryer
Chad Lewis
Dylan Ordoñez
Megan Pedersen
April Putney
Arun Sambataro
Tatiana Saroca
Megan Smith
Gina Topp
Matias Valenzuela
LaKeidra Williams

Office of Economic and Financial Analysis

Dave Reich, Chief Economist
Anthony Cacallori
Laurie Elofson

NARRATIVES

WLCF SNO - SNO RVRFRNT RCH

1047226

1. CURRENT PROJECT SCOPE

Conservation Futures Snoqualmie – Snoqualmie Riverfront Reach: This is a multi-year project to remove frequently flooded homes and complete a passive waterfront park and Riverwalk Trail along the Snoqualmie River. The project area links Snoqualmie's historic downtown on Railroad Avenue SE to the Snoqualmie Valley Regional Trail. The City seeks to acquire properties located in the FEMA-designated 100-year floodway which have experienced repetitive flood damage. Acquisition and restoration of the riverfront will improve habitat quality in this important wildlife habitat corridor. Restoration will contribute to Snoqualmie River water quality improvement by planting native vegetation and facilitating increased shading on the southern banks of the Snoqualmie (the river is 303(d) listed for temperature).

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

4. PROJECT BENEFITS/OUTCOMES

The award funds acquisition of several of the targeted seven parcels (1.2 acres) along the Snoqualmie River in the City of Snoqualmie.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLCF SNO - SNO RVRFRNT RCH

1047226

5. BUDGET REQUEST BASIS

2019 fiscal year: Snoqualmie has prioritized four parcels containing approximately one acre of land in its current request. The CFT Committee recommendation will fully match the \$450,000 secured in Flood Control Zone District funds for three parcels, and will provide additional CFT funding that could be matched by Floodplains by Design or other match funding still being sought. Snoqualmie has made steady progress on acquisitions in recent years. In the broader 2.2-mile reach of the river, Snoqualmie has acquired more than 66 acres across 42 riverfront parcels. Within this specific project area, there are just 16 of out of a total of 28 residential properties remaining to be acquired.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact.

8. PROJECT STATUS

Ongoing project

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. The Committee considered various levels of funding for the project, and determined the recommended amount based on a variety of factors such as urgency, potential to phase, scope of project, open space benefits achieved, among others. An alternative to funding could be to abandon the project, however that would be unwarranted because there are willing sellers.

10. OTHER AGENCY INVOLVEMENT

The City of Snoqualmie.

11. ART ELIGIBILITY

This project is not eligible for 1% Art. Project is for real estate acquisitions only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide public green space accessible to the general public, preserve or enhance health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Conservation Futures urban and rural open space acquisition projects help King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years. The projects help King County and its cities meet countywide GHG emissions reduction targets and adequately prepare for the impacts of climate change through permanently conserving remaining high-priority farm, forest, and other open spaces. Climate change response benefits of CFT-funded open space acquisitions include reduced trip distances by providing close-to-home open spaces; the capture of CO2 emissions in trees and other site vegetation; and reducing anticipated future flooding impacts through preserving or increasing flood storage capacity.

NARRATIVES

WLCF ISS - ISSAQUH CRK WTRWY

1047228

1. CURRENT PROJECT SCOPE

Conservation Futures Issaquah - Issaquah Creek Waterways: The Issaquah Creek Waterways project has multiple goals of preserving riparian habitat, creating an urban greenway and creekwalk opportunity, allowing for future restoration, protecting water quality, and improving the quality of life within the city. Issaquah has protected dozens of acres of natural lands along several miles of Issaquah Creek, a WRIA 8 Tier 1 priority stream which supports threatened chinook. Issaquah is providing local matching funds from a city park bond, which has helped them to continuously and successfully pursue acquisitions as properties become available. Through recent city park planning processes, Issaquah residents have continued to express strong support to preserve open space and add more trails, especially near Issaquah Creek.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

4. PROJECT BENEFITS/OUTCOMES

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLCF ISS - ISSAQUH CRK WTRWY

1047228

5. BUDGET REQUEST BASIS

This year, the priority parcels expand protection along Issaquah Creek on Front Street just south of downtown to the intersection with Newport Way SE, and further downstream on Issaquah Creek near Pickering Farm. Issaquah has also included additional parcels in the long-term scope which could protect upland tributaries and hillsides that provide broader watershed protection, public land connections, habitat conservation, and scenic resource protection. The City still has an existing CFT fund balance in this project. This new award of \$500,000 will supplement those funds, allowing acquisition of an additional three priority parcels, up to two acres in size, based on the current priorities identified.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact.

8. PROJECT STATUS

Ongoing project

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. The Committee considered various levels of funding for the project, and determined the recommended amount based on a variety of factors such as urgency, potential to phase, scope of project, open space benefits achieved, among others. An alternative to funding could be to abandon the project, however that would be unwarranted because there are willing sellers.

10. OTHER AGENCY INVOLVEMENT

The City of Issaquah.

11. ART ELIGIBILITY

This project is not eligible for 1% Art. Project is for real estate acquisitions only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide public green space accessible to the general public, preserve or enhance health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Conservation Futures urban and rural open space acquisition projects help King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years. The projects help King County and its cities meet countywide GHG emissions reduction targets and adequately prepare for the impacts of climate change through permanently conserving remaining high-priority farm, forest, and other open spaces. Climate change response benefits of CFT-funded open space acquisitions include reduced trip distances by providing close-to-home open spaces; the capture of CO2 emissions in trees and other site vegetation; and reducing anticipated future flooding impacts through preserving or increasing flood storage capacity.

NARRATIVES

WLCF KC BEAR CK WATERWAYS

1116231

1. CURRENT PROJECT SCOPE

Conservation Futures King County - Bear Creek Waterways. The county has worked for decades to protect lands along Bear Creek and its tributaries through fee and easement acquisition and current use taxation enrollment. The WRIA 8 Salmon Conservation Plan and the Waterways 2000 Report recommended acquisition of many parcels to preserve riparian habitat, floodplain, habitat-forming process areas, adjacent wetlands, and upland headwaters.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizens Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. 4. PROJECT BENEFITS/OUTCOMES

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WLCF KC BEAR CK WATERWAYS

1116231

5. BUDGET REQUEST BASIS

The project proposes to acquire four acres in two parcels (062510-0125 & -0136) that would extend public ownership in a reach which already has fairly extensive protection along the creek corridor from past acquisitions. These parcels contain hundreds of feet of Bear Creek and enable additional restoration and preservation. Within the Middle Bear Creek scope, there were several King County Roads mitigation sites declared surplus in this reach. The Committee did not recommend funding at this time.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact.

8. PROJECT STATUS

Ongoing project

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. NARRATIVES

WLCF KC COTTAGE&COLD CREEK NA

1122060

1. CURRENT PROJECT SCOPE

Conservation Futures King County - Cottage & Cold Creek Natural Areas: This project includes Cottage Lake Creek and Cold Creek within its scope. Both Cold and Cottage Lake Creeks provide important habitat for resident and migratory birds, a diversity of wildlife, and Chinook, Coho, sockeye, and cutthroat trout. The broader Bear Creek basin is considered one of three core areas for WRIA 8 chinook salmon populations, with several hundred chinook spawning annually in the basin (2/3 of these in Cottage Lake Creek).

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

The project focuses on a set of parcels comprising 36 acres that are under one family ownership. These contain 0.55 river miles of regionally significant chinook spawning habitat on Cottage Lake Creek. The entire purchase will take multiple years of fundraising. The Committee recommends funding toward initial acquisition and purchasing a parcel in this reach.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact.

8. PROJECT STATUS

9. ALTERNATIVES ANALYSIS

This recommended award adds funds to an ongoing project, under which the applicant has been successful over the years in securing CFT funding awards, providing matching funds, negotiating with landowners, and acquiring properties.

10. OTHER AGENCY INVOLVEMENT

No other agencies involved with this project.

11. ART ELIGIBILITY

No, this project is not eligible for 1% Art. Project is for real estate acquisition only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide public green space accessible to the general public, preserve or enhance health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Conservation Futures urban and rural open space acquisition projects help King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years. The projects help King County and its cities meet countywide GHG emissions reduction targets and adequately prepare for the impacts of climate change through permanently conserving remaining high priority farm, forest, and other open spaces. Climate change response benefits of CFT-funded open space acquisitions include reduced trip distances by providing close to home open spaces; the capture of CO2 emissions in trees and other site vegetation; and reducing anticipated future flooding impacts through preserving or increasing flood storage capacity.

NARRATIVES

WLCF KC MITCHELL HILL FOR ADD

1123828

1. CURRENT PROJECT SCOPE

Conservation Futures King County - Mitchell Hill Forest Additions: The Mitchell Hill Forest Additions project would add to 2,000+ acres of King County lands protected east of Issaquah in the Duthie Hill/Grand Ridge/Mitchell Hill/Canyon Creek/Preston Ridge complex, which connect to an additional 2,000+ acres of Washington State DNR lands. Acquisitions in this area preserve second growth forest, in an area where King County may perform forest stewardship to improve ecological health. The protected lands provide habitat benefits for upland species (including black bear, cougar, and approximately 80 species of resident birds) and water quality benefits to streams located in the upper reaches of the Patterson Creek, Raging River, and Issaquah Creek basins. King County and Washington State Department of Natural Resources partner to connect, develop, and maintain trails in this area which is popular for hiking, mountain biking, and horseback riding.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizens Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

5. BUDGET REQUEST BASIS

The funding award will allow acquisition of approximately 3 or 4 parcels of the targeted 67 acres (7 parcels) identified for conservation in the project scope – likely focusing on forested parcels adjacent to Canyon Creek Natural Area and parcels at the northeast edge of Mitchell Hill Forest.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact.

8. PROJECT STATUS

Ongoing project

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. The Committee considered various levels of funding for the project, and determined the recommended amount based on a variety of factors such as urgency, potential to phase, scope of project, open space benefits achieved, among others. An alternative to funding could be to abandon the project, however that would be unwarranted because there are willing sellers.

10. OTHER AGENCY INVOLVEMENT

No other agency involved with this project.

11. ART ELIGIBILITY

This project is not eligible for 1% Art. Project is for real estate acquisitions only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide public green space accessible to the general public, preserve or enhance environmental health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Conservation Futures urban and rural open space acquisition projects help King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years. The projects help King County and its cities meet countywide GHG emissions reduction targets and adequately prepare for the impacts of climate change through permanently conserving remaining high-priority farm, forest, and other open spaces. Climate change response benefits of CFT-funded open space acquisitions include reduced trip distances by providing close-to-home open spaces; the capture of CO2 emissions in trees and other site vegetation; and reducing anticipated future flooding impacts through preserving or increasing flood storage capacity.

NARRATIVES

WLCF KC WAYNE GC BACK NINE

1126725

1. CURRENT PROJECT SCOPE

Conservation Futures King County - Wayne Golf Course Back Nine: This 37.72-acre project will provide funding towards the purchase of the "Back Nine" holes of the Wayne Golf Course, including a wooded hillside, east of Waynita Way NE in Bothell. This site is currently unprotected from future development and the goal is to purchase it to preserve the open space and prevent future residential development. A portion of the property may in the future be used for riparian habitat mitigation restoration that enhances water quality and riparian habitat for the migratory salmonid population of the Sammamish Slough, and the project will also provide passive public access.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizens Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. NARRATIVES

WLCF KC WAYNE GC BACK NINE

1126725

5. BUDGET REQUEST BASIS

The Committee understands that this is the final phase of fundraising and land acquisition at the Back Nine, to conserve the remaining five acres of land (parcel 182605-9025). There is \$2.6 million of RCO funding secured for Wayne Golf Course which the Committee understands will be applied to the Back Nine Phase 1 land. The RCO funds will reimburse \$2.6 million in CFT from the Phase 1 purchase. King County should be able to purchase an easement on the remaining five acres with the reimbursed \$2.6 million of CFT, \$284,139 CFT reallocated from the Front Nine, and the above recommended \$650,000 award. Match is provided by RCO and Parks Levy funds used in the Phase 1 purchase.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact.

8. PROJECT STATUS

Ongoing project.

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. The Committee considered various levels of funding for the project, and determined the recommended amount based on a variety of factors such as urgency, potential to phase, scope of project, open space benefits achieved, among others. An alternative to funding could be to abandon the project, however that would be unwarranted because there are willing sellers.

10. OTHER AGENCY INVOLVEMENT

The City of Bothell.

11. ART ELIGIBILITY

No, this project is not eligible for 1% Art. Project is for real estate acquisitions only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide public green space accessible to the general public, preserve or enhance health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community..

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Conservation Futures urban and rural open space acquisition projects help King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years. The projects help King County and its cities meet countywide GHG emissions reduction targets and adequately prepare for the impacts of climate change through permanently conserving remaining high-priority farm, forest, and other open spaces. NARRATIVES

WLCF KC GR LWR NEWAUKUM CK

1126743

1. CURRENT PROJECT SCOPE

Conservation Futures King County - Lower Newaukum Creek: The Lower Newaukum Creek project seeks to protect riparian and adjacent upland habitat in the lower Newaukum Creek basin, one of the two most significant chinook and steelhead spawning habitat areas in the Green River Watershed. The Newaukum ravine is one of the largest in western Washington, four miles long and 2/3 of a mile wide at its widest point. The ravine's slopes primarily support mature forest on both sides of the creek, and this area is part of a corridor for wildlife movement linking to thousands of acres of protected state and county lands along the Green River. Newaukum Creek is on the Clean Water Act 303(d) list for not meeting water quality standards such as water temperature. Preserving forest cover potentially helps improve water quality. Each year, there are a range of parcels identified in the scope of the project.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

4. PROJECT BENEFITS/OUTCOMES

NARRATIVES

WLCF KC GR LWR NEWAUKUM CK

1126743

5. BUDGET REQUEST BASIS

This year, the scope focused on three parcels at the southern end of the ravine (two of which are part of a larger landholding in one family ownership), one parcel located about 1.5 miles north, and two parcels located along the Green River near Whitney Bridge Park. During the Committee review process, King County received approval for a scope addition adding two parcels to the existing scope (parcel 732770-0050 on the Green River, and parcel 112107-9011 in the Kanaskat area which was already in the Middle Green River Restoration project scope). There was also a scope clarification that the project is prioritizing parcel 282106-9004 which was formerly scoped as a secondary parcel.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact.

8. PROJECT STATUS

Ongoing project

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. The Committee considered various levels of funding for the project, and determined the recommended amount based on a variety of factors such as urgency, potential to phase, scope of project, open space benefits achieved, among others. An alternative to funding could be to abandon the project, however that would be unwarranted because there are willing sellers.

10. OTHER AGENCY INVOLVEMENT

No other agencies involved with this project.

11. ART ELIGIBILITY

This project is not eligible for 1% Art. Project is for real estate acquisitions only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide public green space accessible to the general public, preserve or enhance environmental health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Conservation Futures urban and rural open space acquisition projects help King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years. The projects help King County and its cities meet countywide GHG emissions reduction targets and adequately prepare for the impacts of climate change through permanently conserving remaining high-priority farm, forest, and other open spaces. Climate change response benefits of CFT-funded open space acquisitions include reduced trip distances by providing close-to-home open spaces; the capture of CO2 emissions in trees and other site vegetation; and reducing anticipated future flooding impacts through preserving or increasing flood storage capacity.

NARRATIVES

WLCF KC GR MID NEWAUKUM SP CK

1126744

1. CURRENT PROJECT SCOPE

Conservation Futures King County - Middle Newaukum/Big Spring Creek: This project is an ongoing multiple-parcel riparian habitat acquisition project that will provide additions to the Big Spring/Newaukum Creek Natural Area. The goal is to protect salmon habitat and water quality on Newaukum Creek, and to maintain cold water flow conditions from Big Spring Creek into Newaukum Creek (as described above, listed on the Clean Water Act 303(d) list for temperature among other factors). The targeted parcels contain important salmonid, bird and wildlife habitat, and are part of a much larger wetland system that used to extend across the plateau. Many of the targeted parcels have been farmed or used for livestock but are historically wetlands and are seasonally inundated. The applicant works with the County agriculture program to refine the approach to acquisition in Agricultural Production District. These lands are also very close to the edge of Enumclaw and acquisitions can help define the urban boundary between the city and the rural area.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

4. PROJECT BENEFITS/OUTCOMES

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WLCF KC GR MID NEWAUKUM SP CK

1126744

5. BUDGET REQUEST BASIS

The recommended award will provide funding to acquire a few parcels in several stretches of Newaukum and Big Spring Creek, to remove structures built in or near wetlands and allow for restoration.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact.

8. PROJECT STATUS

Ongoing project

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. The Committee considered various levels of funding for the project, and determined the recommended amount based on a variety of factors such as urgency, potential to phase, scope of project, open space benefits achieved, among others. An alternative to funding could be to abandon the project, however that would be unwarranted because there are willing sellers.

10. OTHER AGENCY INVOLVEMENT

No other agencies involved with this project.

11. ART ELIGIBILITY

This project is not eligible for 1% Art. Project is for real estate acquisitions only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide public green space accessible to the general public, preserve or enhance environmental health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Conservation Futures urban and rural open space acquisition projects help King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years. The projects help King County and its cities meet countywide GHG emissions reduction targets and adequately prepare for the impacts of climate change through permanently conserving remaining high-priority farm, forest, and other open spaces. Climate change response benefits of CFT-funded open space acquisitions include reduced trip distances by providing close-to-home open spaces; the capture of CO2 emissions in trees and other site vegetation; and reducing anticipated future flooding impacts through preserving or increasing flood storage capacity.

The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

This proposal targets 108 acres (022305-9001, -9002, and -9004) that are part of a historic family landholding on the south side of Cougar Mountain. These parcels contain mature forest, tributaries to May Creek, and trails that connect to Cougar Mountain and to a public road. There are additional parcels adjacent and nearby which may be of future interest to the County. During the Committee review process, King County received approval for a scope addition adding nearby parcels to the scope of current funds already awarded at Cougar Mountain (352405-9010, -9022, -9034, -9021, and 022305-9022).

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

NARRATIVES

WLCF KC LOWER SOOS CREEK

1129256

1. CURRENT PROJECT SCOPE

Conservation Futures King County - Lower Soos Creek: This project focuses on protecting land in the lower reaches of Soos Creek and its tributaries. The lower three miles of Soos Creek are core spawning and rearing areas for Green River fall chinook salmon and steelhead, and are an important corridor for other fish and wildlife species. The character of the creek varies through this reach, at some points meandering with off-channel wetlands and at other points located in more of a forested ravine. This area is impacted by noise from adjacent Pacific Raceways. Soos Creek is on the Clean Water Act Section 303(d) list for not meeting various water quality standards including temperature. Preserving forest cover potentially helps improve water quality. Development is scattered along these reaches of Soos Creek, with homes on both sides of the creek (requiring bridges to cross the creek at various points).

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

4. PROJECT BENEFITS/OUTCOMES

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WLCF KC LOWER SOOS CREEK

1129256

5. BUDGET REQUEST BASIS

Acquisition helps prevent construction of new homes and access routes, or allows for removal of existing structures and site restoration. The recommended funding should allow acquisition of one or two parcels.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact

8. PROJECT STATUS

Ongoing project.

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. The Committee considered various levels of funding for the project, and determined the recommended amount based on a variety of factors such as urgency, potential to phase, scope of project, open space benefits achieved, among others. An alternative to funding could be to abandon the project, however that would be unwarranted because there are willing sellers.

10. OTHER AGENCY INVOLVEMENT

No other agencies involved with this project.

11. ART ELIGIBILITY

This project is not eligible for 1% Art. Project is for real estate acquisition only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide green space accessible to the general public, preserve or enhance health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Conservation Futures urban and rural open space acquisition projects help King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years. The projects help King County and its cities meet countywide greenhouse gas emissions reduction targets and adequately prepare for the impacts of climate change through permanently conserving remaining high priority farm, forest, and other open spaces. Climate change response benefits of CFT-funded open space acquisitions include reduced trip distances by providing close-to-home open spaces; the capture of CO2 emissions in trees and other site vegetation; and reducing anticipated future flooding impacts through preserving or increasing flood storage capacity.

1129267

1. CURRENT PROJECT SCOPE

Conservation Futures King County - Piner Point Natural Area: This project is a multiple-year effort to purchase properties on Piner Point on the south end of Maury Island. Piner Point is a bluff-backed shoreline where sand and gravel from the hillside naturally erode down to the beach, feeding an intertidal shoreline sediment drift cell that flows to the north with the Puget Sound currents. The properties contain a madrone-dominated forest that is unusual in Puget Sound lowlands. King County has been acquiring properties at Piner Point for several years to remove shoreline armoring and to restore the natural beach functions. This area contains spawning areas for three species of forage fish (pacific herring, surf smelt, and sand lance), eelgrass beds, and other nearshore features important for juvenile salmonid habitat. These features help support the food chain for many types of terrestrial and marine wildlife and birds. This is a regionally important project for its preservation of Puget Sound shoreline and support of chinook salmon populations. The site has scenic views of south Puget Sound and Mount Rainier.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLCF KC PINER POINT NAT AREA

1129267

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

The current proposal seeks funds to continue to acquire small inholding parcels between Piner Point and Northilla Natural Areas – targeting 1.75 acres across five parcels. The applicant has been successful in securing significant state RCO funding for this project. The recommended award is entirely Conservation Futures funding, as RCO funds serve as match.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact.

8. PROJECT STATUS

Ongoing project

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. The Committee considered various levels of funding for the project, and determined the recommended amount based on a variety of factors such as urgency, potential to phase, scope of project, open space benefits achieved, among others. An alternative to funding could be to abandon the project, however that would be unwarranted because there are willing sellers.

10. OTHER AGENCY INVOLVEMENT

No other agencies involved with this project.

11. ART ELIGIBILITY

This project is not eligible for 1% Art. Project is for real estate acquisition only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide green space accessible to the general public, preserve or enhance health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Conservation Futures urban and rural open space acquisition projects help King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years. The projects help King County and its cities meet countywide GHG emissions reduction targets and adequately prepare for the impacts of climate change through permanently conserving remaining high-priority farm, forest, and other open spaces. Climate change response benefits of CFT-funded open space acquisitions include reduced trip distances by providing close-to-home open spaces; the capture of CO2 emissions in trees and other site vegetation; and reducing anticipated future flooding impacts through preserving or increasing flood storage capacity.

NARRATIVES

WLCF KC FARMLAND ENUM APD/TDR

1129269

1. CURRENT PROJECT SCOPE

Conservation Futures King County - Enumclaw Agriculture Production District / Transfer of Development Rights: The goal of this project is to preserve prime agricultural lands within the Enumclaw Plateau and Green River Valley Agricultural Production Districts (APDs), and in nearby rural areas important to the farming economy. The continued loss of farms reduces the availability of valuable agricultural soils, and lessens the number farms which can support and maintain the economic basis for healthy agricultural production. This project helps King County to both protect viable farmland and support the broader agricultural economy. The matching funds for the project are Transfer of Development Rights funds.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. 4. PROJECT BENEFITS/OUTCOMES

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLCF KC FARMLAND ENUM APD/TDR

1129269

5. BUDGET REQUEST BASIS

The current project scope includes fourteen farms totaling 735 acres. The full funding request would have funded five to seven transactions, on which the County would acquire conservation easements and transfer development rights on a few of the farms in the full scope. Many of these lands are farms which grow food or flowers, or which support the local dairy industry through hay production, livestock grazing, or other dairy infrastructure.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact.

8. PROJECT STATUS

Ongoing project.

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. NARRATIVES

WLCF KC FARMLAND GREEN APD/TDR

1129272

1. CURRENT PROJECT SCOPE

Conservation Futures King County - Lower Green River Valley Farmland Sander's Estate: This project has a goal of helping to preserve farmland in the Lower Green River Plateau APD between Kent and Auburn. This project supports the King County Executive's local food initiative goal of returning 400 acres of fallow farmland per year back into active farming. The farms are located between Kent and Auburn, and they serve as an important and scenic urban separator that prevents the two cities from merging into one continuous band of urban development.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizens Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

4. PROJECT BENEFITS/OUTCOMES

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLCF KC FARMLAND GREEN APD/TDR

1129272

5. BUDGET REQUEST BASIS

This project seeks to acquire a conservation easement and transfer development rights to permanently protect one farm and its forested wetlands in the Lower Green River APD. The Sanders Estate is a 23-acre parcel (352204-9019) located on S. 277th Street. The parcel mostly is located within the Lower Green River APD, with a portion located in unincorporated urban King County just east of Kent. The Sanders Estate is a wedding venue, where the landowners seek to return 5-6 acres of the property to agricultural uses, as a potential source for flowers and produce used for wedding activities. The easement would cover up to 20 acres of the property, encompassing some of the wetlands on site.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact.

8. PROJECT STATUS

Ongoing project

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. The Committee considered various levels of funding for the project, and determined the recommended amount based on a variety of factors such as urgency, potential to phase, scope of project, open space benefits achieved, among others. An alternative to funding could be to abandon the project, however that would be unwarranted because there are willing sellers.

10. OTHER AGENCY INVOLVEMENT

No other agencies involved with this project.

11. ART ELIGIBILITY

No, this project is not eligible for 1% Art. Project is for real estate acquisition only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide public green space accessible to the general public, preserve or enhance health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Conservation Futures urban and rural open space acquisition projects help King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years. The projects help King County and its cities meet countywide GHG emissions reduction targets and adequately prepare for the impacts of climate change through permanently conserving remaining high-priority farm, forest, and other open spaces. Climate change response benefits of CFT-funded open space acquisitions include reduced trip distances by providing close-to-home open spaces; the capture of CO2 emissions in trees and other site vegetation; and reducing anticipated future flooding impacts through preserving or increasing flood storage capacity.

NARRATIVES

WLCF FED HYLEBOS W/SHED CONS

1132069

1. CURRENT PROJECT SCOPE

Conservation Futures Federal Way - Hylebos Watershed Conservation: The City of Federal Way, with strong support from the community and the Save Weyerhaeuser Campus group, is working on a regionally significant project to protect open space on the former Weyerhaeuser campus. The project targets about 54 acres of Category 1 wetland, wetland buffer, lakefront, and associated forests along North Lake in the headwaters of the East Hylebos Watershed. The campus functions as a community separator near the edge of the urban growth area. The acquisition would preserve a popular trail system adjacent to a WDFW boat launch. The long-term vision for conservation of this campus is still being developed (e.g. as related to the nearby bonsai and rhododendron gardens that are outside of the current project scope).

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

4. PROJECT BENEFITS/OUTCOMES

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLCF FED HYLEBOS W/SHED CONS

1132069

5. BUDGET REQUEST BASIS

Federal Way was already awarded \$1 million in 2018 CFT funding, matched with \$1 million in city surface water management funds. Federal Way and Forterra have received \$500,000 in state legislative appropriation toward acquisition. The recommended 2019 CFT award of \$500,000 would bring the total amount of funds raised to \$3 million. The City has applied this spring for a matching \$3 million from the state Recreation and Conservation Office, which would result in \$6 million total if awarded. The CFT Committee recognizes that this is a multi-year project, the costs of which may exceed \$6 million, and invites Federal Way to return with additional funding requests if more project funding is needed.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact.

8. PROJECT STATUS

Ongoing project

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. The Committee considered various levels of funding for the project, and determined the recommended amount based on a variety of factors such as urgency, potential to phase, scope of project, open space benefits achieved, among others. An alternative to funding could be to abandon the project, however that would be unwarranted because there are willing sellers.

10. OTHER AGENCY INVOLVEMENT

The City of Federal Way.

11. ART ELIGIBILITY

No, this project is not eligible for 1% Art. Project is for real estate acquisition only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide public green space accessible to the general public, preserve or enhance health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Conservation Futures urban and rural open space acquisition projects help King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years. The projects help King County and its cities meet countywide GHG emissions reduction targets and adequately prepare for the impacts of climate change through permanently conserving remaining high priority farm, forest, and other open spaces. Climate change response benefits of CFT-funded open space acquisitions include reduced trip distances by providing close to home open spaces; the capture of CO2 emissions in trees and other site vegetation; and reducing anticipated future flooding impacts through preserving or increasing flood storage capacity.

NARRATIVES

WLCF KC FROG HOLLER FOREST VI

1132091

1. CURRENT PROJECT SCOPE

Conservation Futures King County - Frog Holler Forest Vashon Island: The County has recently started a multi-year project to conserve more than 500 acres of upland forest on the south end of Vashon Island, creating a community forest with passive recreational opportunities. The vision is to extend trails to the north, connecting via fee and easement acquisitions to Fisher Creek Forest and Misty Isle Farm. The vision also includes conservation of additional large forested landholdings with trail opportunities to the south of Frog Holler Forest. This site contains mature Douglas-fir and Pacific Madrone forests, offering significant wildlife habitat opportunity as part of the hundreds of forested acres in this part of Vashon Island. These forested uplands help support the water quality and quantity of tributary streams draining to Puget Sound. These acquisitions would preserve local-use trails in permanent public ownership, and expand the new community forest.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizens Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. NARRATIVES

WLCF KC KEEVIE LAKE

1132092

1. CURRENT PROJECT SCOPE

Conservation Futures King County - Keevie Lake: This request is part of a multi-year project to protect approximately 170 acres at Keevie Lake (with a broader scope that includes adjacent forested lands). Keevie Lake is located west of Black Diamond in the headwaters of Crisp Creek, where the Muckleshoot Indian Tribe has its Keta Creek Hatchery downstream. The lake offers habitat for a diversity of bird species, and is located within several hundred acres of forest which offer wildlife habitat for large and small mammals and other species. Scenic Keevie Lake is relatively undeveloped which is rare in the county, and this is a unique opportunity to preserve this lake in its entirety. Immediately north of the target parcels the headwaters of Crisp Creek and associated wetlands are already preserved in more than 200 acres of land held as sensitive area tracts in Homeowner Association ownership. This land is located very close to where 6,000 new homes are being built in Black Diamond. King County Parks would manage the site as a natural area with appropriately sited backcountry trails.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. NARRATIVES

WLCF DEM VAN GASKEN PROP

1133801

1. CURRENT PROJECT SCOPE

Conservation Futures Des Moines - Van Gasken Property Waterfront Open Space: The City of Des Moines seeks to acquire 0.67-acre parcel 200900-3295 located on a bluff above Puget Sound, with sweeping views of the Olympics, Vashon Island, and city waterfront. The parcel will add to dozens of acres protected at nearby parks, which already offer shoreline access, forested habitat, and trails that will include the western terminus of the Lake to Sound Regional Trail. The acquisition will add a new viewpoint to the nearby parks, and offers opportunity for interpretive signage. The property has an older home and a rich history, and cultural resources consultation is underway to help inform the future of the property. The City may consider converting the home to a viewpoint shelter, or creating a new shelter to serve that purpose. To meet impervious surface requirements for CFT funds, the City has removed the footprint of the home and the garage from the CFT-funded portion of the site, which would reduce the estimated CFT-eligible costs to \$594,000. The City has worked with Forterra to buy and hold the property, to ensure it was not sold on the private market before funds could be raised. The City is seeking state Recreation and Conservation Office (RCO) funds as a match to CFT funds. The City indicated that local funds could be used short-term and/or to fill a funding gap in fundraising.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

For this project, the CFT award is anticipated to be a one-time award to this project, matched with city funding or RCO funding. Funding is anticipated to be expended in 2019 to complete the acquisition.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact

8. PROJECT STATUS

Initial award to project

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. The Committee considered various levels of funding for the project, and determined the recommended amount based on a variety of factors such as urgency, potential to phase, scope of project, open space benefits achieved, among others. An alternative to funding could be to abandon the project, however that would be unwarranted because there are willing sellers.

10. OTHER AGENCY INVOLVEMENT

The City of Des Moines

11. ART ELIGIBILITY

This project is not eligible for 1% Art. Project is for real estate acquisition only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide green space accessible to the general public, preserve or enhance health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Conservation Futures urban and rural open space acquisition projects help King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years. The projects help King County and its cities meet countywide greenhouse gas emissions reduction targets and adequately prepare for the impacts of climate change through permanently conserving remaining high priority farm, forest, and other open spaces. Climate change response benefits of CFT-funded open space acquisitions include reduced trip distances by providing close-to-home open spaces; the capture of CO2 emissions in trees and other site vegetation; and reducing anticipated future flooding impacts through preserving or increasing flood storage capacity.

NARRATIVES

WLCF KEN SWAMP CREEK

1133802

1. CURRENT PROJECT SCOPE

Conservation Futures Kenmore – Swamp Creek: Kenmore proposes to add to dozens of acres already protected along Swamp Creek. City seeks to preserve part of an 83-acre wetland that encompasses the creek corridor in northeast Kenmore, providing community separator and visual relief. This large wetland complex provides important wildlife habitat and water quality benefits to salmonid-bearing Swamp Creek (used primarily by coho salmon and cutthroat trout, with historic and potential use by chinook). The acquisitions may eventually support a future trail connection that the City envisions in this area, with a goal to link Wallace Swamp Creek Park north of the site and Squire's Landing Park south of the site.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

4. PROJECT BENEFITS/OUTCOMES

NARRATIVES

WLCF KNT UPPER MILL CR CANYON

1133803

1. CURRENT PROJECT SCOPE

Conservation Futures Kent – Upper Mill Creek Canyon: Kent seeks CFT funding reimbursement for the 3-acre parcel 292205-9211, adding to 107-acre Mill Creek Earthworks Park. This acquisition satisfies a long-term park development goal to create a southern trailhead and entry point the park. The park links Kent’s East Hill neighborhood to Kent’s downtown. In the north end of the park there is a renowned landscape Earthworks sculpture (the city’s first designated landmark). A 1.5-mile long trail will lead down the length of the canyon from this parcel to the Earthworks. The acquisition preserves mature second-growth forest, adding to wildlife habitat and forest canopy already protected in Mill Creek Earthworks Park. The parcel could have been subdivided into 13 home sites. The parcel is located within 70 feet of Mill Creek. Preservation of the forest and future restoration supports the aquatic health of the upper reaches of this salmon-bearing stream.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. NARRATIVES

WLCF SEA AURORA-LICTON SPR UVP

1133804

1. CURRENT PROJECT SCOPE

Conservation Futures Seattle – Aurora-Licton Springs Urban Village Park: Seattle seeks to acquire 0.29-acre parcel 099300-1605 in the rapidly developing Aurora-Licton Springs Residential Urban Village in north Seattle. In the City's 2017 Parks and Open Space Plan, this urban village is identified as having one of the largest open space gaps in the city, with over half of the urban village not served by a park. There is strong community support for creating additional park space in this area. The parcel is sizeable, mostly open grass and landscaping with an older home on one side of the lot. The parcel is surrounded by recently built townhouses and multi-story apartment buildings, with additional buildings under construction. In this challenging real estate market, the City has a unique opportunity to work with a landowner who is interested in seeing the property preserved as a park rather than redeveloped.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

4. PROJECT BENEFITS/OUTCOMES

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WLCF SEA AURORA-LICTON SPR UVP

1133804

5. BUDGET REQUEST BASIS

Seattle proposes to match CFT funding with Seattle Park District funding.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact

8. PROJECT STATUS

Initial award to project

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. The Committee considered various levels of funding for the project, and determined the recommended amount based on a variety of factors such as urgency, potential to phase, scope of project, open space benefits achieved, among others. An alternative to funding could be to abandon the project, however that would be unwarranted because there are willing sellers.

10. OTHER AGENCY INVOLVEMENT

The City of Seattle

11. ART ELIGIBILITY

This project is not eligible for 1% Art. Project is for real estate acquisition only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide green space accessible to the general public, preserve or enhance health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Conservation Futures urban and rural open space acquisition projects help King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years. The projects help King County and its cities meet countywide greenhouse gas emissions reduction targets and adequately prepare for the impacts of climate change through permanently conserving remaining high priority farm, forest, and other open spaces. Climate change response benefits of CFT-funded open space acquisitions include reduced trip distances by providing close-to-home open spaces; the capture of CO2 emissions in trees and other site vegetation; and reducing anticipated future flooding impacts through preserving or increasing flood storage capacity.

NARRATIVES

WLCF SEA CHEASTY GREEN ADD

1133805

1. CURRENT PROJECT SCOPE

Conservation Futures Seattle – Cheasty Greenspace Addition: The City seeks to add 0.24-acre parcel 162404-9095 to the Cheasty Greenspace in southeast Seattle, which provides open space and wildlife habitat on the eastern side of Beacon Hill. The greenspace encompasses the historic and scenic Olmstead-designed Cheasty Boulevard, a scenic corridor which supports soft-surface trails instead of paved sidewalks, and which provides significant visual relief to visitors and drivers as a protected green corridor in a dense urban landscape. Cheasty Greenspace contains about 65 acres, with additional protected lands at adjacent Jefferson Park Golf Course. This area of southeast Seattle is designated as a Neighborhood Revitalization Area where the City strives to achieve revitalization by providing recreation and environmental amenities. The acquisition of this 0.24-acre inholding parcel would prevent development of two homes, and avoid disturbance to the boulevard greenway and the trail from two new driveway crossings. As part of the Green Seattle partnership, this parcel would be revegetated and restored when it is added to the protected corridor.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLCF SEA CHEASTY GREEN ADD

1133805

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

Seattle would match CFT with Seattle Park District funds.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact

8. PROJECT STATUS

Initial award to project

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. The Committee considered various levels of funding for the project, and determined the recommended amount based on a variety of factors such as urgency, potential to phase, scope of project, open space benefits achieved, among others. An alternative to funding could be to abandon the project, however that would be unwarranted because there are willing sellers.

10. OTHER AGENCY INVOLVEMENT

The City of Seattle

11. ART ELIGIBILITY

This project is not eligible for 1% Art. Project is for real estate acquisition only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide green space accessible to the general public, preserve or enhance health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Conservation Futures urban and rural open space acquisition projects help King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years. The projects help King County and its cities meet countywide greenhouse gas emissions reduction targets and adequately prepare for the impacts of climate change through permanently conserving remaining high priority farm, forest, and other open spaces. Climate change response benefits of CFT-funded open space acquisitions include reduced trip distances by providing close-to-home open spaces; the capture of CO2 emissions in trees and other site vegetation; and reducing anticipated future flooding impacts through preserving or increasing flood storage capacity.

NARRATIVES

WLCF SEA COLLEGE ST RAVINE ADD

1133806

1. CURRENT PROJECT SCOPE

Conservation Futures Seattle – College Street Ravine Addition: Seattle seeks to add 0.28 acres in five parcels to the College Street Ravine. These parcels have been longtime targets to consolidate and complete greenbelt ownership. The College Street Ravine is part of the Duwamish Head Greenbelt, an identified preservation priority for Seattle since the 1993 Urban Green Spaces Policy. Portions of Duwamish Head Greenbelt are visible from downtown Seattle. This ravine and the adjacent Duwamish Head Greenbelt provide important habitat for many birds and small mammals in a dense urban environment, and provide neighborhood separators between residential and commercial/industrial areas. At College Street Ravine, trails lead through a forested landscape that is actively being restored and maintained by neighborhood and stewardship groups such as Green Seattle Partnership and the Nature Consortium. The City owns most of property on both sides of the ravine. Acquisition of the target parcels located on the edges of the ravine would help preserve the character of this forested corridor, and prevent development of homes that visually impact the greenspace experience of the College Street Ravine (as has happened on one or two nearby parcels along the corridor).

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

NARRATIVES

WLCF SEA DUWAMISH WATERWAY PK

1133807

1. CURRENT PROJECT SCOPE

Conservation Futures Seattle – Duwamish Waterway Park: While Duwamish Waterway Park functions as a Seattle park, the 1.26-acre parcel 732790-1195 that comprises most of the park acreage is actually owned by King County. This area is the site of an old oxbow lake which was filled in during the 1920s. The County has owned this parcel since the early 1900s, operating a dock on this property for the first few decades of its ownership. The site has been used as a park since the 1970s, managed by Seattle Parks under an agreement with King County. In 1974, the City installed a carved wooden whale sculpture and dedicated the park to the Duwamish Indian Tribe as part of the “Rediscover the Duwamish Festival.” In addition to this County-owned parcel, the park acreage and protected Duwamish River shorelines enjoyed by visitors includes land owned by Seattle Parks and Recreation, Port of Seattle, and unopened Seattle Department of Transportation rights-of-way. The South Park neighborhood in which this park is located has a significant deficit of green space within the community. This park is an important feature in the neighborhood, providing open space to gather and play, and visual and physical access to the river.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed. The Friends of Waterway Park and more than a dozen other community groups have already been involved in discussions of redesign of the park.

NARRATIVES

WLCF SEA MADRONA RAV ADD

1133808

1. CURRENT PROJECT SCOPE

Conservation Futures Seattle – Madrona Ravine Addition: Seattle seeks funding to complete a long-sought acquisition of 0.6-acre parcel 142220-0501 in the Madrona Ravine. This one parcel had been held out of the purchase agreement when a family sold several adjacent properties to the City in recent years. This parcel currently has a small house. Recent redevelopment proposals include a multi-story home set on the edge of the forested ravine, which would change the character of the site. Acquisition would allow removal of the home and would complete the vision to protect the site. Madrona Creek flows through this forested ravine, through Madrona Park, to Lake Washington. More than a decade ago, a community-initiated project funded in part by WRIA 8 helped to daylight the creek, restore the shoreline, establish creek culverts to allow fish passage, and build new pedestrian paths and bridges. This urban greenspace is an important wildlife corridor supporting small mammals and many bird species (including nesting eagles and Coopers hawks), serving as an upland extension of the 31-acre Madrona Park on the Lake Washington shoreline. Friends of Madrona Woods is actively involved in stewarding the Madrona Ravine greenspace.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLCF SEA MADRONA RAV ADD

1133808

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

The City of Seattle will match CFT with Seattle Park District funds.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact

8. PROJECT STATUS

Initial award to project

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. The Committee considered various levels of funding for the project, and determined the recommended amount based on a variety of factors such as urgency, potential to phase, scope of project, open space benefits achieved, among others. An alternative to funding could be to abandon the project, however that would be unwarranted because there are willing sellers.

10. OTHER AGENCY INVOLVEMENT

The City of Seattle

11. ART ELIGIBILITY

This project is not eligible for 1% Art. Project is for real estate acquisition only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide green space accessible to the general public, preserve or enhance health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Conservation Futures urban and rural open space acquisition projects help King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years. The projects help King County and its cities meet countywide greenhouse gas emissions reduction targets and adequately prepare for the impacts of climate change through permanently conserving remaining high priority farm, forest, and other open spaces. Climate change response benefits of CFT-funded open space acquisitions include reduced trip distances by providing close-to-home open spaces; the capture of CO2 emissions in trees and other site vegetation; and reducing anticipated future flooding impacts through preserving or increasing flood storage capacity.

NARRATIVES

WLCF SEA ORCHARD ST RAV ADD

1133809

1. CURRENT PROJECT SCOPE

Conservation Futures Seattle – Orchard Street Ravine Addition: The Orchard Street Ravine is a pocket of open space within a West Seattle neighborhood which serves as visual respite and a neighborhood connector. The undeveloped Orchard Street right-of-way is bordered on both sides by 2.2 acres of Seattle Parks land. The property was acquired in the 1990s to conserve the unique conifer-madrone forest on site (a habitat type present on only 52 acres out of 2,700 acres owned by Seattle Parks). The community actively stewards the park, and helps maintains a network of trails through the site. The City seeks to purchase 0.13-acre parcel 431920-0080 with an abandoned home adjacent to the park that will help buffer the site from adjacent development and allow for restoration.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. NARRATIVES

WLCF TUK DUWAMISH RIV HAB CORR

1133810

1. CURRENT PROJECT SCOPE

Conservation Futures Tukwila – Duwamish River Habitat Corridor: Tukwila is proposing to acquire 0.93-acre parcel 073300-0225 located next to the Green River Trail to provide riverfront public access and restoration opportunity along the Duwamish River. The property owner has actively worked with public agencies to try to conserve the parcel for public use as open space, rather than pursuing private sale and redevelopment. This site offers passive park opportunity, with trails and viewpoints, in a neighborhood with no other passive parks. The acquisition would allow the removal of two structures, invasive weed control, and restoration. The City will preserve mature trees that shade the southern riverbank, where the property contains 160 feet of tidally influenced shoreline within the Duwamish River transition zone. Public ownership could facilitate shoreline restoration to further salmon recovery efforts (nearby restoration project sites just downstream include Duwamish Gardens, Chinook Wind, and North Winds Weir). The property has scenic resource value because of the Duwamish River and the views of the Duwamish Hill Preserve – another CFT-funded purchase which contains the opposite shoreline and the geologically unique and culturally important hill rising in view across the river.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. NARRATIVES

WLCF KC MOSS LAKE NA ADD

1133811

1. CURRENT PROJECT SCOPE

Conservation Futures King County - Moss Lake Natural Area Additions: More than a decade ago, King County purchased the development rights from the 90,000-acre Snoqualmie Forest. This project is located at the western edge of the Snoqualmie Forest, where lands encumbered by the forest conservation easement extend between Moss Lake Natural Area, the Tolt Pipeline Road, and Marckworth State Forest. King County seeks to acquire the underlying fee to one or more of these parcels on the western edge of Snoqualmie Forest. This acquisition would provide significant public benefit by permanently protecting the trail connections that already exist on these parcels – used by mountain bikers, hikers, and equestrians under a permit-based system. These lands would need forest stewardship as there have been recent harvests. The lands contain ecologically important systems such as the drainage upstream of Moss Lake bog and the upper reaches of Stossel Creek. They support wildlife habitat as part of the larger protected forest system. The price of the property should be relatively low as development rights have been removed from the property. King County is exploring whether to pursue additional parcels in future years based on landowner interest, and with possible partnership with Washington State Department of Natural Resources.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

This project is awarded start-up funding to help with title, appraisal, and due diligence. The Committee supports this project, and anticipates additional funding request next year as the County makes progress with the landowner to understand full scope and cost of targeted acquisitions.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact

8. PROJECT STATUS

Initial award to project

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. The Committee considered various levels of funding for the project, and determined the recommended amount based on a variety of factors such as urgency, potential to phase, scope of project, open space benefits achieved, among others. An alternative to funding could be to abandon the project, however that would be unwarranted because there are willing sellers.

10. OTHER AGENCY INVOLVEMENT

No other agency involved in this project.

11. ART ELIGIBILITY

This project is not eligible for 1% Art. Project is for real estate acquisition only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide green space accessible to the general public, preserve or enhance health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Conservation Futures urban and rural open space acquisition projects help King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years. The projects help King County and its cities meet countywide greenhouse gas emissions reduction targets and adequately prepare for the impacts of climate change through permanently conserving remaining high priority farm, forest, and other open spaces. Climate change response benefits of CFT-funded open space acquisitions include reduced trip distances by providing close-to-home open spaces; the capture of CO2 emissions in trees and other site vegetation; and reducing anticipated future flooding impacts through preserving or increasing flood storage capacity.

NARRATIVES

WLCF KC SNOQ VALLEY TR NORTH

1133812

1. CURRENT PROJECT SCOPE

Conservation Futures King County - Snoqualmie Valley Trail North: King County seeks to secure an easement or fee ownership on 0.34 miles of parcel 062607-9027, a former railroad right-of-way. This acquisition would complete the northern end of the 31-mile long Snoqualmie Valley Trail corridor, near the Snohomish-King County line.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

4. PROJECT BENEFITS/OUTCOMES

NARRATIVES

WLCF KC SNOQ VALLEY TR NORTH

1133812

5. BUDGET REQUEST BASIS

While King County used to own fee title to the railroad right-of-way, the prior landowner of the adjacent property built a dairy barn and outbuildings on the right-of-way. A court settlement granted him ownership of the right-of-way through the parcel, and gave King County a term-limited easement (expiring in September 2019) to route the trail along the banks of the Snoqualmie River. The riverfront route is infeasible due to bank erosion, flood risk, environmental impacts, and negative impacts on working farmlands. The current landowner seems willing to work with King County to resolve the issue. The County received \$25,000 in 2018 PL funds for start-up work. The Committee recommends full funding in 2019, recognizing the importance of connecting the regional trail corridor between King and Snohomish County, and the time-sensitivity of resolving this issue in the next year. The Committee encourages ongoing work between King and Snohomish Counties to ensure that Snohomish County works to secure the necessary portions of the Snoqualmie Valley Trail right-of-way north of the county line.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

NARRATIVES

WLCF KC THREE FORKS NA ADD

1133813

1. CURRENT PROJECT SCOPE

Conservation Futures King County - Three Forks Natural Area Additions: This project would acquire nearly 5 acres of parcel 292408-9032 located on the south side of Reinig Road, contiguous with Three Forks Natural Area. The County would acquire a portion of one larger parcel that would undergo a boundary line adjustment, leaving the north half of the parcel in private ownership and managed for sustainable forestry. The land to be acquired contains a beach along the Snoqualmie River with scenic views of Snoqualmie Valley Trail trestle. This beach is a popular summertime spot for public use, and it would be beneficial for King County Parks to manage the site. The property was identified as potential acquisition in the Three Forks Master Plan. The acquisition would add to the forested riparian habitat preserved at Three Forks Natural Area. The property contains Brockway Creek, which flows south to a slough within Three Forks Natural Area. There is scenic and historic significance to the site, as this portion of Reinig Road is lined with mature sycamores planted early in the 20th century as part of the Snoqualmie Falls mill town located on this parcel.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. NARRATIVES

WLCF KC CEDAR RIVER OPP FUND

1133814

1. CURRENT PROJECT SCOPE

Conservation Futures King County - Cedar River Additions: This project includes priority parcels along several miles of the Cedar River between Elliott Bridge Reach and Mouth of Taylor Reach. These areas were identified for habitat restoration and preservation in the Cedar River Legacy program, the WRIA 8 Salmon Conservation Plan, and the King County Flood Hazard Reduction Plan. The Cedar River supports chinook, coho, and sockeye salmon, and steelhead and cutthroat trout. The river and riparian zones provide wildlife habitat, and many of the targeted acquisitions would add to acreage already protected in a natural state along the river. Many lands along the Cedar River offer passive recreation opportunity on backcountry trails, easy access off of the popular Cedar River Trail, and visual and physical access to the river.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

4. PROJECT BENEFITS/OUTCOMES

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLCF KC CEDAR RIVER OPP FUND

NARRATIVES

WLCF KC MOLASSES CREEK

1133816

1. CURRENT PROJECT SCOPE

Conservation Futures King County - Molasses Creek: This project proposed to acquire up to five acres of King County Roads properties along Molasses Creek, in unincorporated urban areas east of Renton. The 2013 Soos Creek Regional Park Site Management Guidelines generally identified parcels in this area along Molasses Creek as having potential conservation value. Molasses Creek is used by coho and sockeye salmon and cutthroat trout (though use may be limited to the lower reaches downstream of the project site). Conserving wetlands and riparian habitat along the creek can support water quality and quantity in the downstream reaches as it flows to the Cedar River. The southern parcels in the scope are zoned R-6 which theoretically could support six homes per acre, though development would be expected to be constrained by critical areas, the permanently protected mitigation project footprint, and/or stormwater detention areas.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Councilmember Reagan Dunn sponsored Motion 14957 which recommends that the Committee give this project priority consideration during the project review process. This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

4. PROJECT BENEFITS/OUTCOMES

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLCF KC MOLASSES CREEK

1133816

5. BUDGET REQUEST BASIS

The Committee recommended \$25,000 CFT at this time, which could help preserve the northern target parcel 282305-9126 that is adjacent to Soos Creek Park and Trail. The Committee recognizes and supports King County DNR's general intent to preserve open space in urban unincorporated areas. The Committee would appreciate information about the broader set scope, timing, and cost/value of Road surplus properties – in particular mitigation sites such as these – to better understand the strategy for management, what covenants to protect the mitigation footprint, and appropriate planning for maintenance. The Committee would consider another request for funding on this project next year.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact

8. PROJECT STATUS

Initial award to project

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. The Committee considered various levels of funding for the project, and determined the recommended amount based on a variety of factors such as urgency, potential to phase, scope of project, open space benefits achieved, among others. An alternative to funding could be to abandon the project, however that would be unwarranted because there are willing sellers.

10. OTHER AGENCY INVOLVEMENT

No other agency involved in this project.

11. ART ELIGIBILITY

This project is not eligible for 1% Art. Project is for real estate acquisition only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide green space accessible to the general public, preserve or enhance health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Conservation Futures urban and rural open space acquisition projects help King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years. The projects help King County and its cities meet countywide greenhouse gas emissions reduction targets and adequately prepare for the impacts of climate change through permanently conserving remaining high priority farm, forest, and other open spaces. Climate change response benefits of CFT-funded open space acquisitions include reduced trip distances by providing close-to-home open spaces; the capture of CO2 emissions in trees and other site vegetation; and reducing anticipated future flooding impacts through preserving or increasing flood storage capacity.

NARRATIVES

WLCF KC MID GREEN RIV OS EXP

1133817

1. CURRENT PROJECT SCOPE

Conservation Futures King County - Middle Green River Open Space Expansions: The County is exploring forest land protection in several areas of southeast King County, primarily southeast of Black Diamond, with a landowner with significant landholdings in the area. Across the landscape, these areas offer scenic benefits, provide habitat to many kinds of wildlife, and provide water quality and water quantity benefits within their watersheds. There may be potential to enroll these lands in a carbon credit program that is under development by the County, and to transfer development rights off of the properties.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

4. PROJECT BENEFITS/OUTCOMES

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLCF KC MID GREEN RIV OS EXP

1133817

5. BUDGET REQUEST BASIS

This is an initial funding request to help develop the proposal, which could lead to a longer-term project that helps to preserve thousands of acres of forest. These properties are part of the working forest landscape in this area, however the lands could be sold for residential uses in the future, resulting in a loss of working forest land base and habitat fragmentation. The County is still developing a strategy to protect these lands as working forest over the long term, which may include easement or fee acquisition, and may include partners such as Washington State agencies or private partners. Depending on the acquisition strategy that is developed, these lands could offer trail opportunities. Many of these properties connect to publicly owned lands under Washington State or King County ownership.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact

8. PROJECT STATUS

Initial award to project

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. The Committee considered various levels of funding for the project, and determined the recommended amount based on a variety of factors such as urgency, potential to phase, scope of project, open space benefits achieved, among others. An alternative to funding could be to abandon the project, however that would be unwarranted because there are willing sellers.

10. OTHER AGENCY INVOLVEMENT

No other agency involved in this project.

11. ART ELIGIBILITY

This project is not eligible for 1% Art. Project is for real estate acquisition only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide green space accessible to the general public, preserve or enhance health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Conservation Futures urban and rural open space acquisition projects help King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years. The projects help King County and its cities meet countywide greenhouse gas emissions reduction targets and adequately prepare for the impacts of climate change through permanently conserving remaining high priority farm, forest, and other open spaces. NARRATIVES

WLCF KC SNOQUALMIE VALLEY FARM

1133819

1. CURRENT PROJECT SCOPE

Conservation Futures King County - Snoqualmie Valley Farmland: The goal of this project is to preserve prime agricultural lands within the Snoqualmie Valley Agricultural Production District (APD) and in nearby rural areas important to the farming economy. The continued loss of farms reduces the availability of valuable agricultural soils, and lessens the number farms which can support and maintain the economic basis for healthy agricultural production. This project helps King County to both protect viable farmland and support the broader agricultural economy. The matching funds for the project are Transfer of Development Rights funds.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

4. PROJECT BENEFITS/OUTCOMES

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLCF KC SNOQUALMIE VALLEY FARM

1133819

5. BUDGET REQUEST BASIS

The current project scope includes fourteen farms totaling 950 acres. The full funding request would have funded five to seven transactions, on which the County would acquire conservation easements and transfer development rights on a few of the farms in the full scope. Many of these lands are farms which grow food or flowers, or which support the local dairy industry through hay production, livestock grazing, or other dairy infrastructure. A small amount of Parks Levy funding will contribute to a trail easement in the Fall City area which will help connect Fall City Park to the Snoqualmie Valley Trail.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact

8. PROJECT STATUS

Initial award to project

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. The Committee considered various levels of funding for the project, and determined the recommended amount based on a variety of factors such as urgency, potential to phase, scope of project, open space benefits achieved, among others. An alternative to funding could be to abandon the project, however that would be unwarranted because there are willing sellers.

10. OTHER AGENCY INVOLVEMENT

No other agency involved in this project.

11. ART ELIGIBILITY

This project is not eligible for 1% Art. Project is for real estate acquisition only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide green space accessible to the general public, preserve or enhance health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Conservation Futures urban and rural open space acquisition projects help King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years. The projects help King County and its cities meet countywide greenhouse gas emissions reduction targets and adequately prepare for the impacts of climate change through permanently conserving remaining high priority farm, forest, and other open spaces. Climate change response benefits of CFT-funded open space acquisitions include reduced trip distances by providing close-to-home open spaces; the capture of CO2 emissions in trees and other site vegetation; and reducing anticipated future flooding impacts through preserving or increasing flood storage capacity.

NARRATIVES

WLCF KC VASHON MAURY ISL FARM

1133820

1. CURRENT PROJECT SCOPE

Conservation Futures King County - Vashon-Maury Island Farmland: This project seeks to preserve agricultural lands on Vashon and Maury Islands where there are clusters of agricultural land uses and which are important to the farming economy. The continued loss of farms reduces the availability of valuable agricultural soils, and lessens the number farms which can support and maintain the economic basis for healthy agricultural production. This project helps King County to both protect viable farmland and support the broader agricultural economy. Farmlands in the rural area may be more vulnerable to conversion to other land uses than farms protected with agricultural zoning in the APDs. The matching funds for the project are Transfer of Development Rights funds.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

4. PROJECT BENEFITS/OUTCOMES

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLCF KC VASHON MAURY ISL FARM

1133820

5. BUDGET REQUEST BASIS

The project scope includes ten farms totaling 104 acres on Vashon and Maury Islands where there are clusters of agricultural land uses. The requested funding would allow the project to complete one or two transactions, on which the County would acquire conservation easements and transfer development rights on a portion of the farms in the full scope.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact

8. PROJECT STATUS

Initial award to project

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. The Committee considered various levels of funding for the project, and determined the recommended amount based on a variety of factors such as urgency, potential to phase, scope of project, open space benefits achieved, among others. An alternative to funding could be to abandon the project, however that would be unwarranted because there are willing sellers.

10. OTHER AGENCY INVOLVEMENT

No other agency involved in this project.

11. ART ELIGIBILITY

This project is not eligible for 1% Art. Project is for real estate acquisition only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide green space accessible to the general public, preserve or enhance health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Conservation Futures urban and rural open space acquisition projects help King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years. The projects help King County and its cities meet countywide greenhouse gas emissions reduction targets and adequately prepare for the impacts of climate change through permanently conserving remaining high priority farm, forest, and other open spaces. Climate change response benefits of CFT-funded open space acquisitions include reduced trip distances by providing close-to-home open spaces; the capture of CO2 emissions in trees and other site vegetation; and reducing anticipated future flooding impacts through preserving or increasing flood storage capacity.

NARRATIVES

WLCF KC MASTER 2020 BOND

1134923

3. PROJECT JUSTIFICATION

This project was created as a result of the advice of the Land Conservation Advisory Group's report in 2017 that conservation lands may be lost forever once they are developed, that the county's growing population needs more and better access to urban greenspaces, and that land values are rising. The advisory group recommended that the county pursue opportunities to accelerate the pace of acquiring conservation lands. Issuing bonds can help accelerate the pace of acquisitions, lower the ultimate cost of acquisitions, and spread the acquisition costs to include future taxpayers who will also benefit from lands protected in perpetuity.

4. PROJECT BENEFITS/OUTCOMES

N/A

5. BUDGET REQUEST BASIS

Issue of bonds to help accelerate the pace of acquisitions, lower the ultimate cost of acquisitions, and spread the acquisition costs to include future taxpayers who will also benefit from lands protected in perpetuity. This project is anticipated to fund a wide variety of open space acquisition projects throughout incorporated and unincorporated King County such as natural and river corridor lands, urban greenspaces, working forests, farmlands, regional trails, and – as authorized in July 2018 by Ordinance 18774 – open space equity lands in underserved communities. The actual project list and distributions will be determined by mid-2019. The Citizen Oversight Committee will submit a detailed report to the King County Executive and King County Council, and will offer presentations to the Executive and Council to review recommendations, with approval through the King County Council consent agenda process.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the Conservation Futures Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

Property acquired by King County will required ongoing maintenance.

8. PROJECT STATUS

NARRATIVES PKS M:PARKS FACILITY REHAB 1039611

1. CURRENT PROJECT SCOPE

Facility Rehabilitation - is an on-going program to design and implement capital investments and solutions to emerging time critical capital construction or major maintenance needs, ADA accessibility, and other recommendations identified in Major Maintenance Reserve Studies to optimize the life cycle of park assets throughout the county's parks system.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M:PARKS FACILITY REHAB

1039611

3. PROJECT JUSTIFICATION

By addressing emergent and strategic needs Parks can work to prolong the useful life of its aging infrastructure. With limited funds, Parks must proactively anticipate, fund, and address these emergent Major Maintenance and Capital needs in order to meet requirements for continued access and use of its facilities.

Parks has many ongoing operational requirements needed to keep the system open and usable by constituents. Of critical necessity in keeping parks open is to ensure that capital assets are in safe operating order. Emergent capital or major maintenance repair needs are routinely identified and these capital needs must often be undertaken and completed in an accelerated manner using design, permitting and implementation resources. Safety is of paramount concern given the volume of users in the Parks System and adequate funding provides the flexibility to respond. This is an essential part of operating a parks system.

4. PROJECT BENEFITS/OUTCOMES

Two of the primary benefits are increased access for all citizens and prolonged capital asset life. In some circumstances, replacement of capital assets are deemed necessary resulting in a new longer life for those assets. A safe and open Park System with usable capital assets is another primary benefit and outcome of this project/program. Keeping parks capital investments and assets safe and open is a requirement for continued operation of any facility. This is the direct result of continued funding and having a flexible and responsive design, permitting, and implementation team available to address the emergent needs as they arise. An unfunded program, or reductions in funding, will generally result in a worsening of any known deteriorating conditions, which may impact the Parks Division's ability to fulfill one of its core mission (taking care of what we have). Delays in addressing these conditions may result in significant additional costs and/or closure of park facilities.

5. BUDGET REQUEST BASIS

Budget request is based on past program needs adjusted to address rising design and construction costs in the region. It is also based on planning level engineer's estimates, past experience with previous similar projects and on past contractual commitments for design, permitting, engineering, and construction. High Priority 2019-2020 capital projects include, but are not limited to, the following: the program will design and implement capital investments and solutions to emerging major maintenance needs, ADA accessibility, continue work to complete recommendations from 2012 study, prioritize and begin to address new recommendations following completion of the updated study currently planned to be done under Asset Management System project (#1124055). This proposed budget request also includes disappropriation of \$185,000, Youth Athletic Sports Fund Grants awarded to the project for City of Sammamish and Si View Park District. The grants will be distributed directly to the City and District as the projects will be done by them.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as capital improvements and major maintenance projects enter and complete construction phases, this work is anticipated to have impacts on the operating budget. For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

8. PROJECT STATUS

The program continues to complete emerging Major Maintenance needs and those identified by past studies. The strong economic development in the region has hampered the speed at which projects can be completed based on increased demand for consultant, contractor, and material resources. This has also driven up costs for similar subprojects.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

It is Parks' emergent maintenance program.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M:PARKS FACILITY REHAB

1039611

12. EQUITY AND SOCIAL JUSTICE IMPACT

King County's park system impacts determinants of equity such as access to parks and natural resources, healthy built and natural environments, and strong, vibrant neighborhoods. These investments will help to equalize asset and facility condition across the system, increase access for all citizens, benefit underserved communities and disadvantaged individuals that use these facilities.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Programmatic Sustainable Scorecard Platinum will be targeted where applicable.

Parks seeks to minimize its impact on the environment, and by facilitating access to nature and outdoor recreation opportunities, hopes to educate the community of the need to protect open space for future generations.

NARRATIVES

PKS M:CMMNTY PRTSHIP GRANT 316

1039848

1. CURRENT PROJECT SCOPE

Community Partnership Grants - The Community Partnerships and Grants (CPG) Program provides funding for strategic partnerships that result in the development of new regional recreation facilities. The grants allow community based organizations to plan, design, permit, and construct recreation facilities on King County Parks land. This appropriation will fund those grants. The CPG program also handles the program management for these projects. CPG is an ongoing, annual program. It started in 2003.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The County's Community Partnerships and Grants (CPG) program was created in response to fiscal pressure, as a way to partner with local sports and community groups to develop and maintain parks and recreation facilities in County parks. Without this creative approach, many underserved communities would not have access to new recreation amenities.

The CPG Program has 3 goals:

- o Address unmet regional/rural public parks, sports, and recreation facility needs by creating new or enhanced facilities while minimizing the impact on tax funded operations and maintenance costs.
- o Empower user groups, sports associations, and other community-based organizations to leverage their commitment, passion, and resources into new long-term, high quality, self-sustaining King County parks, sports, and recreation facilities.
- o Develop a region-wide network of partners consisting of user groups, sports organizations, and citizens, in general, whose success is interconnected with the political, financial, and operational success of the County parks, sports, and recreation system.

If CPG was not implemented Parks would lose millions of dollars in leveraged resources. Parks would also lose a large amount of public support from thousands of stakeholders.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M:CMMNTY PRTSHIP GRANT 316

1039848

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

The amount requested is based on a recommendation from the King County Parks Levy Task Force, which provides direction of the voter-approved 2014-19 Parks, Trails and Open Space Replacement Levy. The proposed amount will provide funding for community based organizations to plan, design, permit, and construct recreation facilities on King County Parks land. CPG is an ongoing, annual program.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

The Northshore Phase 1 project is completed. All the other projects are underway at various stages of completion at this time ranging from planning to design. The balance will be spent in the near future.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

County's Community partnerships

11. ART ELIGIBILITY

It is a Grant Program for the County's Community partnerships.

12. EQUITY AND SOCIAL JUSTICE IMPACT

The CPG program provides opportunities to develop partnerships with organizations in disadvantaged communities that enhance recreational amenities, which would allow the division to further the principles of equity and social justice in both its operations and capital investments. Future CPG projects are not determined until viable partnership proposals are evaluated for a variety of merits which include, among many other requirements, principles of equity and social justice. In addition to this evaluation process, the CPG program will require a statement on the grant application that addresses the benefits to disadvantaged communities within the scope of the partnership proposal.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The CPG program strives to meet Green Building standards when possible. The facilities that are being built however are not always applicable. For example, when building synthetic turf, we conserve water. Given that this is a grant program and specific projects are not necessarily identified, it is difficult to be specific.

NARRATIVES

PKS ACQN EVALTNS MASTER

1046228

1. CURRENT PROJECT SCOPE

Acquisition Evaluations Project - provides due diligence funding to evaluate and implement strategic open space acquisitions (either fee or easement).

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Open space acquisition is a key component of the Parks Division's Business Plan and is identified as a Parks Levy commitment. Without additional funds, Parks would not be able to perform due diligence work related to key acquisitions.

4. PROJECT BENEFITS/OUTCOMES

An unfunded program, reductions in funding, or non-action funding alternative will negatively impact the Parks Division's ability to fulfill its mission. Delays in securing program funding may also result in significant additional costs to acquire open space lands.

5. BUDGET REQUEST BASIS

Budget is based on historic spending patterns and future projections.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Operating budget impacts attributed to the Parks' growing open space system are built in to the Parks Levy.

8. PROJECT STATUS

Ongoing projects/program

Capital Appropriation Proposal

NARRATIVES

PKS M:MAURY ISLAND SITE

1121441

1. CURRENT PROJECT SCOPE

Maury Island Site - In coordination with the Washington Department of Ecology, under an Agreed Order develop and implement a Cleanup Action Plan for remediation of contaminated soils in the Maury Island Natural Area. The Maury Island Natural Area lies in the former Tacoma Smelter Plume and this, coupled with past land use history, has left the property with high levels of arsenic and lead in the soil.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

King County acquired this property with monetary assistance from the Washington Department of Ecology. As part of this acquisition, King County entered into a legal agreement with the Washington Department of Ecology to clean up contaminated soils on the site.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M:MAURY ISLAND SITE

1121441

4. PROJECT BENEFITS/OUTCOMES

This project protects the health and safety of park users, by limiting exposure to contaminants in the soil.

5. BUDGET REQUEST BASIS

Budget is based on detailed Engineer's estimate, past experience with construction of a similar revegetation project in 2016, and on contractual commitments for design and engineering. The appropriation in the 2019-2020 budget will allow implementation of the next 3 to 4 acres of revegetation identified in the Cleanup Action Plan approved by Washington Department of Ecology. The budget request includes a disappropriation of \$169,549 for a funding gap between the grant spending authority in year 2014 and the actual grant awarded.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as capital improvements and major maintenance projects enter and complete construction phases, this work is anticipated to have impacts on the operating budget. For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

8. PROJECT STATUS

Cleanup on this property is being implemented in phases. An Interim Cleanup Action, revegetating the first 3 acres identified in the Cleanup Action Plan occurred in 2016. Implementation of the next phase in the Cleanup Action Plan is estimated for 2019 and includes trail capping and capping of the former skeet range property and is funded by a grant from the Washington Department of Commerce. The final phases consist of revegetation of 3 to 5 acres of contaminated area, every 2 to 3 years until all 16 acres identified for cleanup in the Cleanup Action Plan have been completed.

9. ALTERNATIVES ANALYSIS

As mandated by the Agreed Order with Washington Department of Ecology, King County developed a Feasibility Study with five cleanup alternatives. A Cleanup Action Plan was developed for the recommended alternative and the plan went through a formal public review and comment period.

10. OTHER AGENCY INVOLVEMENT

This cleanup is being done in coordination with Washington Department of Ecology.

11. ART ELIGIBILITY

Maintenance to clean up the contamination.

12. EQUITY AND SOCIAL JUSTICE IMPACT

King County's park system impacts determinants of equity such as access to parks and natural resources, healthy built and natural environments, and strong, vibrant neighborhoods. These investments will benefit underserved communities and disadvantaged individuals that use these facilities.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Programmatic Sustainable Scorecard Platinum will be targeted where applicable. Parks seeks to minimize its impact on the environment, and by facilitating access to nature and outdoor recreation opportunities, hopes to educate the community of the need to protect open space for future generations.

NARRATIVES

PKS CENTRAL MAINT FACILITY

1122161

1. CURRENT PROJECT SCOPE

Central Maintenance Facility (Renton Shop) - includes acquisition, design and construction of new buildings with industrial shops, crew areas and operations administration, heavy equipment, vehicle, and materials storage as well as staff and fleet parking on the 5.7 acre site. Project additionally includes extension of new utilities from ROW and private road to the site as well as site distribution of those utilities. The project includes phased construction to allow the site to remain in operations during construction and includes demolition of the existing facilities once new areas are occupied.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The justification of the project is to replace post WWII era buildings with facilities and yard operations that are safe, code compliant, functional working environments as well as to provide space for relocation of a crew from a satellite facility.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

PKS CENTRAL MAINT FACILITY

1122161

4. PROJECT BENEFITS/OUTCOMES

Crew, yard and shop facilities are designed to enhance efficiency of dispatch of crews, trucks, and trailers that play a critical role in our ability to adequately and efficiently serve the parks, regional trails, back country trails, and open spaces throughout the County. The project additionally provide Parks the ability to relocate a crew from a satellite facility that is no longer functional as an operations base. This project will also position the agency to better support the future maintenance of the additional 60,000 acres of open space acquisitions associated with the Land Conservation Initiative.

5. BUDGET REQUEST BASIS

The budget request is based on a Class 3 Architect/Engineer's estimate prepared for project baseline, past experience with similar projects, and on contractual commitments for design and engineering. The estimate at completion has a range of costs between \$37.9-43.6 million. This appropriation request is for an additional \$28.2 million for a project total EAC of \$41,171,974 including previous appropriation of \$12.9 million.

6. FUNDING AND REVENUE DISCUSSION

This budget request is funded with a 20-year, \$25 million bond to be backed by Real Estate Excise Taxes. Bond financing is considered appropriate for this project in consideration of the anticipated longevity of the constructed facility. King County's Comprehensive Financial Management Policies sites debt funding as the "preferred option for financing the acquisition and construction of the County's capital assets. Debt financing offers three benefits over the pay-as-you-go financing of capital assets: (1) the County is not forced to postpone capital expenditures until it has accumulated sufficient funds; (2) the repayment of debt over an extended period allows for the cost of assets to be spread over current and future years of those assets; and (3) maximizes the federal government benefit of issuing municipal debt on a tax-exempt basis."

Additional budget request of \$3.2 million to be provided by REET 1.

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as this project completes construction and facilities are occupied, this work is anticipated to have impacts on the operating budget. For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

8. PROJECT STATUS

Acquisition of the 5.7 acre parcel and establishment of easement for utilities is complete. Project is at baseline status (between 30%-60%). Additional work to be performed but not yet started includes design through 100%, permitting, bidding, construction, commissioning, post-construction monitoring, and close out.

9. ALTERNATIVES ANALYSIS

Parks conducted an alternatives analysis in 2014 to determine site selection prior to acquisition of the parcel. In 2018, as part of the design effort, Parks conducted an alternatives analysis to determine the most feasible sustainable design certification to pursue for the project. LEED Platinum was determined to be difficult to achieve. Zero Energy or Energy Petal Certification was determined to be the program that aligns with the project goals and desire for operational savings. This alternatives analysis was conducted by the design consultant and further corroborated by an independent Benefit Cost Analysis (BCA) which evaluated the social cost of carbon (based on County's proposed \$71 per MTCO2).

10. OTHER AGENCY INVOLVEMENT

Other agency involvement is limited to local agencies responsible for permitting.

11. ART ELIGIBILITY

N/A

12. EQUITY AND SOCIAL JUSTICE IMPACT

The project is located in an area with an Equity score between 3 and 5, indicating surrounding community which is less wealthy and more diverse. Investments in equity in County practices, healthy built and natural environment, and promoting quality education will benefit the users and visitors as well as ensuring that our operations section can continue to provide access to parks and natural resources through efficient and safe dispatch of crews and equipment.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PKS CENTRAL MAINT FACILITY

1122161

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The project is registered with the International Living Future Institute for Energy Petal Certification (target goal) or Zero Energy (base goal). Additional imperatives under the Living Building Challenge may be targeted where applicable. Parks is responding to the challenges set forth in the SCAP (10 projects by 2020) and seeks to minimize the impact of the project on the environment. \$1.2 million in incremental cost is included in the project EAC for a solar panel and battery backup system (3% of project cost). The project intends to utilize 100% on-site renewable energy to for all electricity and use no fossil fuel based heating. The incremental cost of the solar system yields benefits which include an annual savings of 577 metric tons of CO2, a range of operational savings between \$75,000 and \$95,000, and a 70% reduction in overall energy use compared to a conventional building. Over the planned 50 year life cycle of the building, this translates to 28,850 metric tons of CO2 (equivalent to 747,681 tree seedlings grown for 10 years) and a range of operational savings between \$3.7-4.7 million. The project saves \$1.3 million in embodied carbon equivalent over the 50 year life cycle (compared to a conventional building) which reduces the social cost to society generated by building construction and operations.

NARRATIVES

PKS GRANT CONTINGENCY 3160

1129678

1. CURRENT PROJECT SCOPE

Grant Contingency 3160 - This is a project to provide Parks with more flexibility on the budget side to deal with both anticipated and unanticipated future grant opportunities. The Grant Contingency request is being split between the two capital funds in Parks. A smaller portion of the Grant Contingency request is in Fund 3160 as compared to Fund 3581.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

The Grant Contingency project is being requested in anticipation of projects to be supported by grant revenues or other external funding sources. This request will expedite the implementation of capital projects that are expected to receive grant revenues without having to wait for a supplemental budget opportunity. It is expected that this efficiency will also result in lower project costs based on the ability to contract for services such as design and construction in a more timely manner.

4. PROJECT BENEFITS/OUTCOMES

Time saving and efficiency

5. BUDGET REQUEST BASIS

The amount requested is based on grants that have either already been applied for or currently under consideration. Potential granting agencies include the Puget Sound Regional Council (PSRC), the State's Recreation & Conservation Office (RCO), WADNR, King County Flood District, Land and Water Conservation Fund (LWCF), Washington State Department of Ecology (WSDOE), Washington State Department of Transportation (WSDOT), Bian Abbott Fish Barrier Removal Board, and the Cooperative Watershed Management (CWM).

NARRATIVES

PKS M:SMALL CAPITAL

1129686

1. CURRENT PROJECT SCOPE

The Small Capital Program - is an on-going program that funds emergent and time critical small capital construction or major maintenance project design and implementation with the use of in-house county forces. The legacy program is known as Small Contracts and is currently in Fund 3490, Parks Facility Rehab. The current plan is to complete remaining projects in Fund 3490 and add any new projects in the Small Capital program.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Parks has many ongoing operational requirements needed to keep the system open and usable by constituents. Of critical necessity in keeping parks open is to ensure that capital assets are in safe operating order. Emergent capital or major maintenance repair needs are routinely identified and these capital needs must often be undertaken and completed in an accelerated manner using in house design and implementation resources. Safety is of paramount concern given the volume of users in the Parks System and adequate funding provides the flexibility to respond is an essential part of operating a parks system.

4. PROJECT BENEFITS/OUTCOMES

A safe and open Park System with usable capital assets is the primary benefit and outcome of this program. Keeping parks capital assets safe and usable is a requirement for continued operation of any facility. This is the direct result of having a flexible and responsive design and implementation team available to address the emergent needs as they arise.

An unfunded program, reductions in funding, or non-action funding alternative will generally result in a worsening of any known deteriorating conditions impacting capital assets within the system and which may impact the Parks Division's ability to fulfill its mission. Delays in addressing these conditions may also result in significant additional costs and/or closure of park facilities.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M:SMALL CAPITAL

1129686

5. BUDGET REQUEST BASIS

Budget is based on Planning Level Engineer's Estimate, past experience, and costs associated with similar past contracts for design, engineering, permitting, and construction. This 2019-2020 capital appropriation request funds the design, permitting, and implementation of emergent priority small projects in the Park System. High Priority 2019-2020 capital projects include, but are not limited to, the following: high priority small drainage repair projects, ongoing ADA pathway accessibility improvement projects, demolitions, on-going electrical/mechanical/plumbing repairs and upgrades, preparation work for placement of prefabricated pit toilets, park system signage, reroofing projects, fencing, shelters, and kiosks, safety and security repairs and upgrades, gates, installation of survey monument and property boundary markers, and cultural resources survey.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as capital improvements and major maintenance projects enter and complete construction phases, this work is anticipated to have impacts on the operating budget. For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

8. PROJECT STATUS

Ongoing projects/program

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

Permitting agencies may have limited involvement. No other agency involvement is anticipated.

11. ART ELIGIBILITY

Maintenance or minor rehabilitation

12. EQUITY AND SOCIAL JUSTICE IMPACT

King County's park system impacts determinants of equity such as access to parks and natural resources, healthy built and natural environments, and strong, vibrant neighborhoods. These investments will benefit underserved communities and disadvantaged individuals that use these facilities.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Programmatic Sustainable Scorecard Platinum will be targeted where applicable.

Parks seeks to minimize its impact on the environment, and by facilitating access to nature and outdoor recreation opportunities, hopes to educate the community of the need to protect open space for future generations.

NARRATIVES

E911 Small PSAP Equipmt

1130200

1. CURRENT PROJECT SCOPE

E911 Small PSAP Equipmt - E911 Small Public Safety Answering Point (PSAP) Equipment - This project is an ongoing equipment refresh project that replaces equipment at the end of its life cycle. The scope of this project has been increased to include additional PSAPs not included in the 2017-2018 Budget Proposal.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

The E-911 Viper equipment is a critical system necessary for the delivery of 911 calls. Some of the current systems are going on 6-7 years old and the manufacturer recommends that the systems are refreshed every 4-5 years. Some of the systems are starting to experience system failures and it is critical that the systems are refreshed before they have an unrecoverable failure.

4. PROJECT BENEFITS/OUTCOMES

The refresh of outdated equipment will allow for the Program Office to maintain service levels until the new platform is implemented. There are risks associated with continuing to use 911 equipment past the manufacturer recommendation. Benefits will be recognized by the Program Office and King County PSAPs in maintaining service levels and reducing risks of equipment failures.

5. BUDGET REQUEST BASIS

The budget request will cover the costs of 3 additional PSAP equipment refreshes during this refresh cycle. Per the strategic plan recommendation, E-911 is working to develop an RFP to modernize the E-911 call delivery technology. In order to ensure continuity of the system and mitigate risks associated with aging equipment, this refresh will enable a functional system through the system modernization process.

6. FUNDING AND REVENUE DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

E911 Small PSAP Equipmt

1130200

7. OPERATING BUDGET AND OTHER IMPACTS

There is no anticipated change to the operational budget as the result of the equipment upgrade. The annual support costs are anticipated to remain steady.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

No alternatives considered. The Program Office has a contract for a specific named system and is required to maintain version and system levels. The Program Office recently completed a 10-year strategic plan and will be requesting proposals for replacing the current system, however the current 9-1-1 equipment must be maintained until that system can be implemented.

10. OTHER AGENCY INVOLVEMENT

911 call centers (PSAPs) will be affected by the equipment refresh and the Program Office will coordinate with the PSAP representatives on project scheduling and implementation.

11. ART ELIGIBILITY

Technology Project

12. EQUITY AND SOCIAL JUSTICE IMPACT

N/A

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

N/A

14. OTHER CONSIDERATIONS (OPTIONAL)

N/A

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

The Equipment Refresh aligns with the Effective Digital Systems strategic initiative by decreasing risk of system failure.

16. PROJECT COMPLEXITY

This project is moderately complex. To mitigate, the Program Office is employing a full-time project manager and has also contracted for project management from both the vendor and manufacturer. Comprehensive project plans have been developed and shared with the PSAPs for review and feedback.

17. CAPACITY TO IMPLEMENT THE PROJECT

The E-911 Program Office has the capacity to implement the project in the given timeframe. Initially, a dedicated Business Analyst will be used to gather and document the system requirements. A King County Project Manager will be dedicated to overseeing and managing this project and interfacing with the Project Review Board.

18. PROJECT RISKS

The biggest risk to this project is not implementing or delaying. The primary mission of the Program Office is the reliable delivery of 9-1-1 calls and the current system is beyond the expected life and needs to be refreshed. The current system is beginning to experience system failures and needs to be refreshed before experiencing an unrecoverable failure.

NARRATIVES

E911 Security System

1130202

1. CURRENT PROJECT SCOPE

E-911 Security System - This project was developed to engage consultants and vendors to evaluate and execute an improved security system for the 911 technology. However, the Program Office is requesting a disappropriation of funds after a re-evaluation of the project. Security needs will now be embedded in individual projects.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

The Program Office is requesting to disappropriate funds for the E-911 Security System project. After a re-evaluation of the project, the Program Office determined that embedding an assessment of security needs into each individual project and technology is a more practical approach. Traditionally 9-1-1 systems have been architected around closed networks, however the emergence of new requirements, such as text-to-911, require that the systems are opened up to the outside world. The Program Office therefore recognizes that network security is a critical component of system design. Further, it was recognized that it made more sense to develop the security systems as technologies emerge, rather than install a comprehensive security system that may not be applicable as the technology requirements become clearer. This approach also guards against early obsolescence of the security components.

NARRATIVES

E911 Call Reporting Upgrd

1133687

1. CURRENT PROJECT SCOPE

E911 Call Reporting Upgrade - The project will modernize the existing call reporting system at the 13 9-1-1 call answering centers (PSAPs) located throughout King County and legally meet reporting requirements.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

The current call reporting system has been in use since 2008 and is out of date, hard to use and is manufacturer discontinued, with support ending in 2019. As a State excise tax funded 9-1-1 Agency, King County E-911 is legally required to have a call reporting system that accurately reports the number of emergency calls received, answered, and transferred as well as time-to-answer statistics. The call reporting requirements are unique to 9-1-1 and currently there is only a single solution, called PowerMetrics, which will meet the needs of the County and is supported by the current vendor.

4. PROJECT BENEFITS/OUTCOMES

The benefits of the new system will be recognized equally by both internal (KCIT E-911 staff) and external (9-1-1 Center) customers. The current method for generating monthly call statistics is labor intensive, time consuming, and produces inconsistent results. With PowerMetrics, it is expected that Program Office (PO) staff can quickly access and generate call center data and produce more consistent monthly reports. Since E911 is a subscriber to the National Emergency Number Association (NENA) call record requirements, the cloud-based PowerMetrics application will be able to easily migrate E911 from the existing distributed system architecture to the single platform approach as specified in the E-911 Strategic Plan.

5. BUDGET REQUEST BASIS

E-911 is requesting the full budget for the 2019-2020 biennial budget in order to contract with the vendor and implement the new system. There are no additional phases anticipated for this project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

E911 Call Reporting Upgrd

1133687

6. FUNDING AND REVENUE DISCUSSION

N/A

7. OPERATING BUDGET AND OTHER IMPACTS

We anticipate this project to be cost neutral on an ongoing basis.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

No alternatives considered. PowerMetrics is the only call reporting system that is currently certified for use with the 9-1-1 call answering system. The Program Office is contractually obligated to only install components that are certified by the manufacturer.

10. OTHER AGENCY INVOLVEMENT

All of the PSAPs will be affected by this change in that they will need to use a different tool for reports. The PSAPs will receive benefit by reduced report generation time and consistency between the PO and Agency. All agencies have been made aware that a change is coming, and are supportive, however no specific information has yet been provided.

11. ART ELIGIBILITY

Technology project that does not consist of major physical infrastructure construction.

12. EQUITY AND SOCIAL JUSTICE IMPACT

An equity impact review is required for this project and will be completed as part of the project's planning phase.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

N/A

14. OTHER CONSIDERATIONS (OPTIONAL)

Critical Success Factors from CIO and PSB:

- 1) KCIT Procurement engagement to assist with RFP is required.
- 2) Evaluate required data migration needs and include in RFP.
- 3) Coordinate with other E-911 projects and report to PRB on any resource contention issues.
- 4) Early change management/training plan with / for PSAPs is required.
- 5) Perform Equity Impact Review (EIR).

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

This project will address the strategic initiative of Effective Digital Systems by creating a high quality, reliable call management system that will reduce risk associated with an aging program; streamlined reporting; and allow for more tailored reports for our external partners. The project will also address the Data Driven objective by allowing King County and partners to have greater visibility in the call data.

16. PROJECT COMPLEXITY

The complexity of this project is fairly low. The technology is well proven and both the vendor and manufacturer have significant experience with the product. The Program Office will contract with the vendor to install, maintain and train on the application.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

E911 Call Reporting Upgrd

1133687

17. CAPACITY TO IMPLEMENT THE PROJECT

Although E-911 is currently implementing a number of projects, the Program is bringing on additional resources to implement the project. Implementation will be primarily handled by the application vendor. The vendor will install, maintain and train on the application. E911 will also utilize project manager, business analyst, and quality assurance expertise for this project. These resources are included in the project budget.

Implementation for this project is not complex, as the current thick client application is transitioned to a cloud-based application, which does not require a high level of resource commitment. The project implementation is currently slated for Q1/2019 - Q2/2019, a period in which concurrent active project implementations is at a minimum, including both County and vendor resources.

18. PROJECT RISKS

Project risk is low. The new application adheres to national 9-1-1 standards and migrates easily from the existing application. Data migration from the existing application is not in project scope and, therefore, is not a risk. Further, both the new and old applications will run simultaneously for a period of time to ensure that the new application is receiving data and able to report accurately. Once the data has been verified and training is completed, connectivity to the old system will be discontinued for collection of new data. The old system will be maintained for a period of two years for legacy reporting purposes.

Delaying this project past 2019 puts the County at risk, as the current reporting system will no longer be supported and any failure would result in the not being able to provide the state-mandated call statistics.

NARRATIVES

DPH IT EHS ENVISION CLOUD

1134305

1. CURRENT PROJECT SCOPE

Department of Public Health (DPH) Information Technology (IT) Environmental Health Services (EHS) Envision Cloud - This project will evaluate and upgrade EHS' work management system, Envision Connect, which the vendor is no longer updating. As the system is currently configured, customers have to navigate separate agency platforms, log-ins, and payments to obtain permits. With an enhanced platform, both EHS and the Permitting Division of the Department of Local Services (Permitting) seek to offer more coordinated and standardized public service offerings such as a unified public portal, participation in regional permitting for all services, and enhanced customer service with clear online workflows between combination building/plumbing permits. This project scope allows EHS to explore Accela's new Environmental Health module, release an RFP to leverage Environmental Health and Permitting's combined buying power for an upgrade, complete procurement, and implement the new system.

NARRATIVES

DPH IT EHS ENVISION CLOUD

1134305

3. PROJECT JUSTIFICATION

Envision Connect is the sole work management tracking system for Environmental Health Services' programs and service delivery. This includes both State and Federally mandated services such as food and restaurant inspections. If this project to evaluate and upgrade Environmental Health's work management system is approved, customers seeking permits with King County will experience enhanced online services across EH programs and benefit from improved workflows between Permitting's building permitting and EH's onsite and plumbing permitting processes.

Environmental Health has used the Envision system since 1998. Typical ERP operating life cycles range from five to ten years. At twenty years, Envision is reaching the end of its useful life as business, customer and technological requirements evolve. When Envision was purchased by Accela in 2015, rather than enhancing Envision, Accela determined to invest their development into building a new Environmental Health software module which will offer a more comprehensive solution than Envision. As KCIT and industry has shifted away from supporting on premise solutions and towards SaaS solutions, Environmental Health seeks to realize the efficiencies of a SaaS, cloud based solution for the future. Furthermore, Accela has a pattern of purchasing smaller software companies, integrating their customers and then phasing out the purchased application within a few years. They have done this with previous mergers such as with Permits Plus. There is a possibility this same pattern will repeat with the purchase of Decade, the creator of Envision Connect. It is in King County's best interest to be proactive in light of this risk as all of Environmental Health's wide-ranging regulatory services are managed through the Envision Connect system.

Since Envision Connect is no longer supported for upgrades or new functionality, EH is limited in its ability to improve service offerings or system processes despite the high costs paid to sustain the system. EH's current 15 month contract costs \$439,000 with an additional \$437,000 for system maintenance, including two dedicated KCIT resources to manage the system's server upgrades, program customizations, requests and maintenance.

The proposed Envision Connect upgrade will involve analysis identifying what system and business tools are going to be required to support the rate and fee based programs in EH and the potential cost and impact on future rates, particularly leading into a rate study in 2019.

This project aligns with King County's strategic goal to be the best run government and adopt new technologies and processes that allow county agencies to work more effectively and efficiently while the county achieves consolidated services. This project seeks to enable a more streamlined process for customers to obtain permits between Permitting and EH including reduced processed steps, reduced number of separate log-ins, an integrated payment option, etc. This project also aligns with the KCIT strategic goal of technology modernization, moving away from on premise applications and towards more efficient SaaS solutions. This will also enhance our ability to enable more efficiencies with remote deployment staffing strategies which is challenged now due to our need for manual synchronization with Envision Connect and Envision Connect Remote, our mobile inspection tablet software.

Envision Connect is a critical system for Public Health that supports Environmental Health programs service delivery. It is an industry specific tool for Public Health regulatory services. Environmental Health operates a separate fund within the Public Health budget.

4. PROJECT BENEFITS/OUTCOMES

1—A more streamlined process for customers to obtain permits between Permitting and EH including reduced processed steps, reduced number of separate log-ins, an integrated payment option, etc.

2- Improved online customer satisfaction with our customer facing portal using a CSAT scoring methodology.

3- A new system will overcome our current software deficiencies which we address through side systems such as our customer-facing web portal and the Envision Connect Remote software which requires manual syncing to the Envision Connect system. In a new software implementation, we seek a single platform system that offers live syncing (and ability to hold and send data), and an integrated customer facing web-portal and the ability to add new capabilities and evolve with business needs on the platform.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

DPH IT EHS ENVISION CLOUD

1134305

5. BUDGET REQUEST BASIS

In anticipation of this project, Permitting and EH limited their usual 5-year contracts to 15-month contracts through December 2018, when an RFP will provide details on available solutions. The anticipated cost of this project includes the end-to-end cost of vendor implementation and KCIT support, including \$1.5M for implementation, \$120k for project management, \$60k for business analysis, \$60k for system analysis, \$90k for IT development, \$45k for quality assurance, \$15k for User-Defined Extensions (UDX), and \$6k for contract negotiation support from KCIT. With a 30-percent contingency, the project cost totals \$2,464,800.

6. FUNDING AND REVENUE DISCUSSION

Environmental Health is a rate and fee based division. The costs for the Envision Connect system are recovered through Environmental Health rates. If approved, a rate study analysis will be performed in 2019 to assess the impact of additional costs on EH's rate funded fee-based programs.

7. OPERATING BUDGET AND OTHER IMPACTS

We anticipate the annual operating budget to remain steady with current spending levels. If Public Health and Permitting leverage economies with the vendor and KCIT for Accela system maintenance costs, there is a chance we could even see some margin of decrease.

EH's current 15 month Envision contract costs \$439,000 (\$351,200 annually) with an additional \$437,000 for KCIT managed system maintenance, including two dedicated KCIT resources to deliver system updates, program customizations, requests and maintenance.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

The basis of this project is to perform an RFP and evaluate alternatives for our future Envision Connect work management system. As part of the RFP, Accela, our current vendor, and other comparable Environmental Health regulatory work management systems will be evaluated. Criteria for selection will be based on cost, business needs, improving our customer services offered and the ability to create a streamlined customer experience with Permitting's processes.

10. OTHER AGENCY INVOLVEMENT

This project encompasses all of Environmental Health's programs inspection and regulatory work, ranging from: Food and Facilities, Plumbing, On Site Septic, Solid Waste and Vectors, etc. Permitting will also be directly impacted by this work, should Public Health and Permitting determine to jointly negotiate a contract with Accela with the aim to establish better, more feasible terms and service levels.

11. ART ELIGIBILITY

N/A

12. EQUITY AND SOCIAL JUSTICE IMPACT

An equity impact review is required for this project and will be completed as part of the project's planning phase.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

N/A

Capital Appropriation Proposal

NARRATIVES

DPH IT EHS ENVISION CLOUD

1134305

14. OTHER CONSIDERATIONS (OPTIONAL)

CIO and PSB Critical Success Factors and Conditions:

- 1) KCIT ART and security review are required
- 2) Engage external Quality Assurance reporting to PRB or the project sponsor
- 3) Collaborate with PRB staff and KCIT Procurement for external QA scope of work and contract
- 4) Review and report to PRB on re-evaluated O&M costs when ready (current estimate is high)
- 5) Coordinate and report to PRB potential integration with DPER solution
- 6) Report on the risk register at each funding release request
- 7) EIR is required

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

N/A

15. STRATEGIC IT PLAN ALIGNMENT

This project aligns with KCIT's strategic goal to enable new technologies and processes that promote effective and efficient consolidated services. This project seeks to enable a more streamlined process for customers to obtain permits between Permitting and EH including reduced processed steps, reduced number of separate log-ins, an integrated payment option, etc.

This project also aligns with the KCIT objective of technology modernization and efficiency, moving from on prem applications towards more cloud based, SaaS solutions. This will also enhance our ability to remotely deploy staff which is challenged now due to the need for manual synchronization with Envision Connect and Envision Connect Remote, our mobile inspection tablet software.

16. PROJECT COMPLEXITY

This project offers a low business complexity and mid-to-low technical complexity. If we stay with our current vendor, Accela, and also wait for their new technology to develop for 1-2 years as they onboard new counties and develop workflows for their new Environmental Health software module, there will be less technical complexity, risk and a lower cost. If we acquire a new vendor, or push for the Accela service immediately, there will be more technological complexity.

Business Impact and Scope 3
Business Leadership and Visibility 1
Technology Impact and Risk 3
Technical Solution Approach 4

17. CAPACITY TO IMPLEMENT THE PROJECT

Environmental Health (EH) has a history of implementing technology projects. The last major work management software to be implemented was in 2000 when Envision was adopted, however there have been major upgrades since, including moving to Envision Connect and implementing other side systems including our customer web portal and Envision Connect Remote.

The division technology capacity currently includes two full time KCIT Systems Specialists who are dedicated to managing Envision Connect, providing data, reporting and system modifications. EH also employs a Sr. Business Analyst and Functional Analyst who will be representatives from within the Division for the overall project implementation. The amount of their FTE to be dedicated to the project will be balanced against other business needs.

The budget also includes adequate one-time KCIT resources to enable the transition including: project management, business analysis, system analysis, developer, quality assurance, and UDX.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

DPH IT EHS ENVISION CLOUD

1134305

18. PROJECT RISKS

Vendor readiness – risk occurrence is related to timing. Since Accela’s Environmental Health software is currently under development with only a few counties undergoing implementation in 2018, the risks of schedule delays and complexity of implementation will be higher if pursued immediately. This is especially given EH’s robust reporting requirements that will need to be customized for the new software and the unique format of having a plumbing inspection program within Environmental Health. If EH waits until late 2019-early 2020 to implement, the vendor will be more prepared and the upgrade less risky, complex, and costly.

Change management – risk occurrence is medium. Part of the project manager’s job will be to lead a robust change management effort with tenured workforce, who have been accustomed to the same work management system for 20 years. Within this time, there have been upgrades, process improvements and smaller scale change efforts which have been successful. These indicate a precedent for success, but an intensive change management effort with staff will be crucial to ensure a seamless adoption.

The 30% contingency funding is based on the KCIT standard.

NARRATIVES

DCHS DO CLPPRT

1134636

1. CURRENT PROJECT SCOPE

DCHS Director's Office (DO) Client Level Program Performance Reporting Tool ("CLPPRT") - This project is an IT solution to compare program performance data to goals based on individual client service and outcome data. It will include data from DCHS's three major levy programs (Best Starts for Kids (BSK); Veterans, Seniors and Human Services Levy (VSHSL); and Mental Illness and Drug Dependency (MIDD)) as well as the Developmental Disabilities and Early Childhood Supports Division, and provide reporting capabilities on required data from contracted agencies and how it compares to contractual performance targets at the client or aggregate level.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

This project is addressing a critical system. Currently, there are four DCHS programs that all have their own, disparate processes for reporting on performance data for their services - Best Starts for Kids ("BSK"), the Veterans, Seniors and Human Services Levy ("VSHSL"), MIDD, and Developmental Disabilities ("DD"). These existing processes are poorly documented, non-standardized and do not always provide client-level data on outcomes. The result of the current situation is that DCHS does not have the means to effectively or efficiently report out answers for legally mandated questions in a timely fashion. While the existing systems can produce reports, the process to compile these results requires significant manual labor. This project will significantly decrease the labor required for reporting.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

DCHS DO CLPPRT

1134636

4. PROJECT BENEFITS/OUTCOMES

DCHS will gain the ability to run reports on actuals versus targets directly, using the reporting system. Currently, this process requires manually merging data from several systems to complete a single targets vs actuals report.

The quality of DCHS's program performance data will be improved through the usage of automated validation rules that will trigger at time of entry. The current process relies on manual review by staff to make sure that data "looks right" prior to acceptance.

Provider agencies will be able to view the data that they have submitted to DCHS to review and verify for accuracy.

DCHS will be able to meet its legally mandated commitments to provide client level outcome data.

Client data will be able to be reviewed across multiple programs and provider agencies, creating a comprehensive view of the client experience that DCHS provides.

5. BUDGET REQUEST BASIS

This is a new project, so there is no existing appropriation. The current estimate of total project cost for implementation (1 year timeframe) is \$1.8M. With a 20-percent contingency included, this amount becomes \$2.16M. KCIT led the process for developing this cost estimate, and this estimate is based on the preliminary outcome of a procurement process as well as KCIT estimates of equipment and personnel time necessary for both initial implementation as well as ongoing O&M. Because an RFP has already begun and significant early analysis has already been completed by KCIT, these cost estimates are relatively certain, although there is still uncertainty as this is the early phase of a large-scale project. DCHS will fund this cost entirely through an allocation to the BSK, MIDD, VSHSL and Developmental Disabilities (DD) funds.

6. FUNDING AND REVENUE DISCUSSION

DCHS will fund this cost entirely through an allocation to the BSK, MIDD, VSHSL and DD funds.

7. OPERATING BUDGET AND OTHER IMPACTS

The estimate for ongoing O&M is \$220,000 per year. This will represent an increase in the operating budget for the funds that are affected (BSK, MIDD, VSHSL, and DD).

8. PROJECT STATUS

New.

9. ALTERNATIVES ANALYSIS

The alternative to this project is to continue to use the existing data systems that are built on out-of-date technologies. While this would work, these out-of-date technologies are no longer supported by KCIT, and there are significant benefits to be found in application modernization.

10. OTHER AGENCY INVOLVEMENT

N/A

11. ART ELIGIBILITY

This is a technology project that does not have a significant physical infrastructure component.

12. EQUITY AND SOCIAL JUSTICE IMPACT

An equity impact review is required for this project and will be completed as part of the project's planning phase.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

DCHS DO CLPPRT

1134636

14. OTHER CONSIDERATIONS (OPTIONAL)

CIO and PSB Critical Success Factors and Conditions:

- 1) KCIT ART and data review are required;
- 2) Security review is required;
- 3) There are vendor provided solutions (i.e., CRM Dynamics); Salesforce is a NOT a solution to go with;
- 4) Use of data platform is a must;
- 5) Use of KCIT contracting is required;
- 6) Up to 12 month duration;
- 7) Equity Impact Review/Report - to be completed by December 2018

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

N/A

15. STRATEGIC IT PLAN ALIGNMENT

Best Run Government: Help transform health and human services by providing a means to track specific, measurable goals through the analysis of performance data provided at the client level. This data will be used to improve program service efficiency and ensure that DCHS is investing in the most effective service strategies.

Building Equity & Opportunity: Will work directly with the VSHSL as well as BSK levies, which are two of the primary pillars of this initiative. Provide the much needed data "window" into the performance and efficiency of a number of programs funded by these levies.

Application Modernization - This project will sunset old tools/databases, and leverage a King County endorsed technology platform (Microsoft Dynamics).

16. PROJECT COMPLEXITY

One area of complexity is that the system is external and contains Health Insurance Portability and Accountability Act (HIPAA) protected data on residents, some of whom represent our most vulnerable populations. The system will therefore need to ensure compliance with strict security standards regarding this personal information. DCHS and KCIT have experience managing complex privacy requirements in other recent data system projects related to health care information. An additional area of complexity is how to communicate and roll out these changes to provider agencies, which can have unsophisticated IT systems. DCHS has experience bringing providers along with technical changes and providing technical assistance when needed.

17. CAPACITY TO IMPLEMENT THE PROJECT

DCHS has extensive experience with complex technology projects, including the recently completed Behavioral Health Integration project, a multi-year project that expanded the Mental Health data system into an integrated system that allows the Behavioral Health and Recovery Division (BHRD) to collect, process and analyze data, and generate payment data to contracted providers. This system submits integrated data to the state for both mental health and substance use disorder activities, rather than separately. The third phase of the project, completed in March 2018, successfully moved the system to the Cloud.

This project required multi-year business commitment and oversight, and is a good example of DCHS's experience working collaboratively with KCIT to launch major systems. For 2019-2020, DCHS is proposing to add a Database Integration Manager position that will provide additional support for these types of large scale IT projects and the overall mission behind them to integrate reporting abilities.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

DCHS DO CLPPRT

1134636

18. PROJECT RISKS

(High Risk)

(1) This project will have an aggressive schedule in order for DCHS to meet Executive and Council requirements for reporting on BSK, VSHSL, MIDD, and Developmental Disabilities service success. Since there is a broad range of end users and groups with specific requirements that must be gathered, scheduling conflicts and a general lack of time will be a significant risk to the project timeline. To mitigate this risk, DCHS is planning to engage an experienced vendor who has prior experience with systems of this nature, and who plans to use a King County standard platform (Microsoft Dynamics) to develop the solution.

(2) Competing interests - since so many stakeholders are involved, a DCHS-led Project Steering Committee will keep the scope focused and ensure a common approach to workflows, standardized roles, and metrics.

(3) Latecomer business requirements - MIDD and Developmental Disabilities (DD) were included in this project scope after the needs analysis was performed based on just including BSK and VSHSL information, so less time was spent upfront on understanding MIDD and DD needs. There may be some requirement modifications as more is understood about the needs of these programs.

Capital Appropriation Proposal

NARRATIVES

DCHS DO CMT

1134637

1. CURRENT PROJECT SCOPE

DCHS Director's Office (DO) Case Management Tool (CMT) - This project will implement a modernized case management data system that provides real-time dashboards and queryable data, and the ability to process payments, client incentives, and vendor payment vouchers. This system will replace older systems currently used for veterans, education, and employment program case management.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

This project is addressing a critical system. Currently, there are several programs within DCHS that use case management software to deliver direct services to clients in the community. These applications are based on archaic technologies that are currently no longer supported by KCIT: VIBE supports the Veteran's, Career Connections, and KCJU programs and was originally built by KCIT using Power Builder in 2009; and WTP, which serves as the Employee Education and Resource Youth Database, was built by KCIT using Microsoft Access. Without the implementation of a modernized case management tool, DCHS will be unable to adequately and efficiently meet the legally mandated program reporting requirements of the VSHSL and BSK levies. Additionally, the existing databases will no longer be supported by KCIT if they are not updated to a modern platform. This project seeks to improve end-user experience; simplify reporting; streamline payment processing through interlinking with Oracle EBS; and provide an improved process for entering work training intern time into PeopleSoft.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

DCHS DO CMT

1134637

4. PROJECT BENEFITS/OUTCOMES

This project will replace outdated technologies that are expensive to maintain and modify with more modern technology that will be fully supported by the County's central IT department.

The merging of the two distinct databases will reduce the number of "data silos" within DCHS by creating a single system which will track data from multiple programs.

Reporting capabilities will be improved based on the requirements of the programs, rather than based on the capabilities of the outdated technologies that are currently in use - Employment and Education Resources programs funded by Best Starts' for Kids and the new programs funded by the Veterans, Seniors and Human Services Levy ("VSHSL") will be able to more efficiently meet their reporting needs.

5. BUDGET REQUEST BASIS

This is a new project, so there is no existing appropriation. The current estimate of total project cost for implementation (1 year timeframe) is \$1.25M. With a 30-percent contingency included, this amount becomes \$1.6M. The estimate for ongoing O&M is \$240k per year. KCIT led the process for developing this cost estimate, and this estimate is based on the preliminary outcome of a procurement process as well as KCIT estimates of equipment and personnel time necessary for both initial implementation as well as ongoing O&M. Because an RFP has already begun and significant early analysis has already been completed by KCIT, these cost estimates are relatively certain, although there is still uncertainty as this is the early phase of a large-scale project. DCHS will fund this cost entirely through an allocation to the BSK, Employment and Education Resources, and VSHSL funds.

6. FUNDING AND REVENUE DISCUSSION

N/A

7. OPERATING BUDGET AND OTHER IMPACTS

The estimate for ongoing O&M is \$240,000 per year. This will represent an increase in the operating budget for the funds that are affected.

8. PROJECT STATUS

New.

9. ALTERNATIVES ANALYSIS

The alternative to this project is to continue to use the existing data systems that are built on out-of-date technologies. While this would work, these out-of-date technologies are no longer supported by KCIT, and there are significant benefits to be found in application modernization.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

This is a technology project that does not have a significant physical infrastructure component.

12. EQUITY AND SOCIAL JUSTICE IMPACT

An equity impact review is required for this project and will be completed as part of the project's planning phase.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

DCHS DO CMT

1134637

14. OTHER CONSIDERATIONS (OPTIONAL)

CIO and PSB Critical Success Factors:

- 1) KCIT ART and Data review are required;
- 2) Security review is required;
- 3) Recommended is vendor SaaS solution;
- 4) Evaluate using CRM Dynamics or other county platforms;
- 5) Leverage client lookup being implemented with two projects: FIMC and data Integration;
- 6) Equity Impact Review/Report - to be completed by December 2018.

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

N/A

15. STRATEGIC IT PLAN ALIGNMENT

Best Run Government - This project will help to transform health and human services by building community equity, improving services efficiency, and providing the means to measure program efficacy to invest in what works.

Building Equity & Opportunity - This project will work directly with the VSHSL as well as BSK levies, which are two of the primary pillars of this initiative. This project will provide the much needed data "window" into the performance and efficiency of a number of programs funded by these levies.

Application Modernization - This project will sunset old tools/databases, and leverage a King County endorsed technology platform (Microsoft Dynamics).

16. PROJECT COMPLEXITY

A significant source of complexity in this project will be the migration from the two existing data systems to a single data system. There will be technological complexities due to the need to create a new system that provides a unified data structure. There will be business driven complexities due to the need to train users on the use of a new system and to ensure proper processes and procedures surrounding data entry.

To ensure a successful outcome, we will invest time and effort to define a case management solution that has a consistent workflow for both Veteran's and Workforce Training programs, and considers the addition of future programs. The planned solution will use Microsoft Dynamics, a tool which KCIT has extensive experience with, and which can be configured to meet DCHS's case management needs. KCIT will leverage external vendors, as needed, to supplement internal capacity and skills.

17. CAPACITY TO IMPLEMENT THE PROJECT

DCHS has extensive experience with complex technology projects, including the recently completed Behavioral Health Integration project, a multi-year project that expanded the Mental Health data system into an integrated system that allows Behavioral Health and Recovery Division (BHR) to collect, process and analyze data, and generate payment data to contracted providers. The system will be able to submit integrated data to the state for both mental health and substance use disorder activities, rather than separately. The third phase of the project, completed in March 2018, successfully moved the system to the Cloud. This project required multi-year business commitment and oversight, and is a good example of DCHS's experience working collaboratively with KCIT to launch major systems. For 2019-2020, DCHS is proposing to add a Database Integration Manager position that will provide additional support for these types of large scale IT projects and the overall mission behind them to integrate reporting abilities.

18. PROJECT RISKS

This project is relatively low risk. The primary risk to this project is the potential for ending up with case management solutions customized to each program. A DCHS-led Project Steering Committee will drive the effort to develop a common approach to case management workflows, standardized roles, and common metrics. The Committee will decide, with input from Program Managers, if there are some unique requirements that need to be included.

NARRATIVES

DES FBOD PROCURE MODERN

1133879

1. CURRENT PROJECT SCOPE

Finance and Business Operations Division (FBOD) Procurement and Payables System Modernization -- This project will replace and supplement the systems currently used to support the procure-to-pay value stream. Through the modernization of these systems, the way in which participants in the procure-to-pay value stream interact will be transformed. Other County departments and agencies will have transparent access to where their procurement request is in the process. Suppliers will have a single point of entry for registering to do business with the County, applying for certification, reporting data for contract compliance purposes, submitting invoices, obtaining public procurement records, and signing contracts. Overall, the procurement process will become transparent to all its customers, from internal agencies/departments to suppliers to other public agencies. This project will be executed within two years of the start date, ending no later than December 31, 2020.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

DES FBOD PROCURE MODERN

1133879

3. PROJECT JUSTIFICATION

Procurement & Payables relies on aging applications to support the County's procure-to-pay business process. Users of the County's procure-to-pay systems (internal staff, external agencies, and outside suppliers) experience difficulty in use, inefficient processes, duplicate data entry, inaccessibility of information needed to various stakeholders at the right time (if at all), and numerous work-arounds in the process. These suite of systems are essential services, and this is the highest priority project for FBOD. This project will solve a number of pain points by all stakeholders to the procure-to-pay process; among them:

Suppliers - Vendors want easy access to County bidding opportunities, and to be provided notice when a bid is posted that they might be qualified for. The current system the County uses to offer this functionality ("OVR" or Online Vendor Registration) is antiquated and extremely convoluted. There are multiple steps in order to be registered with the County, none of which are intuitive to the common user. There is a 70% failure rate for vendors attempting to register for "push" email notices from the County when bids are published. This project would streamline the registration process by offering a single point of entry with an intuitive platform.

County Agencies - Agencies want easy access to the status of their procurements and contracts. Currently, agencies submit an online "service request" which hands a procurement off to the procurement team. However, to know where it is in the pipeline after that service request requires manual follow up, and often, the agency does not know who to call. Agencies are frustrated with not having easy access to know where their project is in process. This project will allow for requests to be tracked through Oracle, and provide online access to all associated procurement and contract documents.

Procurement & Payables staff - Procure-to-pay staff want to shorten cycle time and reduce errors by eliminating the double and triple entry points for data that currently exists. For instance, service requests for solicitations are received through the Service Request Module. The information received there is then transferred into a separate document in Microsoft Word. Once the Word document is finalized, it is uploaded to SharePoint so that it can be uploaded to yet another system, Online Vendor Registration ("OVR"). This project would allow requests to be submitted in Oracle and transferred directly into procurement documents that are also housed in Oracle. The push of this information out to vendors would also occur from Oracle therefore moving closer to a single point of truth for data. The consultant report and recommendations for improvement are available and will be submitted with this appropriation request.

4. PROJECT BENEFITS/OUTCOMES

Moving forward with the Oracle Centric options, the County will realize multiple benefits, including:

- Enhancing current use of Oracle iProcurement and implementing additional Oracle modules will further streamline how users interact with procurement & payables as well as accessing existing information to fulfill their purchasing needs. Modules will allow for electronic bidding, a shopping basket model, and a single repository for all documents
- Implementing iSupplier Portal will give vendors a user-friendly method to register with the County, receive bid opportunities, access purchase orders and contracts, and submit invoices
- Contract Agreements (CPA) created for a specific project/grant
- P-Card reporting, tracking and reconciliation
- Travel/Employee Reimbursement front end
- House backup documentation in Oracle
- Grants improvements
- LCP tracker allows ESJ reporting on contracts, priority hire, and other Exec priorities
- Various efficiencies and revenue enhancements

5. BUDGET REQUEST BASIS

FBDO requested this project during the 2017-2018 budget cycle, however the project was not included in the 2017-2018 Proposed Budget due to insufficiently defined value proposition. In preparation for the 2019-2020 budget request, FBOD partnered with the Huron consulting firm, the BRC, and KCIT to create a procurement modernization roadmap addressing PSB and KCIT concerns. Additionally, FBOD and the BRC team are progressing with a fit-gap analysis that will give the optimal sequencing of Oracle modules and other software seen as best practices in the industry. The total for the project is estimated to be \$5,434,800, which includes a 20-percent contingency.

6. FUNDING AND REVENUE DISCUSSION

The entirety of the project will be debt financed over a seven year period, with FBOD paying roughly \$500,000 in debt service in 2019 - 2020. Bond proceeds will be deposited into the DES IT Fund.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

DES FBOD PROCURE MODERN

1133879

7. OPERATING BUDGET AND OTHER IMPACTS

FBOD operating budget will see increases due to increased support costs in the BRC and Oracle licenses. Total Annual Ongoing Cost: \$105,600, calculated as follows:

KCIT Ongoing Support:

283,500 - Oracle Sourcing and Procurement Contracts

28,800 - Oracle Procurement & Spend Analytics

15,300 - Oracle Character Recognition (OCR)

117,000 - Concur P-Card

- LCP Tracker

67,500 - CX Service Cloud

(171,500) - less 2.0 FTE in procurement

(55,000) - less reduction in KCIT support

(300,000) - less additional P-card revenue

(60,000) - less iExpense cost reduction

BRC Ongoing Support: \$180,000

Procurement Ongoing Support: - 0

Efficiencies are possible in administrative and accounts payable work as the full suite of applications are completed. Additionally, savings across the County are possible as agencies move to fewer contracts, focus their procurement, and likely realize lower total costs via volume and other negotiated discounts.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

A number of alternatives were considered during the creation of the Procurement Technology Roadmap. This included internal "fixes and patches" by KCIT, a number of different combinations of software and vendors for various pieces of the procurement value stream, and "best in class" solutions for each primary procurement function. The decision to focus primarily on Oracle technologies was a combination of good fit for the business problem and existing infrastructure and expertise in Oracle technologies. Details are included in the Procurement Technology Roadmap.

10. OTHER AGENCY INVOLVEMENT

FBOD has partnered with the BRC and KCIT over the past two years to identify requirements for this project. The parties are keenly qualified to implement this project in coordination with an external implementation partner. The parties worked together on the initial implementation of Oracle EBS and have partnered since then to continue to improve functionality of the system. Over the past several years, much has been learned about change management for a system that all County agencies interact with given the lessons learned from implementing ABT and large upgrades to PeopleSoft and EBS. Procurement & payables and the BRC have built strong training programs which will be leveraged with this project to ensure effective change management and user adoption.

Additionally, FBOD will work closely with agencies that have existing procurement groups to make sure their specific needs are considered.

Finally, and as noted in the benefits section, Public Disclosure Requests are numerous in Procurement. FBOD will work closely with Records Management to make sure the legal requirements are met as part of the project.

11. ART ELIGIBILITY

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

12. EQUITY AND SOCIAL JUSTICE IMPACT

An equity impact review is required for this project and will be completed as part of the project's planning phase.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

N/A

14. OTHER CONSIDERATIONS (OPTIONAL)

This project will solve a number of pain points by all stakeholders to the procure-to-pay process; among them, the project will result in mitigation of the following pain points:

The major problems tied to this cobbled together system include:

1. Aging procurement system is paper based and with duplication of manual data entries
2. Vendors complain daily on the complexity of our registration system (70% failure rate)
3. Vendors are required to hand deliver paper bids to our office
4. Vendors may only submit paper invoices
5. We have to rely on paper based storage only and must send records to Archives
6. There is no central library of contract templates, terms, conditions and scoring
7. FBOD under-utilizes online store catalogs which could expedite purchases for our internal customers (use only Grainger and inventory items are not part of vendor catalogs)
8. Internal customers cannot track the progress of procurements or contracts
9. Internal customer using our P-card Program are subject to a difficult reconciliation process and cannot easily capture spend from P-cards to analyze with other spend data
10. Reporting and data analysis is very difficult for internal customers, which hinders our ability to analyze County spending and to use procurement for meeting Executive goals

This project will:

- Address each of the problems above as part of integrated system
- Cloud based to reduce ongoing support and infrastructure costs
- Enhance our investment in iProcurement
- Use Oracle's iSupplier Portal (to replace OVR) and add two modules: Oracle's Sourcing and Contracts to provide transparency to vendors and internal customers
- Eliminates KCIT staff from maintaining five non-integrated side systems
- Replace iExpense with an integratable product called Concur to make it easier to use P-cards and to streamline the County's Travel Program
- Move FBOD toward optimization of the procure-to-pay system, a key part of a Best Run Government

The consultant report and recommendations for improvement are available and will be submitted with this request. It contains many of the details and data that can't be explained due to space constraints here, in the many areas we hope to see significant improvements.

Please see the Cost Template for details as to expenditures, revenues, and efficiencies anticipated with this project.

CIO and PSB Critical Success Factors and Conditions:

- 1) Engage external Quality Assurance reporting to PRB or the project sponsor - based on their agreement
- 2) Collaborate with PRB staff and KCIT Procurement for external QA Scope of work and Contract
- 3) KCIT architecture review is required
- 4) Keep the project schedule under two (2) years
- 5) Equity Impact Review/Report - to be completed by December 2018

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

DES FBOD PROCURE MODERN

1133879

15. STRATEGIC IT PLAN ALIGNMENT

Digital Civic Engagement - Modernizing the way prospective vendors interact with the County will increase participation in competitive opportunities (and reduce costs), shorten cycle time, improve satisfaction, and provide greater transparency.

Workforce Empowerment/Effective Digital Systems - While FBOD has been effectively using lean principles to streamline processes, technology has not been agile enough to fully realize efficiencies. This has stifled employees' willingness to put effort toward further improving processes. This project will leverage the County's investment in Oracle.

Data Driven - Combining multiple sources of data into fewer systems will reduce error, make data more accessible, and empower better decision-making.

16. PROJECT COMPLEXITY

- Countywide impact, including prospective suppliers who interact through the current Online Vendor Registration (OVR) system
- Concur will integrate with Oracle
- Data will need to be cleaned and migrated from existing applications
- Oracle modules and Concur solution are in the cloud and will be software-as-a-service; business processes will need to be modified to fit the system
- Existing applications (OVR, multiple databases, and Service Request Module [SRM]) will be retired as the new solutions are implemented
- Planned implementation is: Phase 1 - Oracle Sourcing and Contracts modules (replacing OVR and the databases) and Concur; Phase 2 will include ancillary functionality to replace SRM and provide for electronic invoicing will be phase 3.

To mitigate the complexity, the budget request includes funding for internal and external implementation resources, including project management, change management, communication and training.

17. CAPACITY TO IMPLEMENT THE PROJECT

FBOD has partnered with the BRC and KCIT over the past two years to identify requirements for this project. The parties are keenly qualified to implement this project in coordination with an external implementation partner. The parties worked together on the initial implementation of Oracle EBS and have partnered since then to continue to improve functionality of the system. Over the past several years, much has been learned about change management for a system that all County agencies interact with. Procurement & Payables and the BRC have built strong training programs which will be leveraged with this project to ensure a high level of change management and user adoption.

18. PROJECT RISKS

Change Management as a result of business process change (high) - This risk will be mitigated by leveraging the robust training capabilities in FBOD and supplemental resources with temporary staff where needed. FBOD has become fluent in documenting processes via standard work which will also be leveraged for this project.

Solution does not meet the needs (low) - This risk is being mitigated by working closely with a consultant to perform a fit/gap assessment. The budget request includes resources to also assist with implementation to ensure needs are met.

Solution experiences schedule delays (medium) – Schedule delays would also impact the cost, as the longer the project the more cost for personnel. Having a good technical project manager with experience is the planned mitigation to this risk, and the additional of external QA should reduce risk and allow mitigation as well. Both these mitigation strategies allow for adjustment mid-stream as needed.

Solution experiences higher costs than estimated (medium) – For the most part, costs will follow schedule. The cost of software from Oracle is assumed at the retail level, the expectation is that some better pricing will be available because of the County's significant Oracle footprint. Having a good technical project manager with experience is the planned mitigation to this risk, and the additional of external QA should reduce risk and allow mitigation as well. Both these mitigation strategies allow for adjustment mid-stream as needed. The cost overrun risk is also mitigated with the 20% contingency buffer included in the project.

NARRATIVES DES OEM RCECC AV MODERN 1133880

1. CURRENT PROJECT SCOPE

Office of Emergency Management (OEM) Audio/Video (A/V) Update -- This project will fund the planning of an upgrade of the audio-visual system in the Emergency Operations Center (EOC) in Renton. The current system is inadequate and unable to provide situational awareness to staff managing incidents, which directly impacts public safety and the public's perception of the County.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

DES OEM RCECC AV MODERN

1133880

3. PROJECT JUSTIFICATION

The current system was installed at building construction and is generally around 15 years old. Some parts were transferred from previous locations and may be older. The primary projectors were replaced six years ago on an emergency replacement basis. In general, industry recommends that AV systems be refreshed every five to seven years, so almost every piece of the current system is out of date. In particular, the assistive listening sub-system has failed entirely, meaning OEM is unable to comply with ADA requests. Updates to the AV system are mission critical to maintain a well-functioning EOC.

4. PROJECT BENEFITS/OUTCOMES

This project as proposed will fund the planning for and implementation of an upgrade to the audio-visual system in the EOC. The current system is inadequate and unable to appropriately support first responders conducting life-saving operations after a disaster. The project as approved by Gate 1 funds only the planning portion and is unlikely to directly produce any benefit until further funding for implementation is approved. OEM expects that with full implementation funding, they will be able to install an AV system that allows for sharing of information and management of catastrophic incidents.

The benefit (ability to share information and manage a catastrophic incident) will be addressed in King County Office of Emergency Management after-action reports of EOC activations. When two sequential AARs note that all displays and audio systems worked as intended, the benefit will be considered achieved.

5. BUDGET REQUEST BASIS

The project was approved only for the planning phase. OEM will request full project funding in a 2019-2020 supplemental ordinance.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

The alternative would be to let the existing equipment age until failure.

10. OTHER AGENCY INVOLVEMENT

The EOC is used by all of OEM's regional partners such as: King County Departments, first responders, special purpose districts, municipalities, non-profits and for profits businesses.

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

The KC Strategic IT Objectives that align with the project are Effective Digital Systems, which would benefit the timely information sharing of emergency management information during disasters and provide a regional situation awareness of the emergency response operations from the centralized information hub, the EOC.

Employee Empowerment through providing employee's the confidence to support first responders during disasters utilizing modern technology that allows for proper decision making during life and property safety responses.

Civic Engagement through providing residents and businesses impacted by disaster to report key information into the EOC Individual Assistance recovery reporting portal in order to support Whole Community recovery from a disaster.

16. PROJECT COMPLEXITY

This portion proposal is for the needs study only.

17. CAPACITY TO IMPLEMENT THE PROJECT

OEM has sufficient staff resources who will stay with this project through full implementation. All OEM staff have a vested interested in this project's success as it impacts their work in the EOC. OEM will plan staff time for meetings with the vendor as well as providing escort to secured areas of the building.

18. PROJECT RISKS

The current system was installed at building construction and is generally around 15 years old. Some parts were transferred from previous locations and may be older. The primary projectors were replaced six years ago on an emergency replacement basis. In general, industry recommends that AV systems be refreshed every five to seven years, so almost every piece of the current system is out of date. In particular, the assistive listening sub-system has failed entirely, meaning OEM is unable to comply with ADA requests. Updates to the AV system are mission critical to maintain a well-functioning EOC.

NARRATIVES

DPD CASE MGMT SYS REPLACMENT

1133724

1. CURRENT PROJECT SCOPE

Department of Public Defense (DPD) Case Management System Replacement Project will replace DPD's two current case management systems, consolidating core functions into a unified case management system with end-to-end functionality necessary to provide essential legal services to DPD clients.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

DPD CASE MGMT SYS REPLACEMENT

1133724

3. PROJECT JUSTIFICATION

DPD's ability to effectively deliver constitutionally mandated legal representation to County residents is negatively impacted by:

- Inordinate amount of time to process and review electronic discovery
- Massive amounts of electronic evidence overwhelming the business
- Difficulty accessing data to make business decisions and quantify performance
- Staff time wasted from redundant data entry in multiple systems
- Inefficient business processes from disjointed systems
- Reporting requiring extensive scrubbing and manipulation
- Lack of integration with Courts, Prosecutors, and County financial systems
- High infrastructure and support costs due to antiquated systems
- Not meeting essential service 24-hr disaster recovery requirement

The project will deliver a robust, unified case management system that will provide functionality critical to performing core business functions, with streamlined communication and ready access to information. As a result of these improvements, we expect the following measurable results:

- Increased number of attorneys and clients prepared for hearings
- Fewer clients who miss a hearing
- Fewer bench warrants issued due to a missed hearing
- Increased number of standardized processes across the department

In addition, replacing antiquated systems with a vendor supported system reduces risks related to storage constraints, data protections and security. DPD expects to experience fewer system outages as well.

4. PROJECT BENEFITS/OUTCOMES

The investment will significantly improve internal operations as measured by increased staff satisfaction with the system and the reduction of time spent on duplicate data entry and other non-value added work. As a result of these improvements and the shift to more value-added work, we expect an increase in communication with our clients. Increased communication with the client prior to their court hearing has been shown to reduce the number of clients who fail to appear in court and ultimately reduce the impending collateral consequences that result from failing to appear.

5. BUDGET REQUEST BASIS

This two-phase project is estimated at \$4.1 million, including contingency. Phase 1, the planning phase, is estimated at \$500,000, including a 10-percent contingency. These funds have already been appropriated. Phase 2 (the remainder of the project) is estimated at \$3.55 million, including a 20-percent contingency (in case of data migration and conversion issues). DPD and KCIT collaborated on the cost estimate. DPD focused on business support and KCIT focused on technology and IT support. KCIT met with the BRC and other partners to determine integration needs and costs. DPD used similar projects such as the Jail Management System for guidance on the level of project support needed.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

After the project is fully implemented, a decrease (roughly \$50K/year, down from \$640K/year) in the O&M cost is anticipated because the system will be modernized and vendor supported.

8. PROJECT STATUS

This project is in review for the planning phase. It was submitted as part of the 2017-2018 3rd Omnibus. Phase I will commence in August-September, upon Council approving the Omnibus.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

DPD CASE MGMT SYS REPLACEMENT

1133724

9. ALTERNATIVES ANALYSIS

A detailed alternatives analysis will be done as part of the planning/design (i.e., RFP development and vendor selection) phase of the project. DPD considered integration of the HOMER system with the Legal Files, as one alternative. However DPD (with KCIT) determined that such integration was not possible. The other alternative was "do nothing" but the operational inefficiencies and the risk of maintaining the status quo were deemed too high.

10. OTHER AGENCY INVOLVEMENT

Consulted with DAJD, DCHS, and district courts that will be directly impacted by this project (through data sharing and interfaces with their systems). There might be future consultation/coordination as part of project implementation. In addition, KCIT (on behalf of DPD) consulted with BRC on data interface.

11. ART ELIGIBILITY

IT project

12. EQUITY AND SOCIAL JUSTICE IMPACT

The new solution will send automatic reminders to clients prior to their hearing, which is expected to:

- (i) decrease the rate of failure to appear and, hence,
- (ii) reduce the potential for a bench warrant and new charges for the clients scheduled to appear in court.

A detailed equity impact review is being conducted as part of the project's planning and design (to be completed in late 2018). This review will inform the business requirements before the project's implementation phase.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

DPD CASE MGMT SYS REPLACEMENT

1133724

14. OTHER CONSIDERATIONS (OPTIONAL)

In 2013, non-profit public defense agencies joined King County, each using a different case management system. Legal Files, in use by one agency, was implemented in all four practice divisions in 2015, with side systems developed for missing functionality. The Director's Office retained HOMER as the screening, assignment, and finance system. For the 2017-18 budget, PSB accepted DPD's proposal to retire HOMER and replace functionality with an enhanced Legal Files.

DPD and KCIT have since done due diligence and application rationalization to determine that Legal Files could not meet the requirements of a modern case management system. A Request for Information from outside vendors in 2017 affirmed that other systems can meet DPD's needs in ways that the existing systems cannot.

Overall, our existing CMS systems cannot support the business changes needed to transform the criminal justice system. Implementing a new CMS provides a favorable opportunity to address these limitations as well as to better integrate with criminal justice partners and further standardize work across the department.

Upon implementation of the solution, DPD will decommission HOMER and terminate our contract with Legal Files and will develop a plan for decommissioning our existing systems.

The project will be completed in two phases. Phase 1 includes the development and issuance of an RFP, evaluation of bids, and the selection of a vendor. Phase 2 includes the remainder of the project from awarding the contract, migration of data, testing, implementation and closeout.

During Phase 1, the project team will review integration with existing County law and justice systems for synergies, possible standardization, and improved integration. DPD currently has interfaces with the Prosecuting Attorney, Seattle Municipal Court, and King County EBS financial system. The goal is to improve existing interfaces and establish new ones, if possible, with DAJD, District Court, and Superior Court. The team will also investigate the possibility of integrating with DCHS and Public Health. MOUs will be developed for external agencies.

To ensure equitable outcomes and project success, we have included support for Change Leadership, external Quality Assurance consultants, and are working with KCIT to complete an Equity Impact Review and incorporate ESJ in the project.

CIO and PSB Critical Success Factors and Conditions:

- 1) SaaS solution required; RFP required; KCIT contracts involvement required
- 2) Data migration and KCIT Data and ART review required.
- 3) Provide results of review on integration with existing County law and justice systems for synergies and possibly standardization among fewer vendors for the County prior to final vendor selection.
- 4) Plan for an MOU with external agencies where interfaces exist.
- 5) Engage external Quality Assurance reporting to PRB; Collaborate with PRB staff and KCIT Procurement for external QA Scope of work and Contract
- 6) Project scope to include decommission of HOMER and Legal Files systems
- 7) Conduct Lean Process Improvement effort. Change management plan required as part of overall project plan
- 8) Complete an Equity Impact Review (EIR) by December 2018
- 9) Address Cost Overrun Mitigation strategy in planning phase
- 10) Up to 24 month project duration
- 11) Brief CIO/PRB on planning outcomes

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

DPD CASE MGMT SYS REPLACEMENT

1133724

15. STRATEGIC IT PLAN ALIGNMENT

Workforce Empowerment: Employees can do their jobs better and collaborate more with a better user interface, less duplicate data entry, data that is easier to find, and improved integration with existing software and external KC systems

Data Driven: 1) Improved document management and system architecture will improve transparency and usability of data; 2) Better reporting and document management features will allow us to improve business processes more effectively

Mobility: Solution will increase number of applications delivered through browser or mobile interface

Effective Digital Systems: Decommissioning existing outdated and high-risk solutions will decrease system downtime, increase service quality, and reduce risk

16. PROJECT COMPLEXITY

Technical complexity (Risk-High)

The solution must meet the following business requirements:

- Migrate data from two disparate systems
- Integrate with multiple external systems
- Maintain ethical walls
- Consolidate legal services with finance and administration

The project will work with KCIT's architecture review team on the data exchange component.

Mitigation

- Include department subject-matter experts (SMEs) throughout the project
- Acquire SaaS solution
- Include data migration plan in business requirements
- Utilize KCIT's data service to map and prepare data

Business complexity (Risk-Moderate)

- The project will impact core business functions

Mitigation

- Redesign poorly functioning business processes
- Design and implement employee communication plan
- Sustain leadership visibility and involvement

17. CAPACITY TO IMPLEMENT THE PROJECT

This project has the full support of the DPD Leadership Team. A steering committee that includes the DPD Administrative Services and Operations Director and the DPD Resource Counsel has already been convened and will be responsible for oversight and strategic decision making. The Leadership Team and existing IT Advisory Committee will be consulted regularly to provide subject matter expertise. In addition to Business Analyst and Program Manager support from KCIT, DPD plans to dedicate 1 FTE project lead and subject-matter experts for requirements elicitation, vendor selection, testing and training.

DPD launched its current system in 2013 and will apply lessons learned from this implementation to ensure: 1) The go-live date builds in sufficient time to gather requirements, identify resources, review data, select vendor, on-board equipment, test new system, and provide training; and 2) frequent check-ins are scheduled to report on the status of project and its deliverables.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

DPD CASE MGMT SYS REPLACEMENT

1133724

18. PROJECT RISKS

Schedule Delay (Risk-Moderate)

- Lack of availability of SMEs for requirements gathering, configuration and training
- Current vendor may be unwilling to support data migration if they are not selected
- Inability to integrate with external data at go-live date

Mitigation

- SMEs engaged at key points throughout the project
- Additional compensation offered to vendor or a developer hired to handle the migration efforts
- Thorough QA and UAT

Cost Overrun (Risk-Moderate)

- Pressure to find efficiencies may expand scope beyond articulated needs
- Lack of agreement up front about deliverables required may lead to unexpected changes and costs
- Lack of communication with external partners may lead to unexpected changes and costs

Mitigation

- As part of the project's planning phase, the KCIT PM is providing weekly status reports on the scope-schedule-budget to the project sponsor.
- Inclusion of SMEs in documenting requirements
- Identify external partners and the associated integration needs
- Scope, schedule and budget monitored by the steering committee

NARRATIVES

PAO Data Modernization

1133959

1. CURRENT PROJECT SCOPE

Prosecuting Attorney Office (PAO) Data Modernization Project will consolidate numerous Microsoft Access databases into a single data store. The goal is to provide a single data entry point managed with user permissions and integrated with Power BI and GIS for improved reporting.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

With 18 disparate data sources housed on outdated technology, PAO lacks the ability to consistently maintain critical agency information supporting business processes. The data is entered into various Access databases covering different PAO functions, leading to duplication of data and little transparency. Hundreds of users throughout the department are tasked with maintaining and/or analyzing the information contained in these data stores which serve a wide variety of functions. The use of Access leads to higher IT dependencies and reliance on this technology will be even more problematic as support and upgrade options go away.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

PAO Data Modernization

1133959

4. PROJECT BENEFITS/OUTCOMES

PAO believes the direct benefits of this project are numerous.

- Eliminated risks inherent with outdated technology
- Savings from reduced use of consultant and storage
- Streamlined data entry and data management
- Modernized reporting environment with richer data analytics, shared dashboards, complex searching and improved performance tracking
- Improved access management and auditing ability by roles and division
- Reduced data duplicated and improved data sharing
- Integration with other analytics and GIS platforms
- Enabled remote access for "in the field" data entry via tablets and mobile devices

Constituents whom the PAO directly serves will also see several indirect benefits.

- Improved tracking of defendants, witnesses, and appellants
- Improved tracking of public disclosure requests and fulfillment
- Improved analytics that inform better decision-making around issues of public safety and other public interest initiatives (e.g. "shots fired")

5. BUDGET REQUEST BASIS

The investment is important at this time due to the risks involved in continuing with the status quo. The databases are based on the obsolete technology and the agency is not able to do any data driven decision-making in an efficient manner. Currently, all reports must be generated from multiple systems and processed manually, which takes a lot of time. The estimate was developed jointly by PAO and KCIT.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

\$78K/year in ongoing costs for consultant support and storage will be eliminated.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

Alternatives will be analyzed after the project receives an appropriation and is in planning and design phase. PAO will look into alternatives that utilize existing enterprise platforms through working with KCIT.

10. OTHER AGENCY INVOLVEMENT

There are a few agencies for which PAO provides data today; the effectiveness of this data sharing should be improved as this project streamlines the collection and management of information:

1. DCHS: PAO collects information related to drug addictions which is relevant to Mental Health services provided through DCHS
2. Public Defense: PAO manages information related to legal discovery which is shared with the Public Defender's office
3. City of Seattle: Domestic violence data

In addition, PAO will talk to BRC as it explores the option of utilizing the PeopleSoft platform for some of its databases (those that apply to payroll/HR).

11. ART ELIGIBILITY

IT project

12. EQUITY AND SOCIAL JUSTICE IMPACT

An equity impact review is required for this project and will be completed as part of the project's planning phase.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

n/a

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PAO Data Modernization

1133959

14. OTHER CONSIDERATIONS (OPTIONAL)

To help determine an optimal approach for data migration, PAO is engaging Microsoft Professional Services for a Proof-of-Concept (POC) to be conducted within the next few months. The POC will involve a data profiling effort to help PAO understand the structure of the current data (e.g. number of elements, data consistency, data duplication and overlaps, etc.). A more detailed understanding of the source data will inform the projected cost of migration. The POC will also involve the storage of a data sample in Azure and an integration with Power BI to help PAO visualize the analytics capabilities.

A future solution would most likely utilize the following:

- Cloud-based data storage
- Dynamics 365 or a similar business process tool for improved data entry and to allow remote access to data management tasks
- ESRI integration to utilize GIS-technologies for location-based data
- Active Directory or a similar user-management tool to improve access/security
- Power BI or a similar data analytics platform

CIO and PSB Critical Success Factors and Conditions:

- 1) KCIT ART, data, and security reviews are required
- 2) Engage KCIT as a partner to manage and implement this project
- 3) Up to 12-month project in duration
- 4) Complete an Equity Impact Review (EIR) by December 2018

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

Workforce Empowerment- Engage PAO staff in improving the quality of data we collect and how we can leverage our data to inform decisions at all levels, from individual cases to organizational actions.

Civic Engagement- Leverage the modernization of the PAO data systems to engage community and intergovernmental partners in building trust and oversight of current and future joint diversion programming efforts.

Data Focused- By integrating and consolidating our data, the quality of PAO data will improve over time, which in turn will improve our ability to analyze data, measure our performance, and overall make more informed decisions. Also, PAO will leverage our new platform to connect and integrate other analytics and GIS tools.

16. PROJECT COMPLEXITY

On a scale from 1 (low) to 10 (high) in complexity, this project is a 6. Here is why.

1. Moving existing data into an integrated platform will require some governance around who will have access to what data. Currently, data is contained in Access databases and only staff with appropriate folder permissions may access the data. PAO wants to integrate access management with Active Directory in the new system.
2. Performance and availability of data may change once data is migrated from local file systems to the cloud. However, we expect that improvements in general access and availability will be a net gain.
3. Not all databases (e.g. one we use for payroll) will be migrated to the new platform. We hope to migrate these data to existing enterprise systems (e.g. PeopleSoft).

We are currently working KCIT and Microsoft on a plan to address these complexity contributors.

17. CAPACITY TO IMPLEMENT THE PROJECT

This project has full support of strategic leadership (Chief of Staff Leesa Manion is the project sponsor), a successful history of implementing complex project deployments (e.g., planning and deployment of the criminal case management system (PBK)), and experienced staff who will be in charge of implementing this project on the agency side(Denise Cody, PAO IT Director, will be the main point of contact) . In partnership with KCIT, this project aligns with the focus on platform-based solutions. The PBK project not only involved the vendor, KCIT and the PAO but it had to be deployed across many units and in several waves.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PAO Data Modernization

1133959

18. PROJECT RISKS

1. (HIGH) Performance of the infrastructure when it comes to retrieving data and latency issues, data is accessed locally moving the data and maintaining the same performance matrix will be challenging. This could impact the user experience further the adoption of the data modernization into operations.

MITIGATION: This risk was discovered during our proof of concept exercise with Microsoft and KCIT with moving some of our data to the cloud the team is currently working to find a solution to this.

2. (Medium) Implementing Power BI and GIS and how the data is mapped and then accessible to those who do not need a license.

MITIGATION: This risk will be reviewed and tested during our proof of concept exercise with Microsoft and KCIT. Solution will then be used with the final project deployment.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

KCSC JURY MGMT SYS REPLACEMENT

1134041

1. CURRENT PROJECT SCOPE

King County Superior Court (KCSC) Jury Management System Replacement technology project will replace Superior Court's current jury management system with more advanced technology to improve juror experience and encourage participation in our judicial system. The improved jury technology will support increased efficiency and data driven planning.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

The current KCSC jury management system is 9 years old and is in need of replacement to take advantage of new technologies available on the market that will make it easier and more equitable for jurors to fulfill their legal obligation. The system has limitations which hinder juror access to efficient communication with the court. Innovation in communication methods such as email and text reminders, mobile options to confirm and efficiencies such as check-in kiosks would benefit our jurors and improve their experience. Provisioning of jurors is a constitutional mandate for KCSC. Management of jurors is a critical process for the court; 130,000 summonses annually to provide sufficient jurors for both courthouses and the District Courts located within those facilities. The technology does not meet basic statistical needs and impacts our ability to be more data driven. Extensive KCSC IT support needed for routine annual updates and other shortcomings despite a yearly 5% increase maintenance costs.

4. PROJECT BENEFITS/OUTCOMES

The project's primary benefits fall under the external services benefits category: improving the quality or quantity of services provided to the public. It will improve juror access to the court through better communication in a manner that is most convenient for them. Mobile device options such as a jury app, text notifications, system generated reminders by email or text and other communications, for a variety of reasons, would improve the juror experience. As a critical process for the court, encouraging juror participation by improving their experience with easier communication, better understanding of the process and using their time efficiently is very important. Equity and social justice issues are also being addressed by using a system that has the most advanced cellphone access. Not all residents have a home computer or Internet access and the use of a public access such as at a library creates an additional burden for some jurors. Creates efficiencies in our juror check-in process and increased data driven decisions for further improvements.

Capital Appropriation Proposal

NARRATIVES

KCSC JURY MGMT SYS REPLACEMENT

1134041

5. BUDGET REQUEST BASIS

The current system is 9 years old and is in need of replacement to take advantage of new technologies available on the market that will make it easier and more equitable for jurors to fulfill their legal obligation. The estimate was developed based on vendor price quotes from an RFI released in early 2018. The costs in the responses varied widely. If approved, this amount will fund all project phases. The requested amount assumes \$225k for an enterprise license, \$65k for implementation costs (workflow configurations, data migration and training), \$95k for first year maintenance, and a 20-percent contingency (for unexpected configuration costs). In addition, KCSC will assign existing staff resources, as needed. Jury Department staff will be made available for any configuration, implementation and training efforts. Superior Court IT staff will focus on any data conversion and configuration work with the vendor.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Anticipated O&M post project completion is \$95K/year. This amount represents the ongoing cost for the SaaS solution that was in one of the RFI responses and will potentially grow at 5% every year.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

An RFI has been completed. KCSC received five responses. One offered a SaaS solution with the ongoing costs twice as much as our current costs. Three proposed custom development. As part of the project, Superior Court will release an RFP and weigh the scoring to favor a SaaS solution. If the results of the RFP are similar to the RFI, an on premise solution may need to be selected to meet business needs and ongoing costs. KCIT will be consulted to ensure the selected solution participates in an ART review.

10. OTHER AGENCY INVOLVEMENT

N/A. District Court is aware of this effort. Superior Court has reached out to District Court regarding any issues with the current jury pools we provide them. They stated there is no concern with our current practice or technology.

11. ART ELIGIBILITY

IT project

12. EQUITY AND SOCIAL JUSTICE IMPACT

The new juror management system will further the county's ESJ goal. Not all residents have a home computer or Internet access and the use of a public access such as at a library creates an additional burden for some jurors. The new system will provide better access to information/notifications for jurors through cell phones. It will create efficiencies in our juror check-in process. An equity impact review will be completed as part of the project planning phase (EIR is required for this project).

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

KCSC JURY MGMT SYS REPLACEMENT

1134041

14. OTHER CONSIDERATIONS (OPTIONAL)

This investment will allow for innovation, as we are currently having difficulties reaching all our residents and being accessible to them. Developing methods to encourage participation in the judicial process is necessary to have an equitable jury trial process.

Customer expectations with regard to on-line and mobile access are high. Most everyone can reach the Internet either through a PC or much more likely, a smart phone or tablet. The importance of two-way communication with our juror candidates can't be overstated. Jury service is arguably the only obligation of citizenship and the ability to easily respond to a summons needs to be a priority.

Residents need to be able to reach the court to schedule alternative dates that better fit their busy schedules, request to be excused in circumstances of medical frailty, elder and childcare and other undue hardships, update addresses and claim statutory disqualification.

The court strives to save candidates the trip to the courthouse whenever possible. Trial certainty is a process improvement we are constantly working toward. We often are presented with last minute information that results in trial cancellation or delay. If we have the capacity to quickly notify participants we can not only realize a significant dollar savings but reap substantial goodwill from candidates as well as employers.

A future ability to quickly update the source list could be a huge benefit in reaching populations that have been historically underrepresented in juries. These populations are often more transient than the population as a whole and therefore more likely to not have up-to-date addresses with the Post Office. With new technology, we will work toward updating the source list more often and the consideration of additional list sources which would likely bring added diversity to the jury pool.

This project will be completed within 12 months. This assumes the RFP process is not prolonged due to lack of responses or other unforeseen circumstances.

CIO and PSB Critical Success Factors and Conditions:

- 1) SaaS solution required
- 2) KCIT ART Review for design and implementation
- 3) Duration should not exceed 12 months
- 4) Revisit the cost for a potential reduction
- 5) Complete an Equity Impact Review (EIR) by December 2018

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

KCSC JURY MGMT SYS REPLACEMENT

1134041

15. STRATEGIC IT PLAN ALIGNMENT

Replacement of the SC jury system furthers the KC Strategic Information Technology Plan (SITP) and its five key objectives:

Digital Civic Engagement

- Improved customer satisfaction with their juror experience due to better communication with the Court.
- Timely notification for call offs saving prospective jurors time and money.

Data Driven

- Better data collection tools with a new system will allow better analysis of current business practices and help identify potential improvements.
- A wider variety of reporting options could be set up to learn more about juror yield to ensure ESJ goals are being met.

Workforce Empowerment:

- System improvement for better customer service and allow for collection of feedback useful to staff for other improvements.

IT Mobility:

- Permits jurors convenience of accessing juror system through their smart phones wherever they are and when convenient.

Effective Digital Systems:

- Reduced time and money spent annually updating the source list.
- Provide a more advance, user friendly system for our jurors

16. PROJECT COMPLEXITY

Replacing the existing jury management system will require careful planning to ensure success. Identifying the best system to meet our current and future needs will be essential. One with a strong business approach to an essential judicial system process which is historically rooted but does allow for innovation in many ways through new technology. Transitioning from the old system to the new without a break in service, inconvenience to court customers (litigants, jurors & other court stakeholders), or creating court delays will be complex but can be achieved through careful planning with all necessary participants. Jury pools will need to be created in advance for the time period of the transition and any necessary side systems will be developed for use during the critical six week period between jury summons mailings. Required data exchange will need to be developed as well as plans for storage and access of data from the old system and extensive testing of the new system.

17. CAPACITY TO IMPLEMENT THE PROJECT

The Jury Department falls within SC Court Operations, which has sufficient capacity and experience to implement a project of this size and importance. Under the control and guidance of SC IT, Court Ops has implemented other similar projects. Most recently in June 2015, the Office of Interpreter Services (OIS), another department within Court Ops, converted to a new scheduling program. This was a large project which required extensive planning for the development of new functionality for interpreter scheduling to an existing case management system. This project also necessitated implementation without a break in service and approximately 250 interpreter events take place each day. SC IT developed/maintained a realistic project schedule and we relied on the expertise of other Court Ops managers and staff, conducted extensive training, information sessions, testing and had did additional advanced scheduling to ease operations on the day of transition. We have the essential resources.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

KCSC JURY MGMT SYS REPLACEMENT

1134041

18. PROJECT RISKS

The main project risk is a possible delay in completing the RFP and selecting a vendor. If this happens, the project may have to go into 2020 but the cost should not go over the budget request level. The project has a built in 20% contingency for this risk.

A break in the continuity of operations is an essential risk of this project but we believe it to be of low risk. Jury services sends summons out well in advance through the use of an outside vendor for the printing and mailing of summons. Creation of these electronic files in advance can easily be done and held until needed. An additional risk is the conversion of existing deferred jurors from the old system to the new. Jurors who select another date to serve (up to one year) can create a complication. This is also a low risk as we did experience this complication in 2009. Despite assurances that these jurors would not be lost, that was not the case but the solution was to excuse all deferred jurors in our system. This is not ideal, however, few if any excused jurors complained about being released from service. Of course, with the new vendor, we will strive to move all existing and deferred jurors to the new system but excusing jurors is an available remedy if needed.

NARRATIVES

KCSC COURTROOM RECORDING RPLC

1134042

1. CURRENT PROJECT SCOPE

King County Superior Court (KCSC) Courtroom Recording Replacement technology project will replace aging hardware, software and audio equipment that captures the official record of all Superior Court proceedings.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

The current solution used by Superior Court runs on PCs that are over 6 years old running Windows 7 which will no longer be supported by Microsoft in January 2020. The current recording software will not run on the most current version of Windows (Windows 10) and also needs to be replaced. The audio equipment is even older than the PCs and need to be life-cycled.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

KCSC COURTROOM RECORDING RPLC

1134042

4. PROJECT BENEFITS/OUTCOMES

The primary driver is risk reduction of system failure due to outdated software not working on current hardware running the latest operating system. If the system is not replaced, there will be no way to capture the official court record without hiring more Court Reporters. Prior to implementing the court recording technology, there were 38 court reporters. Now there are 8. There are some hearings that require a court reporter to capture the record so it is not expected that this project would result in a further reduction of court reporters. Clerks have numerous duties during hearings and the elimination of sound checks would not result in fewer clerks, just shorter interruptions of court proceedings should a recording stop during the court proceedings.

Other benefits:

- Better quality audio recording
- Improved access by the public to court recordings through DJA
- Software assurance and maintenance for ongoing stability
- Life-cycling of hardware and audio equipment to forecast predictable funding levels
- Enhanced software support to minimize courtroom interruptions
- Ease of recording by DJA Clerks

5. BUDGET REQUEST BASIS

The PCs currently used across 70 courtrooms run Windows 7, which will lose vendor support beginning in 2020 and therefore must be upgraded to Windows 10 in 2019. The cost estimate is based on conversations with the current vendor and includes the costs of software licenses, annual support, and cloud storage. The new hardware includes leased workstations and digital signal processors (required to measure, filter, and compress real time audio) for each courtroom. The estimate assumes leveraging much of the audio infrastructure currently in the courtrooms (microphones and speakers) with a future upgrade to IP-based equipment if desired. Based on past audio work done in the courtroom, \$250 for each courtroom is assumed for installation services to tune the audio equipment with the new software and hardware. Because this is a technically-straightforward upgrade of software and hardware, only 15 percent has been set for contingency.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

The estimated ongoing annual costs beginning 2020 is \$66,750.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

KCSC has had demos by three vendors and decided to stay with the current vendor because the current product with the same vendor meets the business needs and there were no significant advantages of switching to another vendor.

10. OTHER AGENCY INVOLVEMENT

KCSC has been in discussions with the Department Judicial Administration (DJA) about this project. The DJA and KCSC will both be using the courtroom recording technology. DJA plans to coordinate the migration to cloud storage as part of the hardware and software upgrades. Care must be taken to ensure no interruption to service, like the ability to provide recordings of court proceedings to interested parties, while the recording technology is being updated in the courtrooms. It is intended to offer web access to recordings when requested but due to ESJ issues, the current method of burning DVDs may still be required. DJA currently manages the large files and will work with KCIT as new compliance standards are developed. Record retention policies will be reviewed and Records Management will be consulted.

11. ART ELIGIBILITY

IT project

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

KCSC COURTROOM RECORDING RPLC

1134042

12. EQUITY AND SOCIAL JUSTICE IMPACT

KCSC is researching how accurate speech to text translation is with our current microphones and speakers. This is a goal of this project, but its efficacy may be hindered due to technical limitations and the configuration of our courtrooms. We will complete an Equity Impact Review once the project is approved (EIR is required for this project).

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

n/a

14. OTHER CONSIDERATIONS (OPTIONAL)

This project will upgrade the mission critical technology that captures the court record in the Superior Court courtrooms. This project is necessary because the vendor software, FTR v 5.6.2, runs on Windows 7 which will be out of support in January 2020. The only recourse Superior Court has is to upgrade to the latest recording software, FTR 6.0 which requires newer PC hardware. The new software offers better quality recordings and improved monitoring to avoid missing vital testimony during hearings.

CIO and PSB Critical Success Factors and Conditions:

- 1) Cloud storage required
- 2) Web access to recordings
- 3) ART review for design including access to historic recordings with the new solution; compliance with large file storage standards (yet to be developed)
- 4) Consult w/ Records Mgmt
- 5) Complete an Equity Impact Review (EIR) by December 2018

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

Workforce Empowerment:

Allow DJA to provide recordings to requesters via different media making it more convenient than just using CDs.

Real-time monitoring of the recording to immediately notify the Clerk of any issues with to the recording.

IT Mobility:

Allows Superior Court and DJA to streamline their interdependent business processes.

Better public access to court recordings rather than solely burning CDs.

Effective Digital Systems:

Replacing aging software and hardware will allow the necessary capture of audio recordings to continue uninterrupted.

Leasing equipment through KCIT and purchasing software maintenance will allow for predictable costs, better monitoring of the equipment and continued improvements with software enhancement

16. PROJECT COMPLEXITY

This project is not considered complex in that staff are very familiar with the technology used, both hardware and software, there is a good working relationship with the vendor, and there is no integration with other software. The timing of upgrading the 70 courtrooms, without interfering with the daily work of Superior Court, will take much advanced planning and coordination, but Superior Court staff are familiar with these sort of planning efforts. The complete rollout would take all of 2019. New features in the software will offer the potential of new business processes, including storing data in the cloud by DJA. It is critical, that Superior Court and DJA continue to work together on the implementation work to ensure no interruption to daily operations and smooth implementations of any new business processes. There is a workgroup that has been meeting on topic for about 6 months, identifying potential implementation issues and developing possible alternatives.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

KCSC COURTROOM RECORDING RPLC

1134042

17. CAPACITY TO IMPLEMENT THE PROJECT

This project will require the upgrade of 70 PCs (to be leased through KCIT) in the courtroom, working with the vendor to install the new software on those PCs and upgrading the Digital Signal Processors (DSP). It will also add a cloud component to store some recordings for ease of access. The technical teams involved are very familiar with this technology and the Bench is supportive of this project. The IT Director has the authority to oversee this project. To aid in communication, coordination and planning a joint departmental workgroup was formed. They provide updates to the Superior Court's Technology Committee and to other Executives as needed. The IT Director has the support of the Chief Administrative Officer and update him and other Directors every 2 weeks and as needed.

18. PROJECT RISKS

This is a low risk project due to technical staff being familiar with the hardware, software and business process involved. These implementations are the same for each courtroom with no unique configurations or needs required for any courtrooms. There are minimal risks that the project could be delayed due to courtroom availability and the time required to upgrade and tune all the equipment. To combat this, we will seek out courtroom availability far in advance and work with Court Operations to modify the implementation schedule accordingly. The project will coordinate closely with DJA, which is migrating to the cloud storage.

NARRATIVES

WLER ECO RESTORE & PROTECT

1033882

1. CURRENT PROJECT SCOPE

Ecological Restoration and Protection Program - This project undertakes actions to restore and preserve important habitat ecosystems and/or protect property from events such as flooding, erosion, adverse water quality, vandalism or the deterioration of habitat. The highest priority projects in this program are those which protect or restore habitat for endangered species to maintain the health of the habitat. This includes projects for recon and feasibility analyses of proposed future projects; preserve and protect funds to protect acquired property from misuse by installing fences, bollards or removal of structures; project management improvements, including development and implementation of project management standards/procedures, payment of fees for use of PRISM and project audits; and adaptive management actions following project construction to ensure that project meet project goals and objectives, including protection private property and public safety.

2. PROGRAMMATIC PROJECT DISCUSSION

Excel document "WLRD Fund 3292 Programmatic List" provides details for each sub project within the programmatic project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WLER ECO RESTORE & PROTECT

1033882

3. PROJECT JUSTIFICATION

This project provides an Ecosystem wide master project for several separate programmatic projects: -ecosystem recon/feasibility to identify, assess and develop concepts for potential future projects; -preservation and protection of unique properties, including demolition of structures on the properties; -project management standards and project management accountability; and -adaptive management actions.

4. PROJECT BENEFITS/OUTCOMES

Investment in project specific feasibility provides better understanding of project risk and leads to better estimation of project cost. Adaptive management of constructed projects ensures that the intended outcome of a project is reached to its maximum use. Protection acquired properties from potential harmful use, ensures public safety.

5. BUDGET REQUEST BASIS

Each program forecasted anticipated work needed for the upcoming biennium. Cost estimates were based upon review of prior expenditures with the same scope. These costs were used to determine future costs for the anticipated work needs for the upcoming biennium.

6. FUNDING AND REVENUE DISCUSSION

Funding for this project is from county surface water management fees.

7. OPERATING BUDGET AND OTHER IMPACTS

There are no impacts to the operating budget.

8. PROJECT STATUS

The following projects are ongoing into 2019-2020; Ecosystem recon/feasibility to identify, assess and develop concepts for potential future projects; preservation and protection of unique properties, including demolition of structures on the properties; and adaptive management actions. For 2017-2018 eleven demolitions were completed, three feasibility analysis and six adaptive management actions were taken.

9. ALTERNATIVES ANALYSIS

NA

10. OTHER AGENCY INVOLVEMENT

Various local, state and federal regulatory agencies may be involved in actions undertaken by the preserve and protect (demolition) and adaptive management subprograms.

11. ART ELIGIBILITY

Programs funded in this master project do not include new construction, reconstruction or remodeling. The subprograms are maintenance or minor rehabilitation which are excluded.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The preserve and protect program and adaptive management program both support numerous SCAC goals by removing hazardous structures (often from flood-prone locations), restoration of degraded properties for habitat improvement, and planting of many native trees and shrubs.

NARRATIVES

WLER WRIA 7 ECOSYSTEM RESTORATN

1034167

1. CURRENT PROJECT SCOPE

Water Resource Inventory Area 7 Ecosystem Restoration - This program undertakes actions to protect or restore aquatic ecosystems in the unincorporated portions of the Snoqualmie Watershed. The projects are primarily identified through WRIA 7 salmon conservation planning, Surface Water Management basin planning, and other investigation efforts by the Snoqualmie basin steward. Typical actions include reconnecting side-channel habitat to the mainstem river, removing levees and other forms of bank hardening, eliminating man-made barriers to fish migration (such as blocked culverts), increasing riparian forest cover to improve water quality, and adding large wood to increase instream habitat complexity.

2. PROGRAMMATIC PROJECT DISCUSSION

Excel document "WLRD Fund 3292 Programmatic List" provides details for each sub project within the programmatic project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WLER WRIA 7 ECOSYSTEM RESTORATN

1034167

3. PROJECT JUSTIFICATION

This project provides for substantial ecological improvements in the Snoqualmie watershed. Listing of several species of fish under the Endangered Species Act has shown the need to preserve ecological habitat. The projects which are funded through this program are implemented to provide increased habitat and favorable conditions for fish and other aquatic wildlife which is necessary for their survival.

4. PROJECT BENEFITS/OUTCOMES

Project restores ecological functions within the Snoqualmie watershed which increases salmon rearing habitat and increase aquatic wildlife in restored areas. The restoration projects will also restore riparian buffer vegetation and help maintain salmon-friendly water temperature.

5. BUDGET REQUEST BASIS

The budget requested for 2019-2020 is necessary in order to complete final design (Phase 3) for Frew Floodplain, Barfuse and Patterson Creek and to implement (Phase 4) for Tolt-San Souci and start planning and preliminary design (Phase 1 & 2) for four new projects. The Budget request is based on a combination of bottom-up and analogous estimates derived from previously completed projects of similar scale and complexity.

6. FUNDING AND REVENUE DISCUSSION

Funding for WLR SWM capital projects includes revenue from numerous external agencies as well as county sources. Some of these funding sources includes grants from federal and state agencies, local agencies, local levy proceeds, county surface water management fees and Interlocal agreements.

7. OPERATING BUDGET AND OTHER IMPACTS

Permit driven requirements for Monitoring and Maintenance could be a future operating cost.

8. PROJECT STATUS

The following projects are ongoing into 2019-2020. Frew Floodplain reconnection, Patterson Creek, Tolt-SanSouci and Barfuse Floodplain reconnection. Currently Frew floodplain is in feasibility analysis and securing the footprint through acquisition; Patterson Creek is in design; Tolt-San Souci is in feasibility and starting design and Barfuse Floodplain is undergoing alternative analysis and going into design.

9. ALTERNATIVES ANALYSIS

Alternative analysis for projects is to be completed during the preliminary design phase of each project.

10. OTHER AGENCY INVOLVEMENT

To be determined, but numerous local, state and federal grant and regulatory agencies will be stakeholders.

11. ART ELIGIBILITY

Partial exclusion

12. EQUITY AND SOCIAL JUSTICE IMPACT

The primary purpose of these projects is improving salmon habitat. Restoring healthy runs of salmon is critically important to meeting the tribal treaty rights of Northwest indian tribes and is very consistent with King County's ESJ goals.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The restoration projects will restore riparian buffer vegetation which, over time, will help sequester carbon and help maintain salmon-friendly water temperature.

4. PROJECT BENEFITS/OUTCOMES

Project restores ecological functions within the Cedar/Lake Washington watershed which increases salmon rearing habitat and increase aquatic wildlife in restored areas. The restoration projects will also restore riparian buffer vegetation and help maintain salmon-friendly water temperature.

5. BUDGET REQUEST BASIS

The budget requested for 2019-2020 is necessary in order to complete final design (Phase 3) for Little Bit and to implement (Phase 4) for Riverbend restoration and Little Bit and start planning and preliminary design (Phase 1 & 2) for four new projects. The Budget request is based on a combination of bottom-up and analogous estimates derived from previously completed projects of similar scale and complexity.

6. FUNDING AND REVENUE DISCUSSION

Funding for WLR SWM capital projects includes revenue from numerous external agencies as well as county sources. Some of these funding sources include grants from federal and state agencies, local agencies, local levy proceeds, county surface water management fees and Interlocal agreements.

7. OPERATING BUDGET AND OTHER IMPACTS

Permit driven requirements for Monitoring and Maintenance could be a future operating cost.

8. PROJECT STATUS

There are two ongoing projects, Little Bit restoration which is infeasibility and preliminary design and Riverbend Restoration which is in design.

9. ALTERNATIVES ANALYSIS

Alternative analysis for projects is to be completed during the preliminary design phase of each project.

10. OTHER AGENCY INVOLVEMENT

To be determined, but numerous local, state and federal grant and regulatory agencies will be stakeholders.

11. ART ELIGIBILITY

Partial exclusion

12. EQUITY AND SOCIAL JUSTICE IMPACT

During project design, teams reach out to a variety of stakeholders and to the extent consistent with the goals of the project, strive to incorporate project elements that promote ESJ goals. This includes identifying strategies to improve the contribution of equity determinants in the project area, outreach to the community, ensuring alignment with sustainability and municipal initiatives, and recommendations to mitigate negative ESJ impacts and enhance positive ESJ benefits of the project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The restoration projects will restore riparian buffer vegetation which, over time, will help sequester carbon and help maintain salmon-friendly water temperature.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

WLER WRIA9 ECOSYSTEM RESTORATN

1034245

1. CURRENT PROJECT SCOPE

Water Resource Inventory Area 9 Ecosystem Restoration - This program undertakes actions to protect or restore aquatic ecosystems in the unincorporated portions of the Green/ Duwamish Watersheds. The projects are primarily identified through WRIA 9 salmon conservation planning, Surface Water Management basin planning, and other investigation efforts by the Middle Green river basin steward. Typical actions include reconnecting side-channel habitat to the mainstem river, removing levees and other forms of bank hardening, eliminating man-made barriers to fish migration (such as blocked culverts), increasing riparian forest cover to improve water quality, and adding large wood to increase instream habitat complexity.

2. PROGRAMMATIC PROJECT DISCUSSION

Excel document "WLRD Fund 3292 Programmatic List" provides details for each sub project within the programmatic project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLER WRIA9 ECOSYSTEM RESTORATN

1034245

3. PROJECT JUSTIFICATION

This project provides for substantial ecological improvements in the Green/ Duwamish watersheds. Listing of several species of fish on the Endangered Species Act has shown the need to preserve ecological habitat. The projects which are funded through this program are implemented to provide increased habitat and favorable conditions for fish and other aquatic wildlife which is necessary for their survival.

4. PROJECT BENEFITS/OUTCOMES

Project restores ecological functions within the Green/ Duwamish watershed which increases salmon rearing habitat and increase aquatic wildlife in restored areas. The restoration projects will also restore riparian buffer vegetation and help maintain salmon-friendly water temperature.. Budget for 2017-2018 includes funding for potentially two new projects (Lower Newaukem and Lower Soos Creek restorations) and continuation of two on-going projects; Turley/Lones Levee setback and Auburn Narrows Restoration.

5. BUDGET REQUEST BASIS

The budget requested for 2019-2020 is necessary in order to complete final design (Phase 3) and to implement (Phase 4) for Lones Levee setback, Lower Newuakem Restoration and Flaming Geyser restoration, complete final design on Lower Soos Creek restoration and start planning and preliminary design (Phase 1 & 2) for two other new projects. The Budget request is based on a combination of bottom-up and analogous estimates derived from previously completed projects of similar scale and complexity.

6. FUNDING AND REVENUE DISCUSSION

Funding for WLR SWM capital projects includes revenue from numerous external agencies as well as county sources. Some of these funding sources include grants from federal and state agencies, local agencies, local levy proceeds, county surface water management fees and Interlocal agreements.

7. OPERATING BUDGET AND OTHER IMPACTS

Permit driven requirements for Monitoring and Maintenance could be a future operating cost.

8. PROJECT STATUS

There are three on-going projects; Lones levee setback which is feasibility , Lower Newaukem restoration which completed alternative anlysis and is undergoing preliminary design and Lower Soos Creek restoration which is undergoing feasibility analysis.

9. ALTERNATIVES ANALYSIS

Alternative analysis for projects is to be completed during the preliminary design phase of each project.

10. OTHER AGENCY INVOLVEMENT

To be determined, but numerous local, state and federal grant and regulatory agencies will be stakeholders.

11. ART ELIGIBILITY

Partial exclusion.

12. EQUITY AND SOCIAL JUSTICE IMPACT

During project design, teams reach out to a variety of stakeholders and to the extent consistent with the goals of the project, strive to incorporate project elements that promote ESJ goals. This includes identifying strategies to improve the contribution of equity determinants in the project area, outreach to the community, ensuring alignment with sustainability and municipal initiatives, and recommendations to mitigate negative ESJ impacts and enhance positive ESJ benefits of the project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The restoration projects will restore riparian buffer vegetation which, over time, will help sequester carbon and help maintain salmon-friendly water temperature.

NARRATIVES

WLER VASHON ECOSYSTEM RESTORAT

1034282

1. CURRENT PROJECT SCOPE

Vashon Ecosystem Restoration - This program undertakes actions to protect or restore aquatic ecosystems in the unincorporated portions of the Vashon-Maury Island Watershed. The projects are primarily identified through salmon conservation planning, Surface Water Management basin planning, and other investigation efforts by the basin stewards. Typical actions include reconnecting side-channel habitat to the mainstem river, removing levees and other forms of bank hardening, eliminating man-made barriers to fish migration (such as blocked culverts), increasing riparian forest cover to improve water quality, and recreating log jams to increase the dynamic complexity of river flows.

2. PROGRAMMATIC PROJECT DISCUSSION

Excel document "WLRD Fund 3292 Programmatic List" provides details for each sub project within the programmatic project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLER VASHON ECOSYSTEM RESTORAT

1034282

3. PROJECT JUSTIFICATION

This project provides for substantial ecological improvements in the Vashon-Maury Island watershed. Listing of several species of fish on the endangered list has shown the need to preserve ecological habitat. The projects which are funded through this program are implemented to provide increased habitat and favorable conditions for fish and other aquatic wildlife which is necessary for their survival.

4. PROJECT BENEFITS/OUTCOMES

Project restores ecological functions within the Vashon-Maury Island watershed. The restoration projects will also restore riparian and shoreline buffer vegetation and help maintain fish-friendly water temperature.

5. BUDGET REQUEST BASIS

The budget requested for 2019-2020 is necessary in order to complete final design (Phase 3) and construction (Phase 4) for Judd Creek Estuary Enhancement, continue Marine Shoreline Revegetation, implement phase 2 for the Maury Island Armoring removal program and start planning and preliminary design (Phase 1 & 2) for one new project. The Budget request is based on a combination of bottom-up and analogous estimates derived from previously completed projects of similar scale and complexity. Estimates will be refined as the project progresses through design.

6. FUNDING AND REVENUE DISCUSSION

Funding for WLR SWM capital projects includes revenue from numerous external agencies as well as county sources. Some of these funding sources include grants from federal and state agencies, local agencies, local levy proceeds, county surface water management fees and Interlocal agreements.

7. OPERATING BUDGET AND OTHER IMPACTS

Permit driven requirements for Monitoring and Maintenance could be a future operating cost.

8. PROJECT STATUS

There are currently three on-going projects; Maury Island Reserve Armoring Removal, Judd Creek Estuary Enhancement and Marine Shoreline Revegetation.

9. ALTERNATIVES ANALYSIS

Alternative analysis for projects is to be completed during the preliminary design phase of each project.

10. OTHER AGENCY INVOLVEMENT

To be determined, but numerous local, state and federal grant and regulatory agencies will be stakeholders.

11. ART ELIGIBILITY

Partial exclusion.

12. EQUITY AND SOCIAL JUSTICE IMPACT

During project design, teams reach out to a variety of stakeholders and to the extent consistent with the goals of the project, strive to incorporate project elements that promote ESJ goals. This includes identifying strategies to improve the contribution of equity determinants in the project area, outreach to the community, ensuring alignment with sustainability and municipal initiatives, and recommendations to mitigate negative ESJ impacts and enhance positive ESJ benefits of the project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The restoration projects will restore riparian buffer vegetation which, over time, will help sequester carbon and help maintain salmon-friendly water temperature.

NARRATIVES

WLER SMALL HABITAT RESTORATION

1034287

1. CURRENT PROJECT SCOPE

Small Habitat Restoration Program - The mission of SHRP is to build small low-cost habitat restoration projects to enhance and restore streams and wetlands and riparian habitat. Projects include stabilizing eroding streambanks, restoring fish access to upstream habitat, installing livestock fences, controlling invasive weeds, planting native vegetation and providing technical assistance to landowners and agencies. Projects are implemented in the White, Green, Puget Sound, Cedar-Sammamish-Lake Washington and Snoqualmie River basins and along Puget Sound.

2. PROGRAMMATIC PROJECT DISCUSSION

Excel Document "WLRD Fund 3292 Programmatic List" provides details for each sub project within the programmatic project.

3. PROJECT JUSTIFICATION

The SHRP was developed to provide a fast, cost-effective way to implement small restoration projects. The program selects projects that have maximum habitat benefits and minimal design and permitting needs. The Small Habitat Restoration Program plays an important role in performing small-scale, but cumulatively significant, habitat restoration projects on public and private properties. The program also provides technical assistance to private property owners who are interested in restoring habitat on their property but lack the resources to do so. Over time, the cumulative effect of these smaller projects helps meet salmon conservation and recovery goals. SHRP is a King County program that provides free technical support to private citizens throughout unincorporated King County. SHRP's reputation has enabled it to perform numerous salmon habitat restoration projects on private property without purchasing real property or easements. These mutually beneficial projects are tremendously cost-effective. Not implementing the SHRP would set back salmon recovery efforts, community stewardship building, and the positive legacy of County staff providing excellent customer support.

4. PROJECT BENEFITS/OUTCOMES

The program selects projects that have maximum habitat benefits and minimal design and permitting needs. The cumulative effect of these smaller projects helps meet salmon conservation and recovery goals. SHRP is a King County program that provides free technical support to private citizens throughout unincorporated King County

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WLER SMALL HABITAT RESTORATION

1034287

5. BUDGET REQUEST BASIS

Budget request is based on past program estimates and actual costs. Program costs are somewhat scalable, wherein additional funding supports additional projects.

6. FUNDING AND REVENUE DISCUSSION

Funding is provided from the Surface Water Management fee.

7. OPERATING BUDGET AND OTHER IMPACTS

No change.

8. PROJECT STATUS

N/A

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

Occasionally local (and sometimes state) regulatory agencies may be involved.

11. ART ELIGIBILITY

Some projects may be ineligible due to location on private property. Only new design and construction funded by SWM is eligible. Maintenance is not because it is minor in nature.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Habitat restoration project locations are primarily based on environmental factors and geographic needs that permit the best locations for ecological function, public health and safety, habitat restoration or significant environmental benefit. After project selection, during project design, teams reach out to a variety of stakeholders and to the extent consistent with the site and the goals of the project, strive to incorporate project elements that promote ESJ goals.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The SHRP focus is on restoring stream and wetland corridors, especially riparian buffer vegetation which, over time, will help sequester carbon and reduce in-water temperatures to maintain salmon in our streams.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

WLSWC PUBLIC SAFETY/PROPERTY

1048125

1. CURRENT PROJECT SCOPE

Stormwater Public Safety Program - This program is required to develop support services that are needed for an effective Capital Improvement Project Program. As an example, this program will support the ongoing improvement of the project management manual which is required by the County Executive Order and to ensure Capital Improvement Program projects are managed uniformly. This program will also support the development of the new Construction Management and Inspection Manual.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLSWC PUBLIC SAFETY/PROPERTY

1048125

3. PROJECT JUSTIFICATION

Water and Land Resources Division is obligated to provide public safety and manage stormwater services as defined by King County Code Chapter 9.04. King County is a Phase 1 National Pollution Discharge Elimination System (NPDES) agency obligated to provide improvements in the protection of water quality of natural system within its jurisdiction. Permit compliance include enhancement of operation and maintenance of existing facilities, remediation and retrofit of these facilities and investigations and determination of pollution conditions and abatement or elimination of these sources contributing to water quality detriment. This Ordinance Master oversees the various base programs that include: Emergency-Opportunity, Feasibility, Monitoring & Maintenance, and Project Support Services. The other programs will be completing their assigned inventory assessment lists which will be part of the Asset Management database then those programs will close out. They are Dams and Lakes, Facility Remediation, Aging Pipes and Small Basin. In 2015 this master will continue on Horseshoe Lake Flood reduction, Fairwood 11 Pipe Phase 2 and Wilderness Rim Flood reduction projects. There is one new 2015 project, Fairwood Anti-Corrosive, 1123291.

4. PROJECT BENEFITS/OUTCOMES

Not applicable. This program will be closed in 2020.

5. BUDGET REQUEST BASIS

This program will be closed in 2020. Transfer \$1,250,000 to Project 1117559, WLSWC FAIRWOOD 11 PIPE PHASE 2. This program remains from the prior (Pre-2017) Stormwater CIP structure, carryover appropriation was used to close-out and finish projects started prior to 2017. In 2017 all new projects are using the new structure which more closely aligns with product families developed in business planning efforts which include asset management, natural drainage systems, feasibility studies and water quality. This programmatic project will be closed in 2019-2020 as projects are completed.

6. FUNDING AND REVENUE DISCUSSION

Funding for WLR SWM capital projects includes revenue from numerous external agencies as well as county sources. Some of these funding sources include grants from federal and state agencies, local agencies, local levy proceeds, county surface water management fees and Interlocal agreements.

7. OPERATING BUDGET AND OTHER IMPACTS

It is not anticipated that this program will increase or decrease the operating budget.

NARRATIVES

WLFAC CAPITAL PROJECT OVERSIGHT

1111168

1. CURRENT PROJECT SCOPE

Capital Project Oversight - This project is for costs associated with the County Auditor's Office capital projects' oversight (CPO) with the mission of controlling cost overruns and unforeseen expansion of project scopes, schedules, and budgets on King County's large capital construction projects. The goals for the program include: (1) provide effective independent oversight; (2) focus the oversight on high-risk projects; (3) increase the likelihood of project success; (4) identify problems in a more timely manner; (5) provide clear, succinct reports; and (6) facilitate decision-making by the council.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Ordinance 15652: In 2006, the County Council created a new function in the County Auditor's Office by funding a program for capital projects' oversight (CPO) with the mission of controlling cost overruns and unforeseen expansion of project scopes, schedules, and budgets on King County's large capital construction projects.

4. PROJECT BENEFITS/OUTCOMES

Provides oversight and independent review of overall capital program.

5. BUDGET REQUEST BASIS

his funds the Capital Project Oversight (CPO) function in the Auditor's office. The request is based on a central model that allocated the 2019 -2020 CPO Budget between capital funds based on the size of the budget request, excluding certain types of funds (open space, mitigation, etc.) and large equipment purchases. The budget was determined considering available carryover in addition to the allocation model.

6. FUNDING AND REVENUE DISCUSSION

Funded by Surface Water Management Fee

NARRATIVES

WLSWC FAIRWOOD 11 PIPE PHASE 2

1117559

1. CURRENT PROJECT SCOPE

Stormwater Fairwood 11 Conveyance Pipe Replacement - This project is a capital improvement project to retrofit an existing King County regional storm water flow control facility, Facility DR0516. The facility controls flow discharges of Molasses Creek in to a 2000 feet underground conveyance pipeline which directs flow to open ravine on the south slope of Cedar River valley near Renton. The pipe to be replaced also performs in line flow control of Molasses Creek.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

The retrofit design will determine flow control modifications appropriate for adjacent property protection, downstream conveyance capacity and protection of downstream open channel habitat conditions and provide ravine erosion protection.

NARRATIVES

WLSWC FAIRWOOD 11 PIPE PHASE 2

1117559

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

This request is to transfer \$1,250,000 from Project 1048125, WLSWC PUBLIC SAFETY/PROPERTY. There is insufficient existing budget to complete the project within the current scope.

6. FUNDING AND REVENUE DISCUSSION

Funding for WLR SWM capital projects includes revenue from numerous external agencies as well as county sources. Some of these funding sources include grants from federal and state agencies, local agencies, local levy proceeds, county surface water management fees and Interlocal agreements.

7. OPERATING BUDGET AND OTHER IMPACTS

It is not anticipated that the project will impact the operating budget.

NARRATIVES

WL Transfer to Roads 1111819

1124928

1. CURRENT PROJECT SCOPE

Water and Land Resources Division Surface Water Management Fund Transfer to Roads Project 1111819 - This project is created to help fund maintenance and replacement of stormwater culverts running under County Roads.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

Roads funding has decreased. Since stormwater running under roads is effectively originated outside Roads right-of-way, costs for maintenance and replacement of these culverts should be shared with Surface Water Management Stormwater Unit.

4. PROJECT BENEFITS/OUTCOMES

N/A

5. BUDGET REQUEST BASIS

This is a technical adjustment is related to the \$ 2 m appropriated in this project as part of the council phase in the 2015-2016 capital budget, it did not have revenue backing. As a result, this unfunded project was created. This \$2M was adopted as part of the SWM fee increase in 2017-2018 but was appropriated in the operating fund and did not flow through the capital fund. This technical adjustment reduces expenditure authority in the capital fund to reflect that this transfer was already included in the operating fund.

6. FUNDING AND REVENUE DISCUSSION

Technical Adjustment is related to the \$ 2M appropriated in this Fund as part of the 2015-2016 capital budget it did not have revenue backing. This \$2M was adopted as part of the SWM fee increase in 2017-2018 but was appropriated in the operating fund and did not flow through the capital fund. The miscellaneous revenue reduction reduces revenues that did not exist.

NARRATIVES

WLSWC STEWARDSHIP WATERQUALITY

1129370

1. CURRENT PROJECT SCOPE

Stormwater Stewardship Water Quality - This project provides match funding (partial reimbursement) for participants to implement agricultural best management practices as detailed in the Livestock Management and Critical Areas Ordinances. The cap per property is currently being analyzed. These cost share grants are awarded to landowners implementing practices included in a farm plan from the King Conservation District, USDA Natural Resources Conservation Service or other approved provider. A plan is not necessary, but it is preferred that the applicant work with a technical service agency partner. Typical Best Management Practices include manure and crop residue composting structures, manure management systems, buffer fencing for streams and wetlands, riparian plantings, roof runoff management, and high tunnels (simple greenhouses). King County conducts periodic outreach to advertise the program and monitors for compliance and effectiveness.

2. PROGRAMMATIC PROJECT DISCUSSION

Forecasts are spread evenly throughout the year, as it is difficult to predict incoming applications and requests for reimbursement. Projects are approved in the order received. New focus puts the priority on high tunnels (simple greenhouses) throughout the county and significant water quality BMPs (livestock exclusion from water bodies, manure management, etc.) in targeted sub-basins with state documented water quality impairment. The target sub-basins for 2018 and 2019 are Boise Creek, Second Creek and Pussyfoot Creek, all located in the Auburn/Enumclaw area.

3. PROJECT JUSTIFICATION

Agricultural activities (horticulture and livestock raising) can have negative impacts on water quality and natural resources. Encouraging landowners to implement agricultural best management practices can protect water quality and the environment. Some of these best management practices further King County's Local Food Initiative, such as the high tunnels mentioned above, which have the added benefit of increasing the growing season.

4. PROJECT BENEFITS/OUTCOMES

This is a new standalone master project in 2017.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WLSWC STEWARDSHIP WATERQUALITY

1129370

5. BUDGET REQUEST BASIS

The program has carryover funding which will be used to fund the program expenditures in the 2019-2020 biennium. There is no budget request for 2019-2020; budget request reflects planning estimates for outyears. Cost estimates were based upon review of prior expenditures with the same scope.

6. FUNDING AND REVENUE DISCUSSION

Funding for this project is from the Surface Water Management fee.

7. OPERATING BUDGET AND OTHER IMPACTS

King County may conduct periodic monitoring, based on staff availability. Recipients are responsible for all maintenance of installed projects, during the project lifetime.

8. PROJECT STATUS

9. ALTERNATIVES ANALYSIS

If the project is discontinued, there is less incentive for landowners to implement farm management plans and best management practices. There may also be backlash toward County government for rescinding such a popular program. The greatest negative may be that natural resource concerns will not receive the attention they deserve. Alternative analysis for project scope is handled by the applicant and their King Conservation District Farm Planner (or other planning service provider) during the planning process.

10. OTHER AGENCY INVOLVEMENT

This project involves and affects the King Conservation District (KCD) and USDA Natural Resources Conservation Service (NRCS). KCD and NRCS staff are responsible for developing the farm management plans. They also help applicants with the application process, answer implementation questions and participate in the inspection visits.

11. ART ELIGIBILITY

1% of Arts is not eligible on this project. This project is a grant cost share program funding work of Local Farmers for work on their properties

12. EQUITY AND SOCIAL JUSTICE IMPACT

The program is a reimbursement program, meaning the applicant must pay installation costs before receiving reimbursement. Limited income citizens may not be able to meet this requirement and would therefore not participate. Most applicants are landowners, so communities that have a lower rate of property ownership would be at a slight disadvantage. Note that tenants are welcome to apply, if the landowner agrees to the project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Generally, projects that improve or protect water quality would have a positive climate change impact. Most of the practices improve soil quality and plant health, which help to combat climate change or improve farm resiliency to negative climate change impacts. Projects are implemented on private property and are small in scale. The nature of the projects aligns with the goals of the Green Building Program. The majority of projects have an environmental benefit by protecting and enhancing natural resources or recycling nutrients (manure/crop residue storage structures).

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

WLSWC GENERAL

1129371

1. CURRENT PROJECT SCOPE

Stormwater General Program - This program provides funding for ongoing support services to Stormwater Capital Improvement and Preservation projects and programs, and oversees grant opportunity to fund capital projects. CIP support services include the ongoing implementation and improvement of the project management to comply with county requirements, provide general supports to CADD and Survey.

2. PROGRAMMATIC PROJECT DISCUSSION

Excel document "WLRD Fund 3292 Programmatic List" provides details for each sub project within the programmatic project.

3. PROJECT JUSTIFICATION

The Stormwater Services Section Capital budget has been reconfigured to align with the new product lines from the Line of Business exercise the Section did in 2015 and 2016. This program is required for the development of support services that are needed for an effective Capital Improvement Project Program.

4. PROJECT BENEFITS/OUTCOMES

Not applicable. This is a new program.

5. BUDGET REQUEST BASIS

The budget request for 2019-2020 is necessary in order to continue the ongoing support services to Stormwater Capital Improvement and Preservation projects and programs, and oversees grant opportunity to fund capital projects. The support services include CADD Management, Survey management, Record Management, Project Management, Coordination for Green Building and Sustainable Development, Cultural Resources, Permitting, and other services not funded by the operating budget.

6. FUNDING AND REVENUE DISCUSSION

Funding for this program is from the Surface Water Management fee.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WLSWC GENERAL

1129371

7. OPERATING BUDGET AND OTHER IMPACTS

It is not anticipated that this project (program) will increase or decrease the operating budget.

8. PROJECT STATUS

N/A

9. ALTERNATIVES ANALYSIS

Not applicable as this is CIP program planning.

10. OTHER AGENCY INVOLVEMENT

There are no other agency involvement as no permits are required for CIP program planning.

11. ART ELIGIBILITY

This program is unit management planning. It does not create a capital project. It does not meet eligibility criteria: "Capital Improvement projects for new construction, reconstruction or remodeling buildings, parks, and trails, commemorative structures, pedestrian and vehicular bridges, surface water management projects, wastewater treatment projects, transit facility construction projects and solid waste transfer stations."

12. EQUITY AND SOCIAL JUSTICE IMPACT

One responsibility of this project (program) is to ensure CIP implementation is applied uniformly and that ESJ tools are applied to all CIP projects.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project (program) implements the SCAP by:Engaging stakeholders, Using equity and social justice tools as part of King County's climate commitments, Ensuring CIP projects are taking critical steps to plan for and coordinate regionally on climate change impacts on stormwater, public health, roads, flood risk reduction, and salmon recovery. Green Building strategies are not applied to this project (program) because the work performed is CIP program planning.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

WLSWC EMERGENT NEED CONTG

1129377

1. CURRENT PROJECT SCOPE

WLSWC Emergent Need Contingency - This project provides a mechanism for funding existing Stormwater capital projects that has insufficient appropriation due to unforeseen circumstances and unanticipated project costs.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

Requirements for the Emergent Need Contingency Project are contained in K.C.C. 4A.100.080. This code allows agencies to establish an Emergent Need Contingency Project in their capital funds. The emergency need contingency account can be transferred to other funds without council approval to address unanticipated project costs. Emergent need contingency projects must be included in the proposed capital fund six year capital improvement program and be consistent with the proposed fund financial plan.

4. PROJECT BENEFITS/OUTCOMES

This is a new standalone project in 2017.

5. BUDGET REQUEST BASIS

The budget was determined by a calculation of less than 5% of total agency proposed Surface Water management fee for this fund.

6. FUNDING AND REVENUE DISCUSSION

The funding will be used according to budget guidelines, CIP Processes and Procedures.

7. OPERATING BUDGET AND OTHER IMPACTS

This project is not applicable

8. PROJECT STATUS

Not Applicable

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES	WLSWC EMERGENT NEED CONTG	1129377
-------------------	----------------------------------	----------------

9. ALTERNATIVES ANALYSIS

This project is not applicable

10. OTHER AGENCY INVOLVEMENT

This project is not applicable

11. ART ELIGIBILITY

This project is for funding capital projects due to emergent need. Is not eligible for the Arts 1% calculation.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project is not applicable

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Scientific data indicates that storms will potentially become more frequent and more intense in the future. This could lead to an increase in flood risk (particularly in urban areas).

NARRATIVES

1. CURRENT PROJECT SCOPE

Stormwater Feasibility Studies Program - This program funds studies that identify and assess the feasibility of potential CIP projects. Work in the program includes investigating and evaluating site conditions; and performing preliminary analyses of alternatives. The program is increasing to facilitate a more proactive approach to asset management being implemented for stormwater facilities. This new approach focuses on implementing asset preservation projects to replace or rehabilitate critical facility components before they fail rather than after they fail, thus avoiding the extra costs and damages that occur with failure.

2. PROGRAMMATIC PROJECT DISCUSSION

Excel document "WLRD Fund 3292 Programmatic List" provides details for each sub project within the programmatic project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WLSWCFS FEASIBILITY STUDIES

1129379

3. PROJECT JUSTIFICATION

Feasibility studies are a tool for ranking and prioritizing potential Capital Improvement Projects. This ensures that projects are undertaken in the most strategic manner. A sound investigation and preliminary analysis helps ensure potential Capital Improvement projects (CIP) are feasible, effective, properly prioritized, and have reasonable cost and schedule estimates. The program needs to be increased to accommodate WLRD's more proactive approach to stormwater asset management. This new approach to asset management has identified a number of aging facilities that are in need of feasibility studies to determine the most cost effective form of asset preservation and its cost to implement.

4. PROJECT BENEFITS/OUTCOMES

This is a new master program in 2017. The budget is to support a more proactive approach to asset management which has identified a number of aging facilities in need of feasibility studies.

5. BUDGET REQUEST BASIS

The budget forecast is prepared by estimating the cost of identifying and assessing the feasibility of potential CIP projects. This includes investigating and evaluating site conditions; and performing preliminary analyses of alternatives. The program is expanding to facilitate a more proactive approach to asset management being implemented for stormwater facilities. This new approach focuses on implementing asset preservation projects to replace or rehabilitate critical facility components before they fail rather than after they fail, thus avoiding the extra costs and damages that occur with failure

6. FUNDING AND REVENUE DISCUSSION

Funding for this program is from the Surface Water Management fee.

7. OPERATING BUDGET AND OTHER IMPACTS

No impact to Operating budget.

8. PROJECT STATUS

Every year, high-level evaluations are conducted for both County owned assets (i.e., Stormwater facilities) and problems with flooding outside the Flood Control District's areas of interest. The studies focus on identifying the problem occurring, reason(s) why the problem is occurring and identifying possible solutions to mitigate the problem. The Feasibility Studies Program does not receive grant funding but it is a factor of the CIP selection process as to whether a potential project can be designed and constructed with grant funds. Each project created in the program is expected to be completed within one year of its creation.

9. ALTERNATIVES ANALYSIS

Alternatives are not selected but only identified and recommended in feasibility studies.

10. OTHER AGENCY INVOLVEMENT

There is no other agency involvement as no permits are required to perform studies.

11. ART ELIGIBILITY

This program produces studies. Does not meet "Capital Improvement projects for new construction, reconstruction or remodeling buildings, parks, and trails, commemorative structures, pedestrian and vehicular bridges, surface water management projects, wastewater treatment projects, transit facility construction projects and solid waste transfer stations."

12. EQUITY AND SOCIAL JUSTICE IMPACT

Studies of sites or facilities are selected based on complaints received from the public or from inspection of the facility that indicates a performance issue or a structural component issue (e.g., corrosion due to age of pipe). However, demographics of the site is noted in the study in order to help distribute funds equitably.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WLSWCFS FEASIBILITY STUDIES

1129379

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Scientific data indicates that storms will potentially become more frequent and more intense in the future. This could lead to an increase in flood risk, particularly in urban areas. This project (program) implements the SCAP by:Engaging stakeholders, Using equity and social justice tools as part of King County's climate commitments, Taking critical steps to plan for and coordinate regionally on climate change impacts on stormwater, public health, roads, flood risk reduction, and salmon recovery. The studies completed in this program are for CIP planning purposes. Green Building strategies are identified at 30% design.

NARRATIVES WLSWCAD AGRICULTURE DRAINAGE 1129380

1. CURRENT PROJECT SCOPE

Agricultural Drainage Assistance Program (ADAP) - This program provides assistance to farmers to improve drainage on their property. The ADAP provides support in the form of labor, supplies, and technical assistance to meet many of the permit requirements related to drainage projects such as de-fishing and native buffer planting. The benefits are increased productivity by bringing areas that were too wet to farm into production or extending the growing season for marginally wet properties. The proposed add in the ADAP budget for Farm Fish Flood (FFF) will facilitate the expansion of the ADAP program as part of the FFF process, provide scoping and project initiation/possible completion for a floodgate and/or pump pilot project as well as provide scoping and project initiation/possible completion for a large dredge and/or culvert pilot project.

2. PROGRAMMATIC PROJECT DISCUSSION

Excel document "WLRD Fund 3292 Programmatic List" provides details for each sub project within the programmatic project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLSWCAD AGRICULTURE DRAINAGE

1129380

3. PROJECT JUSTIFICATION

The purpose is to improve the productivity of agricultural lands in King County by assisting farmers with drainage problems on their lands. This work aligns with King County's Local Food Initiative.

4. PROJECT BENEFITS/OUTCOMES

Budget for this New Master Program has been increased by \$350,000 per year. This will allow the County's cost share portion to increase, creating an incentive for more property owners to participate.

5. BUDGET REQUEST BASIS

A 2016 Needs Assessment established an ADAP project waiting list with 136 discrete parcels identified representing 27 miles of channel maintenance needs. This assessment also concluded there are an estimated 530 parcels across King County that are in need of agricultural channel maintenance, representing 98 miles of total channel maintenance needs.

6. FUNDING AND REVENUE DISCUSSION

Funding for this program is from the Surface Water Management fee.

7. OPERATING BUDGET AND OTHER IMPACTS

The operating budget funds some of the administration and technical study/design work for the ADAP program.

8. PROJECT STATUS

The ADAP dredged approximately 14,000 linear feet of agricultural waterway in 2017 and is projected to dredge 10,000+ linear feet in 2018. Planting of 2016 and 2017 projects took place in 2017 and 2018, respectively. Maintenance of 2014, 2015, 2016, and 2017 project planting were/will be performed in 2017/2018. The ADAP also provided technical support to the Farm, Fish, Flood task force and other agricultural programs/efforts requiring engineering support.

9. ALTERNATIVES ANALYSIS

Each sub project is surveyed early in the process. The survey determines what is causing the impacts to the property and identifies options for addressing the problem.

10. OTHER AGENCY INVOLVEMENT

The ADAP program works with the King Conservation District. A permit for each project is obtained from the Washington Department of Fish and Wildlife.

11. ART ELIGIBILITY

This program is ineligible for Arts 1% calculation per the directions from the budget office. The subprojects are cost share agreements with the landowner. The work is done by landowner and this program refunds the expenditures. These sub projects are not accessible or visible to the public.

12. EQUITY AND SOCIAL JUSTICE IMPACT

The agricultural community has many traditionally underserved communities. The ADAP works with all farmers regardless of background or history to resolve drainage problems on their land.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Most ADAP sub project will plant a native buffer along the waterway after construction. A native plant buffer removes CO2 from the atmosphere and shades the water in the waterway which keeps it cooler. ADAP projects remove accumulated sediments from waterways. Green building techniques are implemented by allowing spoils to be spread on site rather than hauled to a different disposal site.

NARRATIVES

1. CURRENT PROJECT SCOPE

Neighborhood Drainage Assistance Program (NDAP) - This program's objectives are to reduce flooding on public and private property. The program also assists citizens in resolving smaller neighborhood problems of localized flooding, erosion, sedimentation, and water quality. These problems are typically identified through citizen drainage complaints or inspections. Actions typically include installing pipes and catch basins, upsizing culverts, removing accumulated sediment, stabilizing drainage channels. The actions may include providing technical assistance to property owners and small-scale drainage improvements.

2. PROGRAMMATIC PROJECT DISCUSSION

Excel document "WLRD Fund 3292 Programmatic List" provides details for each sub project within the programmatic project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WLSWCND NEIGHBORHOOD DRAINAGE

1129381

3. PROJECT JUSTIFICATION

This program was approved by the King County Council in 1993 to address "Neighborhood Drainage Problems" - A stormwater conveyance problem located on private property, which is caused by runoff primarily from another private property and would otherwise be outside King County's scope of responsibility. The goal of this program is to improve customer service by addressing neighborhood drainage problems (for example, localized flooding, erosion, and sedimentation problems) that primarily affect private property. Not providing the Neighborhood Drainage Assistance Program would result in continuing drainage problems for the affected property, or increased costs to property owners to resolve the problems without County support.

4. PROJECT BENEFITS/OUTCOMES

This is a new master program in 2017

5. BUDGET REQUEST BASIS

The program has approximately 30 potential projects on a wait list. The estimated cost to address the entire list of potential projects is over \$1 million. The request was based on funding available and competing priorities.

6. FUNDING AND REVENUE DISCUSSION

Funding for this program is from the Surface Water Management fee.

7. OPERATING BUDGET AND OTHER IMPACTS

The operating budget funds some of the Technical Study, Design, and administration work for the NDAP program.

8. PROJECT STATUS

The NDAP has constructed the Sealman and Geist CIP projects and Smythe, Taylor, and Perri Quick Fix projects in 2017 and 2018 to date. One large CIP project (Pearce) that was planned for 2017 was delayed to 2018 due to permitting requirements. The Moore CIP and two more Quick Fix projects are anticipated to be completed in 2018.

9. ALTERNATIVES ANALYSIS

Each NDAP project evaluates alternatives in the Engineering Review program prior to creating an NDAP project. Alternatives are rated not only based on their cost and ability to address the problem but also on what the property owner desires.

10. OTHER AGENCY INVOLVEMENT

King County Department of Transportation constructs most NDAP projects. Permits for NDAP projects, when needed, are typically obtained from Washington Department of Fish and Wildlife and King County Department of Permitting and Environmental Review.

11. ART ELIGIBILITY

These drainage projects are not visible & assessable to the public.

12. EQUITY AND SOCIAL JUSTICE IMPACT

NDAP assistance is available to all property owners in unincorporated King County. Large projects are chosen for funding based on a cost/benefit ratio and property owners cannot pay a portion of the cost of a project to boost their score. Small projects are selected for funding on a first come, first served basis.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

When possible NDAP projects are coordinated with other projects to minimize travel time for crews and equipment which reduces the amount of fuel burned for the project. King County Department of Transportation constructs NDAP projects. Construction crews follow Green Building guidelines regarding purchase and disposal of products.

NARRATIVES

WLSWCE EMERGENCY

1129382

1. CURRENT PROJECT SCOPE

Stormwater Emergency Program - This program requires using capital funds to address unforeseen incidents that require urgent/immediate response posing imminent danger or risks to health, life or property. Those unforeseen incidents normally caused by major unexpected events (e.g. floods, heavy rainfall etc.) and are identified through complaint call from citizens. The Emergency Program funds projects* that provide design and construction to repair, restore or preserve function of stormwater systems that pose a threat to public safety. These projects are typically a result of large, rain events; major floods or erosion; or unforeseen incidents. *Note: currently < \$250K due to day labor limit. Current allocation is \$400K per year for the Emergency Program

2. PROGRAMMATIC PROJECT DISCUSSION

Excel document "WLRD Fund 3292 Programmatic List" provides details for each sub project within the programmatic project.

3. PROJECT JUSTIFICATION

The County needs to have a program with funds to act quickly when these unforeseen incidents arise and emergency action is needed. Unlike other CIP projects which are identified and systemically funded through the Water and Land Resources Division's CIP 6-year plan, unforeseen incidents necessitate Stormwater Services to maintain an emergency contingency fund to design and construct projects where time is of the essence to protect property and valuable resources.

4. PROJECT BENEFITS/OUTCOMES

This is a new master program in 2017.

5. BUDGET REQUEST BASIS

This is a request to disappropriate budget for closure of the project. Most emergencies are now covered in the Asset Preservation project.

6. FUNDING AND REVENUE DISCUSSION

Funding for this program is from the Surface Water Management fee.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WLSWCE EMERGENCY

1129382

7. OPERATING BUDGET AND OTHER IMPACTS

Permit driven requirements for Monitoring and Maintenance could be a future facilities maintenance operating cost depending on if the project is a King County owned facility.

8. PROJECT STATUS

This project will close out in 2018.

9. ALTERNATIVES ANALYSIS

Not Applicable

10. OTHER AGENCY INVOLVEMENT

Not applicable for this program. However, this program may use King County Road Maintenance crews to perform work. This program funds work - as sub-projects - that may require permits to do the work. These include local, state and federal permits.

11. ART ELIGIBILITY

assumption are these emergency projects are visible to the public even though they are not assessable to the public.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project (program) implements work - as sub-projects - based on a threat to public safety. ESJ tools (e.g., interpreter) will be utilized if needed to abate any threat.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Scientific data indicates that storms will potentially become more frequent and more intense in the future. This could lead to an increase in flood risk, particularly in urban areas. This project (program) implements the SCAP by:Engaging stakeholders, Using equity and social justice tools as part of King County's climate commitments, Taking critical steps to plan for and coordinate regionally on climate change impacts on stormwater, public health, roads, flood risk reduction, and salmon recovery. This project is a program; Green Building requirements do not apply. However, when time is not of the essence for works funded by the project (program), Green Building strategies and reporting will be completed for those bodies of work.

14. OTHER CONSIDERATIONS (OPTIONAL)

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

16. PROJECT COMPLEXITY

17. CAPACITY TO IMPLEMENT THE PROJECT

18. PROJECT RISKS

NARRATIVES WLSWCDF NATURAL DRAINAGE FLOOD 1129383

1. CURRENT PROJECT SCOPE

Stormwater Natural Drainage System Flood Program - Projects within this program address chronic drainage and flooding problems associated with the natural drainage system, such as stream, lakes, and wetlands. Projects will include constructing new facilities, improving/expanding existing facilities, removing sediment, controlling vegetation, or other work in the natural system to improve drainage or minimize flooding.

2. PROGRAMMATIC PROJECT DISCUSSION

Excel document "WLRD Fund 3292 Programmatic List" provides details for each sub project within the programmatic project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLSWCDF NATURAL DRAINAGE FLOOD

1129383

3. PROJECT JUSTIFICATION

The natural drainage system continuously changes over time through variations in rainfall, groundwater levels, and ongoing erosion, sedimentation, vegetation growth, and beaver activities. These natural processes change the behavior of streams, lakes, and wetlands during storm events which can lead to flooding of roads, homes, pastures, and businesses. In some cases, the flooding is worsened by increased runoff from developed land. This program is needed to address the most chronic of these flood problems to protect public safety and property consistent with King County's Strategic Plan and the mission of WLRD. Project costs are increasing as permit agencies emphasize protecting waterways and habitat environments, e.g. improving water quality and making facilities fish passable. The regulatory requirements and longer time needed to secure permits result in project cost increases.

4. PROJECT BENEFITS/OUTCOMES

This a new master program in 2017. This product line was identified directly from Stormwater Section Line of business.

5. BUDGET REQUEST BASIS

Drainage projects are identified through the feasibility studies. Property acquisition may be required for project implementation.

6. FUNDING AND REVENUE DISCUSSION

Funding for WLR SWM capital projects includes revenue from numerous external agencies as well as county sources. Some of these funding sources include grants from federal and state agencies, local agencies, local levy proceeds, county surface water management fees and Interlocal agreements.

7. OPERATING BUDGET AND OTHER IMPACTS

Permit driven requirements for Monitoring and Maintenance of projects in this program will be a future Facilities Maintenance operating cost.

8. PROJECT STATUS

Mud Creek Restoration - The program responded to an emergency caused when sediment filled a stream channel, causing it to flow across private property and then into a roadside ditch. This threatened the road and a nearby residence with flooding and would have led to salmon not being able return to spawn. The project excavated the abandoned stream channel, allowing the stream flow to return.
Horseshoe Lake Pumping - A rental pump was installed for 2 months (Feb and March) and pumping was performed due to threatening lake levels. Water quantity and quality monitoring was performed by WLRD Science and Environmental Lab staff. A SEPA Checklist and water quality analysis are in the process of being written to support the permanent pipeline design. May Creek Sediment facility sites (Tributaries 291A and Country/Cabbage) - Two new projects were opened in late 2017 to identify potential properties that may be good locations for a facility to capture sediment before it gets to May Creek. This project involves office and field analysis and public engagement to site a sediment facility.

9. ALTERNATIVES ANALYSIS

Not applicable to the program, but individual projects in this program will go through an alternatives analysis process.

10. OTHER AGENCY INVOLVEMENT

Depending on the location and scope of projects included in this program, permit agencies could include DPER, ACOE, WDFW, Department of Ecology, and other jurisdictions. If projects are grant funded, FEMA, Washington State Department of Ecology, Washington State Military Department, and the King County Flood Control District could be involved.

11. ART ELIGIBILITY

The subprojects under this program will be individually evaluated to determine their art eligibility. There is one sub project, Horseshoe creek, in the 2017 2018 that is ineligible for the Arts Calculation.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Feasibility studies which take ESJ into account will help prioritize and select the projects in this program. During project design, teams reach out to a variety of stakeholders and to the extent consistent with the site and the goals of the project, strive to incorporate project elements that promote ESJ goals. This includes identifying strategies to improve the contribution of equity determinants in the project area and outreach to the community.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES	WLSWCDF NATURAL DRAINAGE FLOOD	1129383
13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT		
Scientific data indicates that storms will potentially become more frequent and more intense in the future. This could lead to an increase in flood risk (particularly in urban areas). This program is designed to address flooding problems including those that arise from the potentially more frequent and intense storms. Green building strategies will be identified at 30% design for the projects in this program.

NARRATIVES WLSWCWQ WATER QUALITY 1129385

1. CURRENT PROJECT SCOPE

Stormwater Water Quality Program - This program will apply Best Management Practices to manage stormwater runoff and improve water quality and stream health in unincorporated King County. The work includes "stormwater retrofitting" the older developed areas that are lack of stormwater flow control and/or water quality facilities; addressing erosion from stormwater pipe outlets.

2. PROGRAMMATIC PROJECT DISCUSSION

Excel document "WLRD Fund 3292 Programmatic List" provides details for each sub project within the programmatic project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLSWCWQ WATER QUALITY

1129385

3. PROJECT JUSTIFICATION

In King County, over two thirds of the developed land was built before adequate stormwater controls were required. As a result, the water quality and health of streams in these areas are degraded. The Puget Sound Partnership 2014 Action Agenda for Puget Sound identified the lack of stormwater controls in older developed areas as one of the most significant problems preventing Puget Sound recovery. To add these stormwater controls retroactively (stormwater retrofitting) will be expensive and logistically challenging. This will likely take decades to plan, site, design, fund, acquire the necessary land, and implement. Progress needs to begin immediately, as a large number of the County's streams and lakes are in a degraded condition.

4. PROJECT BENEFITS/OUTCOMES

This a new master program in 2017. This product line was identified directly from Stormwater Section Line of business.

5. BUDGET REQUEST BASIS

Basin retrofit projects are identified through Basin Studies (e.g. the Bear Creek Watershed Management Study Report, Small Basin Studies). Other projects will also be implemented to address erosion problems that impact water quality

6. FUNDING AND REVENUE DISCUSSION

Funding for this program is from the Surface Water Management fee.

7. OPERATING BUDGET AND OTHER IMPACTS

Permit driven requirements for Monitoring and Maintenance will be a future facility maintenance operating cost for Stormwater Services.

8. PROJECT STATUS

The 1128113 Evans Creek Detention Vaults project received a Washington State Department of Ecology grant to install stormwater detention vaults to improve water quality in the Evans Creek Tributary 108 Basin. The Evans Creek Detention Vaults project completed construction in January, 2018. The 1129498 May Creek Cemetery Pond Wetland Restoration received a King County Waterworks grant to acquire property necessary to retrofit an existing regional detention facility, Cemetery Pond DR0509, located in unincorporated King County near Renton, Washington.

9. ALTERNATIVES ANALYSIS

This program will have projects that conduct an alternatives analysis during preliminary design.

10. OTHER AGENCY INVOLVEMENT

The Puget Sound Partnership provides an Action Agenda for improving water quality of Puget Sound. The Washington State Department of Ecology provides guidance for prioritizing water bodies and provides grant funding for improving the water quality of Puget Sound. Projects may need permits from King County Department of Permitting, Washington State Department of Fish and Wildlife, Army Corps of Engineers, etc. Tribes also are involved and influence the projects.

11. ART ELIGIBILITY

The subprojects under this program will be individually evaluated to determine their art eligibility.

12. EQUITY AND SOCIAL JUSTICE IMPACT

The projects in the program will analyze ESJ data to provide mitigation strategies as appropriate.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Climate change – Scientific data indicates that storms will potentially become more frequent and more intense in the future. This could lead to an increase in flood risk (particularly in urban areas). Green Building Reporting will not be applicable to the planning projects that will not reach 30% design. Green Building Reporting will be applicable to the design projects that will reach 30% design and the implementation projects.

NARRATIVES

WLSWCA ASSET PRESERVATION

1129388

1. CURRENT PROJECT SCOPE

Stormwater Asset Preservation Program - This program preserves or replaces the existing aging stormwater facilities/assets owned by Water and Land Resources Division (WLRD). Work includes the rehabilitation, restoration, and replacement of the facilities and/or their components (e.g. pipes, catch basins, manholes, etc.) to extend the life, improve and restore the function before or after they have failed or partially failed. Projects will be identified and prioritized through WLRD's stormwater asset management planning.

2. PROGRAMMATIC PROJECT DISCUSSION

Excel document "WLRD Fund 3292 Programmatic List" provides details for each sub project within the programmatic project.

3. PROJECT JUSTIFICATION

Many of Water and Land Resources Division's (WLRD) stormwater facility components are at or nearing the end of their effective life due to age and deteriorating materials. This is increasing the risk of facility failure, the consequences of which include extra costs for emergency replacement, potential hazards to the public, damages to public and private property, and impacts to water quality. Some failures are already occurring or starting to occur. This program is needed to address both existing and predicted failures of facility components.

4. PROJECT BENEFITS/OUTCOMES

This is a new master program in 2017. This product line was identified directly from Stormwater Section Line of business.

5. BUDGET REQUEST BASIS

The inventory of assets is evaluated, facilities that need quick actions are identified and cost estimates are developed. These facilities will be fixed before long term options are implemented. Long-term projects may take multiple years to implement.

6. FUNDING AND REVENUE DISCUSSION

Funding for WLR SWM capital projects includes revenue from numerous external agencies as well as county sources. Some of these funding sources include grants from federal and state agencies, local agencies, local levy proceeds, county surface water management fees and Interlocal agreements.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLSWCA ASSET PRESERVATION

1129388

7. OPERATING BUDGET AND OTHER IMPACTS

Permit driven requirements for Monitoring and Maintenance will be a future facilities maintenance operating cost (mainly mitigation planting). Some maintenance costs will be reduced with the completion of projects that fix existing problems.

8. PROJECT STATUS

Prior Asset Management funding levels restricted maintenance work to permit-required, function critical, and emergency maintenance work. This funding allocation resulted in a run-to-failure, reaction based maintenance strategy. With the increase of funding for the 2017-2018 biennium, Stormwater Services is able to address other maintenance activities that would extend the life of assets. This work includes reducing the maintenance backlog, conducting condition assessments, and the repair and replacement of assets, all of which will reduce the risk of emergency maintenance work. This work is referred to as preservation maintenance. Preservation Maintenance work: Enhanced maintenance: pond grading and sediment removal, tree and vegetation removal, and maintenance on access roads. Quick Fixes: repair and replacement of stormwater infrastructure based upon condition assessments. Capital Preservation: design analysis addressing performance and/or condition of the assets.

9. ALTERNATIVES ANALYSIS

The alternative analysis has been completed in the Feasibility study,

10. OTHER AGENCY INVOLVEMENT

Permits may be required from regulatory agencies including DPER, ACOE, WDFW, DOE and possibly permitting agencies in incorporated areas. King County DOT staff may perform the construction work.

11. ART ELIGIBILITY

These are facilities owned by King County. Generally there is no public access. They are fenced and many are below ground. A majority of this program projects are culverts and stormwater sewer conveyance that are below ground.

12. EQUITY AND SOCIAL JUSTICE IMPACT

After project selection, during project design, teams reach out to a variety of stakeholders and to the extent consistent with the site and the goals of the project, strive to incorporate project elements that promote ESJ goals. This includes identifying strategies to improve the contribution of equity determinants in the project area, outreach to the community, ensuring alignment with sustainability and municipal initiatives, and prioritized recommendations.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This program includes the design and implementation of projects that address stormwater runoff problems, reduces flood risk and promote salmon recovery. Green Building strategies will be identified at 30% design for the projects in this program.

NARRATIVES

WLER EMERGENT NEED CONTINGENCY

1129530

1. CURRENT PROJECT SCOPE

Ecological Restoration Emergent Need Contingency - This project provides a management reserve for ecological capital design and construction projects. The amount of reserve (Contingency) is based upon the amount of construction funding planned for the current budget year. This project provides contingency funds to cover unanticipated unplanned program or project costs.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Standard Industry practices encourages a Management reserve for unknown unknown items that may affect the ability to complete projects or implement programs on time and within budget. The Professional Management Institute has provided guidelines for setting up and managing management reserves.

4. PROJECT BENEFITS/OUTCOMES

This provides a business line management reserve accessible to managers for unanticipated unplanned program or project costs.

5. BUDGET REQUEST BASIS

The request was developed based on available funding and project prioritization.

NARRATIVES

WLER Carbon Sequestration Prog

1133734

1. CURRENT PROJECT SCOPE

Carbon Sequestration Program - The carbon sequestration program expands WLRD tree planting efforts in order to help achieve carbon neutrality goals for divisions within DNRP. Currently, the program is intended to contribute to the carbon needs of the Wastewater Treatment Division, Solid Waste Division and the Water and Land Resources Division. Additional divisions or departments may participate in the future. The program is designed only for King County's internal carbon sequestration goals and will not be offered to external partners. WLRD has developed an approach for calculating lifetime metric tons of carbon equivalent (MTCO₂eq) associated with tree planting projects. This approach applies to tree planting projects that represent an expansion of tree coverage into areas that do not currently have trees. The project incorporates conservative estimates of tree mortality, average tree growth rates and tree sizes at maturity. The program also includes five years of site maintenance, monitoring and reporting requirements.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

King County's Strategic Climate Action Plan and associated Council and Executive directives have establish goals for carbon neutrality. Those goals can be accomplished through a variety of activities, including planting of trees. WLRD has the expertise to identify and prioritize candidate locations and to implement tree planting as one strategy for reaching carbon neutrality goals.

4. PROJECT BENEFITS/OUTCOMES

The program will restore native vegetation communities, including trees as well as shrubs, where they have been lost due to land alteration since European settlement. The goal is to restore sites that have a high likelihood of becoming self-sustaining forests over time, as most carbon credits are realised many decades and even centuries into the future. All sites will be maintained for at least five years to assure long-term survival. Annual reporting will describe new planting activities, maintenance performed on prior year planting, and carbon credits generated.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WLER Carbon Sequestration Prog

1133734

5. BUDGET REQUEST BASIS

Water and Land Resources Division has two current memorandums of understanding in place with Wastewater and Solid Waste divisions for \$350,000/year. This also includes appropriation to allow for potential expansion.

6. FUNDING AND REVENUE DISCUSSION

Revenue for this program is provided through Memorandum of Understanding (MOU) with various King County agencies. Currently WLRD has two MOU's in place one each with KC Solid Water division and one with KC Wastewater division.

7. OPERATING BUDGET AND OTHER IMPACTS

There are no operating impacts since funding includes five years of site maintenance.

8. PROJECT STATUS

Currently there are two Memorandum of Understanding's funding this program.

9. ALTERNATIVES ANALYSIS

Not applicable.

10. OTHER AGENCY INVOLVEMENT

Other King County agencies provide funds through Memorandum of Understanding (MOU). Currently Wastewater and Solid Waste divisions of MOU's with Water & Land Resources.

11. ART ELIGIBILITY

3) maintenance or minor rehabilitation

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide improved public green space accessible to the general public, preserve or enhance environmental health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

King County's Strategic Climate Action Plan and associated Council and Executive directives have establish goals for carbon neutrality. Those goals can be accomplished through a variety of activities, including planting of trees. WLRD has the expertise to identify and prioritize candidate locations and to implement tree planting as one strategy for reaching carbon neutrality goals.

NARRATIVES

WLER FISH PASSAGE PROGRAM

1135075

1. CURRENT PROJECT SCOPE

Water Land Ecological Restoration Fish Passage Program - This program will move forward with feasibility, design, and construction that will replace culverts that currently block fish passage with new culverts that fully restore fish passage and thereby allow fish to access important upstream habitat necessary for the long-term sustainability.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This program supports the Executive's Clean Water and Healthy Habitat Agenda while also supporting tribal fishing rights and environmental best practices. Culverts that are not designed to be fish passable block access to important upstream habitat necessary for the sustainability of fish species. Water and Land Resources Division's proposed Culvert Replacement and Fish Passage project is one component of the Executive's broader County fish passage program, which complements the County's collaboration with tribal governments and long-standing support for watershed-based salmon recovery efforts. The County is initiating work with federal, state, and tribal officials to develop a fish passage program for watersheds within its jurisdiction. Originally conceived in late 2017, the program took on greater meaning following a June 2018 U.S. Supreme Court ruling that required the state of Washington to fix state-owned fish passage barriers within the Puget Sound area in order to avoid violating tribal treaty rights.

4. PROJECT BENEFITS/OUTCOMES

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLER FISH PASSAGE PROGRAM

1135075

5. BUDGET REQUEST BASIS

The Water and Land Resources Division, WLRD, and Roads collaborated to develop a preliminary, planning level list of culvert replacement projects that are a priority for fish passage purposes and in consideration of the safety and condition of the public road system. In the next biennium, a combination of feasibility, design, and construction would be accomplished for the identified projects. Through these efforts, the proposed work would accelerate the pace of addressing fish passage concerns throughout the county. All work, including assessment of project viability throughout the planning and design process, would be done in consultation with tribes and Washington Department of Fish and Wildlife.

Culvert replacement projects will be designed using a combination of WLRD engineering staff resources and consultant services. Culvert replacement projects will be designed using a combination of Roads engineering staff resources and consulting services. Some culvert project construction will be done by the existing Roads crew and, when the crew's capacity is exceeded, contractors will be used.

6. FUNDING AND REVENUE DISCUSSION

Funding for this project is from County surface water management fees.

7. OPERATING BUDGET AND OTHER IMPACTS

There are no impacts to the operating budget.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

Water and Land Resources Division evaluated potential projects based on an assessment of conceptual project feasibility and potential fish passage benefits. The proposed list of projects represents sites that rank high from the feasibility perspective while providing meaningful benefits in restoring unimpeded fish access to upstream parts of the respective watersheds.

10. OTHER AGENCY INVOLVEMENT

Roads Services Division – Leads county's road maintenance and capital programs

11. ART ELIGIBILITY

N/A

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Individual projects will produce outcomes that are beneficial for the natural environment, including enhanced fish passage in the vicinity of roads and other facilities that formerly included physical barriers to migrating salmon. Each culvert project will undergo early and ongoing project review, as part of project delivery, to identify opportunities to meet or exceed Sustainable Infrastructure Scorecard requirements associated with energy, greenhouse gas emissions, storm water management, materials selection, and construction demolition materials diversion. Coordinated waste reduction strategies may result in re-use of materials on site where possible, salvaging of materials offsite, disposal of hazardous waste (if applicable), and recycling. Fleet and fuel efficiencies may be gained through judicious project management, logistics, and reduction in travel times.

NARRATIVES

DES LTLF MASTER PROJECT

1039895

1. CURRENT PROJECT SCOPE

Funding for this project will be used to pay lease costs for agencies leasing non-County space. Costs include base rent, operating costs, common area maintenance, amortized tenant improvements, and other miscellaneous costs included in the lease terms such as parking, storage, and direct utilities. A contingency amount is included to cover possible unanticipated costs that might occur during the biennium. Also included is the FMD Lease Administration Fee collected from the agencies to cover the costs of Real Estate Services staff providing leasehold services, internal service charges and other related expenses. Reimbursement is collected from the agencies to cover the expenditures from the fund.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

Funds for this project are appropriated to pay costs of space leased by KC agencies on a long term basis. Costs include base rent, operating costs, amortized tenant improvements, utilities and other miscellaneous costs included in the lease terms. This project provides the ability to monitor costs of county leased space.

4. PROJECT BENEFITS/OUTCOMES

N/A

5. BUDGET REQUEST BASIS

Budget estimates are based on the terms of each lease including scheduled base rent changes, estimated CPI adjustments, estimated operating costs, leases terminating and new leases projected to be finalized during the biennium.

6. FUNDING AND REVENUE DISCUSSION

NARRATIVES AD PAVEMENT REHABILITATION 1028653

1. CURRENT PROJECT SCOPE

Pavement Rehabilitation - This is the master project for all pavement rehabilitation projects to keep runways, taxiways, ramp and aircraft parking areas, as well as all landside pavements in usable and safe conditions per FAA and other applicable codes. 2019 - 2020: This project consists of multiple small scale pavement rehabilitation efforts at different location of the airport that are of such size that they do not warrant full project designation. This project will use on-call contractors to perform the services. The project will rehabilitate miscellaneous pavement sections as the need arises. Specific locations and work items under this project have not yet been identified. The total project budget includes \$500,000 per calendar year to accomplish miscellaneous pavement projects in 2019 and 2020.

1028653

3. PROJECT JUSTIFICATION

Planned subprojects in this biennium would address issues such as: repaving three aircraft gate areas to bring the pavement up to code for the weight of aircraft parking there; two small but necessary on-airport road projects to improve road conditions and traffic safety; \$200,000 earmarked for emergency pavement repairs, based on recent years' experience; and other pavement management costs. 2019 - 2020: King County International Airport is located in a region where harsh weather conditions greatly affect the durability of pavements and accelerate their deterioration. In addition, the Airport is continually adapting to the growth and changing needs of its tenants and users. Aircraft sizes and weights have grown in past years and they continue to increase. This incremental growth, combined with harsh weather conditions causes damage to the pavement beyond light maintenance. Degraded pavement sections require periodic rehabilitation in order to preserve their longevity and protect the Airport's capital investments.

4. PROJECT BENEFITS/OUTCOMES

Project benefits include reduced need for maintenance, smoother vehicular and aircraft movement area surfaces, and making safety upgrades to pavement markers, striping and signage.

5. BUDGET REQUEST BASIS

The budget request is based on the Airport Engineer's estimates and recent comparable project costs.

6. FUNDING AND REVENUE DISCUSSION

N/A

7. OPERATING BUDGET AND OTHER IMPACTS

None expected.

8. PROJECT STATUS

Current biennium-to-date pavement rehabilitation projects have included completing the periodic Taxiway Bravo sinkhole repairs. Planned work in the coming biennium includes pavement rehabilitation in Gates 6, 7, and 8; emergency repairs; pavement management; and road projects at Perimeter Road South entrance and North Drive Lane.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

All work is subject to FAA grant assurances; in addition, airside pavement rehabilitation is required to meet FAA code.

11. ART ELIGIBILITY

Airport runways

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

We will make every effort to identify and include environmentally-friendly demolition and construction methods and materials, within the highly-regulated code environment for airfield pavement.

NARRATIVES AD STEAM PLANT ACCESS ROAD 1028654

1. CURRENT PROJECT SCOPE

This project will construct a new driveway from Ellis Avenue to the Georgetown Steam Plant Building. The project will demolish the Skagit Transportation building at 6640 Ellis Avenue and relocate power, water, sanitary and stormwater utility lines. The new driveway will be paved using asphalt. High mast lighting will be installed along the route to provide lighting at night. Concrete sidewalks, curb and gutter will be installed on each side of the access. In addition, the design will include the relocation of the material storage ecology blocks to another location at the Airport. Additional work items along the route include excavation, trenching and backfill, utility relocation, security fence installation, driveway markings, and reseeding.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

AD STEAM PLANT ACCESS ROAD

1028654

3. PROJECT JUSTIFICATION

Vehicle access to the Georgetown Steam Plant was historically provided along an easement that traversed the runway protection zone. King County subsequently closed the historic access and is now required to provide alternate access directly from Ellis Avenue.

4. PROJECT BENEFITS/OUTCOMES

The project will enable public access to the Georgetown Steam Plant Museum operated by Seattle City Light. This project will provide access to land to facilitate both tourism and the Museum's business development..

5. BUDGET REQUEST BASIS

The budget request is based on the Airport Engineer's estimates and recent comparable project costs. This appropriation includes environmental remediation and surface water runoff monitoring costs in accordance with federal National Pollution Discharge Elimination System (NPDES) and WA Dept. of Ecology State Environmental Policy Act (SEPA) regulatory requirements.

6. FUNDING AND REVENUE DISCUSSION

This project will be funded by Airport internal funds.

7. OPERATING BUDGET AND OTHER IMPACTS

None expected.

8. PROJECT STATUS

This is an additional appropriation to an existing project.

9. ALTERNATIVES ANALYSIS

The alternative is to continue to provide access to the Georgetown Steam Plant thru an easement across Airport property. This alternative is not viable because this easement traverses the runway protection zone.

10. OTHER AGENCY INVOLVEMENT

All work is subject to FAA grant assurances; in addition, airside road access is required to be included in FAA Airport Layout Plan.

11. ART ELIGIBILITY

Airside road construction.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The Airport will make every effort to identify and include environmentally-friendly demolition and construction methods and materials, within the highly-regulated code environment for airside pavements.

NARRATIVES

AD ARFF FACILITY IMPROVEMENT

1028661

1. CURRENT PROJECT SCOPE

This project is to replace King County International Airport/Boeing Field's existing Aircraft Rescue & Firefighting (ARFF) Facility. The current station is 38 years old and does not meet the current ARFF design guidelines. Based upon a feasibility stud, the new facility will be approximately 8,500 square feet and include three bays. The study also confirmed that to renovate the existing facility would only add to both project cost and duration with no benefit to the Airport. This project was completed in April 2017, and the Airport is requesting disappropriation of the unspent budget authority.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

This project was completed in April 2017, and the Airport is requesting disappropriation of the unspent budget authority.

NARRATIVES AD AIRPORT FLEET 1120731

1. CURRENT PROJECT SCOPE

Airport Fleet - This master project has subprojects for airport fleet equipment replacement as well as special fleet projects such as alternative fuel conversions. 2019 - 2020: This project establishes a budget to perform ongoing routine maintenance for the existing fleet of vehicles owned by the Airport. This project is a monetary budget that provides funds to purchase equipment and parts. The total project budget includes the funds needed to maintain the airport fleet for years 2019 and 2020.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

AD AIRPORT FLEET

1120731

3. PROJECT JUSTIFICATION

The Maintenance Manager maintains a fleet asset lifecycle plan, maintenance and repair schedule, and replacement schedule to manage the maximum planned life of each vehicle and budget for its replacement. 2019 - 2020: The existing fleet of airport vehicles is aging and requires routine maintenance in order to preserve operability and prolong usefulness. Vehicles are maintained by airport maintenance staff and a budget must be established to purchase necessary equipment and parts.

4. PROJECT BENEFITS/OUTCOMES

This project purchases new fleet vehicles and equipment that is less expensive to maintain due to more fuel-efficient powerplants, and to incorporate the latest safety features available to minimize potential workplace injuries.

5. BUDGET REQUEST BASIS

Budget was estimated by the Airport Maintenance manager from market prices for replacement equipment, an FMV bid for the ARFF truck, and King County-provided costs for the AVL project and propane conversion.

6. FUNDING AND REVENUE DISCUSSION

N/A

7. OPERATING BUDGET AND OTHER IMPACTS

Not yet known; to be quantified for individual subprojects at 30% design phase.

8. PROJECT STATUS

Fleet expenditures in the current biennium included scheduled end-of-life equipment replacement. Planned fleet subprojects in the coming biennium plan includes scheduled end-of-life equipment replacement, an ARFF truck replacement (FAA grant-eligible for 90% of the cost), our cost portion of King County's AVL project, and a pilot propane conversion.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

Some or all work is subject to FAA grant assurances. The Propane conversion is being done as part of a larger King County Fleet project.

11. ART ELIGIBILITY

N/A

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project will increase the consumption of alternative fuels (propane) in on-airport vehicles, reducing carbon emissions. Additionally, the introduction of AVL technology will increase the efficient use of KCIA vehicles, and AVL data will enable the Airport to track completion of scheduled maintenance such as runway and taxiway sweeps.

NARRATIVES AD EQUIPMENT SNOW SHED 1129947

1. CURRENT PROJECT SCOPE

Equipment Snow Shed - The project involves construction of a storage building for the Airport's winter maintenance fleet of large equipment. 2019 - 2020: This project will construct a snow removal equipment (SRE) storage building having dimensions approximately 100' deep, 200' wide, and 26' tall. A single maintenance bay will be included to allow SRE vehicle maintenance. The SRE building will be designed as a pre-engineered metal building to accommodate about 10 SRE vehicles with an approximate area of 20,000 square feet. The project site includes general preparation to demolish existing asphalt and concrete, remediation of contaminated soils, 75 foot wide asphalt apron for SRE vehicle maneuvering, high mast lights, reconfiguration of security fence, tree removal, installation and relocation of underground utilities including; electrical, gas, fiber, sanitary sewer and water. A security perimeter fence will be installed around the site, designed to the specifications of the Tenant Security Working Group, and will tie into the existing security perimeter fence. This project includes architectural design services.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

AD EQUIPMENT SNOW SHED

1129947

3. PROJECT JUSTIFICATION

This project will protect and extend the life of the Airport's winter maintenance fleet, which is presently stored outdoors and is exposed to the weather. This work aligns with Best Run Government. 2019 - 2020: King County International Airport is located in a climate that experiences frequent inclement weather events. The weather often consists of freezing rain or snow. In order to combat the inclement weather, the airport deploys snow removal equipment to remove contaminants off of the airfield. Currently, the airport does not have a place to house SRE equipment. Having equipment and chemicals exposed to the elements rapidly reduces their useful life and increases maintenance efforts and costs. A snow removal equipment storage building is needed to protect the expensive equipment and chemicals from adverse weather conditions. The SRE building will minimize maintenance costs and extend the useful life of the equipment.

4. PROJECT BENEFITS/OUTCOMES

This project will protect and extend the life of the Airport's winter maintenance fleet, which is presently stored outdoors and is exposed to the elements year round.

5. BUDGET REQUEST BASIS

Staff resources were used to develop the estimate, which includes funding for project design. This project has been approved by FAA as eligible for grant funding.

6. FUNDING AND REVENUE DISCUSSION

This project is eligible for FAA grant funding; the Airport will apply for an FAA grant.

7. OPERATING BUDGET AND OTHER IMPACTS

Equipment maintenance and repair costs savings due to reduced wear from exposure outdoors may be anticipated. Additionally, indoor storage is expected to extend the operational lives of this equipment.

8. PROJECT STATUS

This is an additional appropriation request. The original appropriation was to construct a fabric structure on a dirt surface. This additional appropriation takes into account site preparation, permitting, and complying with Green Building Ordinance requirements for a permanent corrugated metal structure built atop a poured concrete pad. Construction plans include a restroom and a shop bay for occupancy by Airport vehicle/equipment mechanic staff. This building will be constructed as a Net Zero Energy Building (NZEB), one which produces as much energy as it uses over the course of a year.

9. ALTERNATIVES ANALYSIS

Option 1: No-Build (Status Quo) Pros: There are no changes to the existing facilities There are no engineering requirements There are no investment costs incurred to implement improvements There are no change to the existing environmental conditions Cons: The snow removal equipment will continue to be kept outside with no protection from the elements The useful life of the equipment will be shorter and become more expensive to maintain Option 2: Construct SRE Building Airside (On current DNRP leasehold) Pros: It meets the need to provide enclosed storage and a maintenance area for the SRE It probably would not require a change in the snow removal operations It would continue to have direct and efficient access to the airfield It can be oriented to allow prevailing winter winds to blow snow and debris from the entrance door Cons: There is an increase of the impervious surface The extension of utilities is required from Ellis Ave. So.

10. OTHER AGENCY INVOLVEMENT

Project design and construction must meet FAA criteria to be eligible for grant funding.

11. ART ELIGIBILITY

N/A

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Preserving these County-owned assets for their full intended useful lives will keep them from prematurely filling landfills.

NARRATIVES

AD MAGVAR RUNWAY RENUMBERING

1129949

1. CURRENT PROJECT SCOPE

Magnetic Variation Runway Renumbering - FAA has requested KCIA undertake this project which involves changing the runway numbering to reflect changes in the magnetic North compass heading. This work will involve working closely with various FAA groups on changing published flight procedures and various publication documents used for both navigation and information as well as changing airport markings and signage. Verification flight checks will also be required. This project will also address a safety issue raised by FAA Air Traffic and Runway Safety pertaining to pilot confusion and errors with the current runway headings, Runways 13/31.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Identified by the FAA as a safety risk for airplanes landing on instrument approach, because the magnetic readings differ from the runway numbering; as such, delaying resolving the safety issue represents a financial risk to the Airport and the County.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

Budget was based on dialog with FAA officials, and will be used to address an aviation safety issue.

6. FUNDING AND REVENUE DISCUSSION

This project is eligible for FAA grant funding; the Airport will apply for FAA grant.

7. OPERATING BUDGET AND OTHER IMPACTS

NARRATIVES

AD AIRPORT EMERGENT NEEDS

1129953

1. CURRENT PROJECT SCOPE

Airport Emergent Needs - Budget authority and contingent funds for emergent needs that may arise during the biennium.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Requesting Budget Authority and contingent funds for emergent needs that may arise during the biennium (if falling outside existing budget authority) so the Airport may respond to emergent needs without delay and allowing time to request full budget authority through Omnibus if further funds are needed.

4. PROJECT BENEFITS/OUTCOMES

This project enables the Airport to quickly respond to emerging previously unbudgeted projects that falls outside the biennial/supplemental budget request period.

5. BUDGET REQUEST BASIS

Estimate by Airport Finance in consultation with DOT CFO and PSB.

NARRATIVES

AD PERIMETER INTRUSION DET SYS

1129960

1. CURRENT PROJECT SCOPE

Perimeter Intrusion Detection System - Over the coming 6 months, KCIA will be engaged with KCIT project management and business analysis resources to identify its most pressing security and access control concerns, as well as technology and infrastructure projects necessary to mitigate attendant risks. KCIA and KCIT staffs expect that these investments will involve improvements to KCIA's gate access control software, lighting and video capabilities surrounding the Airport, and connectivity improvements throughout the grounds to enable these improvements. Specific investments, once identified, will require additional documentation and approval before more in-depth planning and implementation can begin. 2019 - 2020: This project is the second phase of installing a perimeter intrusion detection system (PIDS) at King County International Airport. PIDS will consist of fiber optic sensors, variable frequency buried cable detection and microwave sensors. PIDS will be integrated into the airports access control system and emergency alarm system, as necessary. PIDS will integrate into the electrical and fiber infrastructure as part of the Electrical/Fiber Duct Bank project and CCTV will be integrated into PIDS as part of the Airport Video Surveillance project. Project work areas in this project description are undefined until the completion of the Fence Re-Alignment and Gate Closure Planning study. Once the planning study is completed, the specific scope of the project will be more accurately defined. The budget for this project represents a rough order of magnitude cost until the project is better defined and a cost estimate is prepared.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

AD PERIMETER INTRUSION DET SYS

1129960

3. PROJECT JUSTIFICATION

Securing KCIA while providing flexibility demanded by icore customers is of utmost priority. The Airport has begun a process to identify and improve physical security through a number of projects and has initiated a security working group comprised of tenant and stakeholders to address security concerns. The Airport conducted an independent security assessment that identified a lack of proper access control as a primary shortcoming in security capabilities. Specifically, the Airport is unable to accurately identify the means vehicles and personnel have of accessing or leaving the secured airfield. Existing access control mechanisms and technology leverage only one method of authentication: generic PIN codes distributed via physical cards. These codes can be freely passed to unauthorized personnel and remain functional until KCIA updates PIN codes for all gates. In addition, because a number of gates are not connected to a local network, KCIA staff must manage access codes at each gate. This process is very time consuming and lessens security effectiveness - especially if an immediate lock down is needed. This information shared with the working group is the foundation of common interest in ensuring security improvements are pursued now. 2019 - 2020: The Boeing Corporation conducts significant maintenance, retrofits, and delivery operations of highly sensitive military and commercial aircraft at BFI. The presence of these significant operations... (original text top follow)

4. PROJECT BENEFITS/OUTCOMES

The anticipated benefits of implementing the perimeter and intrusion detection system support the KiCIAs Strategic Plan (2014-2020) by providing and maintaining safe and secure transportation services and facilities for the King County flying public and aviation community. Without investment in this critical king county asset the basic security infrastructure is weakened and the airport's ability to partner with its current and future tenants could be jeopardized.

5. BUDGET REQUEST BASIS

KCIA is requesting budget to mitigate current security vulnerabilities and threats. The Perimeter Intrusion Detection System project will be a phased solution and builds on the already started and/or implemented security projects such as: condition assessment, barrier installation, fence and gate replacement, lighting design and technology security planning. Phase 1 of this project planned for January 2017 through April 2017 includes project startup activities, RFP creation and initial planning. Specific budget will be required for IT Project Management, Business Analyst, Network Engineering review, Contracts personnel and Prosecuting Attorney's Office for RFP review. Phase 2 of the project planned for May 2017 through December 2018 includes RFP finalization, contract negotiation, vendor selection activities, and vendor management during implementation. Specific budget requested is based on the KCIT 2017-2018 rate sheet information along with hardware and software estimates based on research of the proposed solution.

6. FUNDING AND REVENUE DISCUSSION

N/A

7. OPERATING BUDGET AND OTHER IMPACTS

Unknown at this time.

8. PROJECT STATUS

NEW - Standalone

9. ALTERNATIVES ANALYSIS

Three alternatives were considered for this project: 1) Alternative A - craft a security strategic plan that defines KCIA's security strengths and weaknesses, security vision, policies, procedures and potential projects along with resource and schedule estimates to achieve KCIA's security vision. The project then shifts to implementing these security projects. 2) Alternative B - Identify and fund each security project separately. This is a well-defined but more piecemeal approach lacking a strategic vision ultimately with higher associated costs. 3) Alternative C - do nothing. This no cost alternative does not invest in security planning and eliminating existing threats and vulnerabilities. It also exposes the County to high liability if a preventable incident were to occur and cause damage to this valuable asset. Alternative A is the chosen alternative. Conducting a comprehensive planning process with key Airport stakeholders and tenants will position KCIA to make informed security investments now and for the future. A portfolio approach is smart, cost-effective and strategic.

Capital Appropriation Proposal

10. OTHER AGENCY INVOLVEMENT

Over the upcoming 6 months, KCIA will be engaged with KCIT project management and business analysis resources to identify its most pressing security and access control concerns, as well as identifying technology and infrastructure projects necessary to mitigate attendant risks. KCIA and KCIT staffs expect that these investments will involve improvements to KCIA's fencing and gate infrastructure, access control software and hardware, lighting and video capabilities surrounding the Airport, and connectivity improvements throughout the grounds to enable these improvements. In addition to KCIT and KCIA staff, Contracts, Procurement, Office of Risk Management and Office of Prosecuting Attorney will have necessary involvement in the execution of the perimeter intrusion detection system project.

NARRATIVES AD CITYWORKS ADDL MODULES 1130186

1. CURRENT PROJECT SCOPE

Cityworks Additional Modules - This is a follow-on project to the IT implementation initiated in 2015 to convert from Maximo to Cityworks. KCIA is engaged with KCIT project management resources and an outside consultant to license, install, and activate additional modules for the increased efficiency and effectiveness to be gained from the collection and use of BIM airport data. 2019 - 2020: This project is a recurring project to purchase and install additional modules, features and functionality to the Cityworks Information Management System. This project provides funding to make desired system improvements as they are identified. The total project budget includes funds needed to purchase additional improvements for years 2019 and 2020.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

AD CITYWORKS ADDL MODULES

1130186

3. PROJECT JUSTIFICATION

The Airport is seeking to optimize its use of the Cityworks technology in property management, following principles of Best Run Government in the most efficient and effective use of resources. 2019 - 2020: King County International Airport is engaged with KCIT Project Management Resources and an outside consultant to move all property management and business information now managed in Maximo to the Cityworks platform. Following the base system implementation which was initiated in 2015, additional modules, features, and functionality are needed to maximize the benefit, efficiency, and effectiveness of Cityworks.

4. PROJECT BENEFITS/OUTCOMES

The Airport has the responsibility to provide sustainable services to their stakeholders while maintaining their assets in a cost effective manner. Cityworks uses ArcGIS® to develop an effective Maintenance Management System (MMS) powered by portable wi-fi tablets, used by staff in the field to quickly identify and log airside/facilities infrastructure maintenance issues. Cityworks also employs a robust Asset Management Solution (AMS) that provides a complete foundation for a truly effective application suite that will improve asset utilization, extending asset life and performance while reducing capital costs and asset-related operating costs.

5. BUDGET REQUEST BASIS

The budget is provided by KCIT estimate, consultant estimate, and vendor license price. This appropriation will include Airport staff salary/benefits, additional applications for integration with the Gasboy fuel management system, work order time and labor integration, and KCIT EGBE server and database administration.

6. FUNDING AND REVENUE DISCUSSION

NARRATIVES AD LARGE AIRCRAFT PARKING 1134634

1. CURRENT PROJECT SCOPE

This project will expand and reconfigure the existing aircraft parking apron north of the Terminal Building. The project includes removing existing asphalt and concrete pavement and replacing it with approximately 7,200 square yards of a full strength PCC pavement section, capable of supporting large/heavy aircraft. The project also includes designing the pavement to drain and capture glycol from deicing operations along with modifying storm drains and other utilities that may be under the existing apron. High mast apron lighting will be installed around the perimeter of the apron to provide night-time lighting. In addition, this project will reconfigure the landside terminal area. This will involve reconfiguring the existing parking lot and roadway. Prior to the construction of the large aircraft parking apron, miscellaneous utilities such as sanitary sewer, fiber, electrical, water and stormwater will be upgraded and relocated as needed. This project includes demolishing both the 7299 Arrivals Building and 7300 PRS Building. Prior to the project, buildings will be vacated and hazardous materials mitigated under a separate project. In addition, the existing perimeter security fence will be removed and replaced per the specifications of the Tenant Security Working Group. Major work items include demolishing existing buildings, removing asphalt roads, removing concrete curb, gutter and sidewalks, tree and vegetation removal, asphalt paving for roads and parking lots, installing new curb, gutter and sidewalks, landscaping, fence relocation, road signage, and utility relocation.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

AD LARGE AIRCRAFT PARKING

1134634

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

King County International Airport / Boeing Field continues to experience increased demand for large aircraft parking. The existing aircraft parking area is too small to accommodate the number and size of aircraft needing to be parked. The existing aircraft parking pavement must be strengthened to support the weight of the aircraft expected to use the area. In addition, glycol containment is needed to allow aircraft to deice on the pavement. In order to accommodate the demand, the existing air cargo apron adjacent to the Terminal Building will need to be reconfigured. The Arrivals Building, 7300 PRS Building, exit road, parking lot, and utilities are in the way of the needed aircraft parking area and must be reconfigured to meet needs. Reconfiguring landside components is needed to open a parcel of land that can be used for an apron expansion to accommodate large aircraft parking. In addition, underground power and fiber utilities that serve the buildings must be re-routed to the Terminal.

4. PROJECT BENEFITS/OUTCOMES

Increased capacity to provide transient parking for large (over 250,000 lbs MGLW) aircraft. Two County-owned buildings will be demolished, lowering maintenance and common area costs.

5. BUDGET REQUEST BASIS

This project budget request is based on the Airport Engineer's cost estimate after consulting with design/engineering firms.

6. FUNDING AND REVENUE DISCUSSION

This project will be funded by Airport internal funds.

7. OPERATING BUDGET AND OTHER IMPACTS

There are would be decreasing operating budget costs due to no longer providing janitorial/maintenance staff costs due to the demolish Arrivals Building and 7300 Building.

8. PROJECT STATUS

This is a new project.

9. ALTERNATIVES ANALYSIS

The Airport can leave the existing buildings and parking apron intact, but will be unable to meet increased future demand for large aircraft parking. There are several potential configurations under consideration, with the alternative to be chosen that best caters to the air cargo carriers and corporate aviation.

10. OTHER AGENCY INVOLVEMENT

The FAA will review site plans to ensure they align with grant assurances. This project will also become part of the FAA Airport Layout Plan.

11. ART ELIGIBILITY

Airside large aircraft parking pavements.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The Airport will make every effort to identify and include environmentally-friendly demolition and construction methods and materials, within the highly-regulated code environment for airside pavements.

NARRATIVES

AD AIRFD ELEC SYS UPRDE PH II

1134719

1. CURRENT PROJECT SCOPE

This project will replace approximately 50,000 feet of electrical cable to upgrade the existing capacity for the runway, Taxiway B and runway guard light circuit. These circuits are generally oriented north to south and housed in conduit. The existing electrical cable will be removed in their entirety and replaced with new cable. The project will use the existing conduit in order to pull and feed electrical cabling. The project will also convert approximately 100 taxiway edge lights on Taxiway B to LED technology. In addition, this project includes converting the REIL for Runway 32L and four box PAPI for Runway 14R to LED technology. Work items under this project include cable removal, new cable installation, color coding new cabling, trenching and backfill, PAPI acquisition and installation, asphalt replacement, flagging and barricades. The installation of this project will be phased and will require portions of the airfield to be closed during installation.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The existing airport electrical system consists of a combination of various service lines that were installed incrementally as King County Airport has grown. Many electrical components are old, have reached their useful life and need to be replaced. The electrical circuits for the runways, Taxiway B and the runway guard lights are demonstrating signs of failure and need to be replaced to ensure long-term functionality of the airfield electrical lighting and signage system.

4. PROJECT BENEFITS/OUTCOMES

This project will update obsolete electrical components that will increase aircraft functionality of the runways, taxiways and connectors. This project aligns with the Airport's Strategic Plan goal of Maintaining a World Class Facility.

5. BUDGET REQUEST BASIS

The Airport is requesting appropriation for this project because many airfield electrical systems are end of life and not energy efficient. Project budget estimates are based on consultant as well as staff estimates.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

AD AIRFD ELEC SYS UPGRDE PH II

1134719

6. FUNDING AND REVENUE DISCUSSION

This project will be funded by internal Airport funds.

7. OPERATING BUDGET AND OTHER IMPACTS

This project should result in lower electrical utility charges, as energy-efficient components are installed.

8. PROJECT STATUS

This is a new project.

9. ALTERNATIVES ANALYSIS

Option 1 to maintain status quo and not upgrade the airfield electrical system would require servicing lines that were installed incrementally and include components that have reached the end of their useful lives. Option 2 is to upgrade airfield electrical system to install more efficient LED lighting that ensures long-term functionality of both lighting and signage.

10. OTHER AGENCY INVOLVEMENT

There would be involvement from DPER to issue electrical permits and provide site inspections during installation.

11. ART ELIGIBILITY

Airfield electrical systems.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project would replace airfield and glide slope REIL lighting with more energy-efficient LED lighting. The new lighting would lower the Airport's GHG emissions by requiring less energy than the current system in place.

14. OTHER CONSIDERATIONS (OPTIONAL)

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

16. PROJECT COMPLEXITY

NARRATIVES

AD AIRFLD SAFTY AND STDS EVAL

1134748

1. CURRENT PROJECT SCOPE

This planning study will evaluate the existing conditions of the Airport and identify FAA design deficiencies. The project will examine the design and placement of existing facilities such as, but not limited to, runways, taxiways, aprons, aircraft parking areas, buildings, vehicle service road, paint markings, edge lights, runway guard lights, service painted markings, signage and navigational aids. The planning study will evaluate each facility and determine if it meets current design standard by evaluating FAA guiding documents such as, but not limited to, AC 150/5300-13A, AC 150/5340-30G and AC 150/5340-1L. The planning study will identify individual projects and recommend priorities for implementation. Cost estimates for each potential project will be prepared to assist in establishing priorities.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Boeing Field is a land constrained airport that has limited area in which it can provide requested facilities and services. The Airport has developed over time to meet aircraft requirements at the time. As the Airport has grown and evolved, facilities that once met FAA design standards no longer meet the standards required for modern, larger aircraft. As aircraft gauge has grown, Modification of Standards were adopted to allow larger aircraft to operate where they did not fully meet geometric standards. The FAA recently revised its policies and Modifications of Standards must now be re-evaluated and re-issued every five years. It is expected that some Modifications of Standards will not be re-issued and infrastructure changes will be mandated.

4. PROJECT BENEFITS/OUTCOMES

This project will enable Airport engineering staff to better align facilities and services to recently-revised FAA policies and Modifications of Standards.

5. BUDGET REQUEST BASIS

This budget request estimate is based on the Airport Engineer's estimate, in consultation with project managers. This project will provide consultant advisory services to implement best practices to ensure compliance with modified Part 139 airfield safety standards.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES	AD AIRFLD SAFTY AND STDS EVAL	1134748
------------	-------------------------------	---------

6. FUNDING AND REVENUE DISCUSSION

This project will be funded by internal Airport funds.

7. OPERATING BUDGET AND OTHER IMPACTS

This budget appropriation is request because the Airport's capital program needs to ensure design and placement of airside infrastructure meets the FAA regulatory requirements.

8. PROJECT STATUS

This is a new standalone project.

9. ALTERNATIVES ANALYSIS

Not conducting an airfield safety and standards evaluation includes a risk that the FAA may find the Airport not in compliance with FAA Part 139 inspection guidelines due to a modified standard.

10. OTHER AGENCY INVOLVEMENT

There will be involvement with the FAA during this project, to consult for guidance on applicable Advisory Circulars (ACs).

11. ART ELIGIBILITY

Airfield safety and standards evaluation.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project has no alignment with the Strategic Climate Action Plan.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

AD FENCES & GATES UPRDGS PH II

1134750

1. CURRENT PROJECT SCOPE

This project will remove and replace approximately 12,000 linear feet of airport controlled security perimeter fence. In addition, 15 vehicle gate and five pedestrian gate will be removed and replaced. The project will also remove gates where they are not needed. The new security fence will be designed in compliance with Tenant Security Committee specifications. The new security fence will be designed using eight feet of polyvinyl coated chain link with one foot strands of barbed wire. Ecology blocks, measuring four feet wide, three feet tall, and two feet deep, will be installed every three feet to provide added security. The security fence will be installed between building surfaces, aprons, and parking lots. The north portion of the security fence will be installed in the existing turf. The project also includes hardening five of the proposed new gates. Temporary construction fencing will be installed and removed in 500 foot increments to allow phased installation of the permanent fence. In addition, the project will install approximately 2,500 feet of cable barrier and extend utilities to provide electrical power to gates where needed. Utilities will tie into the existing FAA utility corridor that runs parallel to Taxiway Bravo.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The Boeing Corporation conducts significant maintenance, retrofits, and delivery operations of highly sensitive military and commercial aircraft at King County International Airport. In addition, the Airport serves many high value corporate and cargo aircraft. The presence of the significant operations warrants heightened security measures to protect them from possible intrusion and threats. Much of the existing security fences are old and have reached the end of their useful life and need to be replaced. Recent evaluations of the existing security system and facilities reveal potential vulnerabilities as well as opportunities to increase security protection. An administrative decision has been made to replace non-standard security fences with fencing that meets Tenant Security Committee requirements to better protect the sensitive military, Boeing, corporate and UPS cargo operations.

4. PROJECT BENEFITS/OUTCOMES

The installation and upgrade of approximately 12,000 linear of airport controlled security fencing and gates will provide better security to the Airport. The project will also remove gates where they are not needed. The new security fence will be designed in compliance with Tenant Security Committee specifications.

Capital Appropriation Proposal

NARRATIVES

AD LAND PURCHASE CONTINGENCY

1134753

1. CURRENT PROJECT SCOPE

The Airport Division has identified several parcels that could be opportunities to meet future aeronautical and non-aeronautical development requirements. Those parcels could be used to create additional aircraft storage options, airport support services, general aviation development opportunities, air cargo handling, or business development associated with air freight logistics or the travel industry.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

KCIA land is constrained with the majority of developable property already secured privately through long-term leases. Revenue generated from the ground leases track with the Fair Market Value (FMV) of aviation and industrial property south of downtown Seattle. While values have been increasing much faster than measures of CPI, the ability for the airport to grow is still limited. Remaining undeveloped land is severely constrained by buildable height, lot depth (distance between airfield safety limits and the outside fenceline), or location without access to the runway. The Strategic Plan suggested that the airport identify potential strategic property acquisitions which might further KCIA's ability to fulfill its mission.

4. PROJECT BENEFITS/OUTCOMES

Increase Airport land area to better serve tenants by meeting demand for leaseable, providing potential additional tiedown space, and make available more land to consolidate non-contiguous leaseholds.

5. BUDGET REQUEST BASIS

The budget appropriation was based on an estimate provided by the Airport's Marketing and Business Development Manager.

6. FUNDING AND REVENUE DISCUSSION

This appropriation will be funded with Airport internal funds/fund balance.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

AD LAND PURCHASE CONTINGENCY

1134753

7. OPERATING BUDGET AND OTHER IMPACTS

There could be a potential impact on the operational budget in increased revenue from the land being acquired. The land purchased may also provide an alternative access road to the Georgetown Steam Plant owned by the City of Seattle.

8. PROJECT STATUS

This is a new standalone project.

9. ALTERNATIVES ANALYSIS

Not having contingency funds for future land purchases may result in the Airport missing opportunities to add airside land parcels that help maintain a world-class facility.

10. OTHER AGENCY INVOLVEMENT

There will be involvement with FMD's Real Estate Services Division and the Prosecuting Attorney's Office, who will support by preparing and reviewing purchase and sale documents for acquired land parcels.

11. ART ELIGIBILITY

Land acquisition.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project is not GBO eligible.

14. OTHER CONSIDERATIONS (OPTIONAL)

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

16. PROJECT COMPLEXITY

17. CAPACITY TO IMPLEMENT THE PROJECT

18. PROJECT RISKS

NARRATIVES

AD STRMWTR PIPE REPLACMT PH II

1134761

1. CURRENT PROJECT SCOPE

This project will implement the second phase of projects to upgrade the Airport stormwater system as might be recommended in the pending Airport Infrastructure Master Plan. This project assumes 1,000 feet of 16" storm drain pipe will be installed. The specific locations and work items under this project have not yet been identified. Once the Airport Infrastructure Master Plan is completed, this project definition and cost estimate will be updated.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The existing stormwater drainage system consists of a combination of pipes that were installed over many years since King County Airport opened. Many pipes are old and some sections have begun to fail. In addition, the historic growth of the Airport and surrounding community has caused increased demand on the original stormwater system and some pipes lack the capacity to handle the increased demand. A infrastructure master plan will be prepared under a separate project which will make recommendations for various stormwater system improvements at the Airport. Recommended projects need to be undertaken in order to improve the overall stormwater system and meet the needs of the users at the Airport.

4. PROJECT BENEFITS/OUTCOMES

This project will upgrade the Airport's stormwater infrastructure to meet increased demand on the original stormwater system and replace pipes that lack the capacity to handle this increased demand.

5. BUDGET REQUEST BASIS

This appropriation is requested because the Airport has identified several areas where the stormwater pipes are end-of-life and in need of replacement. Some of these pipes have begun to fail, so pipe replacement is the only option available. This budget request is based on the Airport Engineer's estimates and recent comparable project costs.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

AD STRMWTR PIPE REPLACMT PH II

1134761

6. FUNDING AND REVENUE DISCUSSION

This project will be funded by internal Airport funds/fund balance.

7. OPERATING BUDGET AND OTHER IMPACTS

There will be a decrease in staff maintenance and operations costs as fewer service calls are needed to repair broken stormwater pipes.

8. PROJECT STATUS

This is a new standalone project.

9. ALTERNATIVES ANALYSIS

One option is to not replace the existing stormwater pipes. Not doing so will require more maintenance and severe tenant/aircraft use impacts if a taxiway or runway is closed due to a stormwater pipe failure creating a sinkhole in the aircraft movement area. The stormwater infrastructure master will make recommendations for prioritizing the various Airport pipe replacement improvements.

10. OTHER AGENCY INVOLVEMENT

There will be coordination with DPER for issuing construction permits during stormwater pipe replacement.

11. ART ELIGIBILITY

Stormwater pipe replacement.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This projec tis not GBO eligible.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

WLR URBAN HABITAT RESERVE

1047110

1. CURRENT PROJECT SCOPE

The Urban Reforestation and Habitat Restoration (URHR) Fund - This fund is intended to provide funds to volunteer organizations, community groups and government agencies for reforestation and habitat restoration projects within the Urban Growth Area of King County. The annual interest income that this fund earns is available for grant awards. The funds are for restoration projects and are not available for acquisition, and are awarded at \$500 to a maximum of \$12,000. This project is the primary project used for these awarded grants.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project is the main project within this fund in which grants are awarded. This fund is an endowment from King County established in 1993 which annually receives interest income. The annual interest income that this account earns is available for grant awards in the following year. Any remaining non-granted amount, disencumbered and/or unspent amount remains in the account and is available for future use. Each grant application under goes a review process. URHR grants are restricted to within the Urban Growth area of King County. The emphasis must benefit either upland habitat or water-dependent habitat anywhere in urban and suburban King County and west of I-5 freeway and south of Seattle. The 5 categories that each application is scored are Project Objectives and Description of Activities and Outputs; Community Stewardship; Project Partners; Legacy; and Leverage. The requested budget will fund projects in 2018-2019.

4. PROJECT BENEFITS/OUTCOMES

The letting out of small grants will benefit upland habitat and water-dependent habitat which will improve water quality

5. BUDGET REQUEST BASIS

The budget requested is adds appropriation to true up budget and actual spending.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLR URBAN HABITAT RESERVE

1047110

6. FUNDING AND REVENUE DISCUSSION

This fund is established to provide funding for grants based upon a fixed principal amount. Grants can be awarded using earned interest only.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact.

8. PROJECT STATUS

Due to low interest rate the fund has had insufficient revenue to be able to issue grants for habitat restoration for the past five years. The fund now has accumulated approximately \$40,000 in fund balance and will begin issuing grants in 2018. The program's longer term expaectaions are for the interest rate to slowly increase, which will aloow WLRD to begin issuing grants on a more regular basis.

9. ALTERNATIVES ANALYSIS

Not Applicable

10. OTHER AGENCY INVOLVEMENT

No other agencies involved.

11. ART ELIGIBILITY

2) project not visible to the public

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This funding source helps increase tree cover and habitat restoration, reducing the carbon impact from other pollutant sources.

NARRATIVES

WLR UHR PARTNERSHIPS

1134895

1. CURRENT PROJECT SCOPE

Urban Habitat Restoration Partnerships - This project will leverage county funds through a public private/partnership to fund projects consistent with the intent of urban reforestation and habitat restoration. Our general approach will be to work with one, or more, lead partners who are able to provide significant program coordination and to fund individual tree-planting efforts from non-profit, cities and other organizations.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

The Urban Reforestation and Habitat Restoration Fund (URHF) was established in 1993 to provide grants to local non-profits and governments for the purpose of urban reforestation and habitat restoration. Historically, the principal amount of \$650,000 has been preserved and only the interest income has been distributed for grant awards in the amount of \$500 to a maximum of \$12,000 on restoration projects. Due to low interest rates, the amount available for grants has been limited. This proposal will utilize the principal plus any interest earned to fund partnerships with other agencies and other groups to leverage these funds and accomplish the intent of the fund. Once the principal has been expended the fund would be closed.

4. PROJECT BENEFITS/OUTCOMES

Fund individual tree-planting proposals from NGOs, cities and others to further the Strategic Climate Action Plan (SCAP) goal of planting 1 million trees.

5. BUDGET REQUEST BASIS

The request is to spend the current fund balance, in collaboration with partners, to further the 1 million trees SCAP goal. Appropriating this project will allow for the investment of these funds to further climate goals through tree planting. Once this fund balance is spent, the fund will be proposed for closure.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WLR UHR PARTNERSHIPS

1134895

6. FUNDING AND REVENUE DISCUSSION

This fund balance in this fund was originally from sources including REET, General Fund and SWM. A small portion of the proposed revenue is accumulated fund balance.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not eligible for 1% for Art.

12. EQUITY AND SOCIAL JUSTICE IMPACT

N/A

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project helps King County meet its 2015 Strategic Climate Action Plan (SCAP) goals by increasing tree cover and habitat restoration, reducing the carbon impact from other pollutant sources.

14. OTHER CONSIDERATIONS (OPTIONAL)

When assessing project proposals, we will consider the following criteria:

- Project sponsors must have a record of proven success with previous, large-scale tree planting efforts.
- Proposals include a reasonable, achievable work plan.
- Project locations have been approved by landowners and other aspects of the projects are "shovel ready."
- Funds will be targeted toward implementation and minimal funds are requested for planning.
- Plantings must not be a component of any mandated planting (e.g., mitigation).

NARRATIVES

DES FMD MMRF QUICK RESPONSE

1124606

1. CURRENT PROJECT SCOPE

This project provides funding for unanticipated, non-discretionary repairs to MMR building systems. Typical use of these funds prevents further damage to a building or maintains building operation until a complete evaluation and repair can be scoped, funded and implemented.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

Problem: Limited MMR funding and deferred maintenance creates new risks and scopes of work in KC facilities. When building system failures or non-discretionary requirements appear (permit requirements or differing site conditions) Quick Response contingency funds may be needed to prevent further damage or to maintain bldg. operation.

4. PROJECT BENEFITS/OUTCOMES

Outcome: This project provides funds needed to prevent damage to buildings, or mitigate system failure or life safety risks in a building.

5. BUDGET REQUEST BASIS

This budget is requested now to restore the MMR Quick Response contingency project. The budget proposal was based on historical use of this contingency fund.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Renewal of building systems or repair of major deficiencies will likely improve/reduce operating and maintenance costs, but it is difficult to quantify at this stage of the project development.

8. PROJECT STATUS

Since the inception of this contingency project in 2015, 11 projects have been funded that total \$463,000. The current balance in the project as of June 2018 is \$186,000. To keep the contingency fund in 2% range of the total fund balance, \$446,000 is currently being requested in the 3Q 2018 Omnibus.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

N/A

11. ART ELIGIBILITY

Not eligible as the project is a maintenance or minor rehabilitation project noted in 3) above.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Major repairs to an existing building system is not expected to have an impact on the underserved communities. Ensuring the existing building remains operational will allow tenant agencies to continue to provide services to all demographics.

NARRATIVES DES FMD MMRF 24/7 FACILITY GRP 1129710

1. CURRENT PROJECT SCOPE

This programmatic project will fund major maintenance repairs and infrastructure replacement to FMD's 24/7 Facility Group. This group includes the Maleng Regional Justice Center (courthouse and detention center), King County Correctional Facility (KCCF), Regional Communication and Emergency Coordination Center (RCECC) and the Ravensdale Shooting Range. Typical major maintenance will include either repair or replacement of major building systems: Exterior Enclosure, Interior Construction, Elevators, Mechanical, Electrical, Superstructure, and Foundations. These building systems were identified in the Facilities Management Division, Facility Condition Assessment as deficient or beyond their useful life. All of the identified projects proposed for the program were ranked in the top 10% of 1270 building deficiencies based on a formula that included building importance and condition, system importance and scheduled replacement factors as the primary criteria.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

DES FMD MMRF 24/7 FACILITY GRP

1129710

2. PROGRAMMATIC PROJECT DISCUSSION

This program includes 8 projects at the KCCF, 10 at the MRJC, and 1 at the RCECC.

3. PROJECT JUSTIFICATION

This Programmatic project is in response to 2014 Council audit recommendation that called for a revised budget structure to address inefficiencies of phased (design and construction) projects and inflexible project budgeting.

Risks of not implementing the project, including risks to the county, the department, constituents, employees, and others FMD considers this program a low-risk project to create efficiencies in managing and reporting multiple maintenance subprojects in a few facilities. Administrative costs will decrease to provide more dollars for tangible results.

4. PROJECT BENEFITS/OUTCOMES

This project contributes to implementation of the MMRF program, by updating or replacing end of life building assets and improving the Facility Condition Index of the building.

5. BUDGET REQUEST BASIS

The total budget for this budget request is based on the individual project estimates of approximately 15 projects that are proposed for the next biennium.

6. FUNDING AND REVENUE DISCUSSION

Streamlined Rate.

7. OPERATING BUDGET AND OTHER IMPACTS

Renewal of building systems or repair of major deficiencies will likely improve/reduce operating and maintenance costs, but it is difficult to quantify at this stage of the project development.

8. PROJECT STATUS

Of the 13 originally funded projects, 5 have been completed as of June 2018 and 2 more will be completed by the end of 2018. 4 projects will be completed in 2019, and the remaining 2 were canceled in 2018, with those funds used to support another 2 projects that were included in the 3Q 2018 Omnibus

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

Internal Agencies; include DES/FMD with minor coordination with Tenant agency.

External Agencies; Include Building and Fire or other jurisdictions having authority in KC facilities.

11. ART ELIGIBILITY

Not eligible as the project is a maintenance or minor rehabilitation project noted in 3) above.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Major repairs to an existing building system is not expected to have an impact on the underserved communities. Ensuring the existing building remains operational will allow tenant agencies to continue to provide services to all demographics.

NARRATIVES DES FMD MMR BARAY DEAN STANDBY 1134406

1. CURRENT PROJECT SCOPE

This project will replace the existing 20-year old gas/propane generator with new 100kW diesel generator and redistribute emergency backup power connections to serve access control systems, the walk in refrigerator and freezer, alarm system, server/phones, and certain outlets in the office areas.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

DES FMD MMR BARAY DEAN STANDBY

1134406

3. PROJECT JUSTIFICATION

Problem: This project was identified in the Facilities Management Division, Facility Condition database as deficient or beyond its useful life. All deficiencies were ranked by a formula including building importance and condition, system importance and scheduled replacement factors. This problem rated in the top 10% of 1700 building deficiencies. This project will mitigate system failure or life safety risks in this building.

Linkages: This project supports adopted Real Estate Asset Management Plan by keeping the facility operational and the MMRF mandate to maintain King County's real estate assets in Good Condition (FCI score below 10%).

4. PROJECT BENEFITS/OUTCOMES

This project contributes to implementation of the MMRF program, by updating or replacing end of life building assets and improving the Facility Condition Index of the building.

5. BUDGET REQUEST BASIS

This budget is requested now to avert failure of the system in the near term. The project improves an important system in an occupied facility. The budget was determined by field verification of conditions and project scope and priced with current construction costs and uniform factors for design and administration of this type of project. The project budget will fund both design and construction.

6. FUNDING AND REVENUE DISCUSSION

Streamlined Rate.

7. OPERATING BUDGET AND OTHER IMPACTS

Renewal of building systems or repair of major deficiencies will likely improve/reduce operating and maintenance costs, but it is difficult to quantify at this stage of the project development.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

The only other alternative is to defer this project. This alternative will maintain the risk of system failure and likely increase the cost in the future. Because this budget repairs/replaces an important system in an occupied facility, this project is proposed to avert interruption of the Tenant agency's operations.

10. OTHER AGENCY INVOLVEMENT

Internal Agencies; include DES/FMD with minor coordination with Tenant agency.

External Agencies; Include Building and Fire or other jurisdictions having authority in KC facilities.

11. ART ELIGIBILITY

Not eligible as the project is a maintenance or minor rehabilitation project noted in 3) above.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Major repairs to an existing building system is not expected to have an impact on the underserved communities. Ensuring the existing building remains operational will allow tenant agencies to continue to provide services to all demographics.

NARRATIVES

DES FMD MMR BARAY DEAN STANDBY

1134406

14. OTHER CONSIDERATIONS (OPTIONAL)

The Barclay Dean Evidence storage unit's operational needs have changed over the years, subsequently also changing the priorities for emergency backup power. Certain types of equipment such as the walk-in refrigerator, new ventilation for the warehouse, access control, and data server, are not now connected to the existing generator, but will need to be with the new generator.

NARRATIVES

DES FMD MMR BARCLAY DEAN ROOF

1134408

1. CURRENT PROJECT SCOPE

This project will replace existing 20-plus year old roof coverings with materials that will have a thirty year warranty period. Work includes demolition of existing roof coverings down to the structural deck and a new roof coverings assembly that includes the addition of ridged insulation to achieve energy and building code compliance.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

DES FMD MMR BARCLAY DEAN ROOF

1134408

3. PROJECT JUSTIFICATION

Problem: This project was identified in the Facilities Management Division, Facility Condition database as deficient or beyond its useful life. All deficiencies were ranked by a formula including building importance and condition, system importance and scheduled replacement factors. This problem rated in the top 10% of 1700 building deficiencies. This project will mitigate system failure or life safety risks in this building.

Linkages: This project supports adopted Real Estate Asset Management Plan by keeping the facility operational and the MMRF mandate to maintain King County's real estate assets in Good Condition (FCI score below 10%).

4. PROJECT BENEFITS/OUTCOMES

This project contributes to implementation of the MMRF program, by updating or replacing end of life building assets and improving the Facility Condition Index of the building.

5. BUDGET REQUEST BASIS

This budget is requested now to avert failure of the system in the near term. The project improves an important system in an occupied facility. The budget was determined by field verification of conditions and project scope and priced with current construction costs and uniform factors for design and administration of this type of project. The project budget will fund both design and construction.

6. FUNDING AND REVENUE DISCUSSION

Streamlined Rate.

7. OPERATING BUDGET AND OTHER IMPACTS

Renewal of building systems or repair of major deficiencies will likely improve/reduce operating and maintenance costs, but it is difficult to quantify at this stage of the project development.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

The only other alternative is to defer this project. This alternative will maintain the risk of system failure and likely increase the cost in the future. Because this budget repairs/replaces an important system in an occupied facility, this project is proposed to avert interruption of the Tenant agency's operations.

10. OTHER AGENCY INVOLVEMENT

Internal Agencies; include DES/FMD with minor coordination with Tenant agency.

External Agencies; Include Building and Fire or other jurisdictions having authority in KC facilities.

11. ART ELIGIBILITY

Not eligible as the project is a maintenance or minor rehabilitation project noted in 3) above.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Major repairs to an existing building system is not expected to have an impact on the underserved communities. Ensuring the existing building remains operational will allow tenant agencies to continue to provide services to all demographics.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

DES FMD MMR BARCLAY DEAN ROOF

1134408

14. OTHER CONSIDERATIONS (OPTIONAL)

The design for this project to replace the roof should be integrated with the designs for two other stand-alone projects;

1) The currently funded 2017-18 project to replace the HVAC Roof Top Units and;

2) The 2019-20 proposal for Testing & Balancing and Commissioning.

The Barclay Dean Evidence storage facility is in need of a comprehensive HVAC design to alleviate moisture and mold problems in the warehouse portion of the building, as well as infiltration of odorous and irritant air from the warehouse into the office portion of the building. The two HVAC projects may trigger an energy code requirement to upgrade the thermal insulation of the building and/or roof. This project allows for new roof insulation in support of the two HVAC projects.

NARRATIVES

DES FMD MMR DC SHRLINE BOILER

1134411

3. PROJECT JUSTIFICATION

Problem:

The existing 30 KW boiler was undersized than the actual heating loads required at the D.C site that causing the building is not fully heated during winter. The boilers cannot be run at the lower loads without producing excessive, highly corrosive soot in the fire chambers, which is unacceptable. The existing boiler is inadequate during cold spells in the winter. The proposed new boiler will save the most energy and provide the greatest longevity, thereby greatly reducing future boiler replacement costs.

This project was identified in the Facilities Management Division, Facility Condition database as deficient. All deficiencies were ranked by a formula including building importance and condition, system importance and scheduled replacement factors. This problem rated in the top 10% of 1700 building deficiencies. This project will mitigate system failure or life safety risks in this building.

Linkages: This project supports adopted Real Estate Asset Management Plan by keeping the facility operational and the MMRF mandate to maintain King County's real estate assets in Good Condition (FCI score below 10%).

4. PROJECT BENEFITS/OUTCOMES

This project contributes to implementation of the MMRF program, by upsizing building assets and improving the Facility Condition Index of the building.

5. BUDGET REQUEST BASIS

This budget is requested now to avert failure of the system in the near term. The project improves an important system in an occupied facility. The budget was determined by field verification of conditions and project scope and priced with current construction costs and uniform factors for design and administration of this type of project. The project budget will fund both design and construction.

6. FUNDING AND REVENUE DISCUSSION

Streamlined Rate.

7. OPERATING BUDGET AND OTHER IMPACTS

No additional operating costs are forecast for this project at this stage of the project development.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

It is not an option to defer this project any longer. Not comfort in some areas, little or no building pressure control has been an issue yearround , as well as insufficient heat in the building during cold season that effecting to tenant agency's operations. The boiler is running but not fulfill its function to provide adequately heat to the building. Maintenance responses to cold issues will increase operational cost yearly.

10. OTHER AGENCY INVOLVEMENT

Internal Agencies: DES/FMD with minor coordination with Tenant agency.

External Agencies: There will be no involvement with other County agencies during project design and implementation.

11. ART ELIGIBILITY

The project is not visible to the public so is not eligible for the 1% for Art program

NARRATIVES DES FMD MMR NE DC SECURITY RP 1134431

1. CURRENT PROJECT SCOPE

The security system is obsolete and is in need of replacement with a new system with card readers, door monitoring and CCTV system.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

DES FMD MMR NE DC SECURITY RP

1134431

3. PROJECT JUSTIFICATION

Problem: This project was identified in the Facilities Management Division, Facility Condition database as deficient or beyond its useful life. All deficiencies were ranked by a formula including building importance and condition, system importance and scheduled replacement factors. This problem rated in the top 10% of 1700 building deficiencies. This project will mitigate system failure or life safety risks in this building.

Linkages: This project supports adopted Real Estate Asset Management Plan by keeping the facility operational and the MMRF mandate to maintain King County's real estate assets in Good Condition (FCI score below 10%).

4. PROJECT BENEFITS/OUTCOMES

This project contributes to implementation of the MMRF program, by updating or replacing end of life building assets and improving the Facility Condition Index of the building.

5. BUDGET REQUEST BASIS

This budget is requested now to avert failure of the system in the near term. The project improves an important system in an occupied facility. The budget was determined by field verification of conditions and project scope and priced with current construction costs and uniform factors for design and administration of this type of project. The project budget will fund both design and construction.

6. FUNDING AND REVENUE DISCUSSION

Streamlined Rate.

7. OPERATING BUDGET AND OTHER IMPACTS

Renewal of building systems or repair of major deficiencies will likely improve/reduce operating and maintenance costs, but it is difficult to quantify at this stage of the project development.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

The only other alternative is to defer this project. This alternative will maintain the risk of system failure and likely increase the cost in the future. Because this budget repairs/replaces an important system in an occupied facility, this project is proposed to avert interruption of the Tenant agency's operations.

10. OTHER AGENCY INVOLVEMENT

Internal Agencies; include DES/FMD with minor coordination with Tenant agency.

External Agencies; Include Building and Fire or other jurisdictions having authority in KC facilities.

11. ART ELIGIBILITY

Not eligible as the project is a maintenance or minor rehabilitation project noted in 3) above.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Major repairs to an existing building system is not expected to have an impact on the underserved communities. Ensuring the existing building remains operational will allow tenant agencies to continue to provide services to all demographics.

All deficiencies were ranked by a formula including building importance and condition, system importance and scheduled replacement factors. This problem rated in the top 10% of 1700 building deficiencies. This project will mitigate system failure or life safety risks in this building.

Linkages: This project supports adopted Real Estate Asset Management Plan by keeping the facility operational and the MMRF mandate to maintain King County's real estate assets in Good Condition (FCI score below 10%).

4. PROJECT BENEFITS/OUTCOMES

This project contributes to implementation of the MMRF program, by updating or replacing end of life building assets and improving the Facility Condition Index of the building.

5. BUDGET REQUEST BASIS

This budget is requested now to avert failure of the system in the near term. The project improves an important system in an occupied facility. The budget was determined by field verification of conditions and project scope and priced with current construction costs and uniform factors for design and administration of this type of project. The project budget will fund both design and construction.

6. FUNDING AND REVENUE DISCUSSION

Streamlined Rate

7. OPERATING BUDGET AND OTHER IMPACTS

Renewal of building systems or repair of major deficiencies will likely improve/reduce operating and maintenance costs, but it is difficult to quantify at this stage of the project development.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

The only other alternative is to defer this project. This alternative will maintain the risk of system failure and likely increase the cost in the future. Because this budget repairs/replaces an important system in an occupied facility, this project is proposed to avert interruption of the Tenant agency's operations.

10. OTHER AGENCY INVOLVEMENT

Internal Agencies; include DES/FMD with minor coordination with Tenant agency.

External Agencies; Include Building and Fire or other jurisdictions having authority in KC facilities.

11. ART ELIGIBILITY

Not eligible as the project is a maintenance or minor rehabilitation project noted in 3) above.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Major repairs to an existing building system is not expected to have an impact on the underserved communities. Ensuring the existing building remains operational will allow tenant agencies to continue to provide services to all demographics.

NARRATIVES DES FMD MMR EARLNIGTON 2F STRU 1134459

1. CURRENT PROJECT SCOPE

This project will repair structural deficiencies to the second floor structure of the building. It will specifically strengthen floor beams, floor beam connections, and reinforce the plywood subfloor as recommended in the structural condition assessment report.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

DES FMD MMR EARLINGTON 2F STRU

1134459

3. PROJECT JUSTIFICATION

Problem:
Several modifications have been made to the second floor structure as well as space usage from the original construction. The WJA report has indicated floor joists are overstressed at several locations as well as the deficiency of joist connections.
This project will mitigate system failure or life safety risks in this building.
Linkages: This project supports adopted Real Estate Asset Management Plan by keeping the facility operational and the MMRF mandate to maintain King County's real estate assets in Good Condition (FCI score below 10%).

4. PROJECT BENEFITS/OUTCOMES

This project contributes to implementation of the MMRF program, by upsizing building assets and improving the Facility Condition Index of the building.

5. BUDGET REQUEST BASIS

This budget is requested now to avert failure of the system in the near term. The project improves an important system in an occupied facility. The budget was determined by field verification of conditions and project scope and priced with current construction costs and uniform factors for design and administration of this type of project. The project budget will fund both design and construction.

NARRATIVES

DES FMD MMR MRJC OUT YEAR EST

1135103

1. CURRENT PROJECT SCOPE

This is a planning level estimate of the backlogged building systems infrastructure work needed at the MRJC detention facility and court facility. From this total amount, projects will be prioritized and, if selected, the cost estimates will be refined for inclusion in the 2021-2022 budget as separate projects contingent on funding availability.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

This planning level estimate is included in the outyears of the 2019-2020 six year to indicate the backlog of infrastructure maintenance awaiting funding at the MRJC. The amount is computed using the Maintenance Replacement Fund (MMRF) database that is used to track the facility condition, and scheduled replacement and predicted cost. The scheduled replacement years for building systems are determined by industry standards for the expected life of each system. The predicted cost for the replacement of a building system is based on the current replacement value (CRV) of the building in cost per square footage, the percentage of the building system compared to the entire building, the total area of the building, an adjustment factor that recognizes that the entire system will not be replaced), and a project soft cost multiplier.

NARRATIVES

DES FMD MMR KCCH OUT YEAR EST

1135104

1. CURRENT PROJECT SCOPE

This is a planning level estimate of the backlogged building systems infrastructure work needed at the King County Courthouse. From this total amount, projects will be prioritized and, if selected, the cost estimates will be refined for inclusion in the 2021-2022 budget as separate projects contingent on funding availability.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

This planning level estimate is included in the outyears of the 2019-2020 six year to indicate the backlog of infrastructure maintenance awaiting funding at the King County Courthouse. The amount is computed using the Maintenance Replacement Fund MMRF database that is used to track the facility condition, and scheduled replacement and predicted cost. The scheduled replacement years for building systems are determined by industry standards for the expected life of each system. The predicted cost for the replacement of a building system is based on the current replacement value (CRV) of the building in cost per square footage, the percentage of the building system compared to the entire building, the total area of the building, an adjustment factor that recognizes that the entire system will not be replaced, and a project soft cost multiplier.

NARRATIVES

DES FMD MMR OTHER BLDGS EST

1135110

1. CURRENT PROJECT SCOPE

This is a planning level estimate of the backlogged building systems infrastructure work needed at buildings other than the Civic Campus buildings and the detention facilities. From this total amount, projects will be prioritized and, if selected, the cost estimates will be refined for inclusion in the 2021-2022 budget as separate projects contingent on funding availability.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

This planning level estimate is included in the outyears of the 2019-2020 six year to indicate the backlog of infrastructure maintenance awaiting funding at the buildings other than the Civic Campus and the detention facilities. The amount is computed using the Maintenance Replacement Fund (MMRF) database that is used to track the facility condition, and scheduled replacement and predicted cost. The scheduled replacement years for building systems are determined by industry standards for the expected life of each system. The predicted cost for the replacement of a building system is based on the current replacement value (CRV) of the building in cost per square footage, the percentage of the building system compared to the entire building, the total area of the building, an adjustment factor that recognizes that the entire system will not be replaced, and a project soft cost multiplier.

6. FUNDING AND REVENUE DISCUSSION

NARRATIVES

WLOS PROPERTY CONVERSIONS

1047254

1. CURRENT PROJECT SCOPE

Open Space Property Conversions and Acquisitions - This project will be used for the acquisition of Farmlands and Open Space Lands. Farmlands should be within designated areas of the Sammamish, Lower Green, Upper Green, Snoqualmie Valley and the Enumclaw Plateau Agriculture Production Districts, and other agricultural lands of County significance.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Long-term goals for the Farmland Preservation Program, which is an integral component of the Land Conservation Initiative, has identified 10,500 acres of farmland that are the highest priority for protection through acquisition of conservation easements. The sale/surplus of non-bond funded farmland will be used to acquire farmland fee or easements throughout the Agriculture Production Districts in King County.

4. PROJECT BENEFITS/OUTCOMES

N/A

5. BUDGET REQUEST BASIS

The Open Space Property Conversions and Acquisitions project holds spending authority pending the sale/surplus of non-bond funded farmland. Current plans include the sale of the Mount Peak north and south farms and use the proceeds for acquisitions in or near the Sammamish and Enumclaw Agricultural Production Districts (APD).

6. FUNDING AND REVENUE DISCUSSION

This project is funded by revenues from the sale/surplus of non-bond funded farmland.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact.

NARRATIVES

PKS BEAR CREEK WATERWAYS

1044590

1. CURRENT PROJECT SCOPE

Bear Creek Waterways - This project seeks to acquire and do feasibility assessment for key parcels in two focus areas for the protection and conservation of riparian habitat, floodplain, and adjacent wetlands in the Bear Creek Basin and improve public access to new and existing King County park lands.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

This acquisition preserves open space along Bear Creek. It furthers goals established in the King County Comprehensive Plan, the King County Open space Plan, the Strategic Climate Action Plan, and the WRIA 8 Salmon Conservation Plan.

4. PROJECT BENEFITS/OUTCOMES

This project will add up to 5 acres of undeveloped open space along Cottage Lake Creek, permanently protecting an important regional asset, preserving wildlife habitat and other open space benefits such as flood reduction, water quality, and salmon habitat.

5. BUDGET REQUEST BASIS

The budget request is based on market value of the target property and recommended by the Conservation Futures Tax (CFT) Committee.

6. FUNDING AND REVENUE DISCUSSION

Capital Appropriation Proposal

NARRATIVES

PKS COUGAR MTN PRECIPICE TRL

1044596

1. CURRENT PROJECT SCOPE

Cougar Mountain Precipice Trail - This project is to acquire 108 acres of undeveloped forested land adjacent to Cougar Mountain Regional Wildland Park for open space benefits, recreation and public access.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

This acquisition preserves forested hillsides adjacent to Cougar Mountain Regional Wildland Park. This project directly furthers goals established in the King County Comprehensive Plan, the King County Open Space Plan and the Strategic Climate Action Plan.

4. PROJECT BENEFITS/OUTCOMES

This project will add 108 acres of undeveloped forested open space to Cougar Mountain Regional Wildland Park permanently protecting an important regional asset, preserving wildlife habitat and other open space benefits such as flood reduction, water quality and clean air.

5. BUDGET REQUEST BASIS

The budget request is based on market value of the target property and recommended by the Conservation Futures Tax (CFT) Committee.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

King County Parks, Trails and Open Space Replacement Levy includes an annual, inflation-adjusted allotment for stewardship of newly acquired natural lands.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PKS COUGAR MTN PRECIPICE TRL

1044596

8. PROJECT STATUS

This is an ongoing project. Many parcels have been identified adjacent to Cougar Mountain and the Open Space Team has been working for many years with great success to acquire these parcels.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Open Space Acquisition

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project does not directly further a goal of the King County Equity and Social Justice Plan

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project furthers goals of the King County Strategic Climate Action Plan (SCAP), by protecting forested lands.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

PKS M:E Lake Samm Trail

1044600

1. CURRENT PROJECT SCOPE

East Lake Sammamish Trail (ELST) - The purpose of the ELST project is to design and construct an alternative non-motorized transportation corridor and a multi-use recreational trail along the former railroad corridor on the east side of Lake Sammamish.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Development of King County's Regional Trails System is a key component of the Parks Division's Business Plan. Paved, multi-use trails with soft-surface shoulders have the highest degree of accessibility for people of all ages and abilities and provide for a wide variety of uses. The ELST is currently a 3.5-mile missing link in the regional trail system serving the north and east portions of King County. The South Sammamish B segment is the last and most challenging segment of the ELST corridor to be constructed. The remaining segment are the final trail phases of a multi-phase Master Plan trail that will complete the entire 11-mile trail corridor and directly connect the cities of Redmond, Sammamish, and Issaquah to the new 2025 opening of the Sound Transit Light Rail Station near Marymoor. The ELST is a vital part of a 44-mile urban, regional trail system extending from Puget Sound in Seattle to the Cascade Foothills.

4. PROJECT BENEFITS/OUTCOMES

When complete this 2019/20 appropriation will add 1.03 miles of regional trail to the network.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M:E Lake Samm Trail

1044600

5. BUDGET REQUEST BASIS

The requested budget is based on a detailed engineer's estimate, past experience with previous segments of the project, and on contractual commitments for design, permitting, and engineering. The legal cost budget is based on estimates from the PAO based on current anticipated project needs. This appropriation request seeks authority to fund a portion of the construction of a 1.03 mile portion of the 3.5-mile South Sammamish Segment B. The proposed portion of the project to be constructed is located between SE 33rd St. and Station B in the City of Sammamish. The 2019-2020 appropriation request also includes \$1.5 million in additional funds to support the litigation team in facing continued legal challenges to ownership of the corridor, removing built encroachments within Parks property, and other ongoing and emergent legal matters related to the project. The request also includes design money for revising the Inglewood parking lot design. Due to the high cost, the parking lot will be constructed into multiple sub-segments and the design needs to be adjusted accordingly.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as capital improvements and major maintenance projects enter and complete construction phases, this work is anticipated to have impacts on the operating budget. For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

8. PROJECT STATUS

The ELST corridor is being designed and constructed in segments, based on budget availability. Construction of the Redmond, Issaquah and North Sammamish and Sammamish "A" segments are complete. Design of South Sammamish Segment B is nearing completion and construction is anticipated to begin on the first portion in early 2020 pending the outcome of permit appeals.

9. ALTERNATIVES ANALYSIS

Alternatives analysis was done as part of the master plan for the ELST.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

N/A

12. EQUITY AND SOCIAL JUSTICE IMPACT

King County's park system impacts determinants of equity such as access to parks and natural resources, healthy built and natural environments, and strong, vibrant neighborhoods. These investments will benefit local communities and all individuals that use these facilities.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Programmatic Sustainable Scorecard Platinum will be targeted where applicable.

Parks seeks to minimize its impact on the environment, and by facilitating access to nature and outdoor recreation opportunities, hopes to educate the community of the need to protect open space for future generations.

NARRATIVES	PKS FOOTHILLS REGIONAL TRAIL	1044668
------------	------------------------------	---------

1. CURRENT PROJECT SCOPE

Foothills Regional Trail - This project will connect the Foothills Trail system in Pierce County to the Foothills Trail in King County. The project has been segmented into two separate projects in order to meet environmental, safety and budget constraints. Segment A will leave from 252nd St. in Enumclaw at the existing terminus for the KC Foothills Trail. This segment will extend 0.8 mile to just south of the Boise Creek bridge. Segment B includes 0.3 miles of trail and includes a new bridge crossing the White River. It will begin at the Boise Creek bridge terminus and continue across Mud Mountain Road to the White River, including crossing of the river.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

PKS FOOTHILLS REGIONAL TRAIL

1044668

3. PROJECT JUSTIFICATION

This project, when completed, will connect the King County and Pierce County Regional Trail networks and is a partnership between King County Parks, the cities of Enumclaw, Buckley, and Pierce County. It was formed to pursue grant funding and complete a connection with the Pierce County trail system.

4. PROJECT BENEFITS/OUTCOMES

Segment A when complete will add 0.8 miles of trail. Completion of Segment B of the Foothills trail will add 0.3 miles of trail including a new bridge to connect King County's Foothill Trail to the 21 miles Foothills trail in Pierce County.

5. BUDGET REQUEST BASIS

The budget request is based on a detailed engineer's estimate, past experience with previous segments of the project, and on contractual commitments for design and engineering. This appropriation request funds the construction phase of Segment A and also includes additional design budget for Segment B which has a \$2.8 million RCO grant for the bridge over the White River (requires a grant match and completion by Dec. 2021). The project has been segmented into two separate projects in order to meet environmental, safety, and budget constraints.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as capital improvements and major maintenance projects enter and complete construction phases, this work is anticipated to have impacts on the operating budget. For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

8. PROJECT STATUS

Segment A is in permitting and nearing construction advertisement. Segment B is beginning final design phase and is planned for construction in 2021 to meet secured grant deadlines.

9. ALTERNATIVES ANALYSIS

Alternatives were analyzed during the planning and preliminary design phases. The selected alternative was chosen based on being the best value and having the least environmental impact.

10. OTHER AGENCY INVOLVEMENT

This is a partnership between King County Parks, the cities of Enumclaw, Buckley, and Pierce County.

11. ART ELIGIBILITY

N/A

12. EQUITY AND SOCIAL JUSTICE IMPACT

King County's park system impacts determinants of equity such as access to parks and natural resources, healthy built and natural environments, and strong, vibrant neighborhoods. These investments will benefit underserved communities and disadvantaged individuals that use these facilities.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Salmon Safe Certification will be targeted for compliance in lieu of King County Sustainable Scorecard requirements. Parks seeks to minimize its impact on the environment, and by facilitating access to nature and outdoor recreation opportunities, hopes to educate the community of the need to protect open space for future generations.

NARRATIVES

PKS MITCHELL HILL DUTHIE

1044750

1. CURRENT PROJECT SCOPE

Mitchell Hill Forest Additions - The goal of the Mitchell Hill Forest Additions project is to acquire up to 150 acres of forested open space that will connect King County's Mitchell Hill Forest with adjacent WADNR lands. The project area is part of Duthie Hill/Grand Ridge/Mitchell Hill/Preston Ridge forest complex. This area supports second growth forest that is important habitat for upland species, including black bear, cougar and approximately 80 species of resident birds.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

This acquisition proposal continues a multi-year effort to connect over 2,000 acres of King County open space park lands with over 2,000 acres of Washington State Department of Natural Resources (WADNR) forest lands. These lands are located north of Preston and I-90 in rural King County within both the Snoqualmie/Skykomish and Lake Washington/Cedar/Sammamish Watershed Systems. King County ownership would restrict future additional residential development, ensuring retention of forestland, and give additional protection to a designated wildlife habitat network. Establishing connectivity between thousands of acres of county and state lands provides significant conservation of forest land, protection of terrestrial and aquatic habitat, and opportunities for miles of new passive recreation trails for hiking, mountain biking, running and horseback riding.

This request is the result of a long-term partnership with WADNR and the Mountains to Sound Greenway Trust to connect county and state lands in the Preston area. Acquisition of lands to connect to Mitchell Hill Forest to Preston Ridge Forest and WADNR lands is a recommendation in the WADNR Draft Concept Snoqualmie Recreation Corridor Plan, the Draft Mitchell Forest Plan and the Forest Stewardship Plan for Preston Ridge Forest (2001). Also, facilitating connectivity and expanding the backcountry trail system are listed as acquisition criteria in the 2010 Parks Open Space Plan and policy goals listed in the King County Comprehensive Plan.

4. PROJECT BENEFITS/OUTCOMES

This project contributes to the county's Land Conservation Initiative and Strategic Climate Action Plan.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

PKS MITCHELL HILL DUTHIE

1044750

5. BUDGET REQUEST BASIS

The budget request is basing on market value of the target property and recommended by the Conservation Futures Tax (CFT) Committee.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

King County Parks, Trails and Open Space Replacement Levy includes an annual, inflation-adjusted allotment for stewardship of newly-acquired natural lands.

8. PROJECT STATUS

The project is in current negotiations with King County Roads and other landowners adjacent to the county's Mitchell Hill Forest.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

King County Roads, Washington State Department of Natural Resources (DNR), Mountains to Sound Greenway Trust.

11. ART ELIGIBILITY

Open Space Acquisition

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project protects critical forest land and promotes long term carbon sequestration which contributes to the goals of King County's Strategic Climate Action Plan (SCAP).

NARRATIVES PKS South County Regional Tra 1112621

1. CURRENT PROJECT SCOPE

The South County Regional Trail Program (Lake to Sound Trail) - funds a multi-jurisdiction, multiple segment trail that extends 16 miles from the mouth of the Cedar River at Lake Washington in Renton to Des Moines Beach Park on Puget Sound. This type of multijurisdictional trail requires years of coordination and advanced planning. Segments of the trail will advance on individual timelines. From a design and implementation perspective, it is advantageous to have one segment going into construction, while another segment is in Final Design, and yet another is in Preliminary Design.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

PKS South County Regional Tra

1112621

3. PROJECT JUSTIFICATION

Expansion of King County's regional trails system is a key component of the Parks Division's business plan. Development of the Lake to Sound Trail will be a significant benefit to the system, providing a new recreation and non-motorized transportation amenity in rapidly growing portion of South King County, and connecting multiple recreation areas, unincorporated areas, and the cities of Renton, Tukwila, SeaTac, Burien, and Des Moines.

4. PROJECT BENEFITS/OUTCOMES

Development of the Lake to Sound Trail would connect multiple recreation areas, unincorporated areas, and cities, providing users with new non-motorized transportation options in this area. Specifically, Segment c creates 2.2 miles of new Regional Trail.

5. BUDGET REQUEST BASIS

This budget request is based on past program needs adjusted to address rising design and construction costs in the region. Program budget in this 2019-2020 appropriation is a consolidation of the individual budgets for project segments. Budget for individual project segments are based on either planning level or a detailed engineer's estimate, past experience with previous similar projects, and on recent contractual commitments for design and engineering. The 2019-2020 funding request for this MPA project advances Segment C from Final Design into Construction while continuing the preliminary design for both segments D and E. Segments D & E are contiguous and while it is not currently the plan to construct them at the same time, there are cost savings by undertaking the Phase 2 work concurrently.

6. FUNDING AND REVENUE DISCUSSION

\$8.7m of funding for the construction of Segment C will be reimbursed to KC Parks from the WSDOT via a funding agreement.

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as capital improvements and major maintenance projects enter and complete construction phases, this work is anticipated to have impacts on the operating budget. For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

8. PROJECT STATUS

Segment A is moving into bid advertisement and construction will begin in September 2018 and be completed in 2019. Segment C is in Final Design. Segments D and E are in Preliminary Design.

9. ALTERNATIVES ANALYSIS

A feasibility study for the Lake to Sound Trail was completed in June of 2009. This study identified routes and alternatives for the various missing segments of the Lake to Sound Trail. This proposal is consistent with the feasibility study.

10. OTHER AGENCY INVOLVEMENT

The Lake to Sound Trail is a partnership with the cities of Renton, Tukwila, SeaTac, Burien and Des Moines. Segment C is located in the cities of Burien and SeaTac. The WSDOT has a significant role in the project since it meets a mitigation requirement for its SR509 expansion project.

11. ART ELIGIBILITY

N/A

12. EQUITY AND SOCIAL JUSTICE IMPACT

King County's park system impacts determinants of equity such as access to parks and natural resources, healthy built and natural environments, and strong, vibrant neighborhoods. These investments will benefit underserved communities and disadvantaged individuals that use these facilities.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Programmatic Sustainable Scorecard Platinum or Salmon Safe Certification will be targeted where applicable.

Parks seeks to minimize its impact on the environment, and by facilitating access to nature and outdoor recreation opportunities, hopes to educate the community of the need to protect open space for future generations.

NARRATIVES

PKS M:GREEN2CEDAR RIVER TRAIL

1120085

1. CURRENT PROJECT SCOPE

Green2Cedar Trail -- This master program funds multiple segments including preliminary design, final design, and implementation of the Green to Cedar (G2C) Rivers Trail, an 11 mile regional trail corridor in South King County linking Renton to Black Diamond. Portions of the corridor are currently developed as a soft-surface trail and other sections in the south end are undeveloped, forested open space. The proposed trail development project will create a regional trail in accordance with Parks Regional Trail Standard and is currently divided into two segments: the G2C North Segment runs three miles from the existing Cedar River Trail to Kent Kangley Road in Maple Valley; the G2C South Segment is eight miles from Kent Kangley Road to the Green River south of Black Diamond.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Expansion of King County's regional trails system is a key component of the Parks Division's business plan. Development of the Green to Cedar Rivers Trail would be a significant benefit to the system, providing a new recreation and non-motorized transportation amenity in rapidly growing portion of South King County, and connecting multiple recreation areas, unincorporated areas, and the cities of Black Diamond, Covington and Maple Valley. However, the cost to construct the project exceeds the funding currently appropriated for the project. This is the case for several Parks other trail projects which are ready to advertise and bid for construction in 2019. To address that problem this 2019/2020 budget appropriation redistributes construction money to projects ready to build.

4. PROJECT BENEFITS/OUTCOMES

Development of the Green to Cedars River Trail would connect multiple recreation areas, unincorporated areas, and cities, providing users with new non-motorized transportation options in this area.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M:GREEN2CEDAR RIVER TRAIL

1120085

5. BUDGET REQUEST BASIS

This 2019-2020 budget appropriation redistributes construction funding to other projects; thus providing enough funding to construct one trail project ready to construct. Final design will progress on this trail and permitting will be undertaken to prepare for future construction funding that is adequate to build a portion of this trail. Additional segmentation of the G2C North Segment may be considered to create a fundable construction segment for the future biennium.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as capital improvements and major maintenance projects enter and complete construction phases, this work is anticipated to have impacts on the operating budget. For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

8. PROJECT STATUS

Preliminary design is complete for the G2C North Segment, final design and permitting is underway. Preliminary design is in progress for the G2C South Segment of the trail with an estimated completion date of January 2019.

9. ALTERNATIVES ANALYSIS

Two preliminary trail designs were developed for the G2C North Segment, and the one that best met the project purpose and need and budget was selected. A similar alternatives analysis process is in progress for the G2C South Segment.

10. OTHER AGENCY INVOLVEMENT

The cities of Maple Valley, Covington, and Black Diamond are very supportive of the project and will be important partners in the project design.

11. ART ELIGIBILITY

Disappropriation

12. EQUITY AND SOCIAL JUSTICE IMPACT

King County's park system impacts determinants of equity such as access to parks and natural resources, healthy built and natural environments, and strong, vibrant neighborhoods. These investments will benefit underserved communities and disadvantaged individuals that use these facilities.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Programmatic Sustainable Scorecard Platinum or Salmon Safe Certification will be targeted where applicable.

Parks seeks to minimize its impact on the environment, and by facilitating access to nature and outdoor recreation opportunities, hopes to educate the community of the need to protect open space for future generations.

NARRATIVES

PKS M:EASTSIDE RAIL CORR (ERC)

1121155

1. CURRENT PROJECT SCOPE

The Eastside Rail Corridor Trail - is a phased capital program that will construct approximately 16 miles of paved shared use path connecting Renton, Bellevue, Kirkland, Woodinville, and Redmond. In addition to connecting communities, the trail will also connect existing regional trails including the I-90 Trail, SR 520 Trail, Sammamish River Trail, Cedar River Trail, and Lake to Sound trail. The overall program includes rehabilitation of several major structures including the Wilburton Trestle, a new bridge over NE 8th St. in Bellevue, Wilburton "Gap" by Washington State Department of Transportation (WSDOT) which includes a new bridge over I-405 with partial funding support by KC, and renovation of a steel railroad bridge over I-90. As part of its phased implementation, portions of the trail will be constructed as interim (soft surface) trail to support limited use until funding for full construction is available.

2. PROGRAMMATIC PROJECT DISCUSSION

Will be done on a separate excel file

3. PROJECT JUSTIFICATION

The 2019/20 appropriation will fund a portion of the WSDOT I-405 project that begins construction in 2019. This budget will provide cost share in coordination with trail construction in 2019-2020. This funding is needed or the WSDOT project will not move forward with the Wilburton Gap.

4. PROJECT BENEFITS/OUTCOMES

This 2019/20 appropriation will fund a project that will close a major gap in the Eastside Rail Corridor trail (the crossing over I-405 southbound), and construct 2.5 miles of new paved trail.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M:EASTSIDE RAIL CORR (ERC)

1121155

5. BUDGET REQUEST BASIS

Budget is based on estimates developed for the WSDOT I-405 design-build RFP and supplemented to include County expenses for construction period services. Legal and emergent costs are based on input from PAO and in house engineering. In combination with budget from the WSDOT I-405 Renton to Bellevue project, this appropriation will complete construction of the Wilburton "Gap" bridge over I-405 along with associated connecting trail, and construct 2 miles of paved trail along the Eastside Rail Corridor between Coal Creek Parkway and Ripley Lane. This appropriation also adds additional funding to support ongoing emergent trail issues and trail related legal services for the Eastside Rail Corridor program.

6. FUNDING AND REVENUE DISCUSSION

The total value of the project constructed in partnership with WSDOT is approximately \$26 million. The proposed budget is matched with \$19 million of WSDOT funding as defined in their previous agreement to provide a non-motorized crossing over I-405, and as mitigation for trail impacts (to the Lake Washington Loop Trail) associated with widening I-405. Balance of \$7 million for King County portion of the project funding is included in this 2019/20 appropriation.

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as capital improvements and major maintenance projects enter and complete construction phases, this work is anticipated to have impacts on the operating budget. For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

8. PROJECT STATUS

New project for this appropriation. Other projects within the master program are in various phases of planning, design, and implementation.

9. ALTERNATIVES ANALYSIS

The size, location, and character of the Wilburton Gap bridge were developed through an extensive stakeholder process that considered several potential scenarios. The selected bridge provides a preferred trail experience at a cost acceptable to WSDOT. Alternatives for the trail segment between Coal Creek Parkway and Ripley Lane were considered in the Master Plan and EIS for the Eastside Rail Corridor Trail. The trail planned for construction in this location is consistent with the Master Plan preferred alternative.

10. OTHER AGENCY INVOLVEMENT

This project is being constructed by WSDOT as part of their design-build contract to add HOV/toll lanes to I-405 between Renton and Bellevue. Design requirements for the design-build contract are being prepared by WSDOT and King County Parks.

11. ART ELIGIBILITY

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will improve access to the Regional Trail System and reduce the gaps in non-motorized connectivity between the cities of Renton and Bellevue.

King County's park system impacts determinants of equity such as access to parks and natural resources, healthy built and natural environments, and strong, vibrant neighborhoods. These investments will benefit underserved communities and disadvantaged individuals that use these facilities.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The Eastside Rail Corridor Trail will improve non-motorized connectivity between neighborhoods and employment centers, offering commute options to reduce fossil fuel use. In combination with the completion of future phases of the ERC Trail, the project will provide direct access to Sound Transit Light Rail, King County Metro RapidRide, and Sound Transit BRT stations.

Programmatic Sustainable Scorecard Platinum will be targeted where applicable. Parks seeks to minimize its impact on the environment, and by facilitating access to nature and outdoor recreation opportunities, hopes to educate the community of the need to protect open space for future generations.

NARRATIVES

PKS M:STEVE COX MEMORIAL PARK

1121444

1. CURRENT PROJECT SCOPE

Steve Cox Memorial Park - This master program funds priority and emergent capital projects to address priority capital rehabilitation needs, major maintenance, repair and safety needs at Steve Cox Memorial Park.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Steve Cox Memorial Park is a regional destination, an important and essential asset to the Parks Division. It is identified in the current Parks Levy as an essential regional park facility and requires continued investment in order to ensure it is available for use by citizens. Parks has many ongoing operational requirements needed to keep the system open and usable by constituents. A critical necessity of keeping parks open is to ensure that capital assets are in safe operating order. Emergent capital or major maintenance repair needs occur regularly that must be undertaken and completed in an accelerated manner in order to keep facilities open. Safety is of paramount concern given the volume of users in the Parks System and having adequate funding to respond is an essential part of operating a parks system.

Replacing the stadium infield synthetic turf ensures the field will be playable for the next 10 years, installing shower room ventilation to have a fully functional locker rooms, and updating picnic shelter to enhance safety and security. Other minor improvements are planned and emergent issues arise that need to be promptly addressed.

4. PROJECT BENEFITS/OUTCOMES

A safe and open Park System with usable assets at Steve Cox Memorial Park is the primary benefit and outcome of this program. Keeping parks capital investments and assets safe and open is a requirement for continued operation of any facility. An unfunded program, reductions in funding, or non-action alternative will generally result in a worsening of any known deteriorating conditions, which may impact the Parks Division's ability to fulfill its mission. Delays in addressing these conditions may result in additional costs or closure of park facilities.

NARRATIVES

PKS M:STEVE COX MEMORIAL PARK

1121444

5. BUDGET REQUEST BASIS

Budget is based on Planning Level Engineer's Estimate, past experience and costs associated with past contracts for design, engineering, and construction. The 2019-2020 capital appropriation for this master program funds continued identification, planning, design, engineering, permitting, and construction of priority and emergent projects to address priority capital rehabilitation needs, major maintenance, repair and safety needs at Steve Cox Memorial Park. The planned capital asset improvements funded by this 2019-2020 appropriation at Steve Cox Memorial Park include, but are not limited to, the following currently identified needs: major rehab and/or replacement of stadium ballfield infield synthetic turf, shower room ventilation, picnic shelter, flagpole, repair, upgrade lawn area drainage east of play area, replacement of missing stones on reflexology path and other minor improvements are planned. The appropriation also funds emergent issues that arise within the park that need to be promptly addressed.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as capital improvements and major maintenance projects enter and complete construction phases, this work is anticipated to have impacts on the operating budget. NARRATIVES

PKS M:RTS MOBILITY CONNECTIONS

1121455

1. CURRENT PROJECT SCOPE

Regional Trail System (RTS) Mobility Connections (MCs) - are defined in the Regional Trail System Network Vision (2012) as connections from existing and planned regional trails to important destinations - transit centers, city centers, and other important locations. This master program will investigate the feasibility of designing and implementing these bicycle and pedestrian links within King County's urban areas and, where appropriate, will partner with other public agencies to design and construct them. These connections are envisioned as new urban trails, on-road bike/pedestrian facilities, or other innovative approaches to extend the safety and mobility benefits of the regional trails to urban destinations. These connections will increase use, enhance multimodal transportation and urban center connectivity within the region. The master program will fund the planning and engineering investigation of the feasibility of various connections using available rights-of-way, in conjunction with local city staff. Coordination with local agencies to design and construct these types of connections will be an ongoing priority project activity.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M:RTS MOBILITY CONNECTIONS

1121455

3. PROJECT JUSTIFICATION

Timing is critical and now is the time to make this essential connection a reality. Sound Transit is designing and constructing an extension of their light rail rail system to Redmond in the vicinity of three regional trails, passing under SR 520 and over Bear Creek utilizing the ELST and Redmond Connector Corridors. This is the opportunity to make these non-motorized connections a part of the overall design for the transportation improvements in the SR 520 right-of-way. Previous attempts have been unable to secure an appropriate solution due to cost. Sound Transit, WSDOT, City of Redmond and King County's mutual participation in developing a solution for all is essential to the success of this connection.

4. PROJECT BENEFITS/OUTCOMES

When completed, an essential mobility connection twenty or more years in planning will finally be completed allowing non-motorized travel to and from the trails, light rail stations and surrounding neighborhoods. The region will have gained a new essential non-motorized connection in an extremely difficult location.

5. BUDGET REQUEST BASIS

Budget is based on Sound Transit's detailed Engineer's Estimate, past experience with previous segments of the project and on past contractual commitments for design and engineering of similar project connections. This 2019-2020 appropriation will fund the following high priority mobility connection: compensate Sound Transit for design and construction of a trail connection between four essential public transportation facilities near and under SR520 in Redmond. The trail connection will connect East Lake Sammamish Trail (ELST), the new Sound Transit Marymoor Station, the Redmond Central Connector, and the Bear Creek Trail and increase mobility between these essential facilities.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as capital improvements and major maintenance projects enter and complete construction phases, this work is anticipated to have impacts on the operating budget. For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

8. PROJECT STATUS

Subprojects in the Mobility Connections Program are in various phases of planning, design and construction based on the opportunities of establishing partnership projects with local jurisdictions that meet the goals of the Mobility Connections program and the capacity of local jurisdictions to lead the project implementation.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

City of Redmond, Sound Transit, WSDOT, King County Metro, and Parks are working together to plan, design, engineer, and make the essential non-motorized public facility mobility connections in SE Redmond a reality.

11. ART ELIGIBILITY

N/A

12. EQUITY AND SOCIAL JUSTICE IMPACT

King County's park system impacts determinants of equity such as access to parks and natural resources, healthy built and natural environments, and strong, vibrant neighborhoods. Investments from King County and Partner agencies involved in this project will increase access to Marymoor Park and ELST. This will provide increased access and benefit to underserved communities and allow more disadvantaged individuals to travel to the area and use these facilities.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M:AQUATIC CENTER

1121497

1. CURRENT PROJECT SCOPE

The King County Aquatic Center (KCAC) - was built in 1989 to host the Seattle Goodwill Games in 1990. The complex consists of two main buildings, the Aquatic Center (which includes a dive pool, a competition pool, a recreational pool and associated support spaces including offices, locker rooms and mechanical rooms) and Banquet Hall (built in 1997), plus three paved parking lots surrounding the buildings. This master program would fund priority and emergent capital projects to address priority capital rehabilitation needs, major maintenance, repair and safety needs at the KCAC.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Existing skylights were installed at WKAC in 1988 and have exceeded their useful life of 20-30 years and require replacement. Design will commence in anticipation of replacement when sufficient funds become available in 2021 or earlier.

WKAC is a regional destination, an important and essential asset to the Parks Division. It is identified in the current Parks Levy as an essential regional park facility and requires continued investment in order to ensure it is available for use by citizens. Parks has many ongoing operational requirements needed to keep the system open and usable by constituents. A critical necessity of keeping parks open is to ensure that capital assets are in safe operating order. Emergent capital or major maintenance repair needs occur frequently that must be undertaken and completed in an accelerated manner in order to keep facilities open. Safety is of paramount concern given the volume of users in the Parks System and having adequate funding to respond is an essential part of operating a parks system.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M:AQUATIC CENTER

1121497

4. PROJECT BENEFITS/OUTCOMES

A final permitted design that is ready for bid advertisement and construction of new skylights with a useful life of 20-30 years will be added to the WKCAC to allow its continued operation and service to the community. When construction funds are appropriated in 2020/21 biennium and construction is complete, the new skylights will ensure a safe and open facility with usable assets at WKCAC. This is the primary benefit and outcome of this appropriation request. Keeping parks capital investments and assets safe and open is a requirement for continued operation of any facility. An unfunded program, reductions in funding, or non-action alternative will generally result in a worsening of any known deteriorating conditions, which may impact the Parks Division's ability to fulfill its mission. Delays in addressing these conditions may result in additional costs or closure of park facilities.

5. BUDGET REQUEST BASIS

The 2019-2020 capital appropriation for this master program funds continued identification, planning, design, engineering, permitting, and construction of priority and emergent projects to address priority capital rehabilitation needs, major maintenance, repair and safety needs at Weyerhaeuser King County Aquatic Center (WKCAC). The planned asset improvement projects funded by this 2019-2020 appropriation at WKCAC include, but are not limited to, the following: priority emergent issues when they arise, fund the design and replacement of existing large skylights at WKCAC.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as capital improvements and major maintenance projects enter and complete construction phases, this work is anticipated to have impacts on the operating budget. For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

8. PROJECT STATUS

Preliminary feasibility study of alternatives has been undertaken. Preliminary design is started.

9. ALTERNATIVES ANALYSIS

Feasibility Study was undertaken and examined four different skylight material options. The selected option provided the best value.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

N/A

12. EQUITY AND SOCIAL JUSTICE IMPACT

WKCAC is a regional facility that allows for vendors to provide swimming lessons and practice opportunities for children of all ages and incomes. King County's park system impacts determinants of equity such as access to parks and natural resources, healthy built and natural environments, and strong, vibrant neighborhoods. These investments will benefit underserved communities and disadvantaged individuals that use these facilities.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Programmatic Sustainable Scorecard Platinum will be targeted where applicable.

Parks seeks to minimize its impact on the environment, and by facilitating access to nature and outdoor recreation opportunities, hopes to educate the community of the need to protect open space for future generations.

NARRATIVES

PKS M:PLAYAREA REHAB

1121498

1. CURRENT PROJECT SCOPE

Play Area Rehabilitation Program - The project will fund the removal, rehabilitation, and upgrade of play structures and safety surfacing at regional, rural and UGA parks throughout the King County Parks system, as needed for safety. Depending on the current condition of a play area, rehabilitation will vary from full replacement of equipment and safety surfacing for some play areas, to partial equipment or surfacing replacement in other areas.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The existing play structures and safety surfacing are approaching the end of their useful life, are showing signs of aging and need to be replaced. Funding this project ensures that the play structures are safe, meet ADA requirements and meet the growing and changing needs of the community. This project is consistent with the funding recommendations of the Parks Levy Task Force.

4. PROJECT BENEFITS/OUTCOMES

The program protects the health and safety of park users and ensures that all play areas can be kept open.

5. BUDGET REQUEST BASIS

Budget is based on detailed Engineer's Estimate, past experience with similar project and on contractual commitments for design and engineering. Carryover from 2018 will be used to finish the rehabilitation of the Skyway Play Area. In 2019, Both 2-5 year old and 5-12 year old play areas in Petrovitsky Park will be rehabilitated. No play area rehabilitations are scheduled for 2020 under current budget proposal. Play area rehabilitations to be completed in 2021 to 2024 include Marymoor North 5-12 year area, Boulevard Lane 5-12 year area, Maplewood, 5 to 12 year area, Dockton 5 to 12 year area, and Big Finn Hill Climbing Net. Depending on size of the approved budget appropriations and future cost increases for design and construction of play areas, partial rehabilitations may also be undertaken at Preston Athletic Fields, Marymoor North 2 to 5 year area, and Cottage Lake.

Capital Appropriation Proposal

NARRATIVES

PKS M:BRIDGE&TRESTLE PROGRAM

1121499

1. CURRENT PROJECT SCOPE

The Bridge and Trestle Program - The Bridge and Trestle master program is an ongoing effort to inspect, enhance, repair and replace (as needed) the bridge and trestle structures associated with King County Parks' Regional Trails System.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This master program implements recommendations to rehabilitate and preserve numerous historic railroad bridges and trestles in the Division's Regional Trail System. This is an on-going high priority, safety-related project for the Division. The project funds the ongoing inspection and rehabilitation of the 93 bridges and trestles, most of which were incorporated into the system with the abandonment of former railroad lines. The Division works closely with the Road Services Division to ensure timely inspection and appropriate rehabilitation of these facilities. This program is costly given that many bridges are nearing 100 years in age, span over 100 feet, and are located in environmentally sensitive areas. The Bridge and Trestle Rehab Program identifies significant rehab needs, prioritizes repairs, and undertakes appropriate construction to ensure that the system's bridges and trestles are safe and sound.

4. PROJECT BENEFITS/OUTCOMES

The program strives to keep our regional trail system open to both users and our maintenance vehicles. Investing in bridge infrastructure rehabilitation early reduces the long term cost of replacement but extending the remaining useful life of existing assets.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M:BRIDGE&TRESTLE PROGRAM

1121499

5. BUDGET REQUEST BASIS

The amount requested for the master program in this 2019-2020 appropriation request comes from the overall 6 year CIP program for bridges and trestles. This request is comprised of numerous subprojects that continue the fulfillment of commitments that were made in the Parks Levy. Individual project budgets are based on detailed Engineer's Estimates, past experience with previous similar bridge projects and on recent contractual commitments for design and engineering. The 2019-2020 appropriation request for the master program includes but is not limited to funding for the following: responding to emergent priority bridge issues that arise, program administration, inspections, load ratings, and small repairs. This project also funds the rehabilitation of the Coal Creek Bridges (45', 70') and Trestle (135') on the new Eastside Regional Corridor (ERC).

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Maintenance of the bridge and trestle structures within the regional trail system enables operations staff to efficiently conduct their work. When bridges fall into disrepair there is an added operational cost due to re-routing and detours.

8. PROJECT STATUS

Bridge inspections scheduled for 2018 are currently underway. Two separate small bridge repairs are currently scheduled for the fall 2018. A feasibility study will begin this summer to address emergent needs. One medium sized bridge replacement is in permitting and scheduled for construction beginning in October of 2018.

9. ALTERNATIVES ANALYSIS

All large rehabilitation and replacement projects begin with a feasibility study that identifies cost effective construction materials and methods. These large projects are typically standalone.

10. OTHER AGENCY INVOLVEMENT

The Bridge Engineering Unit of the Road Services Division performs inspections, calculates load ratings and reviews bridge plans for the Parks Division.

11. ART ELIGIBILITY

N/A

12. EQUITY AND SOCIAL JUSTICE IMPACT

King County's park system impacts determinants of equity such as access to parks and natural resources, healthy built and natural environments, and strong, vibrant neighborhoods. These investments will benefit underserved communities and disadvantaged individuals that use these facilities.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Programmatic Sustainable Scorecard Platinum will be targeted where applicable. Parks seeks to minimize its impact on the environment, and by facilitating access to nature and outdoor recreation opportunities, hopes to educate the community of the need to protect open space for future generations.

NARRATIVES	PKS M:REG TRL SURFACE IMPR	1121500
------------	----------------------------	---------

1. CURRENT PROJECT SCOPE

Regional Trail Surface Program - This program will identify, design, engineer, permit, and implement emergency repairs, major maintenance, and rehabilitate soft surface and paved trails including trail appurtenances (drainage under surfacing, pathways to trail parking and rest areas) throughout the Regional Trails System (RTS). This program work will include major resurfacing and repairs that exceed normal maintenance and will allow the Division to respond to emergency surface repairs or unforeseen trail issues as they occur to ensure trail usability and safety.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M:REG TRL SURFACE IMPR

1121500

3. PROJECT JUSTIFICATION

This program will allow the Division to protect the health and safety of trail users and avoid extensive closures. This work will also protect the trail infrastructure from further deterioration. A 2018 Pavement Management System report including GIS maps identified needed repairs along specific trail segments in order to sustain usability and safety. A pavement condition index on GIS maps was generated to prioritize pavement repairs and overlay of the regional trail system.

4. PROJECT BENEFITS/OUTCOMES

A safe and open Regional Trail System with safe usable surfacing and appurtenances is the primary benefit and outcome of this program. Keeping parks surfacing and appurtenances safe and usable is a requirement for continued operation of any facility. This is the direct result of having funds available to address the emergent needs as they arise.

An unfunded program, reductions in funding, or non-action funding alternative will generally result in a worsening of any known deteriorating conditions impacting capital assets within the system and which may impact the Parks Division's ability to fulfill its mission. Delays in addressing these conditions may also result in additional costs and/or closure of park facilities.

5. BUDGET REQUEST BASIS

Budget is based on Planning Level Engineer's Estimate, past experience and costs associated with past contracts for design, engineering, and construction. This appropriation request will fund for asphalt overlays of long trail segments and extend the trail lifetime for an additional 10-15 years.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as capital improvements and major maintenance projects enter and complete construction phases, this work is anticipated to have impacts on the operating budget. For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

8. PROJECT STATUS

Ongoing projects/program

9. ALTERNATIVES ANALYSIS

A non-action alternative will result in a worsening of a known deteriorating condition, which may impact public usability of the RTS and create a safety risk for King County. By delaying or not funding this project, the Division runs the risk of losing sections of trail surfacing to deterioration and/or facing higher costs at a later date.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Parks trail maintenence

12. EQUITY AND SOCIAL JUSTICE IMPACT

King County's park system impacts determinants of equity such as access to parks and natural resources, healthy built and natural environments, and strong, vibrant neighborhoods. These investments will benefit underserved communities and disadvantaged individuals that use these facilities.

NARRATIVES

PKS M:DOCK REHAB PROGRAM

1121501

1. CURRENT PROJECT SCOPE

The Dock Rehabilitation Program - is a master program that is an ongoing effort to inspect, repair and/or replace (as needed) existing dock structures associated with the King County Parks System.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The existing aging dock facility has significant priority needs for replacement of dock components. It must be repaired and rehabilitated or closed. The work will be undertaken in multiple phases to keep it open for use during replacement and as permitted by available funding. Washington State Department of Natural Resources in the aquatic lease issued for continued use of the dock facility, requires removal of existing creosote piles supporting these two docks. Parks is studying the best way to approach this removal and replacement.

By addressing emergent and strategic needs Parks can work to prolong the useful life of its aging infrastructure. With limited funds, Parks must proactively anticipate, fund, and address these emergent Major Maintenance and Capital needs in order to meet requirements for continued access and use of its facilities.

Parks has many ongoing operational requirements needed to keep the system open and usable by constituents. Of critical necessity in keeping parks open is to ensure that capital assets are in safe operating order. Emergent capital or major maintenance repair needs are routinely identified and these capital needs must often be undertaken and completed in an accelerated manner using design, permitting and implementation resources. Safety is of paramount concern given the volume of users in the Parks System and adequate funding provides the flexibility to respond. This is an essential part of operating a parks system.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M:DOCK REHAB PROGRAM

1121501

4. PROJECT BENEFITS/OUTCOMES

Two of the primary benefits are increased access for all citizens and prolonged capital asset life. In some circumstances, replacement of capital assets are deemed necessary resulting in a new longer life for those assets. A safe and open Park System with usable capital assets is another primary benefit and outcome of this project/program. Keeping parks capital investments and assets safe and open is a requirement for continued operation of any facility. This is the direct result of continued funding and having a flexible and responsive design, permitting, and implementation team available to address the emergent needs as they arise.

An unfunded program, or reductions in funding, will generally result in a worsening of any known deteriorating conditions, which may impact the Parks Division's ability to fulfill one of its core mission (taking care of what we have). Delays in addressing these conditions may result in significant additional costs and/or closure of park facilities.

5. BUDGET REQUEST BASIS

Budget request is based on past program needs adjusted to address rising design and construction costs in the region. Program budget in this appropriation is a consolidation of the individual budgets for project segments. Budget for individual project segments are based on either planning level or detailed Engineer's Estimate, past experience with previous similar project and on recent contractual commitments for design and engineering. The 2019-2020 appropriation request for the master program includes but is not limited to funding for the following: responding to emergent priority issues at docks that arise, program administration, inspections, and small repairs. This project also funds the replacement of portions of the Dockton Park dock facility located on Vashon Island. Remaining funds will also be used to study the needed repairs, removal or replacement of the piles at this dock and also the Tramp Harbor dock located on Vashon Island as required by Washington State Department of Natural Resources in the aquatic lease issued for continued use of the dock facility.

6. FUNDING AND REVENUE DISCUSSION

KC Parks has received RCO grant funding for a portion of the updates to Dockton Park Dock. This additional appropriation will help to leverage these dollars and increase Parks ability to meet its requirements in the aquatic lease.

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as capital improvements and major maintenance projects enter and complete construction phases, this work is anticipated to have impacts on the operating budget. For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

8. PROJECT STATUS

Design and permitting is underway for the first set of replacement dock components.

9. ALTERNATIVES ANALYSIS

Most medium and all large rehabilitation and replacement projects begin with a feasibility study that identifies cost effective construction materials, methods, and engineering alternatives. Alternatives are further explored, reviewed, and the best value alternative is generally selected by the Parks Management Team for final design, engineering, permitting, and implementation. A complete replacement of the floating dock was considered infeasible due to cost and current budget constraints.

10. OTHER AGENCY INVOLVEMENT

Washington State DNR is involved in matters pertaining to the Aquatic Lease. RCO has awarded a grant for a small set of updates to the Dockton Dock.

11. ART ELIGIBILITY

N/A

12. EQUITY AND SOCIAL JUSTICE IMPACT

King County's park system impacts determinants of equity such as access to parks and natural resources, healthy built and natural environments, and strong, vibrant neighborhoods. These investments will benefit underserved communities and disadvantaged individuals that use these facilities.

NARRATIVES

PKS M: RSTRM REHAB & RPLMNT

1123893

1. CURRENT PROJECT SCOPE

Restroom Rehabilitation and Replacement - This project will assess, evaluate, rehabilitate, enhance, and/or replace existing aging park restroom facilities throughout King County's park system in order to ensure they remain usable, functional and open for public and staff use.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Restroom facilities proposed in this project are past their useful life and replacement will provide an opportunity to install more water efficient toilets and fixtures. The Parks Division has received numerous complaints from park users about the poor condition of these restroom facilities. The proposed improvements will enhance visitor use of park facilities.

4. PROJECT BENEFITS/OUTCOMES

Updated restroom facilities will create a more enjoyable park user experience and will improve operating and maintenance efficiency.

5. BUDGET REQUEST BASIS

Budget is based on detailed Engineer's Estimate, past experience with previous similar projects for design, engineering, permitting, and construction. The 2019-2020 appropriation will be used to fund design, engineering, permitting and construction of emerging priority restroom issues, replace the restroom at Coalfield Park, rehab and/or replace the restroom at Five Mile Lake. Other high priority restroom projects identified for upcoming 6-Year CIP include but are not limited to the following: Dockton Park, Tolt McDonald Park, Dick Thurnau Park, Sammamish River Trail at Northshore, Redmond Ridge and some of those in Marymoor Park.

For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

8. PROJECT STATUS

In 2017/2018 King County focused on developing and finalizing restroom design standards for use throughout its system. The standards will be used for future restroom projects. By the end of 2018 King County plans to purchase up to six Portland Loo (brand name for urban restroom designed by City of Portland to discourage nefarious activities) single user restroom facilities for testing in high risk parks with high incidents of vandalism and nefarious activities. Four are scheduled for installation at Steve Cox Park in 2018 and two for installation at Skyway Park in 2019.

9. ALTERNATIVES ANALYSIS

A non-action alternative would result in frequent repairs and probable closure of restroom facilities. Delays in addressing this condition may result in additional costs and could create negative public opinion of the lack of service provided to the community.

10. OTHER AGENCY INVOLVEMENT

Permitting agencies may have limited involvement. No other agency involvement is anticipated.

11. ART ELIGIBILITY

N/A

12. EQUITY AND SOCIAL JUSTICE IMPACT

King County's park system impacts determinants of equity such as access to parks and natural resources, healthy built and natural environments, and strong, vibrant neighborhoods. These investments will benefit underserved communities and disadvantaged individuals that use these facilities.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Programmatic Sustainable Scorecard Platinum will be targeted where applicable. Parks seeks to minimize its impact on the environment, and by facilitating access to nature and outdoor recreation opportunities, hopes to educate the community of the need to protect open space for future generations.

NARRATIVES

PKS M: PK LOT & PTHWY RHB

1123894

1. CURRENT PROJECT SCOPE

The Parking Lot and Pathway Rehabilitation Program - funds emergent parking lot or pathway repairs, rehabilitation of existing parking lots and pathways, as well as, design, engineering, permitting and implementation of parking lot improvement and pavement conversion projects in high priority locations within King County's Parks system.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Parking lots and pathways are critical to maintaining safe and ADA compliant access to King County's Parks system. A number of parking lots and pathways are in a state of significant deterioration. It is critical that the Division invest in its infrastructure to keep parks open and safe for public use. Further delay or slowing of this work increases the amount of damage and degradation to these facilities, thereby significantly increasing costs and risks to the public.

4. PROJECT BENEFITS/OUTCOMES

A safe and open Park System with usable assets is the primary benefit and outcome of this program. Keeping parks capital investments and assets safe and open is a requirement for continued operation of any facility. An unfunded program, reductions in funding, or non-action funding alternative will generally result in a worsening of any known deteriorating conditions impacting capital assets within the system and which may impact the Parks Division's ability to fulfill its mission. Delays in addressing these conditions may also result in significant additional costs and/or closure of park facilities.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M: PK LOT & PTHWY RHB

1123894

5. BUDGET REQUEST BASIS

Budget is based on Planning Level Engineer's Estimate, past experience and costs associated with past contracts for design, engineering, and construction. This 2019-2020 capital appropriation funds emergent pavement repairs, parking lot and pathway rehabilitation, and improvements at high priority locations. It allows the Division to bring parking lots and pathways up to current design and safety standards. Major elements of the program include pathway ADA accessibility within parking lots, sub-base repair, paving, tree removal, parking lot drainage improvements, and installation of root barrier as needed.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as capital improvements and major maintenance projects enter and complete construction phases, this work is anticipated to have impacts on the operating budget. For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

NARRATIVES **PKS M: DRNGE/SWR/WTR SYSTM RHB** **1123896**

1. CURRENT PROJECT SCOPE

Utility System Rehabilitation Program - This project will assess, evaluate, rehabilitate and/or replace existing underground and aerial utility systems (drainage, electrical, communication, water, and sewer) serving park buildings and facilities in order to ensure the continued operation of facilities, as well as, the safety of the public and staff.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Deteriorating utility systems at aging park facilities require ongoing capital investments to fund required significant repairs and/or replacement. Failure to remedy these failing systems may require closure of park facilities.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M: DRNGE/SWR/WTR SYSTM RHB

1123896

4. PROJECT BENEFITS/OUTCOMES

A safe open Park System with usable capital assets is the primary benefit and outcome of this program. Keeping parks capital assets safe and usable is a requirement for continued operation of any facility. This is the direct result of having a flexible and responsive design and implementation team available to address the emergent needs as they arise.

An unfunded program, reductions in funding, or non-action funding alternative will generally result in a worsening of any known deteriorating conditions impacting capital assets within the system and which may impact the Parks Division's ability to fulfill its mission. Delays in addressing these conditions may also result in significant additional costs and/or closure of park facilities.

5. BUDGET REQUEST BASIS

Budget is based on Planning Level Engineer's Estimate, past experience and costs associated with past contracts for design, engineering, and construction. High priority projects in this 2019-2020 capital appropriation request include capital investments in replacement of failing culverts in the Parks System and additional emerging utility system priorities which are identified during the biennium.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as capital improvements and major maintenance projects enter and complete construction phases, this work is anticipated to have impacts on the operating budget. For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

8. PROJECT STATUS

Ongoing projects/program

9. ALTERNATIVES ANALYSIS

Each utility system location is reviewed for a variety of possible engineered alternatives during the design process.

10. OTHER AGENCY INVOLVEMENT

Permitting agencies may have limited involvement. No other agency involvement is anticipated.

11. ART ELIGIBILITY

The project is not visible to the public and for minor rehabilitation.

12. EQUITY AND SOCIAL JUSTICE IMPACT

King County's park system impacts determinants of equity such as access to parks and natural resources, healthy built and natural environments, and strong, vibrant neighborhoods. These investments will benefit underserved communities and disadvantaged individuals that use these facilities.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Programmatic Sustainable Scorecard Platinum will be targeted where applicable.

Parks seeks to minimize its impact on the environment, and by facilitating access to nature and outdoor recreation opportunities, hopes to educate the community of the need to protect open space for future generations.

NARRATIVES

PKS M:EMERALD NCKLCE TR

1123925

1. CURRENT PROJECT SCOPE

Emerald Necklace Trail - This grant request would provide for some early feasibility work (appraisals and title work) to be completed to support acquisition of parcels in fee or easement within the Patterson Creek Basin that would both serve as an addition to the County's Soaring Eagle Park and address some crucial missing links associated with the proposed "Emerald Necklace", an inter-jurisdictional effort to create a continuous 28-mile trail encircling the Sammamish Plateau within, and adjacent to, the City of Sammamish. This proposed trail project would connect to many local/community trails currently located on public lands within the vicinity and the regional trails that surround Sammamish. Approximately 80% of the proposed Emerald Necklace trail is already in place.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

The proposed project is consistent with King County Park and Recreation Division's goal of providing connectivity between public lands and to regional trail corridors, increasing public access to existing park lands and conserving critical fish and wildlife habitat. The parcels are also identified in the WRIA 8 Plan and the Land Conservation Initiative inventory as high conservation priorities. The City of Sammamish and the Mountains to Sound Greenway are spearheading Emerald Necklace trail effort. King County is involved due to its park ownership within the proposed trail corridor and the fact that a large portion of the trail would be located in unincorporated rural zoned lands. This project is supported by the City of Sammamish and several key stakeholder groups (Sammamish Friends, Sammamish Walks, and Issaquah Alps Trail Club). The Conservation Futures Tax (CFT) Citizens Committee, a council-appointed committee to advise on open space acquisitions, recommended this funding request.

4. PROJECT BENEFITS/OUTCOMES

If fully implemented, this project will help facilitate the acquisition of an addition of 40 acres of land to Soaring Eagle Park and trail conservation easements on multiple parcels adding several miles of additional linkages of the Emerald Necklace Trail.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M:EMERALD NCKLCE TR

1123925

5. BUDGET REQUEST BASIS

The budget request is based on estimates for early due diligence work provided by Water and Land Resource (WLR) Open Space Acquisitions staff and as recommended by the Conservation Futures Tax (CFT) Committee. This project would allow feasibility work to support acquisition of multiple key "missing link" parcels located in the proposed Emerald Necklace Corridor as described above.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

King County Parks, Trails and Open Space Replacement Levy includes an annual, inflation-adjusted allotment for stewardship of newly-acquired natural lands.

8. PROJECT STATUS

Initial mapping and analysis of the proposed trail corridor have begun. An appraisal and a title report has been ordered for two of the properties for which there is a willing seller. This project builds upon an earlier acquisitions in 2017 that resulted in the fee acquisition of 170 acres which became an addition to Soaring Eagle and contributed to completing some portions of the Emerald Necklace Corridor. Funds from the King County's Transfer of Development Rights (TDR) Program (as a result of sale of the parcels' development rights to developers within the City of Sammamish) may also be available to support some of the parcels within the larger acquisition project scope.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

The City of Sammamish has an interest in working with King County in support of the overall Emerald Necklace Corridor vision and has partnered with the County on a TDR ILA that helps provide funding to support acquisitions related to this project.

11. ART ELIGIBILITY

Open Space Acquisition

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project furthers goals of the King County Strategic Climate Action Plan (SCAP), by protecting forested lands.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES PKS M: MARYMOOR PARK 1123996

1. CURRENT PROJECT SCOPE

Marymoor Park Program - This master program would fund priority and emergent projects to address priority capital rehabilitation needs, major maintenance, repair and safety needs at Marymoor Park.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M: MARYMOOR PARK

1123996

3. PROJECT JUSTIFICATION

Marymoor Park is a regional destination, an important and essential asset to the Parks Division. It is identified in the current Parks Levy as an essential regional park facility and requires continued investment in order to ensure it is available for use by citizens. Parks has many ongoing operational requirements needed to keep the system open and usable by constituents. A critical necessity of keeping parks open is to ensure that capital assets are in safe operating order. Emergent capital or major maintenance repair needs occur weekly that must be undertaken and completed in an accelerated manner in order to keep facilities open. Safety is of paramount concern given the volume of users in the Parks System and having adequate funding to respond is an essential part of operating a parks system.

4. PROJECT BENEFITS/OUTCOMES

A safe and open Park System with usable assets at Marymoor Park is the primary benefit and outcome of this program. Keeping parks capital investments and assets safe and open is a requirement for continued operation of any facility. An unfunded program, reductions in funding, or non-action alternative will generally result in a worsening of any known deteriorating conditions, which may impact the Parks Division's ability to fulfill its mission. Delays in addressing these conditions may result in additional costs or closure of park facilities.

A safe and open Park System with usable capital assets is the primary benefit and outcome of this program. Keeping parks capital assets safe and usable is a requirement for continued operation of any facility. This is the direct result of having a flexible and responsive design and implementation team available to address the emergent needs as they arise.

An unfunded program, reductions in funding, or non-action funding alternative will generally result in a worsening of any known deteriorating conditions impacting capital assets within the system and which may impact the Parks Division's ability to fulfill its mission. Delays in addressing these conditions may also result in significant additional costs and/or closure of park facilities.

5. BUDGET REQUEST BASIS

Budget is based on Planning Level Engineer's Estimate, past experience and costs associated with past contracts for design, engineering, and construction. The 2019-2020 proposed capital appropriation for this master program funds continued identification, planning, design, engineering, permitting, and construction of priority and emergent projects to address priority capital rehabilitation needs, major maintenance, repair and safety needs at Marymoor Park. The planned asset improvement projects funded by this 2019-2020 appropriation at Marymoor Park include, but are not limited to, the following: synthetic turf field surface replacement, a variety of infrastructure issues at Clise Mansion, Cottage interior remodeling, improvements to North Utility building, picnic shelter upgrades, pathway improvements, and pedestrian lighting at parking lots.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as capital improvements and major maintenance projects enter and complete construction phases, this work is anticipated to have impacts on the operating budget. For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

NARRATIVES

PKS:ASSET MGT SYS

1124055

1. CURRENT PROJECT SCOPE

Parks Asset Management System - This is a project to customize and setup a Parks Asset Management System using Lucity Software. It also includes ongoing collection of asset data, conducting inspections to update existing asset data, software licensing fees, and labor to maintain/operate the software system once implemented. The project also proposes to develop a prioritization algorithm for identified asset deficiencies and their repair or replacement.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

As the division embarks on the renovation and construction of a significant number of capital assets. There exists a need to make more informed data driven decisions. This requires that we develop a data set of new and existing assets, procedures to manage those assets, and an automated system to manage and track major maintenance details, drawings, and documents associated with each asset, including their priority ranking for major maintenance, inspection, protection and renewal. The automated system will allow the division to track and report on all Parks assets and to maintain a record of each of the assets, asset service schedules, major maintenance records, the current value of the asset and a schedule for asset replacement. It would also allow Parks to establish regular rehabilitation and replacement cycles and allow the division to develop a system to assist the division in the management and prioritization of the repair and replacement all of its assets.

4. PROJECT BENEFITS/OUTCOMES

This project will allow the Division to more efficiently and accurately identify and prioritize repair and replacement of parks assets using data driven decisions.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PKS:ASSET MGT SYS

1124055

5. BUDGET REQUEST BASIS

The budget request is based on the Project Manager's estimate of labor and other equipment costs to collect, input, maintain, and analyze data as well as anticipated software licensing fees. The 2019-2020 appropriation request will allow the division to complete the implementation of the Parks Asset Management System using Lucity Software. It will also pay for the costs associated with collecting, updating, and maintaining data in the system.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as capital improvements and major maintenance projects enter and complete construction phases, this work is anticipated to have impacts on the operating budget. For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

8. PROJECT STATUS

The division is currently working with Lucity to setup, customize, and import existing asset data into the asset management system. Park's goal is to go Live with existing asset data in the system by the end of 2018. Continued timely support for the IT and GIS team is essential in order to meet this goal.

9. ALTERNATIVES ANALYSIS

A lack of funded would result in a no-action alternative that would result in a delay in the collection and automation of the agency's physical assets and a delay in the automation of the documentation of maintenance records. It would also make prioritization of future projects less efficient and more costly.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not visible to the public.

12. EQUITY AND SOCIAL JUSTICE IMPACT

King County's park system impacts determinants of equity such as access to parks and natural resources, healthy built and natural environments, and strong, vibrant neighborhoods. Investment in this system will benefit underserved communities and disadvantaged individuals that use these facilities.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This is a software and data collection program only and the requirements of the Green Building Ordinance do not apply.

NARRATIVES

PKS COLD/COTTAGE LAKE CREEK

1127071

1. CURRENT PROJECT SCOPE

Cottage Lake Creek - This project is to acquire and protect significant open space lands along Cottage Lake Creek, an important salmon bearing stream.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

This acquisition preserves open space along Cottage Lake Creek. It furthers goals established in the King County Comprehensive Plan, the King County Open Space Plan, the Strategic Climate Action Plan, and the WRIA 8 Salmon Conservation Plan.

4. PROJECT BENEFITS/OUTCOMES

This project will add up to 5 acres of undeveloped open space along Cottage Lake Creek, permanently protecting an important regional asset, preserving wildlife habitat and other open space benefits such as flood reduction, water quality, and salmon habitat.

5. BUDGET REQUEST BASIS

The budget request is based on market value of the target property and recommended by the Conservation Futures Tax (CFT) Committee. This project will acquire a property on the Nicholls property along Cottage Lake Creek. They own ~ 11 parcels totaling 35 acres.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

King County Parks, Trails and Open Space Replacement Levy includes an annual, inflation-adjusted allotment for stewardship of newly acquired natural lands.

NARRATIVES

PKS VASHON ISLND S UPLAND FRST

1129476

1. CURRENT PROJECT SCOPE

Vashon Island South Upland Forest Acquisition - This is a multi-year project to conserve more than 500 acres of upland forest on the south end of Vashon Island, creating a community forest and passive recreational opportunity.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

This is an ongoing initiative to conserve large blocks of undeveloped forest land in SE Vashon Island. More than 500 acres of upland forests could be preserved to connect to Camp Sealth and Misty Isle Farm, other large forest landholdings, and adjacent natural areas along the shoreline. The acquisition approach may include both development rights and fee purchase.

The Conservation Futures Tax (CFT) Citizens Committee, a council-appointed committee to advise on open space acquisitions, recommended this funding request.

4. PROJECT BENEFITS/OUTCOMES

This project contributes to the county's Land Conservation Initiative and Strategic Climate Action Plan.

5. BUDGET REQUEST BASIS

The budget request is based on market value of the target property and recommended by the Conservation Futures Tax (CFT) Committee. Acquire 40 acres of forested land that would add to Frog Holler Forest as part of an initiative on southwestern Vashon Island to conserve large tracts of upland forests.

6. FUNDING AND REVENUE DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M: PARKS ENERGY EFFICIENCY

1129671

1. CURRENT PROJECT SCOPE

The Parks Energy Efficiency Program (PEEP) Program - funds emergent priority energy issues that arise, energy audits of existing park facilities and the ongoing replacement of existing energy consuming systems with better energy controls and more energy efficient systems.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This master program allows the Parks Division to meet its Strategic Climate Action Plan (SCAP) goals of reducing energy and greenhouse gas emissions. It also reduces short and long term energy costs which will free up utility funds in the operating budget.

4. PROJECT BENEFITS/OUTCOMES

Reduced energy consumption, lower operating costs, and reduced greenhouse gas emissions.

5. BUDGET REQUEST BASIS

Budget is based on planning level estimate, past experience with previous types of projects and on past contractual commitments for design and engineering. This 2019-2020 appropriation will fund the following: emergent priority energy issues that arise, energy audits of existing park facilities, the ongoing replacement of existing energy consuming systems with better energy controls and more energy efficient systems.

6. FUNDING AND REVENUE DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M:PARKS ENERGY EFFICIENCY

1129671

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as capital improvements and major maintenance projects enter and complete construction phases, this work is anticipated to have reduced relative energy costs for the operating budget. For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

8. PROJECT STATUS

Parks has and continues to strive to reduce its impacts on the environment. The program has installed a significant number of energy efficient systems and continues to identify and implement new ones.

9. ALTERNATIVES ANALYSIS

Energy alternatives are continually evaluated for each project undertaken in this master program, always considering the latest available proven technologies.

10. OTHER AGENCY INVOLVEMENT

The Lighting Lab, PSE and Seattle City Light are consulted for information on latest proven technologies and available energy rebates that allow master program funds to be go toward other projects.

11. ART ELIGIBILITY

Maintenance or minor rehabilitation.

12. EQUITY AND SOCIAL JUSTICE IMPACT

King County's park system impacts determinants of equity such as access to parks and natural resources, healthy built and natural environments, and strong, vibrant neighborhoods. These investments will benefit underserved communities and disadvantaged individuals that use these facilities.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Programmatic Sustainable Scorecard Platinum will be targeted where applicable. Parks seeks to minimize its impact on the environment, and by facilitating access to nature and outdoor recreation opportunities, hopes to educate the community of the need to protect open space for future generations.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

PKS GRANT CONTINGENCY 3581

1129676

1. CURRENT PROJECT SCOPE

Grant Contingency 3581 - This project provides Parks with more flexibility on the budget side to deal with both anticipated and unanticipated future grant opportunities. The Grant Contingency request is being split between the two capital funds in Parks.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

The Grant Contingency project is being requested in anticipation of projects to be supported by grant revenues or other external funding sources. This request will expedite the implementation of capital projects that are expected to receive grant revenues without having to wait for a supplemental budget opportunity. It is expected that this efficiency will also result in lower project costs based on the ability to contract for services such as design and construction in a more timely manner.

4. PROJECT BENEFITS/OUTCOMES

Time saving and efficiency

5. BUDGET REQUEST BASIS

The amount requested is based on grants that have either already been applied for or currently under consideration. Potential granting agencies include the Puget Sound Regional Council (PSRC), the State's Recreation & Conservation Office (RCO), WADNR, King County Flood District, Land and Water Conservation Fund (LWCF), Washington State Department of Ecology (WSDOE), Washington State Department of Transportation (WSDOT), Bian Abbott Fish Barrier Removal Board, and the Cooperative Watershed Management (CWM).

NARRATIVES PKS M:RTS MONITORING & MAINT 1129690

1. CURRENT PROJECT SCOPE

Regional Trail System Monitoring & Maintenance - This master program funds on-site assessments of capital plantings and mitigation along the Regional Trail System Projects. In addition, during the permit required time periods, the program funds are used to evaluate the health of landscape plantings, perform required site maintenance and monitoring, remove invasive plants, replant dead or damaged plants, and provide reports to regulatory agencies for review and approval.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M:RTS MONITORING & MAINT

1129690

3. PROJECT JUSTIFICATION

Public agencies are not generally required to post bonds for these permit requirements. Permitting agencies and/or local city ordinances still require King County to install significant planting on new capital projects and compliance is mandatory. This planting must be maintained in accordance with permit conditions and city standards. They also must be regularly monitored to ensure survivability standards (can be anywhere between 85-100%) are being met. Funding will provide appropriate compliance monitoring and maintenance to meet the permit requirements and city standards. Monitoring and maintenance is typically required for at least 3 to 10 years or for as long as it takes to meet survivability standards. Failure to meet standards may require planting and longer monitoring periods.

4. PROJECT BENEFITS/OUTCOMES

Successful maintenance of these sites adds the user enjoyment of the regional trails. Successfully maintaining and achieving performance standards within the targeted timeframe also keeps King County Parks is high standing with citizens and regulatory agencies. This makes obtaining future permits for similar capital project work easier and faster.

5. BUDGET REQUEST BASIS

Budget for this 2019-20 appropriation request is based on actual historical costs of successfully maintaining and monitoring similar sites over the past few years. These costs have been slightly adjusted for anticipated increasing labor, equipment, and materials costs based on growth and demands in the region. The 2019-2020 budget appropriation request will fund emergent trail landscape issues that arise, monitoring and maintenance of permit required landscaping and mitigation areas, as required by permit agencies and local jurisdictions. Locations currently included in this master program are the following: East Lake Sammamish Trail, Lake to Sound Trail, Burke Gilman Trail, and other regional trails as needs emerge.

6. FUNDING AND REVENUE DISCUSSION

The requested amount includes a transfer of \$4,195 from a completed project #1044591 (PKS Burke Gilman Regional Trail).

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as capital improvements and major maintenance projects enter and complete construction phases, this work is anticipated to have impacts on the operating budget. For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

8. PROJECT STATUS

Six distinct locations along three trails were monitored and maintained in 2017/2018. One of these sites successfully met its performance standards and was approved by the regulatory agency as no longer requiring monitoring or maintenance. At least three new locations are expected to be added for 2019/2020, and two existing locations are on track to meet performance standards by 2020.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

Federal, state, and local permitting agencies must approve monitoring and maintenance success at a site. King County Parks utilizes the King County Community Work Program (DAJD) for maintenance in some locations.

11. ART ELIGIBILITY

It is a monitoring and maintenance project.

12. EQUITY AND SOCIAL JUSTICE IMPACT

King County's park system impacts determinants of equity such as access to parks and natural resources, healthy built and natural environments, and strong, vibrant neighborhoods. These investments will benefit underserved communities and disadvantaged individuals that use these facilities.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Landscaping and mitigation areas are included in the Sustainable Scorecard analysis that is done for the associated project, and thus are not reevaluated a second time under this program. Parks seeks to minimize its impact on the environment and by facilitating access to nature, hopes to educate the community of the need to protect open space for future generations

NARRATIVES

PKS M:SKYWAY PARK

1129700

1. CURRENT PROJECT SCOPE

Skyway Park - This program is for the planning, design, engineering, permitting and construction of the proposed Skyway Park improvements. This project will make multiple improvements, including installing a new mini open play soccer arena, installing an larger playground, adding adult fitness equipment, upgrading fencing, lighting, restrooms and ADA access, repurposing poorly draining ballfields to a grassy meadow, and creating a new pedestrian entry way.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Skyway Park is located in an urban portion of unincorporated King County that has been economically disadvantaged and struggling for many years. Skyway-West Hill shows vast differences from countywide averages: the residents are among the most diverse in the region with a majority-minority population, household income is considerably lower than in the rest of county, and nearly every public health indicator such as heart disease, obesity, and access to healthy food, is alarmingly higher than those found countywide and in adjacent cities. Also noteworthy is the rate of children are deemed eligible for free and reduced cost school meals, which ranges from 69 percent to 86 percent in the schools serving students from Skyway-West Hill.

Providing facilities that encourage free play and team sports in this area will pay substantial dividends for the community in the long term with opportunities to exercise and outlets for fresh area and physical activity.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M:SKYWAY PARK

1129700

4. PROJECT BENEFITS/OUTCOMES

Ultimately, this project seeks to inspire revitalization of the community by creating a vibrant and safe community asset in Skyway Park. This project is building on the recommendations of a community-led comprehensive planning effort that engaged a broad range of residents and stakeholders and that integrated issues of equity, public health, education, housing, transportation, and public infrastructure. Once complete, this project will enable the park to truly become a focal point for the community, cultivating a sense of place, encouraging physical activity and healthy lifestyles, and offering a safe place for youth and families to gather and enjoy the outdoors.

Providing facilities that encourage free play and team sports in this area will pay substantial dividends for the community in the long term with opportunities to exercise and outlets for fresh area and physical activity.

5. BUDGET REQUEST BASIS

Budget is based on detailed Engineer's Estimate, past experience with similar projects and on contractual commitments for design and engineering. The 2019-2020 budget appropriation will be used to continue with the improvements that could not be included in the scope for the 2017-2018 improvements due to insufficient funds, which based on current estimate, would potentially include a new pedestrian entry-way, expanded parking, and enhancement of the existing restroom facilities.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as capital improvements and major maintenance projects enter and complete construction phases, this work is anticipated to have impacts on the operating budget. For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

8. PROJECT STATUS

The project is currently in intermediate design and permitting for improvements with estimated construction by a Contractor to occur in 2019. One baseball field was rehabbed/repared in Spring 2018 for use by the little league. Additional smaller improvements may be constructed in 2018 by King County crews including enhanced fencing, kiosks, and signage.

9. ALTERNATIVES ANALYSIS

As part of the schematic design process, alternatives and priorities were considered with community input. The improvements desired exceed the available funding, so construction of the proposed improvements are being phased as funding becomes available. The partnership with Skyway Solutions, Seattle Sounders, CPG grant funds, and LWCF grant funding together provide a good foundation of funds and support for the project.

10. OTHER AGENCY INVOLVEMENT

Through a grant from Seattle/King County Public Health, Skyway Solutions, a local nonprofit, worked to develop conceptual design of the Park. This was used as a starting point for the schematic design. The funds from the Car Rental Tax in the 2017/18 budget provided matching funds for a Land and Water Conservation Fund (LWCF) grant awarded in 2017. Rainier Little League is participating in the revitalization of the park by once again scheduling games at the recently rehabbed baseball field. Additionally, the Seattle Sounders FC have already committed to supporting this project by delivering free soccer balls to the surrounding community, offering free clinics and camps for the kids in the community, and will work to leverage their other partners to support kids in the classroom and on the field.

11. ART ELIGIBILITY

NARRATIVES

PKS SNOQ VLLY TRL NORTH ACQ

1132221

1. CURRENT PROJECT SCOPE

Snoqualmie Valley Trail - The project is to secure a trail easement on 0.34 miles of former railroad right-of-way to complete the northern end of the 31-mile long Snoqualmie Valley Trail corridor, at the Snohomish-King County line.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

Funding helped to do background work necessary to secure the last remaining segment of the historic Milwaukee Road railroad corridor for the future extension of the soft-surface Snoqualmie Valley Trail.

4. PROJECT BENEFITS/OUTCOMES

Acquisition of this property will allow for the future extension of the Snoqualmie Valley Trail North to the Snohomish County line and eventual connection to a planned trail to the cities of Monroe and Snohomish.

5. BUDGET REQUEST BASIS

The budget request is based on market value of the target property and recommended by the Conservation Futures Tax (CFT) Committee.

6. FUNDING AND REVENUE DISCUSSION

The amount requested may be adjusted once the appraisal has been finalized and after CFT grant decisions are made for 2018.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PKS SNOQ VLLY TRL NORTH ACQ

1132221

7. OPERATING BUDGET AND OTHER IMPACTS

King County Parks, Trails and Open Space Replacement Levy includes an annual, inflation-adjusted allotment for stewardship of newly acquired natural lands.

8. PROJECT STATUS

The planning work has been completed and two options have been developed for the property owners' consideration (one retaining the barn and one removing it). An appraisal has been ordered and is being reviewed by WLRD's property agent for the project.

9. ALTERNATIVES ANALYSIS

Two options have been developed for the trail through this property: one retains the barn and routes the trail to the west of the barn and the other removes the barn.

NARRATIVES

PKS KEEVIE LAKE ACQ

1132225

1. CURRENT PROJECT SCOPE

Keevie Lake Acquisition - This project would establish a new area of protection for the county west of Black Diamond - approximately 170 acres of family ownership (and potentially adjacent forested lands owned by others).

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

Keevie Lake is in the headwaters of Crisp Creek, where the Muckleshoot Indian Tribe has its Keta Creek Hatchery downstream. The lake offers habitat for a high diversity of bird species, and the hundreds of acres of forest offer wildlife habitat opportunity. This scenic lake is relatively undeveloped which is rare in the county, and this is a unique opportunity to preserve this system.

The Conservation Futures Tax (CFT) Citizens Committee, a council-appointed committee to advise on open space acquisitions, recommended this funding request.

4. PROJECT BENEFITS/OUTCOMES

This project acquires 170 acres of RA-5 zoned land west of Black Diamond, a city that is planning for a massive population growth. This acquisition preserves un-developed forested land surrounding Crisp Creek from development. Additionally, the proximity to the new development in Black Diamond makes this site an ideal location for passive recreation (hiking) for the residents of Black Diamond.

5. BUDGET REQUEST BASIS

The budget request is recommended by the Conservation Futures Tax (CFT) Committee. The current budget request focuses on the four parcels that contain most of north and east sides of Keevie Lake and adjacent forested uplands.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

PKS THREE FORKS NA ADD

1133889

1. CURRENT PROJECT SCOPE

Three Forks Natural Area Acquisition - This project is to acquire and protect significant open space lands adjacent to the Three Forks Natural Area along the Snoqualmie River.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

This acquisition preserves open space land adjacent to Three Forks Natural Area. This project directly furthers goals established in the King County Comprehensive Plan, the King County Open Space Plan and the Strategic Climate Action Plan.

4. PROJECT BENEFITS/OUTCOMES

This project will add almost 5 acres of undeveloped open space land along the Snoqualmie River to Three Forks Natural Area permanently protecting an important regional asset, preserving wildlife habitat and other open space benefits such as flood reduction and water quality.

5. BUDGET REQUEST BASIS

The budget request is based on market value of the target property and recommended by the Conservation Futures Tax (CFT) Committee. This project is to acquire approximately 4.67 acres of a larger 39 acre parcel along the Snoqualmie River and add it to Three Forks Natural Area. The goal is to protect riparian habitat and accommodate public use to a popular summer river destination and swimming beach along the Snoqualmie River. The owner of the parcel is managing the parcel for sustainable forestry and would like to sell the portion of his property along the river. The project would require a boundary line adjustment prior to acquisition.

NARRATIVES

PKS CEMETERY POND OPN SPCE ADD

1133891

1. CURRENT PROJECT SCOPE

Cemetery Pond Open Space Acquisition - To acquire lands in the vicinity of Cemetery Pond on the East Renton Plateau to inquire about willingness to sell property to the County for open space acquisitions in the area. Project scope includes potential acquisitions of eight parcels covering five acres adjacent to the Cemetery Pond Regional Stormwater Facility.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

In response to a Comprehensive Plan work plan item to identify community desired amenities in the East Renton Plateau area to mitigate effects of added density resulting from transfers of development rights through the County's Transfer of Development Rights (TDR) program. Furthermore these parcels are contemplated in King County Motion 2017-0396 which passed Council on October 16, 2017. This motion "establishes as a priority for the conservation futures citizen oversight committee's consideration during the annual project selection and funding recommendation process, one or more projects that includes the purchase or property rights for the purpose of wildlife habitat, aquatic resources or stewardship in the vicinity of Cemetery Pond in the unincorporated Four Creeks community east of Renton."

4. PROJECT BENEFITS/OUTCOMES

Additional open space in the neighborhood for residents to enjoy.

5. BUDGET REQUEST BASIS

The budget request is based on market value of the target property and recommended by the Conservation Futures Tax (CFT) Committee.

6. FUNDING AND REVENUE DISCUSSION

The TDR program has funds available from past Conservation Futures Tax awards to contribute to acquisitions. Exact funding necessary to complete the acquisitions will be determined through appraisals and negotiations with willing sellers (if any).

NARRATIVES

PKS MOLASSES CREEK

1133892

1. CURRENT PROJECT SCOPE

Molasses Creek Area Acquisition - this project would contribute to conservation within the Lower Cedar Basin (Cedar River Watershed) in urban unincorporated King County and serve as additions to the approximately 800-acre King County Soos Creek Regional Trail/Park complex. Conservation of these properties preserve a valuable riparian corridor and provide protection for migrating fish as well as create additional permanent open space for passive recreation, including the potential for developing opportunities for trail connections. The full project scope would support acquisition of 5 parcels (totaling about 9 acres) owned by King County Roads.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

The proposed project is consistent with King County Park and Recreation Division's goal of providing connectivity between public lands and to regional trail corridors, increasing public access to existing park lands and conserving critical fish and wildlife habitat. These parcels are located within a high priority conservation area documented in the 2013 Soos Creek Regional Park Site Management Guidelines, are listed in the Land Conservation Initiative inventory and were identified as priorities for Conservation Futures Tax levy funding by Councilmember Dunn via Council Motion 14957 (September 19, 2017). The Conservation Futures Tax (CFT) Citizens Committee, a council-appointed committee to advise on open space acquisitions, recommended this funding request.

4. PROJECT BENEFITS/OUTCOMES

Acquisition of the target parcel will acquire an "inholding" within the existing Soos Creek Regional Park and the full project scope would ensure protection of a portion of Molasses Creek and create a new local community passive park.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PKS MOLASSES CREEK

1133892

5. BUDGET REQUEST BASIS

The budget request is based on an appraisal of the target property conducted by a private appraiser hired by King County Roads and amount recommended by the Conservation Futures Tax (CFT) Committee. The current project scope includes the acquisition of an approximately 1.18 acre parcel.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

King County Parks, Trails and Open Space Replacement Levy includes an annual inflation-adjusted allotment for stewardship of newly-acquired lands.

8. PROJECT STATUS

New project.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

The property is under King County Roads custodianship and the surplus process is being managed by King County Facility Management Division (FMD)/Real Estate Services.

11. ART ELIGIBILITY

Open Space Acquisition

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project furthers goals of the King County Strategic Climate Action Plan (SCAP), by protecting forested lands.

NARRATIVES

PKS URBAN GREEN SPACE ACQ

1133893

1. CURRENT PROJECT SCOPE

Urban Green Space Acquisition - This is a new and long term acquisition effort to increase public green space in urban communities. The goal is to identify and acquire vacant parcels of urban forest adjacent to or near existing county park lands as well as residential parcels that improve public access and safety at existing county parks. In addition, this project will seek to add urban green space in areas that are devoid of parks and green space. The project will engage community groups and stakeholders to help identify open space and park needs in various urban unincorporated areas.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

PKS URBAN GREEN SPACE ACQ

1133893

3. PROJECT JUSTIFICATION

King County Executive has proposed a countywide Landscape Conservation Initiative (LCI) to protect and secure the 65,000 acres of remaining high conservation value lands within the next 30 years. Equity is an over-arching theme across the entire Initiative. Land protection is a region-wide benefit; the County and cities must ensure these benefits accrue to all residents. The initiative seeks to improve equity across all communities in access to natural areas and green spaces by directly investing dollars in communities that currently do not have green spaces, so that every resident of King County can reap the many benefits that come from accessing nature. (King County Land Conservation Advisory Group – Final Report, December 2017).

The LCI fully supports King County's Equity and Social Justice Strategic Plan, which guides future actions to advance environmental justice including access to open spaces, habitat, trails, trees, green infrastructure, energy conservation and climate response.

The LCI established an Open Space Equity Objective which identified Priority Areas for acquisition funding support. Priority Areas represent neighborhoods where targeted investments to create readily accessible public open spaces and trails will have a significant impact on open space access.

All or parts of the West Hill and North Highline neighborhoods are designated as Priority Areas.

4. PROJECT BENEFITS/OUTCOMES

This project contributes to the county's Equity and Social Justice Initiative, Land Conservation Initiative and Strategic Climate Action Plan.

5. BUDGET REQUEST BASIS

The budget request rely upon appraised market value of target properties and recommended by the Conservation Futures Tax (CFT) Committee. The goal is to identify and acquire vacant parcels of urban forest adjacent to or near existing county park lands as well as residential parcels that improve public access and safety at existing county parks.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

King County Parks, Trails and Open Space Replacement Levy includes an annual, inflation-adjusted allotment for stewardship of newly-acquired natural lands.

8. PROJECT STATUS

This is a brand new acquisition project that will focus on open space acquisition in the White Center and Skyway communities.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

Department of Community and Human Services, Department of Natural Resources and Parks director's office, Skyway Solutions, White Center Community Development Association

11. ART ELIGIBILITY

Open Space Acquisition

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project has a very high ESJ impact. It will increase public access and use of parks and open space in unincorporated urban areas that have been identified as priority areas for enhanced conservation protection under the Land Conservation Initiative (LCI).

NARRATIVES

PKS MID GREEN RIVER EXPANSON

1133894

1. CURRENT PROJECT SCOPE

Green River Expansion - The County is exploring forest land protection in several areas of southeast King County, primarily southeast of Black Diamond, with a landowner with significant landholdings in the area. These properties are part of the working forest landscape in this area, however the lands could be sold for residential uses in the future, resulting in a loss of working forest land base and habitat fragmentation. The County is still developing a strategy to protect these lands as working forest over the long term, which may include easement or fee acquisition, and may include partners such as Washington State agencies or private partners. Depending on the acquisition strategy that is developed, these lands could offer trail opportunities. Many of these properties connect to publicly owned lands under Washington State or King County ownership. Across the landscape, these areas offer scenic benefits, provide habitat to many kinds of wildlife, and provide water quality and water quantity benefits within their watersheds. There may be potential to enroll these lands in a carbon credit program that is under development by the County, and to transfer development rights off of the properties.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

This project supports the preservation of open space lands as recommended in the Conservation Futures Citizen Oversight Committee report sent to Council and Executive by July 1 each year. The Committee receives applications from jurisdictions or non-profits requesting funding for fee or easement acquisitions that will achieve a variety of open space protection goals such as wildlife and salmon habitat preservation, farmland preservation, passive recreation opportunity, and urban green space preservation. The Committee reviews all proposed projects in detail, considering the potential open space benefits of each project as well as feasibility factors such as landowner willingness, urgency, ability to phase projects. The Committee's funding recommendations, if adopted, will result in progress on acquiring land in fee or easement within many cities and in the unincorporated area. The risk of not funding this project is that the targeted property may not be acquired, and the opportunity to secure the desired open space outcomes and public benefits on the property may be lost as it is sold to another landowner or developed.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

PKS MID GREEN RIVER EXPANSON

1133894

4. PROJECT BENEFITS/OUTCOMES

Newly acquired open space would be publicly accessible and provide recreational opportunities, wildlife habitat and scenic views.

5. BUDGET REQUEST BASIS

The budget request is based on market value of the target property and recommended by the Conservation Futures Tax (CFT) Committee.

6. FUNDING AND REVENUE DISCUSSION

Funded by the Parks Levy as recommended by the CFT Citizen Oversight Committee

7. OPERATING BUDGET AND OTHER IMPACTS

King County Parks, Trails and Open Space Replacement Levy includes an annual, inflation-adjusted allotment for stewardship of newly acquired natural lands.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

The project applicant considered various alternatives and proposed a certain set of parcels for funding in their application. The Committee considered various levels of funding for the project, and determined the recommended amount based on a variety of factors such as urgency, potential to phase, scope of project, open space benefits achieved, among others. An alternative to funding could be to abandon the project, however that would be unwarranted because there are willing sellers.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Open Space Acquisition

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will provide green space accessible to the general public, preserve or enhance health, and/or provide a scenic amenity from a public park, open space or right of way. There is no negative impact to an underserved community.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project furthers goals of the King County Strategic Climate Action Plan (SCAP), by protecting forested lands.

NARRATIVES

PKS ERC NE 8TH ST ACQUISITION

1133897

1. CURRENT PROJECT SCOPE

The Eastside Rail Corridor Trail NE 8th Street Acquisition - This project will support acquisitions required to provide access to the Eastside Rail Corridor trail and acquisitions that will resolve "pinch points" in the current ownership. It will allow safe crossing of NE 8th for trail users, and will also provide direct access from the trail to the Sound Transit Wilburton light rail station.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

The project is located in a segment of the ERC corridor owned by Sound Transit, and adjacent to elevated light rail currently in construction in the ERC ownership. The proposed ERC bridge over NE 8th requires additional right of way because of pinch points in the ownership in this location, and the complications of construction adjacent to active Sound transit light rail.

4. PROJECT BENEFITS/OUTCOMES

The project will allow safe crossing of NE 8th for trail users, and will also provide direct access to the Sound Transit Wilburton light rail station. There is no feasible alternative crossing location or type, and a bridge over NE 8th is necessary to complete the trail and achieve the goal of a continuous north-south corridor serving Renton, Bellevue, Kirkland, Woodinville, and Redmond.

5. BUDGET REQUEST BASIS

The budget request is based on market value of the target property and recommended by the Conservation Futures Tax (CFT) Committee. The current budget request includes partial funding for acquisition to support development of a trail bridge across NE 8th Street in Bellevue, the busiest arterial crossing in King County's segment of the Eastside Rail Corridor. Engineering and environmental review for the project began June 2018. The consultant team includes a right of way consultant who will assist with negotiation and acquisition. The project is federally funded, and will need to meet federal requirements including NEPA review.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PKS ERC NE 8TH ST ACQUISITION

1133897

6. FUNDING AND REVENUE DISCUSSION

Engineering and environmental for the project is funded and underway (\$1.5 million including \$.5 million federal grant contribution). Additional funding will be required to complete the project. \$2 million in federal funding has been secured in 2018 towards construction. Updated acquisition costs and engineer's estimates for the project will be available in early 2019.

7. OPERATING BUDGET AND OTHER IMPACTS

King County Parks, Trails and Open Space Replacement Levy includes an annual, inflation-adjusted allotment for stewardship of newly acquired natural lands.

8. PROJECT STATUS

New project

9. ALTERNATIVES ANALYSIS

Several alternative crossing options were explored in the ERC master plan and preliminary design for the bridge crossing. The selected alternative is the most feasible and provides the most public benefit of the options explored. The general project scope was included in the ERC SEPA EIS finalized in 2016.

10. OTHER AGENCY INVOLVEMENT

Sound Transit is the underlying owner for the majority of the project. The project is being developed in coordination with Sound Transit and the City of Bellevue.

11. ART ELIGIBILITY

Open Space Acquisition

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will improve access to the Regional Trail System and reduce the gaps in non-motorized connectivity between the cities of Renton and Bellevue. The project also provides direct access to Sound Transit light rail and King County Metro RapidRide B line.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project furthers goals of the King County Strategic Climate Action Plan (SCAP), by protecting forested lands

NARRATIVES

PKS M:MILLION TR-FOREST HEALTH

1134312

1. CURRENT PROJECT SCOPE

Million Tree Forest Health Program - This program funds forest restoration projects, critical to the success of the Million Trees effort and to meeting the County's Strategic Climate Action Plan (SCAP) goals.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

PKS M:MILLION TR-FOREST HEALTH

1134312

3. PROJECT JUSTIFICATION

The King County SCAP calls for restoring parks and natural lands in ways that maximize biological carbon storage and increase resilience to changing climate conditions. By 2020, King County – with community partners – aims to plant a million trees. Parks' Open Space Program will complete several large-scale restoration projects in the next two years, planting more than 110,000 trees. Million Trees is considered to be a down-payment on the longer-term SCAP goal to reforest King County in 30 years (Goal Area 5).

4. PROJECT BENEFITS/OUTCOMES

When completed, Parks will have delivered on its commitment to plant 110,000 trees, more than 10% of the Million Trees total. This program will also improve the health of more than 600 acres of forestland, aligned with the SCAP's commitment to "Steward and restore more than 25,000 acres of existing King County-owned forestland." (p. 87) Proactively managing the County's forestland assets will maximize biological carbon storage and ecological resilience.

5. BUDGET REQUEST BASIS

Budget is based on expected revenue and cost estimates developed in coordination with WLR Forester and technical consultants, past experience with similar forest health and restoration projects, and current market factors (e.g., timber prices). The 2019-2020 capital appropriation for this program funds at least six discrete forest health and restoration projects across King County, including permitting, site preparation, selective timber harvest (on some sites), seedling costs, tree planting, post-planting treatment, trail repair, and consultant support. These projects directly support King County Parks' commitment to plant 110,000 trees by 2020 as part of the Million Trees effort. Priority sites include Henry's Ridge, Ravensdale, Taylor Mountain, Sugarloaf Mountain, Island Center Forest, and Mitchell Hill.

6. FUNDING AND REVENUE DISCUSSION

Four planned forest restoration projects are expected to result in harvest revenue. This revenue will directly offset program costs.

7. OPERATING BUDGET AND OTHER IMPACTS

No immediate operating budget impacts are anticipated at this time. However, as forest restoration projects are implemented, this work is anticipated to have impacts on the operating budget. For more context concerning future anticipated impacts of the capital program implementation on operations, please refer to the Parks Line of Business Plan.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

The Million Trees project sites were selected because of existing forest conditions and the need to improve forest health on each site. Henry's Ridge, Ravensdale Retreat and Island Center Forest have overstocked stands of Douglas-fir trees that need thinning to enhance growth and tree vitality. Taylor Mountain, Sugarloaf Mountain, and Mitchell Hill are dominated by degraded red alder hardwood trees that have a short lifespan. These forest sites will retain some hardwoods but overall will be converted to long-lived conifers.

10. OTHER AGENCY INVOLVEMENT

King County Parks is working with several community partners on this program, including The Nature Conservancy (TNC), Washington Trails Association (WTA), Evergreen Mountain Bike Alliance, Tahoma Backcountry Horseman, and Washington Environmental Council.

Timber harvests, over a certain size, require a permit from Washington Department of Natural Resources. The Forest Practices Permit process includes State Environmental Policy Act compliance, which engages other agencies and Tribes through review and coordination.

11. ART ELIGIBILITY

This is a project to support one-million tree.

12. EQUITY AND SOCIAL JUSTICE IMPACT

King County's park system impacts determinants of equity such as access to parks and natural resources, healthy built and natural environments, and strong, vibrant neighborhoods. These investments will benefit underserved communities and disadvantaged individuals that use these facilities.

Capital Appropriation Proposal

NARRATIVES

PKS M:MILLION TR-FOREST HEALTH

1134312

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This program directly supports SCAP Goal Area 5, Measure #2 under “County Operations”: Planting one million trees by 2020. It will also help jumpstart the effort to develop and implement the 30-year plan to reforest King County, another SCAP goal. This program will improve the health of more than 600 acres of forestland, aligned with the SCAP’s commitment to “Steward and restore more than 25,000 acres of existing King County-owned forestland.” (p. 87)

NARRATIVES

MD Grant Contingency

1129118

1. CURRENT PROJECT SCOPE

Grant Contingency - As allowed by Title 4A of the King County Code, this project has been established to provide capital appropriation in anticipation of a new or existing Marine capital project that has received funds from a grant donor or other external funding source or from a combination of external funds and county matching funds. (Ord. 17929 § 59, 2014)

2. PROGRAMMATIC PROJECT DISCUSSION

Admin

3. PROJECT JUSTIFICATION

4A.100.090 Grant contingency projects. A grant contingency project may be included in a capital improvement fund appropriation in anticipation of projects to be supported by grant revenues or other external funding sources. A grant contingency project shall not be approved without documentation, such as grant applications or records of previous grant awards, to support the anticipated project appropriation. Appropriations for grant contingency projects shall be expended or encumbered only in the amount of revenues awarded from external funding sources or a combination of external funds received and county matching revenues. (Ord. 17929 § 22, 2014).

4. PROJECT BENEFITS/OUTCOMES

The benefit of establishing this project is to meet granting requirements to show an existing project and budget appropriation prior to seeking grant funds. As suitable funding opportunities are made known, the County will be positioned to participate in the competitive grant application process.

5. BUDGET REQUEST BASIS

This project is requesting 2019-20 Capital appropriation in anticipated receipt of external funding for new or existing projects. The budget requested will provide sufficient contingency to allow the agency to apply for and receive grants between budget cycles.

6. FUNDING AND REVENUE DISCUSSION

3. PROJECT JUSTIFICATION

This project requests funding to plan, design and construct a replacement West Seattle Ferry Terminal in support of the West Seattle to downtown Seattle POF service. There is a need to replace the existing leased Water Taxi docking facility at Seacrest Park in West Seattle with a permanent terminal that will meet increased ridership demand for the West Seattle to Downtown Seattle Route and resolve physical constraints at the existing terminal site which reduce access, and impede circulation and efficient system operations.

The West Seattle POF terminal is located at Seacrest Park and docking facilities are leased from the City of Seattle. The current terminal lease has an annual renewal clause effective November to October. The lease was structured with an initial five-year period with options to extend the lease for up to five additional one-year periods. The lease will expire October 2019. The County is entering negotiations with the City on a new lease that will bridge the gap between the expiration of the current lease and the opening of a new permanent facility. The leased location at Seacrest Park has several shortcomings including no possibility to add an additional dock to accommodate ridership growth, a small and congested upland footprint shared with both POF passengers and park users, and limited parking opportunities in the immediate vicinity.

Route ridership is increasing annually and forecasts show continued increases through 2030. The leading contributing factor to increased passenger ferry ridership on this route is significant congestion on surface arterials and highways connecting West Seattle to Downtown Seattle. Congestion bottlenecks that contribute to the traffic delay include the West Seattle Bridge, the future State Route 99 Tunnel (SR 99), and on the connecting surface streets and ramps in downtown Seattle. The West Seattle Bridge corridor has the highest traffic of all Seattle streets with 108,200 average annual weekday traffic volumes in 2015. Volumes on the West Seattle Bridge and on the connecting Spokane Viaduct are projected to increase 26-33% over the next 20 years (West Seattle Bridge/Duwamish Waterway Corridor Whitepaper and Priority Investment List (2015)). This project will help moderate increases to traffic on this critical regional corridor.

West Seattle Water Taxi service also provides an alternative transit mode when surface streets and highways are severely congested during significant construction, planned and unplanned special events, and weather related traffic disruptions. The route is a convenient and reliable transit alternative to the congested West Seattle surface arterial commute.

The existing terminal location precludes the ability of single occupancy vehicles to access the Water Taxi service due to area parking restrictions. There are only a small number of all-day parking spaces near the terminal. A new facility would accommodate parking for up to 325 vehicles and provide design enhancements to improve transit, kiss and ride, bike and walk access. These improvements would allow more riders to access the service by all modes, help meet increasing demand, and maximize service operational efficiency.

King County completed the planning phase for a new passenger ferry terminal in 2013. The West Seattle Siting Study provided feasibility analysis of three potential permanent facility locations on the West Seattle waterfront. The study reviewed potential location's ability to meet ridership demand including site access and conditions, intermodal transfer opportunities, and development costs. The report identified two feasible site alternatives which met the criteria. This request will help fund the preliminary engineering, NEPA environmental analysis, and design for a permanent West Seattle POF facility on the preferred alternative determined through the siting study. The facility will be sized to meet the project future demand for passenger-only ferry service between West Seattle and downtown Seattle.

MD W Sea Terminal Replacement

1129121

4. PROJECT BENEFITS/OUTCOMES

The West Seattle to Downtown Seattle Water Taxi service provides an important link to employment, education, healthcare and other community based resources and opportunities in the Seattle core. The service also provides a convenient link to other transit services including Washington State Ferries, the Seattle Streetcar, Sound Transit Express Bus, Link and Sounder service, King County Metro bus routes, Community Transit routes, Amtrak rail and SeaTac International Airport service. Intermodal connectivity is an important objective of a permanent Water Taxi terminal in West Seattle. A new terminal will help reduce traffic congestion and support West Seattle transportation and development goals.

The project will benefit numerous transit dependent user groups, including commuters, seniors, students, low income and minority populations, and people with disabilities. This project will support increased POF transit access and help increase ridership serving Downtown Seattle where approximately 35% of all jobs in King County's 17 Regionally Designated (MPO) Growth Centers are located. The project encourages travelers to utilize a transportation mode that's walking distance of their residential neighborhood and replaces single occupancy vehicles in favor of a waterborne transport mode to reach destinations and other transit services.

This project supports the retention of existing jobs and businesses and creation of new employment by providing a facility to help meet the increasing demand for Water Taxi service from/to West Seattle. Over 244,000 employees work downtown (2014), nearly half of all jobs in Seattle. Several major hospitals, dozens of health clinics and scores of individual doctors, dentists and other health practitioners are located in downtown Seattle. Over a dozen colleges and schools are located in Downtown Seattle.

King County partners with large employers in downtown Seattle to offer public transportation options to their employees which has a direct correlation to the employers' ability to meet State Commute Trip Reduction program targets, resulting in decreased auto-related air pollution, energy use, and traffic congestion. The vessel providing service on the West Seattle route to downtown Seattle has a 278 passenger capacity and is scheduled for twelve trips during daily commute periods. A new, permanent terminal will create opportunities to process and transport more daily riders. The West Seattle POF route to downtown Seattle utilizes infrequently traveled waterways equating to transit times that are reliable and consistent with 10 minute crossings. The service provides 99.9% service reliability and better than 98% on time performance.

The new terminal would be designed to meet Marine Transportation Security Administration security requirements increasing the safety of traveling public. The terminal will be equipped with access controls, video surveillance monitoring, and safety enhancements all of which are not currently possible on the public dock facilities the City owns. Improvements will focus on enhancing safety of crew and passengers with better access for mobility impaired passengers. New passenger queuing arrangements and vessels docking will increase the safety and speed loading/unloading of vessels, lessening turnaround times during busy commute hours. Improved parking and transit access at the new terminal facility will provide safer passenger access as compared to the current terminal configuration.

Unique geographic, socioeconomic, land use, street and highway transportation limitations, and increasing traffic congestion in the Central Puget Sound region combine to create significant demand for POF service. Utilization of the POF system minimizes the number of single occupancy vehicles traveling into the Seattle downtown core which will support the regional plans for economic growth, access to public services, preserve the environment and provide for an integrated public transportation system.

5. BUDGET REQUEST BASIS

The Marine Division has recently been awarded the 2017-18 Federal Transportation Administration (FTA) Passenger Ferry Grant in the amount of \$1.2M to begin preliminary engineering, design and environmental review for the West Seattle POF. Outyear budget impacts are estimated based upon infrastructure projects of similar size, and will be revised with engineering estimates when appropriation is ultimately requested.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

There is no impact to the current operating budget. Future budget impact will be identified prior to project implementation.

NARRATIVES

MD W Seattle Dock Preservation

1129123

1. CURRENT PROJECT SCOPE

West Seattle Dock Preservation - Design, build and install improved float for shoreside gangway landing at the Seacrest Dock. This will include the removal and re-installation of two piles.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

Wind and wave action at this location has proven that the float and pile configuration for this section of the floating dock needs to be more substantial to prevent premature failure of the float and appurtenances. This project will require a SEPA and other environmental reviews and/or permitting.

4. PROJECT BENEFITS/OUTCOMES

Maintain a safe and sustainable landing site at the Seacrest facility.

5. BUDGET REQUEST BASIS

Inquiries were made to the float manufacturer, installers, and environmental consultants to gain insight into approximate costs.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

There is no impact on the operating budget.

8. PROJECT STATUS

New

Capital Appropriation Proposal

NARRATIVES

MD W Sea Mobility Transit Hub

1133740

3. PROJECT JUSTIFICATION

King County operates two passenger only ferry (POF) routes that serve downtown Seattle from West Seattle and Vashon Island. The West Seattle route provides year round daily commute service Monday - Friday and adds hourly mid-day service and weekend service April to October. In West Seattle, the service operates out of City of Seattle's Seacrest Park. In 2017, ridership on the West Seattle route was 375,931, a 20% increase over 2015. The leading contributing factor to increased passenger ferry ridership on this route is significant congestion on surface arterials and highways connecting West Seattle to Downtown Seattle.

Annual ridership demand for the West Seattle POF service is forecasted to increase to 596,918 by 2022 and to 711,836 by 2027 (Berk Unconstrained Ridership Model Report, February 2018). At these levels, the existing facility would be inadequate to meet the demand without improving access to the facility. Currently, access in West Seattle to the Water Taxi is limited to those riders that can arrive by walking, biking, being dropped off, or by Metro bus/shuttle.

Key to meeting this demand will be the capacity to board and de-board a 278- person capacity vessel in a time and space constrained environment. This currently manifests in parking, shuttle, and internal circulation constraints, as well as limitations on passenger loading/unloading facilities. These constraints limit ridership by limiting access and cause congestion at the terminal during peak periods and events.

In the fall of 2018, the Alaskan Way Viaduct (AWV) will permanently close with demolition scheduled for early 2019. The recently completed State Route 99 (SR 99) tunnel that replaces the AWV will open during this same time period. The toll tunnel provides a bypass of downtown Seattle for North and South bound traffic but reduces access to downtown below levels previously provided by the AWV. This shift in downtown access is anticipated to create increased demand for access to POF services.

This project proposes identification and development of a mobility hub that could accommodate parking, improve transit access and connections, kiss and ride, bike and pedestrian access.

While Metro routes 37, 773, and 775 currently provide shuttle bus service to the West Seattle Seacrest POF Terminal, additional analysis related to enhanced or different service will be completed before the mobility hub site is chosen. This will support maximizing service efficiency by increasing the ability for more riders to access Water Taxi service from a mobility hub.

4. PROJECT BENEFITS/OUTCOMES

The project's goal is to decrease single occupant vehicle (SOV) travel and congestion between West Seattle and downtown Seattle by increasing ridership on the West Seattle to downtown Seattle Water Taxi Route. To achieve this goal, the project would seek to utilize the full capacity of the existing Water Taxi service, currently operating at 30% occupancy rates during peak hours. Accordingly, the Water Taxi mobility hub facility and complementary services would be designed for convenient access by all passenger and non-motorized modes, and deliver travel time and costs savings for people traveling from West Seattle to downtown Seattle linking travel modes, an enhancement over the current transportation options.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

MD W Sea Mobility Transit Hub

1133740

5. BUDGET REQUEST BASIS

This proposal requests funding for the planning, preliminary engineering and environmental review during the 2019-20 budget cycle for a West Seattle Mobility Transit Hub.

Metro Transit and its Marine Division are broadening the site evaluation to include Metro service planning with long range planning guidance from METRO CONNECTS to ensure the concept of the mobility hub aligns with the future transportation vision. This will involve collaboration with the City of Seattle and other agency partners to develop a more holistic approach to West Seattle transportation service and placement of a mobility hub and terminal.

Initializing this project in the 2019-2020 biennium will provide the capital investment planning needed to support the development of mobility infrastructure in West Seattle, regardless of the final project site.

A project engineer's cost estimate was completed in April 2018. Total project costs are estimated at \$11M, with the construction costs at \$7.9M and the soft costs for project management, design, environmental review and permits at \$3.1M. This cost estimate will be reevaluated once site has been finalized.

6. FUNDING AND REVENUE DISCUSSION

Management is actively seeking federal grant funding in support of the Mobility Transit Hub project. Currently the division has received \$1.2M in federal grant funding for a complementary project, the West Seattle Terminal Replacement project to support the funding of a new terminal.

Award determination has yet to be made regarding a submitted application for the 2018 FHWA Countywide grant in support of the Mobility Transit Hub project seeking \$1.4M in preliminary engineering and environmental review support.

7. OPERATING BUDGET AND OTHER IMPACTS

There is no impact to the current operating budget. Future budget impact will be identified prior to project implementation.

NARRATIVES	WTC STRUCTURE SITE IMPROVEMENT	1037498
------------	--------------------------------	---------

1. CURRENT PROJECT SCOPE

Structures / Site Improvement: These projects are focused on making modifications, improvements, or upgrades to the structures, buildings, and property owned by the Wastewater Treatment Division (WTD). For example, roof replacements, repairing structural damage to facilities, and adding fencing or gates to WTD property. Other improvements may be made to bring the structures up to current code, increase safety, or minimize vandalism. The Roll-Up Project funds a number of sub-projects that vary in value but are generally less than \$1,000,000 total project cost although they may range up to \$2,500,000 total project cost. The number of sub-projects fluctuates as projects are completed and new sub-projects are added through the project work request (PWR) process. As a result sub-projects contained within this Roll-Up project are in various phases from planning, design and through construction. In addition, the Roll-Up project is sometimes used to initiate upgrade or replacement projects throughout the year that may later develop into stand alone projects with their own project numbers. This Roll-up project contains the sub-project Sustainable Education Every Day (SEED) Classroom. This project will provide a dedicated facility on the South Treatment Plant grounds for educational program activities. The facility will be pre-fabricated and meet full Living Building Challenge (LBC) certification requirements. The facility will be used by the WTD Education Unit and community partners to provide educational programs and workshops for students, teachers and the general public."

NARRATIVES

WTC STRUCTURE SITE IMPROVEMENT

1037498

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Sub-projects included in this Roll-Up project serve several purposes such as to refurbish, modify, upgrade or replace miscellaneous components on WTD owned structures and/or facilities. The sub-projects provide benefits in several areas such as increased reliability and safety, meeting current codes and regulations and replacing assets that have reached the end of their useful lives. The SEED Classroom will be used by the community outreach/education section of WTD as a classroom to teach community members about sustainability, water quality and water education. This sub-project will advance the Strategic Action Plan (SCAP) goal to register 10 LBC/Net Zero Energy(NZE) projects by 2020. This sub-project can be used to pilot small facility buildings that can be used by other county agencies in rural areas (e.g., satellite office, shop, parks facility).

4. PROJECT BENEFITS/OUTCOMES

This Roll-Up project allows WTD to provide a broad array of improvements, modifications or upgrades to facilities and property owned by WTD. These projects provide benefits in several key areas such as: 1. Increased safety for operators and the public. 2. Meeting current codes and regulations. 3. Increased reliability of facility components. The SEED Classroom will help WTD meet SCAP goals by reducing the need for purchasing potable water and purchasing energy from the local utility, instead the building will generate all of its own electricity on-site and will collect enough potable water for its own use. The building will be outfitted with composting toilets and will not be connected to the sewer system. The project team will investigate all utility grants and rebates it is eligible to receive. The SEED Classroom will also help support King County's Equity and Social Justice Initiatives because it will be used to provide education and engagement for underserved WTD service area communities that are South of Seattle. These communities have the highest level of low income people of color and immigrant populations within King County. The target for this project is to receive LBC certification approximately one year after it has been operational. Substantial Completion of the project is expected in 2020.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, budget carryover amount and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

The Sewer rate or Renewable Identification Numbers (RINS) Revenue may be used to provide funding for the SEED Classroom. The project team will investigate and apply for all utility grants and rebates the project is eligible to receive.

7. OPERATING BUDGET AND OTHER IMPACTS

See individual subprojects for specific information. The SEED Classroom sub-project capital budget will cover the entire cost of planning and implementation. Because the SEED Classroom will not need to purchase either potable water or electricity and will not be connected to the sewer the Operating budget necessary to operate and maintain this building will be less than is required for a conventional building of the same size and type.

8. PROJECT STATUS

This is an ongoing program. Please see the program detail report submitted for the 2019/2020 budget for more information. The SEED Classroom is currently in the Planning phase, having been authorized to proceed as a project in Q2 2018. This sub-project has a total project cost estimate of \$784,000 to cover all capital planning, design and implementation costs. The incremental costs to achieve the LBC certification are included in the total project budget. The capital budget does not cover any operating costs, including any costs to perform educational programming. Substantial Completion is targeted for 2020 with LBC certification anticipated approximately one year after the building is operational.

9. ALTERNATIVES ANALYSIS

NA

10. OTHER AGENCY INVOLVEMENT

See individual subprojects for specific information.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC STRUCTURE SITE IMPROVEMENT

1037498

11. ART ELIGIBILITY

Project is for equipment or component replacement and refurbishment or improvements to facilities or properties. The SEED Classroom project may be eligible for Art funding or Art implementation.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Subprojects will use WTD ESJ evaluation processes as part of project delivery. We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Subprojects will strive for the Platinum level on their Sustainability Scorecards by considering energy efficiency, water conservation, use of sustainable materials, environmental health, community quality of life, equity and social justice. Subprojects will also maximize construction and demolition waste diversion from landfills by striving for an 80% - 85% diversion rate. These actions contribute to SCAP Green Building Goal Area targets and strategies. The SEED Classroom sub-project will advance the Strategic Climate Action Plan (SCAP) goal to register 10 LBC/Net Zero Energy(NZE) projects by 2020. This sub-project can be used to pilot small facility buildings that can be used by other county agencies in rural areas (e.g., satellite office, shop, parks facility). The project will further WTD SCAP goals by reducing energy used (reduce Greenhouse Gas emissions) and will instead self-generate the electricity needed to operate the building. WTD and King County will be able to measure the use of the LBC certification when the actual use of water, electricity and sewer systems is compared to a comparably sized conventional building. The use of LBC should result in lower costs for water, electricity/fuel and sewage fees. Additionally comparing the number of people participating in WTD sponsored educational programming before and after the SEED Classroom will show many more people reached after the SEED Classroom is completed.

NARRATIVES

WTC BIOSOLIDS TRANSP

1037513

1. CURRENT PROJECT SCOPE

Biosolids Transportation: This project is needed to ensure the right equipment is consistently available. Major repairs like engines transmission, and drive trains are required as the equipment reaches their life expectancy. All of our equipment is needed to meet the daily needs of our 5 treatment plants. The dump trucks and pup trailers along with our end dumps and tankers are used to haul biosolids, grit, screenings and liquids from the plants to the many reuse sites we currently serve. During the useful life of the equipment major repairs and sometimes replacement of some pieces maybe required.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The treatment plants need to have equipment ready and available at all times. The equipment provides the storage the treatment plants need when weather related events happen.

4. PROJECT BENEFITS/OUTCOMES

We continue to serve our rate payers with consistent dedication to ensure all usable byproducts produced are transported safely from treatment plants to beneficial reuse sites. Biosolids has become a much needed commodity for farmers in eastern Washington. Without biosolids many farmers would not be farming anymore. It has helped restore their land and increases their crop yields.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project spending and budget carryover amount.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

None.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC BIOSOLIDS TRANSP

1037513

8. PROJECT STATUS

We have been operating King County owned equipment since the year 2000. During that time we have transported approximately 1,793,500 tons of biosolids to agricultural, forestry and composting sites. This has allowed our biosolids program to become one of the most recognized programs in the United States.

9. ALTERNATIVES ANALYSIS

The alternative for the biosolids that are produced at our treatment plants would be to transport them to a landfill. That is very costly and it would fill our landfills to capacity in a very short period of time.

10. OTHER AGENCY INVOLVEMENT

King County Fleet Washington State Department of Ecology

11. ART ELIGIBILITY

Project is for equipment replacement.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Choices of truck technology and driving techniques have impacts on the communities trucks pass through. Trucks can impact communities through noise, speed, emissions, and traffic. In implementing this project, we will consider any impacts of truck technologies on surrounding communities.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The project will reduce fuel consumption in Loop trucks through driver training and/or the purchase of equipment that can be installed on Loop trucks that tells drivers how to drive trucks optimally. This will further the SCAP Transportation and Land Use Goal Area target of King County reducing normalized energy use in its vehicle operations (excluding Metro Transit fleet vehicles) by at least 10% by 2020, compared to a 2014 baseline. Progress towards the target will be measured by tracking Loop truck fuel use and mileage.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

WTC BRIGHTWATER RW PIPELINE

1037543

1. CURRENT PROJECT SCOPE

Brightwater Reclaimed Water Pipeline: A conveyance system will be developed to convey reclaimed water from the Brightwater site to a number of water reuse opportunities. Issues critical to the success of the reclaimed water component of the Brightwater Project are: a) Minimizing cost, b) Optimizing the project schedule, c) Meeting stakeholder and County commitment and, d) Minimizing risk. Given that the Brightwater Treatment Plant will produce effluent that, except for disinfection, meets the requirements for Class A reclaimed water, reclaimed water will be conveyed from the Brightwater Treatment Plant to the Sammamish Valley and other potential customers via the following: 1) A new pipeline from the North Creek Portal and Influent Pump Station to North Creek Pump Station, 2) Use of one of the existing North Creek forcemains to transport reclaimed water to the Sammamish Valley, 3) New local distribution piping to reclaimed water customers specifically in the Sammamish Valley area, and 4) Facilities in the Brightwater Tunnel and at one or more effluent portal sites to ultimately serve potential reclaimed water customers west of the North Creek Portal in Bothell. Modifications to the Ballinger Portal for future removal of membrane effluent because of changes to the Tunnel configure were developed. The reconfiguration of the BT3 tunnel removes the dedicated reclaimed water pipes between North Kenmore and Ballinger Way portals. This allows Brightwater conveyance start-up at least three months sooner at considerable savings to the project. This approach remains consistent with reclaimed water comprehensive planning process and is supported by the regulators.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Constructing a reclaimed water facility supports the division's mission to create resources from wastewater. The opportunity to develop this facility arose from the need to design and construct a new wastewater treatment facility and conveyance system. Washington state identifies standards for four classes of reclaimed water, with Class A being the most stringent standard. Class A reclaimed water can be used for non-potable industrial processes irrigation of food and non-food crops, and irrigation of open access areas (e.g. parks). The scope remained unchanged with all remaining design contract amendments #

NARRATIVES

1. CURRENT PROJECT SCOPE

Bellevue Influent Trunk Improvements: -Abandon the existing Bellevue Influent Trunk (BIT) sewer and design and construct 1,600 lineal-feet of new replacement BIT trunk sewer, ranging in diameter from 18 to 42 inches, designed to convey to the projected year of 2050, 20-year peak flows of 17.71 million gallons per day. -Partner with the City of Bellevue, at their cost, to design and construct a 635 lineal-foot section of 24-inch pipe, to form a new upstream connection of their West Central Business District trunk to the new BIT.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC BELLEVUE INFLNT TRK IMPRV

1037545

3. PROJECT JUSTIFICATION

The Bellevue Influent Trunk has an estimated 5 to 10-yr peak flow level of service. This level of service is below the 20-year peak flow design standard stated in RWSP Conveyance Policies in place to minimize overflows in the separated conveyance system. The Influent Trunk conveys flows to the Bellevue Pump Station; an upgrade of that facility was completed in 2011. The Bellevue Influent Trunk project will increase the capacity of the trunk sewer to convey the projected 2050 20-year peak flow to the upgraded pump station.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

Disappropriate remaining balance.

6. FUNDING AND REVENUE DISCUSSION

8. PROJECT STATUS

Project is complete. Abandoning remaining appropriation.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

12. EQUITY AND SOCIAL JUSTICE IMPACT

WTD continues to work on developing best practices for incorporating equity and social justice into the siting, design, mitigation and construction of our capital projects. We are striving to include King County equity and social justice principles, demographic assessment information and equity determinants into capital project decisions. Additional information is outlined in the 2015-2016 Wastewater Treatment Division Business Plan.

NARRATIVES

WTC POWER REPLACEMENT EQUIP

1037588

1. CURRENT PROJECT SCOPE

EDRP - POWER EQUIPMENT REPLACEMENT: Work for this project takes place at the South Treatment Plant formally known as the East Division Reclamation Plant. The project will remove and replace 480-volt motor control centers in area control centers 1, 2, and 3; secondary control building; administration building; chlorine building; pump building; maintenance building; and the south primary building. Other project work includes the removal and replacement of associated distribution switch gear where necessary and removal and replacement of additional circuits that are identified during project construction.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

MCC's are obsolete and repair parts no longer available.

NARRATIVES

WTC WATER QUALITY CAP OUTLAY

1037765

1. CURRENT PROJECT SCOPE

Water Quality Capital Outlay: This project covers the small capital outlay portion of the Capital Asset Management Plan, which largely includes purchases of information technology equipment. The Wastewater Treatment Division follows general criteria in determining the replacement of these assets, including: the maintenance history of the equipment; the manufacturers' recommended useful life; quantifiable benefits; intangible cost/benefits; and the future impact of the decision to replace equipment in order to reduce maintenance costs. These are all factors which are considered in the equipment replacement plans.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Computers and other equipment require periodic replacement due to obsolescence, major failure and useable life.

4. PROJECT BENEFITS/OUTCOMES

Allows for flexibility and agility in the replacement of small capital assets throughout the year equating to less downtime for operations.

5. BUDGET REQUEST BASIS

Annual budgets are based on planned capital outlays and replacement cost estimates.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

If applicable, the operating budget is updated to reflect impact of equipment purchases. In most cases, there are no significant impacts to replacing existing equipment.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES	WTC WATER QUALITY CAP OUTLAY	1037765
8. PROJECT STATUS		
N/A		
9. ALTERNATIVES ANALYSIS		
Equipment purchaser evaluates each purchase according to established County policies to insure proper policies and procedures are followed.		
10. OTHER AGENCY INVOLVEMENT		
None.		
11. ART ELIGIBILITY		
Equipment purchase and replacements are not art eligible.		
12. EQUITY AND SOCIAL JUSTICE IMPACT		
Not applicable to project.		
13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT		
This project is for equipment purchasing and is not expected to directly and significantly further a goal of the SCAP. If equipment purchase has potentially significant SCAP impacts, WTD staff with SCAP knowledge will be consulted so asset purchase is consistent with current policies. If equipment purchase has potentially significant Green Building impacts, WTD staff with Green Building knowledge will be consulted so asset purchase is consistent with current policies.

NARRATIVES

WTC BIOSOLIDS SITE DEVELOPMENT

1037767

1. CURRENT PROJECT SCOPE

Biosolids Site Development: Work under this project provides planning, engineering, and geographic information systems services in support of the WTD biosolids forestry application program. It also provides funds for improvements to forestry sites to allow biosolids application; namely, the construction and reconstruction of trails/roads used by the application equipment.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Proper field reconnaissance, mapping, field layout and construction of application roads/trails are required by permit to apply biosolids to forested sites in an environmentally safe manner. Field reconnaissance is the primary method for site selection. Proper site selection is important to maximize benefits to biosolids application and to minimize risks. Mapping of sites allows accurate measurement for developing application rates, and it provides tools for communication. Having roads and trails with clearly marked layout prevents wasted effort during construction. Construction of trails is essential to allow access for application equipment in a forest setting. Continued and expanded biosolids application to forests in western Washington is ranked as a top priority in the Biosolids Strategic Action Plan.

4. PROJECT BENEFITS/OUTCOMES

Project enables beneficial use of biosolids on an ongoing basis. The County benefits by using the nutrient rich product of our resource recovery process to grow timber in western Washington. This satisfies the Washington Department of Ecology's mandate to use all biosolids beneficially.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project spending and budget carryover amount.

6. FUNDING AND REVENUE DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC BIOSOLIDS SITE DEVELOPMENT

1037767

7. OPERATING BUDGET AND OTHER IMPACTS

None.

8. PROJECT STATUS

On average, 12 miles of trail have been constructed each year. This equates to approximately 15,000 wet tons of biosolids delivered yearly, and approximately 10 units prepared for application.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

None.

11. ART ELIGIBILITY

Project is for asset replacement and refurbishment.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. All site development is in rural, forested areas a minimum of 0.25 miles (often further) from the nearest residence. All sites are several miles away from towns or urban centers.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Section 1, Goal Area 5 (Forests and Agriculture) of the SCAP states that King County's sustainable agriculture and forestry practices include improving soils. Specifically, "the Wastewater Treatment Division uses its soil amendment Loop biosolids on private and state-managed forests in King County to increase tree growth, store carbon in forest soils, and replace use of fossil fuel-based fertilizers" (SCAP pg. 90). This capital project provides key support to the application of Loop biosolids to forest lands. Progress will be measured by tracking the amount of Loop that is applied to forest lands, the acreage of forest lands to which Loop is applied, and the carbon sequestration associated with the application of Loop to forest lands.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

WTC CONVEYANCE SYS IMPROVEMENT

1037789

1. CURRENT PROJECT SCOPE

RWSP Conveyance System Improvements: Conveyance system improvement planning is driven by the Regional Wastewater Service Plan's adopted conveyance standard of being able to convey the 20-year peak flow. For purposes of constructing facilities to meet future demand, the design standard used for planning new conveyance facilities is to accommodate the 20-year peak flow as projected in 2060. The year 2060 is based on 50 year planning horizon. A 50 year planning horizon is considered as a reasonable timeframe for modeling future wastewater flows. The 1037789 budget is a roll-up of sub-projects covering everything from staff labor to future capital projects and other expenses incurred to do conveyance planning for the region. The Conveyance System Improvement (CSI) project provides an opportunity for the County and local agencies to jointly address common conveyance issues, leverage available resources, and minimize customer disruption. The County values and encourages local sewer agency involvement as planning in the wastewater service area moves forward. Project schedule dates reflect the activities of multiple sub-projects.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Conveyance system improvement planning is necessary to identify and address capacity needs in the system as the region grows over time. King County is responsible for conveying and treating wastewater collected by 34 local sewer agencies in the King County region. King County operates the regional wastewater system under a Washington State Department of Ecology issued National Pollutant Elimination Discharge System (NPDES) permit. The NPDES permit does not allow overflows from the separated conveyance system. The County is engaged in a multi-year, multidisciplinary effort called the Conveyance System Improvements (CSI) project. This project is focused on upgrading and improving the existing regional conveyance system and planning for future conveyance capacity needs to avoid overflows from the separated conveyance system. The County's regional conveyance system consists of interceptor sewers, pump stations, forcemains, regulators, and tunnels that transport wastewater from local sewers to the County's three regional secondary treatment plants. The CSI project is integrated with other King County programs including the Infiltration/Inflow (I/I) Control Program, the Combined Sewer Overflow (CSO) Program, and the Major Capital Improvement Program (MCIP).

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC CONVEYANCE SYS IMPROVEMENT

1037789

4. PROJECT BENEFITS/OUTCOMES

The CSI Program protects public health and the environment by tracking capacity in the separated portion of the regional wastewater conveyance system. The program identifies areas of the system with limited capacity and recommends projects to increase the capacity. The activities carried out by the CSI Program prevent overflows and backups in the regional wastewater system.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project spending and budget carryover amount.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Not applicable to this programmatic project.

8. PROJECT STATUS

The CSI Program is routinely updated to ensure that current information is being used to plan capacity improvements in the separated portion of the regional wastewater system. The most recent update was completed in 2017. This update will guide investments in the conveyance capacity projects over the next 10 years. The next CSI program Update will be complete in mid 2020s. Ongoing CSI Program activities including flow monitoring, CIP project initiation, and local agency coordination.

9. ALTERNATIVES ANALYSIS

Not applicable to this programmatic project.

10. OTHER AGENCY INVOLVEMENT

Wastewater Treatment Division Planning staff coordinate closely with cities and sewer districts on all aspect of conveyance system planning. Examples of coordination include sharing flow forecast data and results, obtaining input on project prioritization, and early consultation on project initiation.

11. ART ELIGIBILITY

This project is for conveyance system capital planning, project identification and initiation.

12. EQUITY AND SOCIAL JUSTICE IMPACT

ESJ considerations are reviewed in the planning process. We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

SCAP goals and targets are typically considered in the planning efforts of new projects.

NARRATIVES

WTC SEDIMENT MANAGEMENT PLAN

1037810

1. CURRENT PROJECT SCOPE

Sediment Management Plan: This project will implement King County's participation in the East Waterway Superfund site Memorandum of Understanding and Administrative Order on Consent, and clean up the other contaminated sites under the state Model Toxics Control Act voluntary cleanup authority. Tier 1: Program plan (complete: update complete). Tier 2: Studies. Develop a model to predict contamination from Combined Sewer Overflows needed for cleanup decisions (complete). Provide other project support to implement. Tier 3 projects. Tier 3: Site remediation. The Sediment Management Program identified and laid out a plan for seven sites that need remediation. The sites scheduled for cleanup in 2016-23 are included in this budget. The Plan Update identified one additional site to clean up. Source control studies are needed to determine if cleanup will need to wait for the CSO to be controlled. Project schedule dates reflect the different tier activities.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project implements the Sediment Management Plan developed under the RWSP.

4. PROJECT BENEFITS/OUTCOMES

Help meet permit requirements and water quality criteria (Sediment Management Standards) for County's CSOs. Removes environmental liability. Improves environmental health of water bodies.

5. BUDGET REQUEST BASIS

Budget is based on SMP estimates for cleanups and past LOE and experience for other tasks. Cleanup budgets are revised at alternatives analysis and design stages

6. FUNDING AND REVENUE DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC SEDIMENT MANAGEMENT PLAN

1037810

7. OPERATING BUDGET AND OTHER IMPACTS

None

8. PROJECT STATUS

Sediment Management Plan Update revisions to address Seattle Public Utilities' comments before submittal to WA Dept. of Ecology this summer. University CSO identified as needing cleanup. Added source characterization at this CSO to determine if cleanup will need to wait for the CSO to be controlled. Denny CSO site starting process for final cleanup phase in second half of 2018. King CSO remediation delayed one year - start 19-20 biennium. East Waterway Feasibility Study final this summer, proposed cleanup plan to be released for public comment 4th qtr 18.

9. ALTERNATIVES ANALYSIS

Conducting alternatives analysis per state SMS criteria this year for Denny. For East Waterway, Feasibility Study analyzed alternatives per EPA guidance which will be used by EPA to select remedy in the Proposed Plan.

10. OTHER AGENCY INVOLVEMENT

NRDA negotiations natural resource trustees - NOAA, FWS, Ecology, WADNR, WAFWS, Muckleshoot and Suquamish tribes Cleanups - Ecology, EPA, WADNR SMP Update - Ecology

11. ART ELIGIBILITY

Program planning and development for remediation.

12. EQUITY AND SOCIAL JUSTICE IMPACT

ESJ considerations are factored into each cleanup site at the time of the alternatives analysis and again for implementing actions. Project public involvement plan incorporates County best practices for equitable outreach (e.g. demographic analysis, collaboration with Community Based Organizations, increased educational opportunities and/or culturally appropriate information gathering as applicable). Information gathered during public involvement effort incorporated into County decision-making. We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Sediment remediation projects managed by WTD will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Sediment remediation projects managed by WTD will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES

WTC CSO CONTROL AND IMPRV

1038098

1. CURRENT PROJECT SCOPE

CSO Control & Improvement: The scope of the master project contains several subprojects as a mechanism to track the capital projects in the combined sewer overflow (CSO) Long-term Control Plan being implemented through 2030. When projects are ready for implementation, the budget is transferred to the Project Management Unit (PMU) under a new project number. The project reflects the King County Council approved 2012 Long-term CSO Control Plan. A new subproject - the Water Quality Assessment & Monitoring Study - was added in 2013 to develop information for the 2018 Long-term Control Plan Update and respond to King County Council questions about priority and sequencing CSO projects. The Water Quality Assessment & Monitoring Study was completed in 2017. A new technology is being pilot tested to potentially improve performance of treating combined sewers under this master project in 2018 and 2019.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC CSO CONTROL AND IMPRV

1038098

3. PROJECT JUSTIFICATION

Combined sewer overflows (CSO) are a risk to public health from the discharge of a mix of untreated sewage and stormwater. CSOs are regulated under requirements of State and federal water quality regulations. WTD has been working to meet water quality regulations since 1979 by building facilities to reduce the volume and number of times CSOs discharge. WTD is now under a federal Consent Decree that obligates WTD to finish the remaining projects by 2030 or face penalties and additional court action. Reducing CSO volumes and events meets the Strategic Plan strategy to protect and restore water quality, biodiversity, open space, and ecosystems.

4. PROJECT BENEFITS/OUTCOMES

The benefit of the Combined Sewer Overflow (CSO) program is reducing the volume and number of times a CSO event occurs. Reducing the amount of bacteria in region's waterbodies during the winter is a benefit from the program. Because there is less CSO volume; there is less bacteria.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project spending and budget carryover amount.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Operating budgets will increase as new facilities for CSO control are completed. Life cycle costs are identified early in planning and shared with finance to include in upcoming operations budgets. Final operating costs are calculated prior to starting construction. Operations managers and planning staff will review information from the Mainsaver database periodically to update life cycle costs.

8. PROJECT STATUS

The Combined Sewer Overflow Program has been in place since 1979. Major capital projects underway are Rainier Valley Wet Weather Storage; Georgetown Wet Weather treatment; West Duwamish CSO Control Project and Chelan Avenue CSO Control Project. In this biennium, the Water Quality Assessment & Monitoring Study was completed. Over the next year, WTD will test an innovative new technology for CSO treatment. The new technology has the potential to improve the performance of treating combined sewage.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

Coordination with Seattle Public Utilities (SPU) is being done through a large coordination effort agreed to by both agencies. Each future capital project may or may not have direct collaboration with SPU.

11. ART ELIGIBILITY

Project is for capital planning.

12. EQUITY AND SOCIAL JUSTICE IMPACT

ESJ considerations are reviewed in the planning process. Project public involvement plan incorporates County best practices for equitable outreach (e.g. demographic analysis, collaboration with Community Based Organizations, increased educational opportunities and/or culturally appropriate information gathering as applicable). Information gathered during public involvement effort incorporated into County decision-making. WTD is implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 WTD Business Plan and ESJ work plan.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project does not directly or significantly further a SCAP goal. It is primarily used to track capital projects as they are transferred from planning to the Project Management Unit for implementation.

NARRATIVES

WTC MITIGATION SITE MAINT MON

1038099

1. CURRENT PROJECT SCOPE

Mitigation Site Maintenance and Monitoring: For each mitigation site the following activities would be performed: 1. Maintenance and monitoring of mitigation site as required by the permit. 2. Monitoring report preparation. 3. Development of contingency measures if mitigation measures fail to meet the performance standard. 3. Coordination with permitting agencies for approval of monitoring report and contingency measures. 4. Installation of contingency measures with a work order contract. 5. Coordination with permitting agencies for final approval. 6. Perform Landscape maintenance on Green Stormwater Infrastructure sites (special training required). The Mitigation Site Maintenance and Monitoring Program is ongoing. Each year there is a potential for additional mitigation sites to be added if a Wastewater Treatment Division project will occur within critical areas or their buffers.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Major capital projects in Wastewater Treatment Division sometimes impact critical areas (e.g. streams, wetlands, steep slopes and their buffers) and will have conditions contained in permit approvals that require long-term monitoring and maintenance of mitigation sites. The Mitigation and Monitoring Program (Program) ensures performance standards outlined in permits are met for typically a period of three to five years, although 10 years of monitoring may be required for larger sites. Performance standards must be evaluated on an annual basis, and restoration results must be submitted to the permitting agency. For sites that do not meet the prescribed performance measures, contingency measures must be implemented until the permitting agency issues a final approval of the mitigation site. The risk of not implementing the project would be a violation of the permit and would result in fines. The Program has linkages to strategic plans such as the Strategic Climate Action Plan because carbon can be more readily sequestered at those sites.

4. PROJECT BENEFITS/OUTCOMES

Apart from required regulatory compliance, the Program fulfills several King County initiatives, including the Million Tree Initiative and Clean Water and Healthy Habitats Initiative.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC MITIGATION SITE MAINT MON

1038099

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project spending and budget carryover amount.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Impacts on the operating budget are low to non-existent. The Program is funded through our capital budget. Once compliance objectives are met, no further work is typically required. That said, there are some exceptions. The Brightwater North 40 Mitigation site will be overseen by our gardeners after monitoring is complete because of the Brightwater Education Center and high public use and visibility. Because there is currently a gardener onsite, no additional staffing should be required.

8. PROJECT STATUS

We currently have a total of 31 sites. Thirteen are active, thirteen closed, two pending, and three additional sites are coming into the Program beyond 2018.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

The Corps of Engineers, the Washington Department of Ecology, the Washington Department of Fish and Wildlife, King County Department of Permitting and Environmental Review, and 13 local jurisdictions are directly involved in the project through conditions required under permit.

11. ART ELIGIBILITY

Project is for post construction monitoring and mitigation.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Project is for post construction monitoring.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

N/A. Project is for post construction monitoring.

14. OTHER CONSIDERATIONS (OPTIONAL)

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

NARRATIVES

WTC SUNSET HEATH PS FM UPGRADE

1038122

1. CURRENT PROJECT SCOPE

Sunset/Heathfield Pump Station Replacement & Forcemain Upgrade: The Sunset/Heathfield Pump Station Replacement and Forcemain Upgrade Project will increase the pumping capacity of the Sunset and Heathfield pump stations to 30 million gallons per day (mgd) by replacing pump station equipment and installing new force mains.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC SUNSET HEATH PS FM UPGRADE

1038122

3. PROJECT JUSTIFICATION

Per the King County Conveyance System Policy CP-1 (KCC 28.86.060), the twenty-year peak flow storm shall be used as the design standard for the county's separated wastewater system. The current peak flow capacity of the pump stations is approximately 18 mgd, which represents an estimated 5-10 year storm, and causes the system to be at risk of sanitary sewer overflows. Increased population growth and influent flows have increased demand on the existing pump station equipment, which has affected the overall reliability, performance, and efficiency of the system. Projected future population and sewer increases in the area served by the pump stations also necessitate increasing the pumping capacity.

4. PROJECT BENEFITS/OUTCOMES

Once completed, the capacity of the Sunset and Heathfield pump stations will be increased, meeting current and future design flows. The new equipment will also improve reliability as much of the existing pump station equipment is at end of useful life and has been failing. The conveyance line is also at end of life and requires an upgrade to meet current and expected future flows.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, budget carryover amount and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Some O&M savings are expected because of the new ECO2 system and equipment standardization.

8. PROJECT STATUS

The project has completed design and is currently in construction. It is expected to reach substantial completion in March of 2020.

9. ALTERNATIVES ANALYSIS

This project evaluated multiple alternatives including a storage (tunnel) option, larger pump station, upgrades of pump station and new force main. Evaluation criteria included life cycle cost, permitting and environmental impacts, engineering, constructability, operational and maintenance impacts, reliability, and community impacts. The selected alternative performed best in a triple-bottom-line analysis that considered cost and value.

10. OTHER AGENCY INVOLVEMENT

The project has permits with the City of Bellevue, Washington State Department of Transportation, Army Corps of Engineers and Washington Department of Ecology.

11. ART ELIGIBILITY

All Art Budget has already been contributed by the project.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Implementing robust community involvement, strategies including a career education program in project-area schools, engaging students/community for temporary construction fencing art project, etc., interpretive signage and replacement of the Sunset PS fence (currently chain-link) for improved aesthetics. We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan.

NARRATIVES

WTC SUNSET HEATH PS FM UPGRADE

1038122

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project will strive for the Platinum level on the Sustainability Scorecard and pursue third-party verification through the Envision Sustainable Infrastructure Rating System. This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Current certification projection is Platinum. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion. Current C&D diversion rate projection is 85%.

NARRATIVES

WTC NORTH CREEK PIPELINE

1038128

1. CURRENT PROJECT SCOPE

North Creek Pipeline: In 2013, the City of Bothell requested pavement repairs in SR 524, in the locations of 8 settlement monitors installed by the Alderwood Water and Wastewater District (AWWD) over an AWWD water main. KC plans to issue a work order in Q1 2014 to repair the pavement at a construction cost of about \$40K, while leaving the settlement monitors in place for future sewer construction. In 2013, King County transported the remaining pipe to KC Roads yard in Renton for storage/eventual reuse and terminated the storage yard license. This action avoided \$300k - 500K in disposal costs. King County also restored the storage yard (e.g, cleanup, mulched) to meet the requirements of the license agreement. King County twice advertised the pipe for surplus in 2012 and sold about half of it. No bidders were interested in the remaining pipe. The pipe was purchased for construction of King County's new North Creek Interceptor Sewer by Alderwood Water and Wastewater District (AWWD) under a 2005 agreement with King County. King County has now decided to complete construction of its North Creek Interceptor, and determined that the pipe is not suitable for the new tunneling method that was selected to reduce risks.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC NORTH CREEK PIPELINE

1038128

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The pavement repairs are associated with past construction by AWWD. The pipe in storage was designed for microtunneling machines. King County determined that microtunneling will not work due to ground conditions and that the pipe in storage is no longer needed. King

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

Disappropriate remaining balance.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

Project cancelled. Abandoning remaining appropriation.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

12. EQUITY AND SOCIAL JUSTICE IMPACT

WTD continues to work on developing best practices for incorporating equity and social justice into the siting, design, mitigation and construction of our capital projects. We are striving to include King County equity and social justice principles, demographic assessment information and equity determinants into capital project decisions. Additional information is outlined in the 2015-2016 Wastewater Treatment Division Business Plan.

NARRATIVES WTC LOWER DUWAMISH SUPERFUND 1038129

1. CURRENT PROJECT SCOPE

Lower Duwamish Waterway Superfund: The project implements King County's shared responsibilities under a signed Administrative Order on Consent (AOC) to conduct a Remedial Investigation/Feasibility Study (RI/FS) for the Lower Duwamish Waterway (LDW) Superfund Site and pay for Environmental Protection Agency and Washington State Department of Ecology oversight costs. The AOC is jointly signed by King County, the City of Seattle, the Port of Seattle, and Boeing. King County will also move ahead on cleanup of identified early actions areas at the site to quickly reduce risks. Phase 1: Existing RI data to define data gaps and early actions (complete). Phase 2: Baseline and Residual risk assessments and RI; Early Action studies and cleanups (complete). Phase 3: Feasibility study and proposed cleanup plan (complete). Phase 4: Predesign Studies and allocation process. AOC amendments have added additional studies (phase 4): fisher, activated carbon pilot, and pre-design. Phase 5: AOC amendment added remedial design of upper 1/3 of LDW cleanup.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC LOWER DUWAMISH SUPERFUND

1038129

3. PROJECT JUSTIFICATION

Signed Administrative Order on Consent (AOC) with EPA and Ecology

4. PROJECT BENEFITS/OUTCOMES

Removes existing environmental liability. Improves environmental health of Duwamish River. Improves environment in community with disproportionate impacts.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project spending and budget carryover amount.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

None that have been identified

8. PROJECT STATUS

Finished RI/FS, fisher study. Completed construction of pilot study, monitoring year 1 of 3 for effectiveness. Conducting Predesign Studies: completed baseline sampling, drafts of user survey and design strategy reports delivered to EPA. Signed order amendment for design of cleanup for upper 1/3 (added in 4 yr cost estimate).

9. ALTERNATIVES ANALYSIS

Feasibility Study analyzed alternatives per EPA guidance and selected remedy was published by EPA in the Record of Decision

10. OTHER AGENCY INVOLVEMENT

EPA, Ecology, USCOE, Muckleshoot and Suquamish Tribes, City of Seattle, Port of Seattle, WLRD, KCIA, Roads, FMD, DPH, PAO and PSD.

11. ART ELIGIBILITY

Project is for regulatory compliance.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Conducted an Equity Impact Review on the selection of cleanup alternatives (see WTD website for document). Project public involvement plan incorporates County best practices for equitable outreach (e.g. demographic analysis, collaboration with Community Based Organizations, increased educational opportunities and/or culturally appropriate information gathering as applicable). Information gathered during public involvement effort incorporated into County decision-making. We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Sediment remediation projects managed by WTD will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Sediment remediation projects managed by WTD will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES

WTC JUANITA BAY PS MODS

1038220

1. CURRENT PROJECT SCOPE

Juanita Bay PS - Modifications: A new 30.6 million gallons-per-day two-stage pump station is being built across the street from the existing Juanita Bay Pump Station (PS). The station will include four pairs of two-stage pumps, odor control, chemical addition for odor and corrosion prevention, equipment sound attenuation, and a standby generator. The existing pump station will be taken off-line when the new pump station is completed.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC JUANITA BAY PS MODS

1038220

3. PROJECT JUSTIFICATION

The existing Juanita Bay Pump Station (PS) is over 30 years old and does not meet current capacity standards for flows projected from 2000 to 2050. The existing pump station equipment is near the end of its useful life and requires replacement. The existing pump station site is not large enough to add pumping capacity and does not have sufficient space to be updated for odor and corrosion control, standby generation, seismic reinforcement, equipment sound attenuation, adequate ventilation and equipment access, and electrical and fire codes.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

Disappropriate remaining balance.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

Project is complete. Abandoning remaining appropriation.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

12. EQUITY AND SOCIAL JUSTICE IMPACT

WTD continues to work on developing best practices for incorporating equity and social justice into the siting, design, mitigation and construction of our capital projects. We are striving to include King County equity and social justice principles, demographic assessment information and equity determinants into capital project decisions. Additional information is outlined in the 2015-2016 Wastewater Treatment Division Business Plan.

NARRATIVES

WTC BELLEVUE PS UPGRADE

1038223

1. CURRENT PROJECT SCOPE

Bellevue Pump Station: The existing Bellevue Pump Station is 30 years old. The scope under this project is to: replace the pumps, controls, electrical system, process piping, HVAC unit and generator; add chemical storage; update the odor control system; and build a new force main from the pump station to the existing conveyance line, Eastside Interceptor (ESI). This project will upgrade the hydraulic capacity, electrical systems, and control systems for the Bellevue Pump Station. It will also construct a new 5,700 foot-long, 24-inch diameter force main from the Bellevue Pump Station to the ESI, thereby reducing the hydraulic load on the Swayolocken Pump Station. The new force main will require a new discharge structure at the ESI just upstream of the Wilburton Siphon inlet structure. The project provides needed capacity to avoid raw sewage overflows downstream at the Swayolocken Pump Station. A planning assessment of the alternatives to flow from Swayolocken was conducted during 2000. Seven possible alternatives were evaluated; two alternatives were carried forward for further evaluation, and this project was ultimately selected. This project is part of the Regional Wastewater Services Plan.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC BELLEVUE PS UPGRADE

1038223

3. PROJECT JUSTIFICATION

The Swayolocken Pump Station and some related King County Conveyance facilities are projected to experience capacity limitations as a result of increased base flows from development of Bellevue Central Business District. Due to limitation of capacity of Swayolocken PS and Bellevue Trunk, a new force main will be constructed to transfer the flow. The existing pump station will also be upgraded to accommodate the flow and also replace the aging equipment.

4. PROJECT BENEFITS/OUTCOMES

NARRATIVES

1. CURRENT PROJECT SCOPE

Ravenna Creek Separation: The scope of this project is to review the piping and control gate strategy in the Ravenna Creek structures (24th Avenue Diversion Structure and 54th Street Diversion Structure) and associated conveyance system, and to design and implement the necessary modifications to prevent sewage releases into the Ravenna Creek storm water transfer system.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC RAVENNA CRK SEPARATION

1038236

3. PROJECT JUSTIFICATION

In May 2008, an estimated 6.4 million gallons of sewage flowed from a storm water pipe into the University Slough over a 10-day period. Sewage had been mistakenly diverted into a City of Seattle storm water pipe instead of the Laurelhurst Trunk during a County project to repair a regulator gate in the Lake City Tunnel. The overflow discharge primarily impacted a portion of the University Slough from Northeast 45th Street near Montlake Boulevard to Union Bay. An interim procedure has been developed to prevent sewage releases into University slough through the design and construction of permanent modifications to the system.

NARRATIVES WTC ODOR CORROSION 1038273

1. CURRENT PROJECT SCOPE

Odor / Corrosion Control: The Odor/Corrosion Control Program includes asset management projects that correct, mitigate or repair the effects of hydrogen sulfide damage; overhaul or replace failed odor/corrosion control equipment that has reached the end of its useful life; improve safety, reliability, efficiency or increase redundancy related to odor/corrosion control systems; and code required upgrades for odor/corrosion control equipment. This "Roll-Up Project" funds a number of odor/corrosion control sub-projects that vary in dollar value, but are typically less than \$2,500,000. The number of sub-projects fluctuates from one year to the next as projects are completed and new sub-projects are added through project work request process. As a result, sub-projects contained within this project number are in various states of design, from planning to construction. In addition, this project number is used to initiate odor/corrosion control sub-projects throughout the year that develop into stand alone projects with their own unique project number.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC ODOR CORROSION

1038273

3. PROJECT JUSTIFICATION

To refurbish, modify, upgrade or replace miscellaneous odor and corrosion control equipment and systems; and equipment or systems damaged by H₂S, or other corrosive elements. Risks of not implementing project include damaged or inoperable equipment, odor impacts, and risk to worker safety.

4. PROJECT BENEFITS/OUTCOMES

This Roll-Up project benefits range from improving safety, reliability, efficiency or increasing redundancy related to odor/corrosion control systems achieving effective odor control; and code required upgrades for odor/corrosion control equipment.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, budget carryover amount and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

See individual subprojects for specific information.

8. PROJECT STATUS

The Project Roll-Up sub-projects are in various states of design, from planning to construction. Please see the program detail report submitted for the 2019/2020 budget for more information.

9. ALTERNATIVES ANALYSIS

See individual subprojects for specific information.

10. OTHER AGENCY INVOLVEMENT

See individual subprojects for specific information.

11. ART ELIGIBILITY

Project is for equipment replacement and refurbishment.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Subprojects will use WTD ESJ evaluation processes as part of project delivery. We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Subprojects will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Subprojects will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES

WTC NOAA NON PROJECT SPEC

1038294

1. CURRENT PROJECT SCOPE

Non-Project Specific - NOAA: The Elliott Bay / Duwamish River Restoration program (EBDRP) panel convened by the National Oceanic and Atmospheric Administration meets four times per year to discuss issues related to work; reimbursement from the panel; stewardship of restoration sites under King County ownership; and monitoring of sediment remediation conducted by the County.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

King County is a member of the panel assigned to oversee implementation of the consent decree. It also is responsible for monitoring the sediment cleanups it did for the panel.

4. PROJECT BENEFITS/OUTCOMES

Mitigate natural resource damages from Metro releases. Comply with consent decree. Set up long-term stewardship program to address that responsibility at EBDRP sites under County ownership. Fulfil monitoring requirements intended to ensure projects meet environmental goals.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project spending and budget carryover amount.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

None

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC NOAA NON PROJECT SPEC

1038294

8. PROJECT STATUS

Submitted Denny Biological Assessment monitoring report for 2011-2015 to the Trustees. Selected long-term stewardship contract for EBD RP habitat restoration sites Additional monitoring of sites may be added in 2019-20

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

EBDRP is an entity that consists of natural resource trustees, City and County - NOAA, FWS, WAFWS, Ecology, Muckleshoot Tribe, Suquamish Tribe and WADNR. Monitoring reports go to Ecology and WADNR.

11. ART ELIGIBILITY

Project is for planning and monitoring work.

12. EQUITY AND SOCIAL JUSTICE IMPACT

EBDRP identified habitat, sediment cleanups and source control in the Lower Duwamish, which has communities that have been identified as having disproportionate impacts in several Determinants of Equity. That work has improved a couple determinants while having some short-term impacts on others.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This is an administrative and regulatory monitoring project that does not directly and significantly further a goal of the SCAP.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

WTC BIOSOLIDS EQUIPMENT

1038295

1. CURRENT PROJECT SCOPE

Biosolids Forestry Equipment: The Biosolids Forestry Equipment project provides funding for the refurbishment and purchase of equipment for biosolids application in forestry environments. Forestry equipment needs regular parts replacement from regular use in rugged settings. Properly maintained equipment provides for predictable, safe, and efficient operations.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Twenty percent of WTD's annual biosolids production goes to these sites. Equipment purchase/replacement and major capital repairs not covered by Fleet's revolving fund are funded by this project. Predictably functional equipment is essential to use of biosolids in forests. Continued and expanded biosolids application to forests in western Washington is ranked as a top priority in the Biosolids Strategic Action Plan.

4. PROJECT BENEFITS/OUTCOMES

This project enables beneficial use of biosolids on an ongoing basis. The County benefits by using the nutrient rich product of our resource recovery process to grow timber in western Washington. This satisfies the Washington Department of Ecology's mandate to use all biosolids beneficially.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project spending and budget carryover amount.

6. FUNDING AND REVENUE DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC BIOSOLIDS EQUIPMENT

1038295

7. OPERATING BUDGET AND OTHER IMPACTS

None.

8. PROJECT STATUS

There are a number of pieces of equipment under this project. They are on individual service and replacement schedules. This year, we have replaced a forwarder tire, repaired the articulating driveline, remounted the blower drive motor, replaced the boom extension cylinder, changed grapple control joystick, replaced dump truck batteries, adjusted the skidder tracks, replaced the blower fan bushings, repaired the front roller shaft, and completed many minor repairs.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

None.

11. ART ELIGIBILITY

Project is for equipment replacement.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Project is for equipment replacement.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Section 1, Goal Area 5 (Forests and Agriculture) of the SCAP states that King County's sustainable agriculture and forestry practices include improving soils. Specifically, "the Wastewater Treatment Division uses its soil amendment Loop biosolids on private and state-managed forests in King County to increase tree growth, store carbon in forest soils, and replace use of fossil fuel-based fertilizers" (SCAP pg. 90). This project provides key support to the application of Loop biosolids to forest lands. Progress will be measured by tracking the amount of Loop that is applied to forest lands, the acreage of forest lands to which Loop is applied, and the carbon sequestration associated with the application of Loop to forest lands.

NARRATIVES

WTC E DIV SCNDRY TANK COATING

1038314

1. CURRENT PROJECT SCOPE

East Division Secondary Tank Coating: This project addresses corrosion damage in the secondary sedimentation tanks at South Treatment Plant in Renton. This project will repair and re-coat corroded metal in four tanks each year. The repair and re-coating of metal components in twenty tanks have been completed, four remain to be completed.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

These tanks were constructed between 1963-2000. They are subjected to acids, chemicals, and abrasion; and have considerable corrosion at the metal equipment and piping. Repairs to the tanks when corrosion is present is highly cost effective and will eliminate potential downtime for future more extensive repairs or replacement.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC E DIV SCNDRY TANK COATING

1038314

4. PROJECT BENEFITS/OUTCOMES

These repairs will extend the service life of the metal in these tanks by 10 years.

5. BUDGET REQUEST BASIS

There is no budget request for 2019-2020; budget request is for the outyears only.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

None.

8. PROJECT STATUS

Coating of twenty tanks has been completed. Inspections completed in 2016 show that the current coating in the final four tanks is in adequate condition. The project is on hold until inspections show re-coating is necessary.

9. ALTERNATIVES ANALYSIS

This project had a single alternative, which was to repair and re-coat the existing assets.

10. OTHER AGENCY INVOLVEMENT

None.

11. ART ELIGIBILITY

Project is for equipment rehabilitation and refurbishment.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Inside of existing plant boundaries. No odor or transportation impact.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project will strive for the Platinum level on the Sustainability Scorecard and is considering the use of an alternative rating system such as Salmon Safe. This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES WTC ELECTRICAL I AND C 1038335

1. CURRENT PROJECT SCOPE

Electrical Instrument and Control: The Electrical and Instrumentation and Control (I&C) Program includes asset management projects that enhance the treatment process, overhaul or replacing failed electrical and I&C equipment or electrical I&C equipment that has reached the end of its useful life, improve safety, reliability, efficiency or increase redundancy of the electrical I&C systems and code required upgrades for electrical I&C equipment. This "Rollup Project" funds a number of electrical and I&C subprojects that vary in dollar value, but are typically less than \$2,500,000. The number of subprojects fluctuates as projects are completed and new subprojects are added through the project work request process. As a result, subprojects contained within this project number are in various states of design, from planning to construction. In addition, this project number is used to initiate electrical I&C subprojects throughout the year that develop into stand alone projects with their own unique project number. Project schedule dates reflect activities of multiple subprojects.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC ELECTRICAL I AND C

1038335

3. PROJECT JUSTIFICATION

To refurbish, modify, upgrade or replace miscellaneous electrical or instrumentation and control equipment and systems.

4. PROJECT BENEFITS/OUTCOMES

This capital asset management program provides a programmatic approach to the timely replacement of capital assets that have reached their end of life or emergent issues that require capital solutions. This has a beneficial impact on plant operating budgets and work loads by reducing maintenance costs, improving electrical efficiency and standardizing equipment manufactures.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, budget carryover amount and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

This is a rollup program and the majority of work is equipment replacement. This has a beneficial impact on plant operating budgets by reducing maintenance costs, improving electrical efficiency and standardizing equipment manufactures.

8. PROJECT STATUS

This is an ongoing program. Please see the program detail report submitted for the 2019/2020 budget for more information.

9. ALTERNATIVES ANALYSIS

See individual subprojects for specific information.

10. OTHER AGENCY INVOLVEMENT

See individual subprojects for specific information.

11. ART ELIGIBILITY

Project is for equipment replacement and refurbishment.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Subprojects will use WTD ESJ evaluation processes as part of project delivery. We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The Brightwater Membrane Feed subproject is expected to result in energy savings of approximately 1,100,000 kWh/year. Implementation of the project will further the SCAP Buildings and Facilities Goal Area target of King County reducing normalized energy use in County owned facilities by at least 5% by 2020 and 10% by 2025, as compared to a baseline year of 2014. To measure progress towards the target, energy savings will tracked through WTD's normalized energy use reporting after the project is completed. Subprojects will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Subprojects will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES

WTC SP DIGESTER FLOATING LIDS

1038447

1. CURRENT PROJECT SCOPE

South Treatment Plant Digester Floating Lids: The scope includes cleaning and rehabilitation or replacement of the coating or roofing systems on the five floating digester covers at the South Treatment Plant. The scope also includes coordination with plant operations for the inspection and roofing work and assessment of the degree of rehabilitation and/or replacement required.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The coatings/roofing systems applied to the digester covers at the South Treatment Plant have deteriorated to the point that the steel roof structures and skins are at risk. Repairs will extend the life of the covers and prevent corrosion of the underlying steel structure. Deterioration of the steel roof skin and structure could allow odors and explosive methane gas to concentrate within the cover, or to escape into the plant site and surrounding area.

NARRATIVES

WTC MAGNOLIA CSO

1038448

1. CURRENT PROJECT SCOPE

CSO Control & Improvements - Magnolia: Design and construct of an approximately 1.5 million gallon CSO storage tank in the vicinity of Terminal 91 in Seattle, and a conveyance pipeline to connect the existing interceptor in 32nd Avenue West to the storage tank. The scope will include odor control and mechanical, electrical, and control systems to enable the system to function when required.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC MAGNOLIA CSO

1038448

3. PROJECT JUSTIFICATION

Combined Sewer Overflows (CSOs) at the South Magnolia CSO outfall in Seattle exceed the one untreated overflow per average year standard set by the Washington Department of Ecology (DOE) for a controlled CSO. Measures must be taken to bring this overflow into compliance with the DOE limit. Preliminary design work (under a separate contract) determined that a storage tank to retain CSO flows was the most effective approach, with the storage tank to be located near Terminal 91 with a new 3,000-foot conveyance pipeline to convey flows to the tank for storage.

4. PROJECT BENEFITS/OUTCOMES

Bring South Magnolia CSO outfall into compliance with DOE overflow limits.

5. BUDGET REQUEST BASIS

This appropriation request will cover remaining costs associated with the contractor's corrective action plan and the closeout of the project.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

None

8. PROJECT STATUS

Implementing Contractor's Corrective Action Plan.

9. ALTERNATIVES ANALYSIS

N/A – already in implementation (repair).

10. OTHER AGENCY INVOLVEMENT

None

11. ART ELIGIBILITY

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project.

NARRATIVES

WTC SP SOLIDS CONTROLS REPL

1048071

1. CURRENT PROJECT SCOPE

SP Solids Controls Replacement: The South Plant Solids Control System Replacement project is consistent with WTD's long-range control system plans which include developing and documenting control system standards for the wastewater system, designing and implementing control system replacement at the South Treatment Plant, and evaluating and implementing database systems for wastewater labs and asset management programs. To ensure greater project management control, the solids replacement portion of the South Plant Control System Project (423493) has been given its own project number.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Modernize and standardize WTD Control System Automation. Replace obsolete control equipment at South Plant with new standardized Emerson Ovation Control equipment.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

NARRATIVES

WTC CONVEYANCE H2S CORR REHAB

1048076

1. CURRENT PROJECT SCOPE

Conveyance System H2S Corrosion Rehabilitation: The scope of the program is to rehabilitate conveyance pipelines damaged due to hydrogen sulfide corrosion. This project number is for program planning and a program budget placeholder for future pipeline rehabilitation projects. No construction is being performed under this project number. Please see project numbers 1122412 individual project information.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC CONVEYANCE H2S CORR REHAB

1048076

3. PROJECT JUSTIFICATION

The H2S corrosion program and the Facilities Inspection group in the Wastewater Treatment Division (WTD) has a program to prioritize and inspect WTD conveyance interceptors for condition. Based on these inspections a list of pipelines was identified and prioritized as the most severely corroded and needing rehabilitation. Hydrogen sulfide corrosion causes structural damage to reinforced concrete pipe, which when left unabated can cause structural failure of the pipeline. This can result in emergencies such as overflows and/or sinkholes, which are costly to repair and are a public nuisance.

4. PROJECT BENEFITS/OUTCOMES

Implementing corrosion repairs maintains the structural integrity of the regional conveyance system, reduces the risk of overflows and/or sinkholes, and maintains pipeline capacity

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, budget carryover amount and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

None.

8. PROJECT STATUS

1122413- Eastgate Interceptor Rehabilitation 3 is in construction and on schedule

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

None.

11. ART ELIGIBILITY

The projects rehabilitate underground sewer pipelines.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Subprojects will use WTD ESJ evaluation processes as part of project delivery. We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This is a planning project that does not directly and significantly further a goal of the SCAP.

14. OTHER CONSIDERATIONS (OPTIONAL)

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

NARRATIVES

WTC ENVIR LAB ENERGY IMPROVMNT

1048077

1. CURRENT PROJECT SCOPE

Environmental Lab - Energy Improvements: This project will replace multiple existing aging fume hoods with new, more efficient hoods and associated mechanical equipment at the King County Environmental Laboratory.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The existing fume hoods have been in service since 1985 and are reaching the end of their useful lives. King County will replace or retrofit inefficient equipment with energy-efficient models to achieve energy savings and help meet the County's energy goals. Operational fume hoods are necessary for employees to perform their sample testing work safely.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC ENVIR LAB ENERGY IMPROVMNT

1048077

4. PROJECT BENEFITS/OUTCOMES

King County will replace or retrofit inefficient equipment with energy-efficient models to achieve energy savings and help meet the County's energy goals. The energy efficiency improvements that have been identified include replacement and/or upgrade of equipment, roof upgrade and installation of energy savings devices. Energy savings for the Environmental Laboratory are expected.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, budget carryover amount and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Energy saving are expected to be realized.

8. PROJECT STATUS

The project is in implementation. The temporary lab trailer is onsite and being prepared for staff usage. There are weekly project meetings at the site.

9. ALTERNATIVES ANALYSIS

The following alternatives were identified: Alternative 1, Replace 15 fume hoods with auxiliary air fume hoods operating with a face velocity of 100 fpm. Alternative 2, Replace 15 fume hoods with high performance fume hoods operating at 70 fpm. Alternative 3, Replace 15 fume hoods with variable air volume hoods. Alternatives 2 and 3 were eliminated because they will not provide a beneficial payback due to the much higher capital cost. The amount of energy savings were not significant and they have substantial impacts on construction duration which are not feasible for the operations at the lab. Alternative 1 was analyzed further in Options 1A - 1D: Option 1A: Replace Fume Hoods and Exhaust Fans 100 fpm at Trace Organics and Conventionals; Option 1B: Replace Fume Hoods and add Exhaust Manifold 100 fpm at Trace Organics and Conventionals; Option 1C: Replace Fume Hoods and Exhaust Fans 80 fpm at Trace Organics and Conventionals; and Option 1D: Replace Fume Hoods and add Exhaust Manifold 80 fpm at Trace Organics and Conventionals. Recommended Alternative chosen was Option 1D: Replace 15 Fume Hoods primarily in Trace Organics and Conventionals with auxiliary air fume hoods operating with a face velocity of 80 fpm. This option combines the fume hood exhaust from Trace Organics and Conventionals so exhaust routes through primary \backup exhaust fan for each area.

10. OTHER AGENCY INVOLVEMENT

Water and Land Resources Division and the WTD Director's Office

11. ART ELIGIBILITY

Equipment replacement only project.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Project is inside an existing building.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The project is expected to result in energy savings, which will further the SCAP Buildings and Facilities Goal Area target of King County reducing normalized energy use in County owned facilities by at least 5% by 2020 and 10% by 2025, as compared to a baseline year of 2014. To measure progress towards the target, energy savings will be tracked by the DNRP Energy Manager after the project is completed.

NARRATIVES WTC PROCESS REPLACEMENT IMPROV 1113189

1. CURRENT PROJECT SCOPE

Process Replacement/Improvement: The Process Replacement /Improvement projects in this asset management project are designed to enhance or improve the treatment process by adding redundancy, improving safety, or enhancing maintenance practices. This "Roll-Up Project" funds a number of process replacement and improvement sub-projects that vary in dollar value, but are typically less than \$2,500,000. The number of sub-projects fluctuates as projects are completed and new sub-projects are added through the engineering work request process. As a result, sub-projects contained within this project number are in various states of design, from planning to construction. In addition, this project number is used to initiate process replacement and improvement sub-projects throughout the year that develop into stand alone projects with their own unique project number. Project schedule dates reflect activities of multiple sub-projects.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC PROCESS REPLACEMENT IMPROV

1113189

3. PROJECT JUSTIFICATION

These replacements, enhancements, and improvements to the treatment process are necessary to achieve defined standards for the proper, adequate, and efficient treatment of wastewater.

4. PROJECT BENEFITS/OUTCOMES

The Roll-Up Project sub-projects maintain or enhance the treatment process by adding redundancy, improving safety, or enhancing maintenance practices. Benefits include improved quality of products for plant effluent, reclaimed water and/or biosolids.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, budget carryover amount and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

See individual subprojects for specific information.

8. PROJECT STATUS

This Roll-Up is used to initiate process replacement and improvement sub-projects throughout the year that develop into stand alone projects with their own unique project number. Please see the program detail report submitted for the 2019/2020 budget for more information.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

See individual subprojects for specific information.

11. ART ELIGIBILITY

Project is for equipment refurbishment and replacement.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Subprojects will use WTD ESJ evaluation processes as part of project delivery. We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Subprojects will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Subprojects will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES WTC MECHANICAL UPGRADE AND REP 1113196

1. CURRENT PROJECT SCOPE

Mechanical Upgrade & Replacement: These projects replace or upgrade mechanical systems at wastewater facilities that have served their useful life such as piping, hydraulic systems, and heating and ventilation systems. Mechanical projects are also implemented to improve efficiency, provide safety for operators, and to meet current codes. This "Roll-Up Project" funds a number of mechanical upgrade and replacement sub-projects that vary in dollar value, but are typically less than \$1,000,000 although they may range up to \$2,500,000. The number of sub-projects fluctuates as projects are completed and new sub-projects are added through the project work request (PWR) process. As a result, sub-projects contained within this project number are in various phases from planning, design, and to construction. In addition, this Roll-Up project is used to initiate mechanical upgrade and replacement sub-projects throughout the year that may later develop into stand alone projects with their own project number. Project schedule dates reflect activities of multiple sub-projects.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC MECHANICAL UPGRADE AND REP

1113196

3. PROJECT JUSTIFICATION

Sub-projects included in this "Roll-Up Project" serve several purposes such as, increase system reliability and efficiency, increase operator and public safety and contribute to wastewater treatment division (WTD) meeting current codes as well as replacing or upgrading various mechanical equipment that have reached the end of their useful lives such as piping, hydraulic systems and heating and ventilation systems.

4. PROJECT BENEFITS/OUTCOMES

The sub-projects included in this "Roll-up Project" provide benefits in several key areas such as: 1. Reduced staff hours to maintain or operate various pieces of equipment or process systems. 2. Decrease use of resources such as water, electricity, fuel or chemicals which also reduces costs to purchase these items. 3. Increase safety for operators and the general public.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, budget carryover amount and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

See individual subprojects for specific information.

8. PROJECT STATUS

This is an ongoing program. Please see the program detail report submitted for the 2019/2020 budget for more information.

9. ALTERNATIVES ANALYSIS

See individual subprojects for specific information.

10. OTHER AGENCY INVOLVEMENT

See individual subprojects for specific information.

11. ART ELIGIBILITY

Project is for equipment replacement and refurbishment.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Subprojects will use WTD ESJ evaluation processes as part of project delivery. We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The WLRD Environmental Lab HVAC subproject is expected to result in energy savings of approximately 85,755 kWh/year. Implementation of the project will further the SCAP Buildings and Facilities Goal Area target of King County reducing normalized energy use in County owned facilities by at least 5% by 2020 and 10% by 2025, as compared to a baseline year of 2014. To measure progress towards the target, energy savings will be tracked by the DNRP Energy Manager after the project is completed. Subprojects will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Subprojects will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES

WTC PIPELINE REPLACEMENT

1113247

1. CURRENT PROJECT SCOPE

Pipeline Replacement: The Pipeline Replacement Program projects are primarily treatment process support systems. This piping conveys fluids such as potable and non-potable water, sludge, gases, chemicals, and air. These are projects that enhance the treatment process, overhaul or replace failed piping systems and equipment that has reached the end of its useful life, improve safety, reliability, efficiency or increase redundancy of the piping systems and code required upgrades. This "Rollup Project" funds a number of pipeline replacement subprojects that vary in dollar value, but are typically less than \$2,500,000. The number of subprojects fluctuates as projects are completed and new subprojects are added through the project work request process. As a result, subprojects contained within this project number are in various states of design, from planning to construction. In addition, this project number is used to initiate pipeline replacement sub-projects throughout the year that develop into stand alone projects with their own unique project number.. Project schedule dates reflect activities of multiple subprojects.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC PIPELINE REPLACEMENT

1113247

3. PROJECT JUSTIFICATION

These pipeline replacements and upgrades are necessary to ensure that existing systems continue to function properly to meet the required service levels.

4. PROJECT BENEFITS/OUTCOMES

This capital asset management program provides a programmatic approach to the timely replacement of capital assets that have reached their end of life or emergent issues that require capital solutions. This has a beneficial impact on plant operating budgets and work loads by reducing maintenance costs, improving mechanical efficiency and standardizing equipment manufactures.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, budget carryover amount and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

This is a rollup program and the majority of work is equipment (process piping) replacement. This has a beneficial impact on plant operating budgets by reducing maintenance costs, improving plant efficiency and standardizing equipment manufactures.

8. PROJECT STATUS

This is an ongoing program. Please see the program detail report submitted for the 2019/2020 budget for more information.

9. ALTERNATIVES ANALYSIS

See individual subprojects for specific information.

10. OTHER AGENCY INVOLVEMENT

See individual subprojects for specific information.

11. ART ELIGIBILITY

Project is for equipment replacement and refurbishment.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Subprojects will use WTD ESJ evaluation processes as part of project delivery. We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Subprojects will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Subprojects will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES

WTC COMP PLANNING REPORTING

1113334

1. CURRENT PROJECT SCOPE

Comp Planning & Reporting: This programmatic project funds and staffs the Wastewater Treatment Division's (WTD) comprehensive planning functions. The planning functions are on-going planning and reporting for combined sewer overflow control, monitoring, and update of the Regional Wastewater Services Plan (RWSP). This project also supports WTD planning for climate change and supports policy development and planning level coordination for WTD. The project tracks on-going coordination with Seattle Public Utilities (SPU), and budgets in the reimbursements from SPU for work WTD performs for SPU's benefit. Any new initiatives or capital planning efforts are under this project such as the Systemwide Comprehensive Plan.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC COMP PLANNING REPORTING

1113334

3. PROJECT JUSTIFICATION

King County Code Chapter 28.86 requires WTD's comprehensive planning functions. Additional planning functions are required in the National Pollution Discharge Elimination System (NPDES) Permits for municipal treatment plants and consent decrees. Planning functions are also responsive to the King County Strategic Plan, Strategic Climate Action Plan., and King County Executive Policy.

4. PROJECT BENEFITS/OUTCOMES

Comprehensive planning includes long-range planning activities for financial stability and rate savings. Identifying large capital projects and sequencing those projects to minimize rate impacts and provide for long-range financial planning is standard for large utilities. Long-range planning insures WTD meets regulatory requirements and court orders to complete projects in a timely manner.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project spending and budget carryover amount.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

No direct operation budget impacts. Portions of this project provide budget for operations staff involvement in planning work. Comprehensive plans will identify new projects for future capital budgets as well.

8. PROJECT STATUS

In the last biennium, WTD has completed the required update to the combined sewer overflow (CSO) Long-term Control Plan. In the next biennium, WTD will begin a System wide Comprehensive Plan.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

A number of the subprojects deal with Comprehensive Planning work that includes all 34 component agencies as stakeholders in the work being done. Frequent briefings with the Metropolitan Water Pollution Abatement Advisory Committee and Regional Water Quality Committee occur under this project.

11. ART ELIGIBILITY

This project is for comprehensive planning and reporting as required by county code.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Project is for report development.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project will implement the priority actions in Section Two of the SCAP (Preparing for Climate Change Impacts) that calls for WTD to (1) assess the impacts of climate change/rainfall patterns on wastewater conveyance and treatment, and (2) incorporate results of the assessment into future updates of the Regional Wastewater Services Plan and the King County Combined Sewer Overflow Control Plan.

NARRATIVES

WTC LAB ASSET MGMT PROGRAM

1113351

1. CURRENT PROJECT SCOPE

Lab Capital Asset Management Program: This project includes the refurbishment or replacement of the capital asset testing and sampling equipment of the Environmental Laboratory. Large building components, such as roofs and sidewalks, are not included.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Replace and maintain lab equipment including some building systems. In determining a replacement date for laboratory equipment and instrumentation, several factors are taken into consideration: when repair costs exceed replacement costs; whether changes in regulatory requirements stipulate more stringent standards such as lower detection limits; and whether availability of repair service and replacement parts has become more limited as technologies become less utilized by the industry. The Lab CAMP is tracked by an asset database. The Lab's ability to collect and analyze samples and generate quality data for DNRP programs and for outside agencies is reliant upon equipment that is operating properly. This budget also supports the maintenance of building systems required for employee safety.

4. PROJECT BENEFITS/OUTCOMES

In 2018 the lab is replacing a failing dishwasher that is critical to microbiology and conventional analyses, a TOC analyzer that was no longer adequately supported by the vendor, and a new flowcam system to support analyses of organisms in Puget Sound. All of this equipment supports. This equipment is essential to the lab's mission of supporting NDPES permits and other long term monitoring programs.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project spending and budget carryover amount.

6. FUNDING AND REVENUE DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC LAB ASSET MGMT PROGRAM

1113351

7. OPERATING BUDGET AND OTHER IMPACTS

N/A

8. PROJECT STATUS

The Environmental Lab submitted it's spending plan to WTD Finance in April. Procurement of replacement items has begun. TOC Analyzer – purchased and waiting for installation Centrifuge – replaced part instead of the entire system, was not over \$5000 Flowcam – getting quotes Dishwasher – getting quotes Crane - getting quotes Plate Reader – in route

9. ALTERNATIVES ANALYSIS

Each year the Environmental Lab reviews it's CAMP to identify which equipment needs to be replaced or new equipment that needs to be purchased.

10. OTHER AGENCY INVOLVEMENT

The Environmental Lab works with Executive Service Procurement for the issuance of RFPs, Waiver processes and other procurement activities.

11. ART ELIGIBILITY

Replacement of equipment.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Replacement of equipment.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

N/A Replacement of equipment.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES	WTC N CREEK INTERCEPTOR	1114382
------------	-------------------------	---------

1. CURRENT PROJECT SCOPE

North Creek Interceptor: This project increases the capacity of part of the North Creek Interceptor Sewer serving southwestern Snohomish County. The project involves replacement of 10,000 LF of existing gravity pipe with larger gravity pipes, 36 to 48 inches in diameter. Both trenchless (open face shield tunneling and pipe ramming) and open trench construction methods are being used.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

King County Conveyance System Policy CP-1 (KCC 28.86.060) directs the county to design and construct wastewater conveyance facilities to meet the 20-year peak flow standard to avoid sanitary sewer overflows and accommodate planned growth. Since 2010, WTD staff have responded to periodic overflows from the existing sewer during wet weather due to capacity limitations.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC N CREEK INTERCEPTOR

1114382

4. PROJECT BENEFITS/OUTCOMES

Avoid 20 year peak flow standard to avoid Combined Sewer Overflows and accommodate planned growth.

5. BUDGET REQUEST BASIS

Additional appropriation will cover project closeout.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

None expected.

8. PROJECT STATUS

The project achieved substantial completion in February 2018. The punchlist is being worked and includes two corrective actions which are being addressed and to be complete no later than December 2018.

9. ALTERNATIVES ANALYSIS

Recommended solution was implemented.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Project is a sewer.

12. EQUITY AND SOCIAL JUSTICE IMPACT

An Equity Determinants Assessment has been completed. The project team has already used interpreters and will continue to address equity and social justice needs in outreach activities during construction.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project is targeting Gold Scorecard rating.

NARRATIVES

WTC RECLAIM H2O PLAN & INFSTRC

1114383

1. CURRENT PROJECT SCOPE

Reclaimed Water Planning & Infrastructure: The project includes customer development and support for existing reclaimed water facilities, planning, negotiating agreements, obtaining initial permits, customer connections, feasibilities studies, and engineering planning for reclaimed water use from South Plant, Carnation, and Brightwater.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Required by RWSP planning policies, Council Ordinance, DNR outfall lease, SCAP, Brightwater DNR Outfall lease requirements, and Executive Initiative

4. PROJECT BENEFITS/OUTCOMES

Provides ability to evaluate feasibility of customer connections and develop potential customers to increase reclaimed water use as an alternative discharge to Puget Sound.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project spending and budget carryover amount.

6. FUNDING AND REVENUE DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC RECLAIM H2O PLAN & INFSTRC

1114383

7. OPERATING BUDGET AND OTHER IMPACTS

As additional customers in the Sammamish Valley are connected to the reclaimed water system, operations staff is required to read the meters and maintain the meters and backflow preventers. In addition the billing department has additional invoicing to the bill the new customers. Reclaimed water program staff will spend additional time supporting the customers as they become long term customers and providing on-going training which is charged to the operating budget.

8. PROJECT STATUS

The Cascade Water Alliance reclaimed water feasibility study is underway and expected to finish mid-summer. The mixer relocation project has been delayed to later in the year due to operational needs. With the distribution pipe damage in April, a greater examination of the distribution system has occurred. From that examination, the need for equipment replacement and changed valve programming has been added to the scope of this project to allow for more reliably and lower risk distribution. The Foster Golf Links Soil study and test plot is underway and will be completed in November. All remaining studies have not been started yet.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

WLRD provides reclaimed water and soil quality testing, provides farmer coordination assistance, and guidance on wetland, surface water, and groundwater associated with reclaimed water projects. Departments of Ecology and Health jointly permit reclaimed water facilities. New customer contracts and training are required by these departments.

11. ART ELIGIBILITY

Capital Planning and Program Development Project

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project involves connecting customers where our existing reclaimed water distribution lines have already been installed. We are constrained by existing geography of distribution systems which are near the existing wastewater treatment plants. King County will be offering reclaimed water to all potential customers along the system that will use the water for uses approved by WA Department of Ecology and Health. We do provide customer training in the language preferred by the customer's employees and are reaching out to immigrant farmers in Sammamish Valley.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project will help implement the priority action in Section Two of the SCAP (Preparing for Climate Change Impacts) that calls for WTD to expand the use of reclaimed water. Progress towards implementation of the priority action will be measured by quantifying new reclaimed water customers and connections. Reclaimed water connection projects will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Reclaimed water connection projects will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES WTC SP RECLAIMED H2O FAC MODS 1116796

1. CURRENT PROJECT SCOPE

SP Reclaimed Water Facility Modifications: Upgrade the existing reclaimed water system at South Plant to replace the pilot facility with a permanent facility, improve the reliability of reclaimed water produced and provide safety enhancements for WTD staff. The work includes: 1. Replace the existing temporary chemical pump building with a permanent building, 2. Modify the existing storage tank to meet current system requirements, 3. Provide a permanent chemical storage tank, 4. Provide spray washing system at the chlorine tanks and the reclaimed water storage tank, 5. Provide fill stations for the sodium hypochloride and the coagulant.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The existing system is housed in a pilot facility that is at the end of its useful life. This project provides a permanent facility and will improve the reliability of reclaimed water produced and improve operator safety.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC SP RECLAIMED H2O FAC MODS

1116796

4. PROJECT BENEFITS/OUTCOMES

This project will provide substantial improvements to the Reclaimed Water Facility in terms of improved water quality and reliability as well as improved operator safety.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, budget carryover amount and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Staff labor for maintaining the existing reclaimed water facility should be reduced when the new and improved facility is up and running. In addition, the safety improvements provided by this project will improve operator safety, especially when cleaning the Reclaimed Water Storage tank.

8. PROJECT STATUS

The project achieved Substantial Completion on April 30, 2018. Currently the contractor is pursuing Punchlist items and the project team is beginning activities to close the project out.

9. ALTERNATIVES ANALYSIS

Several different alternatives were evaluated including using ultraviolet light for disinfection. Ultimately WTD management determined that the current scope of work, to upgrade the existing Pilot facility to a permanent facility and provide upgraded safety features and reclaimed water reliability was the selected alternative.

10. OTHER AGENCY INVOLVEMENT

The City of Renton will provide a building permit.

11. ART ELIGIBILITY

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Inside of existing plant boundaries. No odor or transportation impact.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project has achieved substantial completion. The projected C&D diversion rate for the project was 97%. This furthered the SCAP Green Building Goal Area target of County capital projects achieving an average C&D diversion rate of 85% percent by 2025. Progress towards the target will be confirmed by the completion of a C&D Report that identifies an actual C&D diversion rate for the project.

NARRATIVES

WTC JAM/ARC BLDG REPLACEMENT

1116797

1. CURRENT PROJECT SCOPE

Jameson/Arcweld Buildings Replacement: This project will incorporate information previously gathered in the Planning Level Alternatives Analysis developed in June of 2012, performed under a separate Minor Asset Management project. The team will re-evaluate and update current and future organizational business needs and requirements for housing West Division maintenance and Construction Management Staff. Perform alternatives analysis and develop a recommended alternative. The KC PM presents monthly to an approval Project Review Board (PRB). At 15% design the KC PM will present to the PRB a recommended alternative to implement.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC JAM/ARC BLDG REPLACEMENT

1116797

3. PROJECT JUSTIFICATION

The Jameson and ArcWeld buildings are beyond their useful life. These facilities, which currently house West Section Off-Site Facilities operations staff and the North Satellite Construction Management office staff, have numerous problems that impact productivity, such as insufficient space for the number of employees, rodent infestation, and substandard heavy machine maintenance work areas. The Jameson facility does not meet codes for ADA compliance, and current International Building and Seismic Codes. The ArcWeld building is comprised of an 85-year-old house connected to a 35-year-old construction trailer. The operational need and justification for this project is to provide a safe, healthy, and functional work environment for our employees.

4. PROJECT BENEFITS/OUTCOMES

This project replaces substandard and obsolete facilities that are in need of repair and maintenance. The new facility will provide a safe, healthy, and functional working space for personnel who operate and maintain West Section facilities, and for construction management personnel who manage and inspect construction projects on WTD's regional conveyance and treatment system. The current building does not meet current seismic codes or ADA accessibility. The new facility will improve WTD's capabilities to operate and maintain West Section off-site facilities and improve WTD's resiliency to withstand a major seismic event as the personnel housed in the building are critical to recovery. The new facility will improve energy efficiency and building performance.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, budget carryover amount and the timing of implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

\$2 Million (which is less than 10% of construction costs) of RINs revenue has been included to support additional incremental investment in energy/water efficiency and emissions reduction.

7. OPERATING BUDGET AND OTHER IMPACTS

To be determined based on alternative selected.

8. PROJECT STATUS

The team has defined the user needs and investigated purchase and leasing options for the new building. The team is reviewing and rating four conceptual schemes, which will be compared. A recommendation to the Project Review Board will be in September, 2018. A life-cycle cost assessment (LCCA) will be completed in the summer of 2018 at 15% design. The LCCA will compare the status quo versus the two preferred alternatives. LCCA includes the social cost of carbon.

9. ALTERNATIVES ANALYSIS

Preliminary alternatives evaluated include new site acquisition, leasing, and construction of a new building on the existing property.

10. OTHER AGENCY INVOLVEMENT

Engaging SPU on easement through Jameson property.

11. ART ELIGIBILITY

Art budget will be determined at Gate 2 (September 2018), per agreement with 4Culture.

12. EQUITY AND SOCIAL JUSTICE IMPACT

To be determined as project definition is determined in Alternative Analysis. .

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC JAM/ARC BLDG REPLACEMENT

1116797

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project is one of the few regularly occupied space projects that WTD implements, so it provides an opportunity for application of criteria from various ratings. Will contribute to SCAP Green Building Goal Area targets/strategies. The project will explore GSI and energy efficiencies in the design stage. The new building will comply with the GBO. Team is in process of determining what sustainability rating to use. If the team recommends using Living Building Challenge (LBC), the project helps to advance SCAP goal to register 10 net zero energy (NZE) or LBC projects by 2020. The team has determined that there will be similar costs to implement LEED V4 platinum (required minimum) versus LBC Petal Cert.. The project is evaluating options to be energy net zero (annually) by installation of a solar photovoltaic system, and will include several building system efficiency measures that exceed the Seattle Energy Code. These will advance SCAP energy goals by reducing WTD energy use and increasing WTD renewable energy production. These measures will also reduce or nullify carbon emissions associated with operation of the facility. The project will advance SCAP water goals by including rain water catchment and grey water reuse systems to reduce city/potable water consumption. The project team has been in contact with Seattle City Light to begin discussions on grant-eligible efficiency measures. Team will pursue state and federal incentives.

NARRATIVES WTC N MERCER ENATAI INT PAR 1116800

1. CURRENT PROJECT SCOPE

North Mercer Island & Enatai Interceptors Upgrade: This project will increase the reliability and capacity of the existing North Mercer Island Interceptor and Enatai Interceptor components of the regional wastewater system in order to convey the 20-year peak wastewater flows projected through the year 2060 from service areas in North Mercer Island, the southwest portion of Bellevue, and the Town of Beaux Arts Village.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

King County Conveyance System Policy CP-1 (KCC 28.86.060) directs the County to design and construct wastewater conveyance facilities to meet the 20-year peak flow standard to avoid sanitary sewer overflows.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC N MERCER ENATAI INT PAR

1116800

4. PROJECT BENEFITS/OUTCOMES

Timely replacement of the existing pipeline will prevent sewer breaks in a densely populated area. Increasing the conveyance line to accommodate future flows will avoid overflows and support future growth.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, budget carryover amount and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

The project's potential net impact – increase or decrease – on the operating budget is to be determined in the future design phases.

8. PROJECT STATUS

Project team is currently working on 60% design. 60% design package for the conveyance (Contract B) will be submitted to KC in June 1 for review. A design review kick off meeting will be held in June 6. Property team is working with the appraiser to get the estimates for the temporary and permanent easements for the private properties. Permitting team is pursuing JARPA application which will be submitted early June. Team is also coordinating with the other agencies including WSDOT, the City of Bellevue and the City of Mercer Island for the local permits.

9. ALTERNATIVES ANALYSIS

The project team analyzed project alternatives in a multi-stage process to identify a limited number of best apparent alternatives. In Stage 1 of the alternatives analysis, sets of segment options were developed for each of three geographic portions of the project: Mercer Island, the East Channel, and the Enatai neighborhood of Bellevue. The general characteristics of the alternatives are listed below by the location: 1. Mercer island: a) In water route, following the existing pipeline, b) Upland route including I(Trail and North Mercer Way, 2. East Channel Crossing: a) In water trenchless construction, b) In water open cut construction, 3. Bellevue section: a) In water construction following the existing pipeline, b) Trenchless construction from Enatai Beach park to Sweyolocken pump station. The categories of evaluation criteria used to screen the alternatives included impacts related to; North Mercer Pump Station capacity and total dynamic head, technical considerations, constructability, operation and maintenance, permitting, rights of way, easements and rights of entry, environment, community, and cost. After extensive criteria -based evaluation performed in multiple stages the WTD Capital Systems Team selected the alternative that includes an upland route in Mercer Island, open cut East channel crossing and trenchless construction in Bellevue.

10. OTHER AGENCY INVOLVEMENT

City of Mercer Island, City of Bellevue, WA Department of Ecology, WA Department of Natural Resources, WA Department of Fish & Wildlife, WA Recreation and Conservation Office, WA Department of Transportation, US Army Corps of Engineers, US Coast Guard, Tribes, Individual property owners & various interest groups, Sound Transit

11. ART ELIGIBILITY

12. EQUITY AND SOCIAL JUSTICE IMPACT

An Equity and Social Justice (ESJ) plan is currently being developed to access and assist in addressing any ESJ impacts related to this project. Project area's access to equity determinants was assessed prior to alternative selection. Project public involvement plan incorporates County best practices for equitable outreach (e.g. demographic analysis, collaboration with Community Based Organizations, increased educational opportunities and/or culturally appropriate information gathering as applicable). Information gathered during public involvement effort incorporated into County decision-making. We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC N MERCER ENATAI INT PAR

1116800

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Current certification projection is Platinum. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion. Current C&D diversion rate projection is 85%.

NARRATIVES WTC LK HILLS&NW LK SAM INTCPT 1116801

1. CURRENT PROJECT SCOPE

Lake Hills and NW Lake Sammamish Interceptor Upgrade: This project will increase the capacity of the Lake Hills Trunk and NW Lake Sammamish Interceptor sewers to convey 20-year storm peak flow capacity through 2060. The condition of the existing pipe will determine which portions are replaced, refurbished, or paralleled. The project is located in the City of Redmond and unincorporated King County. The sewer includes 4.5 miles of gravity pipe and two siphon sections. Per Wastewater Treatment Division (WTD) management direction, a scope for 1.5 miles of recycled water (RW) pipeline was added to the project. The RW line will start from the south side the Redmond City Hall and parallel the new sewer line all the way to the north of the Marymoor Park entrance. The RW line is 18" diameter pipe, pressure rated at 250 pounds per square inch (psi), and is approximately 1.5 miles in length. The additional scope for RW and the combined baseline (sewer and RW) were approved by the WTD Capital Systems Team on September 12, 2017.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC LK HILLS&NW LK SAM INTCPT

1116801

3. PROJECT JUSTIFICATION

King County Conveyance System Policy CP-1 (KCC 28.86.060) directs the County to design and construct wastewater conveyance facilities to meet the 20-year storm peak flow standard to avoid sanitary sewer overflows. The current capacity of the two pipelines is estimated to accommodate only a 5 to 10 year storm. At the time of the 2007 Conveyance System Improvements Plan update, facility inspections indicated that existing Lake Hills Trunk likely warranted replacement based on age and condition as well.

4. PROJECT BENEFITS/OUTCOMES

Timely replacement of the existing pipeline will prevent sewer breaks in a densely populated area. Increasing the conveyance line to accommodate future flows will avoid sanitary sewer overflows and support future growth.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, budget carryover amount and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

None.

8. PROJECT STATUS

The project has completed planning and preliminary design. The project completed 60% design on April 27, 2018 and is currently working towards 90% design early in 2019. Staff are pursuing temporary and permanent construction easements as well as acquiring permits needed to construct the project in 2018 and 2019. It is anticipated that design will be completed and construction started in early 2020.

9. ALTERNATIVES ANALYSIS

WTD Capital Systems Team approved the recommended alternative in December 2015. As part of the alternatives analysis, the project team conducted an in-depth risk assessment workshop and evaluated alternatives with regulatory and community stakeholders. The existing line was broken into five segments and multiple alignments were considered for each. Additionally, the project team evaluated whether the existing line could be relined or if a complete replacement was required. Tunneling techniques (trenchless vs open cut) were also evaluated. Evaluation criteria included the following considerations: Community, Environmental and Cultural Resources, Permitting and Land Use, Property, Technical Considerations, and Operations and Maintenance. The recommended alternative was selected using a Triple Bottom Line Analysis that considered social, environmental, and financial impacts.

10. OTHER AGENCY INVOLVEMENT

The project is located in the City of Redmond and unincorporated King County (near Marymoor Park). The project team has briefed City staff from various departments, including public works, parks, transportation and permitting. The project manager briefed City Council in January 2016. Coordination is ongoing. The project team has held several meetings with King County DNR Parks, due to proximity of the project to Marymoor Park and the location of the existing pipe in the Sammamish River Trail. The project team will need to obtain an access agreement from King County Parks. One manhole is located in the City of Bellevue, and coordination with them is also required. Permits and access agreements will also be acquired from King County Dept. of Permits and Environmental Review, Washington State Department of Transportation (to cross under SR 520), and WDNR (to cross under the Sammamish River).

11. ART ELIGIBILITY

The project upgrades an underground sewer pipeline.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC LK HILLS&NW LK SAM INTCPT

1116801

12. EQUITY AND SOCIAL JUSTICE IMPACT

An Equity Determinants Assessment has been completed, and no racial and/or social economic disparity issues were identified. The project team will update and evaluate issues as the project is developed. Project area's demographics and access to equity determinants was assessed prior to alternative selection. Project public involvement plan incorporates County best practices for equitable outreach (e.g. demographic analysis, collaboration with Community Based Organizations, increased educational opportunities and/or culturally appropriate information gathering as applicable). Information gathered during the public involvement effort incorporated into County decision-making. We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Current certification projection is Platinum. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion. Current C&D diversion rate projection is 85%.

NARRATIVES

WTC SP RSP MEDIUM VOLT SG REPL

1121404

1. CURRENT PROJECT SCOPE

STP Raw Sewage Pump Medium Voltage Switch Gear Replacement: This project will replace the medium voltage (15kV) switchgear that supports the Raw Sewage Pumping equipment located in the South Treatment Plant Influent Pump Building.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The current switchgear has been in service since 1964 and is beyond its estimated useful life. One side of the two-sided switchgear has recently failed twice, which reduced the plants pumping capacity by 50% until repairs were made. These failures occurred during a low flow period during the dry season and consequently did not result in overflows. A future failure of either side of the switchgear during a high flow period would most likely result in overflows and the discharge of raw sewage into the Green River. In addition, switchgear maintenance has become more and more difficult due to the lack of available spare parts.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC SP RSP MEDIUM VOLT SG REPL

1121404

4. PROJECT BENEFITS/OUTCOMES

Replacing the switchgear will provide a more reliable power source to the plant's systems and help assure continual operations are maintained without interruption. It will also update the equipment to modern standards, which provide a higher level of safety and reliability than the current aging and outdated gear.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, budget carryover amount and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

The plant operating budget would see minor reduction in costs associated with switchgear maintenance and operation. The newer switchgear will not require the level of maintenance that is currently necessary for the existing switchgear because of its age, condition and component design. The design of the new switchgear incorporates a greater level of fault protection and switching capability, which will address operational limitations due to safety requirements placed on the existing switchgear.

8. PROJECT STATUS

The project is currently in the design phase and progressing through 60% design review. Design is anticipated to be completed in 2018. Construction is expected to occur in 2019, with project completion anticipated to occur in 2020.

9. ALTERNATIVES ANALYSIS

There were seven alternatives originally considered. Two were eliminated in the preliminary stage due to building structural limitations and plant operational issues. The remaining five were developed more fully to identify constraints, costs and alignment with the evaluation criteria. Three alternatives were located in the existing building and two were located outside the building in self-contained equipment enclosures. The evaluation criteria were operations, maintenance, construction cost, and plant operational risk during construction. Based on these criteria, the alternative of locating the switchgear outside of the existing facility in an equipment enclosure was selected. Subsequent to the alternatives analysis, during the pre-design process, it was discovered that the new equipment to be installed occupies much less space than was first thought. Because of this, it was later decided that the new equipment would be placed inside the existing facility and no new containers would need to be constructed.

10. OTHER AGENCY INVOLVEMENT

There are no external agencies involved in this project.

11. ART ELIGIBILITY

Project is for equipment replacement.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Inside of existing plant boundaries. No odor or transportation impact.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Current certification projection is Platinum. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion. Current C&D diversion rate projection is 85%.

NARRATIVES

WTC ESI SECT 4 LINING	1121406
1. CURRENT PROJECT SCOPE	
East Side Interceptor Section 4 Lining: This project will implement the solution for addressing corrosion in the previously lined section of East Side Interceptor Section 4 (ESI4), as proposed by project number 1120992 - East Side Interceptor Section 4 Lining Assessment.	
2. PROGRAMMATIC PROJECT DISCUSSION	
3. PROJECT JUSTIFICATION	
The lining system installed in a section of ESI 4 in 1993 has failed, leaving the reinforced concrete pipe vulnerable to hydrogen sulfide corrosion. Corrosion can cause a structural failure of the pipe, which can lead to undesirable consequences such as sewer backups and sinkholes.

NARRATIVES

WTC NCRK INTCPTR OVRFLW CONTRL

1121408

1. CURRENT PROJECT SCOPE

North Creek Overflow Control: Investigate and correct I/I problems along the North Creek Interceptor (NCI) and work with AWWD to identify and reduce I/I problems in their system to reduce overflows along the NCI. As a contingency measure, design, permit, and if needed, construct a temporary pump around of the capacity restricted section of the NCI.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

During the 2012-2013 wet season, the NCI experienced several overflows and there were backups at two homes. Subsequent to the first overflow and backup, WTD identified I/I problems at several locations along the NCI. The North Creek Interceptor project (1114382) will increase capacity to eliminate the overflow problem, but reduction of I/I is necessary to reduce the likelihood of overflows before that project is completed. If the I/I reduction is insufficient to stem the overflows, a temporary pump-around may be required.

NARRATIVES

WTC E FLEET MAINT FAC REPLCMNT

1123517

1. CURRENT PROJECT SCOPE

East County WTD Fleet Repair & Maintenance Facility Replacement: This project entails acquiring property, obtaining permits, and constructing a new biosolids truck parking, maintenance, and repair facility. The site will accommodate a vehicle maintenance building, vehicle parking, vehicle electrification, materials storage, and landscaping.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

WTD must find a replacement site for the existing leased biosolids truck staging/maintenance facility in Georgetown. The King County Airport is planning to construct a snow maintenance structure on the existing leased site in 2019.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC E FLEET MAINT FAC REPLCMNT

1123517

4. PROJECT BENEFITS/OUTCOMES

Project benefits will be: - Will provide a new maintenance facility on WTD owned property. - Replace an aging facility. - Provide a more accessible facility along the commonly used traffic path. - Will assist in meeting Federal requirements for maximum drive times of truck drivers.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, budget carryover amount and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

No impacts are expected as the existing facility management contract will be transferred to the new building.

8. PROJECT STATUS

Project is currently at 90 percent design and proceeding through the Land Use and Building Permit process with the City of North Bend.

9. ALTERNATIVES ANALYSIS

The Right-of-Way (ROW) group evaluated different properties in determining the final site location. In addition, the project team evaluated the current alternative against the "do nothing" alternative.

10. OTHER AGENCY INVOLVEMENT

City of North Bend will be the permitting agency on this project.

11. ART ELIGIBILITY

Project is a new construction of a fleet repair and maintenance facility.

12. EQUITY AND SOCIAL JUSTICE IMPACT

We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The project will reduce fuel consumption in Loop trucks by reducing the total travel mileage of the trucks. This will further the SCAP Transportation and Land Use Goal Area target of the County reducing normalized energy use in its vehicle operations (excluding Metro Transit fleet vehicles) by at least 10% by 2020, compared to a 2014 baseline. Progress towards the target will be measured by tracking Loop truck fuel use and mileage. The building constructed as part of this project will be LEED Platinum certified. This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by the receipt of LEED certification. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES

1. CURRENT PROJECT SCOPE

Coal Creek Siphon & Trunk Parallel: This project will increase the capacity of the downstream half of Coal Creek Trunk. The trunk to be upgraded is 7,100 lineal feet, ranges in diameter from 15 to 21 inches, and ranges in flow from 7 to 10 million gallons per day (MGD). The upgraded sewer will be required to convey between 11 and 19 MGD to meet the year 2060, 20-year peak flow criteria.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC COAL CRK SIPHON TRUNK PARA

1123624

3. PROJECT JUSTIFICATION

King County Conveyance System Policy CP-1 (KCC 28.86.060) directs the County to design and construct wastewater facilities to the 20-year peak flow standard to avoid sanitary sewer overflows. The County adopted Policy CP-1 as the measure for designing and building conveyance facilities intended to meet the National Pollutant Discharge Elimination System (NPDES) permit requirement that prohibits overflow of untreated wastewater from the separated portion of the County's regional conveyance system. Currently, the Coal Creek Trunk is under capacity with respect to the Conveyance System Policy CP-1. The typical level of service in year 2000 was considered to be at the two- to five-year peak flow indicating there is a 20 to 50 percent chance of overflowing each year because of insufficient capacity. The limited capacity of the Coal Creek Trunk creates a risk of sanitary sewer overflow and violation of the County's NPDES permit.

4. PROJECT BENEFITS/OUTCOMES

This project will: - Move most of the Coal Creek Trunk out of the Coal Creek basin preventing future impacts to critical areas. - Increase the capacity of the Coal Creek Trunk to meet year 2060, 20-year peak flow criteria. - Replace a 50-year old sewer with a new sewer. - Provide a more accessible sewer outside of the creek basin.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, budget carryover amount and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

None expected

8. PROJECT STATUS

The project is currently in the preliminary design phase. The project team is currently evaluating horizontal directional drilling (HDD) and Direct Pipe drilling trenchless technologies for constructability. Geotechnical investigation and surveying is progressing.

9. ALTERNATIVES ANALYSIS

Alternative analysis was completed in September 2017.

10. OTHER AGENCY INVOLVEMENT

Washington State Department of Ecology will be involved when pursuing SRF loan funding of the Construction Phase. City of Bellevue is involved for permitting of the project and easements in the Coal Creek recreational area. A pre-application meeting has occurred with the U.S. Army Corps of Engineers for permits for work near the creek and wetlands.

11. ART ELIGIBILITY

Project is a sanitary sewer project, entirely underground with no above-ground facilities.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Project area's demographics and access to equity determinants assessed for use in alternative analysis. Project public involvement plan incorporates County best practices for equitable outreach (e.g. demographic analysis, collaboration with Community Based Organizations, increased educational opportunities and/or culturally appropriate information gathering as applicable). County decisions will be informed by information gathered during public involvement effort. We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan..

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC COAL CRK SIPHON TRUNK PARA

1123624

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES

WTC SP BIOGAS HEAT SYS IMPROVE

1123626

1. CURRENT PROJECT SCOPE

SP Biogas and Heat Systems Improvements: Implement modifications identified in the South Plant Biogas Utilization Study (2013), which established that the continued upgrading of digester gas for injection into the local utility's natural gas line was the best use of plant generated biogas in the future. The selected alternative (September 2016, under this project) includes: 1) replacement of the existing biogas scrubbing system with a new membrane biogas separation system, and 2) installation of new dual-fuel hot water boilers and low-temperature effluent heat extractors to meet year-round heating demands through 2040. The new boilers will be co-located with the biogas upgrading facility in a new building, and the heat extractors will be located in the lower floor of the existing Digester Equipment Building. The existing biogas scrubbing system, heat extractors and boiler will be demolished.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC SP BIOGAS HEAT SYS IMPROVE

1123626

3. PROJECT JUSTIFICATION

Major elements of the current gas scrubbing system are at the end of their useful life and the system will need costly replacements and upgrades to keep it running. Some components of the system are beyond obsolete or beyond repair. The existing system has very high power demands compared to other alternatives, has not been integrated into the plant Ovation Control System and has a substantial Green House Gas footprint that this project will reduce. The plant heating system, which currently relies on scrubbed biogas, is insufficient to meet peak heat demand with the primary unit out of service. The gas turbine combined heat and power system is currently used as an emergency backup to the boiler but it is inefficient, as well as expensive to operate as a backup heating system.

4. PROJECT BENEFITS/OUTCOMES

Extends the practice of exporting renewable biogas fuel to Puget Sound Energy's natural gas transmission line, directly replacing consumption of fossil derived natural gas, reducing the County's carbon footprint. Pays for itself through the sale of highly valued Renewable Identification Number (RINS) credits, for which the County is paid and which will more than offset the capital cost for the project.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, budget carryover amount and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

In the short term, the project is likely to reduce the South Treatment Plant maintenance costs by replacing worn out equipment with new. Process reliability will be greatly improved. Because the new system will be constructed while the existing system continues to operate, there will be no or minimal loss of RINS revenue.

8. PROJECT STATUS

90 percent design is nearing completion

9. ALTERNATIVES ANALYSIS

The alternative analysis was completed in 2017 and it evaluated several options for replacement of process and space heating equipment, and for replacement of biogas scrubbing equipment. Four biogas upgrading systems were evaluated. Three were lowest and comparable in net 20 year life cycle cost, and only one of these there, the selected membrane technology, had been demonstrated to meet the new gas quality requirements imposed by the natural gas utility. The membrane technology also had low air emissions and a small GHG footprint.

10. OTHER AGENCY INVOLVEMENT

Permit applications from the City of Renton and from the Puget Sound Clean Air Agency are in progress.

11. ART ELIGIBILITY

Project is for equipment replacement and completely within the plant boundary.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Inside of existing plant boundaries. No odor or transportation impact.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC SP BIOGAS HEAT SYS IMPROVE

1123626

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Reducing greenhouse gas emissions and increasing facility energy efficiency, resulting in energy savings of approximately 2,400,000 kWh/year. Project includes lower emission alternatives for facility heat and evaluates tapping in to renewable energy through sewage heat recovery. Upgrades the biogas scrubber to increase productivity and use of renewable biogas energy. Progress toward the target will be measured by monitoring the amount of electricity produced. Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Current certification projection is Platinum. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES WTC WP 2ND MIX LIQ BLOWER REPL 1123627

1. CURRENT PROJECT SCOPE

WP Secondary Mixed Liquor Channel Air Blower Replacement : This project will evaluate the replacement of the existing centrifugal mixed liquor channel air blowers with alternative technology such as high-speed turbo blowers. The Variable Frequency Drive (VFD) equipped turbo blowers are a newer and more energy efficient technology, and can generate more cubic feet per minute (CFM) of air per kilowatt (kW) than the existing centrifugal blowers. This project will evaluate: the air requirements for the secondary mixed liquor channel physical/biological processes; and alternative air delivery system efficiencies and cost data. Based on those findings, the project will determine what equipment (blowers, piping, valves, etc.) requires replacement.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC WP 2ND MIX LIQ BLOWER REPL

1123627

3. PROJECT JUSTIFICATION

Mixed liquor channel aeration at West Point is required to keep solids in suspension prior to flow entering the secondary clarifiers. Currently, the secondary agitation air blower system at West Point uses an estimated 2.6 million kWh annually with two 200 Horse Power (HP) centrifugal blowers operating 24/7. Replacing the blowers with new high speed turbo blowers could save 800,000-1,000,000 Kilowatt-hours (kWh) annually, saving \$48,000 - \$60,000 in energy costs. The project would help WTD meet energy efficiency targets and be in compliance with the County's Energy Plan and Strategic Climate Action Plan.

4. PROJECT BENEFITS/OUTCOMES

Approved Recommended Alternative will replace current blowers with energy efficient modulated high speed turbo blowers. New equipment will save 30,650 MWh and approximately \$2,064,000 in energy costs over the life of the equipment. This project will contribute to the King County Strategic Climate Action Plan and will help reduce energy use of 7% by 2020.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, budget carryover amount and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Project anticipates reduction in the Operating cost for electricity.

8. PROJECT STATUS

CST Approve Recommended Alternative on May 8, 2018. Phased Amendment negotiations and predesign services anticipated for 3rd quarter 2018.

9. ALTERNATIVES ANALYSIS

Recommended Alternative has been approved May, 8 2018.

10. OTHER AGENCY INVOLVEMENT

None.

11. ART ELIGIBILITY

Project is for equipment replacement.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Inside of existing plant boundaries. No odor or transportation impact.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project is expected to result in energy savings of approximately 930,000 kWh/year. Implementation of the project will further the SCAP Buildings and Facilities Goal Area target of King County reducing normalized energy use in County owned facilities by at least 5% by 2020 and 10% by 2025, as compared to a baseline year of 2014. To measure progress towards the target, energy savings will be tracked through WTD's normalized energy use reporting after the project is completed. Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES WTC ESI SECT 2 REHAB PHASE II 1123630

1. CURRENT PROJECT SCOPE

Eastside Interceptor Section 2 Rehab - Phase II: The scope of this project is to evaluate alternatives and implement the rehabilitation of approximately 3,900 linear feet of the Eastside Interceptor Section 2 (ESI 2), located in Renton.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The primary objective of this project is to maintain reliable sewage conveyance and extend the useful life of existing sewers by the structural rehabilitation or replacement of conveyance system pipelines and/or structures suffering from severe Hydrogen Sulfide (H2S) corrosion. If this project is not implemented, it may result in failure of the pipeline.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC ESI SECT 2 REHAB PHASE II

1123630

4. PROJECT BENEFITS/OUTCOMES

The project maintains the structural integrity of the Eastside Interceptor Section 2, and extends the useful life of the pipeline.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, budget carryover amount and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

None.

8. PROJECT STATUS

Working on phased amendments and construction management services request for proposal. Continuing to meet with external agencies and stakeholders. Submitted application for conditional use permit. Conducted a two-day risk workshop. Conducted an eco-charrette. Submitted 30% sustainability scorecard and construction& demolition diversion report.

9. ALTERNATIVES ANALYSIS

This project has not completed alternatives analysis yet.

10. OTHER AGENCY INVOLVEMENT

This project is anticipated to require property access from the Boeing Company and permits from City of Renton.

11. ART ELIGIBILITY

This project will rehabilitate an underground sewer pipeline.

12. EQUITY AND SOCIAL JUSTICE IMPACT

We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Current certification projection is Platinum. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of achieving an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion. Current C&D diversion rate projection is 85%.

NARRATIVES

WTC JOINT SHIP CANAL CSO

1127126

1. CURRENT PROJECT SCOPE

Joint Ship Canal Water Quality CSO Control: This project funds King County's share of the capital costs for the Joint Ship Canal Water Quality Project (SCWQP), a Combined Sewer Overflow (CSO) control project with Seattle Public Utilities (SPU). SPU is the lead agency for design, construction and operation of this facility. The Ship Canal Water Quality (WQ) Project is a joint project between Seattle Public Utilities (SPU) and King County Department of Natural Resources and Parks (DNRP) that will provide offline storage with a deep storage tunnel constructed between the Ballard and Wallingford Combined Sewer Overflow (CSO) areas, on the north side of the Ship Canal. The Ship Canal WQ Project will control SPU's Ballard CSO basins (Outfalls 150,151, and 152), Fremont (Outfall 174) and Wallingford CSO basins (Outfall 147), DNRP's 3rd Avenue West Regulator (DSN008), and 11th Avenue NW Regulator (DSN004). The minimum total control volume for both SPU and DNRP CSO basins is 15.24 million gallons (MG).

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC JOINT SHIP CANAL CSO

1127126

3. PROJECT JUSTIFICATION

King County and SPU have each entered into federal court ordered consent decrees requiring control of combined sewer overflows to the Lake Washington Ship Canal, Duwamish River and Elliott Bay. The parties have jointly identified a storage tunnel along the Ship Canal as the preferred option to meet each jurisdiction's consent decree requirements.

4. PROJECT BENEFITS/OUTCOMES

The storage tunnel to be constructed will control DNRP's 3rd Avenue West Regulator (DSN008), and 11th Avenue NW Regulator (DSN004) CSO basins.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, budget carryover amount and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Operations will be the responsibility of SPU.

8. PROJECT STATUS

The project consists of multiple work packages; the Storage Tunnel package has reached the 90% design completion milestone. The Tunnel Effluent Pump Station is currently kicking off 60% design. Shilshole Pipe, which is the effluent conveyance from the pump station, has reached 90% design completion. The Ballard Early Works (the Ballard site preparation) construction contract was recently awarded.

9. ALTERNATIVES ANALYSIS

Originally WTD's Consent Decree specified two CSO projects (3rd Ave. W. and 11th Ave. NW), though it allowed a joint project with SPU if proposed. Internal WTD analysis and County Executive decision resulted in direction to participate in this joint project, based on lower community impact than separate projects and similar costs.

10. OTHER AGENCY INVOLVEMENT

Seattle Public Utilities (SPU) is the lead agency for design, construction and operation of this facility.

11. ART ELIGIBILITY

Project is Seattle Public Utilities (SPU) owned and managed and WTD is contributing reimbursable charges only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Seattle is the lead agency for this project and has ESJ components in their project delivery.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

N/A. City of Seattle is the lead agency.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

WTC PRIMARY SED ROOF STRUCTURE

1127489

1. CURRENT PROJECT SCOPE

West Point Primary Sedimentation Area Roof Structure: Remove or retrofit the roof structure over the primary sedimentation area of West Point Plant. The West Point Treatment Plant was constructed in the early 1960s. The primary sedimentation area roof structure had a seismic upgrade in the 1990s for the East- West oriented frames. The North- South frames were not upgraded. Analysis in 2010 showed the East- West frames meet a Life Safety performance level but the North- South frames do not; therefore, the roof structure as a whole does not meet a Life Safety performance level.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC PRIMARY SED ROOF STRUCTURE

1127489

3. PROJECT JUSTIFICATION

The West Point Treatment Plant was constructed in the early 1960s. The primary sedimentation area roof structure had a seismic upgrade in the 1990s for the East- West oriented frames. The North- South frames were not upgraded. Analysis in 2010 showed the East- West frames meet a Life Safety performance level but the North- South frames do not; therefore, the roof structure as a whole does not meet a Life Safety performance level and is vulnerable to collapse during a major seismic event. Collapse or damage could render the primary treatment process inoperable, resulting in raw sewage discharging to Puget Sound. The project will evaluate and implement alternatives to enhance the seismic resiliency of the primary sedimentation area during a major earthquake.

4. PROJECT BENEFITS/OUTCOMES

Approved Recommended Alternative will retrofit the primary sedimentation basins to meet Life Safety performance levels. Project will provide a roof canopy over the influent equipment gears and provide a fall arrest safety system for plant operations and maintenance staff. This project will improve the resiliency of the West Point Treatment Plant.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, budget carryover amount and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

When completed there should be no increase to the operating budget.

8. PROJECT STATUS

CST Approved Recommended Alternative. Team is currently progressing towards 30% baseline design.

9. ALTERNATIVES ANALYSIS

Recommended Alternative has been approved. Alternatives were evaluated including removal and reinforcement of the existing roof structure. Removal of the existing roof structure is the selected alternative.

10. OTHER AGENCY INVOLVEMENT

An alternative has been selected, determination of other agency involvement is known at this phase.

11. ART ELIGIBILITY

Art eligibility and calculation has been determined.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Inside of existing plant boundaries. No odor or transportation impact.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES WTC INTERBAY FORCE MAIN & ODOR 1128354

1. CURRENT PROJECT SCOPE

Interbay Force Main & Odor Control: The project will determine the locations and lengths of the Interbay Pump Station dual force mains segments to be replaced or repaired, then design and construct the needed repair/replacement. Also, replace and/or rehabilitate the Discharge Structure and lastly to design and construct an Odor Control Unit at the Discharge Structure site.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The condition of the Interbay Pump Station dual force mains is known to be deteriorating. A section of the Interbay Pump Station force mains failed in December 2013 resulting in a sewage spill. This project will correct all found deficiencies in the force mains. Without correction there is high probability of continuing emergency situations and the need to respond to sewage spills along the force main alignment.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC INTERBAY FORCE MAIN & ODOR

1128354

4. PROJECT BENEFITS/OUTCOMES

There was emergency repair work completed in 2013 due to a leak, without correction there is a high probability of continuing emergency situations. With this project, the useful life of the force mains will be extended. The additional permanent odor control unit will help alleviate odors in the community, which more buildings are being constructed currently.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Will be evaluated in the course of project design.

8. PROJECT STATUS

The project team is meeting bi-weekly, collecting data and developing alternatives analysis for the project.

9. ALTERNATIVES ANALYSIS

In the process of developing alternatives analysis.

10. OTHER AGENCY INVOLVEMENT

Burlington Northern Santa Fe Railroad, The United States Armory and the City of Seattle.

11. ART ELIGIBILITY

Art budget will be determined at Gate 2 (December 2018) per agreement with 4Culture.

12. EQUITY AND SOCIAL JUSTICE IMPACT

We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of achieving an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES

WTC WP LSG PIPING REPLACEMENT

1129526

1. CURRENT PROJECT SCOPE

WPTP Low Pressure Sludge Gas Piping Replacement: Replace the Low Pressure Sludge gas /Biogas (LSG) piping system at the West Point Treatment Plant (WPTP). Recent inspections identified six holes in the LSG pipeline. Temporary patches have been installed at these locations. The LSG pipe system at West Point was installed during the original plant construction in the 1960's for Digesters 1-3. The system was expanded in the mid 1980's with the construction of Digesters 4 and 5; and again in the 1990's with the addition of Digester 6. The project will conduct an Alternative Analysis of the existing LSG piping system, design and implement the rehabilitation of the piping systems into a safe and reliable system. Major Scopes include: * Inspect, identify, and develop the inventory of corroded Low Pressure Sludge Gas (LSG)/Biogas piping system; * Inventory the LSG piping system assets in the MainSaver * Conduct an Alternatives Analysis for Replacing, Fixing (coating, lining), and Cathodic Protection, etc. * Design the recommended alternative plan and prepare the bid document * Implement the designed plans in close coordination with the Plant Process Safety Management (PSM) Team

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC WP LSG PIPING REPLACEMENT

1129526

3. PROJECT JUSTIFICATION

The biogas systems are crucial to the operation of the treatment facility. Leaking gas pipes present high risk to safety and operation of the plant.

4. PROJECT BENEFITS/OUTCOMES

The reliability and safety of the West Point LSG piping System will be improved. Although there will be no change in the mode of operations for LSG generation and conveyance due to pipeline replacement but the re-habilitated pipeline system will extend the life of the piping network and reduce the risk of hazardous gas emissions thorough pitted gas pipes due to corrosion. New piping assets will be created after rehabilitation of the existing corroded pipes and fittings. The rehabilitated pipeline system will have expanded capacity to handle the increased biogas generation in the digesters systems for the next 30 years.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Expected to reduce maintenance costs.

8. PROJECT STATUS

Carollo Engineering, Inc. has been hired as A&E Consultant (Contract # E00516E18) and NTP has been issued on April 25, 2018.

9. ALTERNATIVES ANALYSIS

Consultant is now working on the Alternatives Analysis. Gate 2 will be established by end of December 2018.

10. OTHER AGENCY INVOLVEMENT

To be determined. Ecology's involvement may be required.

11. ART ELIGIBILITY

Project is for equipment replacement.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Inside of existing plant boundaries. No odor or transportation impact. Will increase overall system resiliency and reliability, promoting the region's natural and built environments, economic development and strong neighborhoods.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES WTC OFFSITE REPLACE SMALL GENS 1129528

1. CURRENT PROJECT SCOPE

Small Generator Replacement at Various Offsite Stations: The project will replace small standby generators at various West offsite stations. The project will design and construct replacement generators at the following facilities: 8th Avenue South Regulator Station, Ballard Regulator Station, Brandon Street Outfall Station, Chelan Regulator Station, Connecticut Street Regulator Station, Dexter Avenue Regulator Station, Hanford Street Regulator Station, Hanford Street Outfall Station, Harbor Avenue Regulator Station, King Street Regulator Station, Lake City Tunnel Regulator Station, Montlake Boulevard Regulator Station, Norfolk Street Regulator Station, South Michigan Street Outfall Station, South Michigan Street Regulator Station, and the West Michigan Street Regulator Station.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC OFFSITE REPLACE SMALL GENS

1129528

3. PROJECT JUSTIFICATION

Back-up electrical power is required at WTD facilities so the facilities remain operational during power disruptions. These Regulator Stations and Outfall Stations have standby generators that are beyond their useful life and are obsolete. The project will ensure that adequate back-up power is available at these stations.

4. PROJECT BENEFITS/OUTCOMES

The project will provide new reliable back-up power systems to replace aging and obsolete systems, reducing Operations and Maintenance costs and reducing the risk of overflows.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

The project should provide new generators that are more reliable and require less maintenance and repair, thereby reducing Operating staff hours to maintain them.

8. PROJECT STATUS

A design consultant has been selected and consultant contract negotiations are in progress.

9. ALTERNATIVES ANALYSIS

Not conducted yet. To be completed in the course of project delivery.

10. OTHER AGENCY INVOLVEMENT

May involve permitting with local jurisdictions for building permits.

11. ART ELIGIBILITY

Project is for equipment replacement.

12. EQUITY AND SOCIAL JUSTICE IMPACT

To be determined as location impacts are identified. We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan. Will increase overall system resiliency and reliability, promoting the region's natural and built environments, economic development and strong neighborhoods

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Subprojects will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Subprojects will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES

WTC SP C2/C3 PIPE REPLACEMENT

1129531

1. CURRENT PROJECT SCOPE

South Treatment Plant Header Pipe Replacement: Provide funding and a stand alone project number for the Final Design and implementation phase of the previously initiated South Plant C2/C3 Header Replacement Project #1122486. That project scope is to replace approximately 1,680 linear feet of C2/C3 header piping in the South Plant aeration gallery.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The existing C2, C3 Low pressure and C3 High pressure process piping in the South Plant aeration gallery is leaking and needs to be replaced before a catastrophic failure occurs that will severely impact South Plant operations.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC SP C2/C3 PIPE REPLACEMENT

1129531

4. PROJECT BENEFITS/OUTCOMES

This project will provide several benefits: 1) Replace existing leaking pipes with new, stainless steel piping that is not leaking. This will eliminate the chance of a catastrophic failure from these leaking runs of piping. 2) Add several isolation valves in the runs of piping, making it easier for maintenance staff to isolate and replace leaking piping in the future. 3) Upgrade the existing pipe racks to increase both their seismic and weight bearing capacity, because they are currently undersized for the loads being placed on them. 4) Use of stainless steel will eliminate ongoing maintenance painting of the piping, saving both money and staff time in the future.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency and the timing of implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

The operating labor and materials costs will be reduced for two reasons: 1) New piping will eliminate the need for ongoing repairs to the piping systems. 2) Use of stainless steel pipe will eliminate the need to paint the piping in the future.

8. PROJECT STATUS

The project is currently in the last phase of the design process, 90% design submittal review comments are being incorporated into the construction contract documents and the drawings have been submitted to the City of Renton for application for a building permit. Required documents and documentation are being placed onto the PCSS SharePoint site so that the construction contract can be advertised in the near future.

9. ALTERNATIVES ANALYSIS

The project team reviewed various different piping materials and found that the use of type 304 stainless steel had the lowest life cycle cost, making it the recommended alternative and the piping material used for this project.

10. OTHER AGENCY INVOLVEMENT

None.

11. ART ELIGIBILITY

Project is for equipment replacement inside a structure that is not seen by the general public.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Inside of existing plant boundaries. No odor or transportation impact. Will increase overall system resiliency and reliability, promoting the region's natural and built environments, economic development and strong neighborhoods

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Current certification projection is Platinum. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion. Current C&D diversion rate projection is 97%.

NARRATIVES

WTC BW OPTIMIZE AERATION BASIN

1129532

1. CURRENT PROJECT SCOPE

BW Aeration Basin Optimization: At the Brightwater Treatment Plant (BWTP), optimize the three aeration basins to improve operational flexibility via diffuser optimization and zone control in order to reduce process chemical costs, energy usage, and foaming.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC BW OPTIMIZE AERATION BASIN

1129532

3. PROJECT JUSTIFICATION

Experience with operating the Brightwater Treatment Plant (BWTP) since coming online in 2011 has identified opportunities to optimize the aeration basins performance. Because of low alkalinity, Brightwater spends \$1.2 million dollars annually for caustic addition to meet discharge permit limits for pH. The ability to fully or partially denitrify would decrease the demand for caustic addition and air. Modification of the anoxic zones in each basin and/or reducing the ammonia load could reduce the annual cost of chemical addition. In addition to the cost for caustic addition, the current aeration air flow is as much as 20% higher than expected during high load periods of the day. A more efficient diffuser system and reduction in aeration piping leaks could result in substantial energy savings as well improving the plant processes noted above. BWTP experiences foaming events that affect flow through the aeration basins and membrane filterability. Foam is usually the result of filamentous bacteria, that thrive with long sludge ages and when aeration is not well controlled. Revisions to the aeration diffuser layouts, headers and valving may improve foam control, the economic life of the diffusers, and reduce energy usage. Foam control may also be improved with modifications to the aeration basin scum channels.

4. PROJECT BENEFITS/OUTCOMES

The benefits of this project include improved aeration system delivery and control, improved secondary process performance, reducing chemical usage costs, and reducing energy usage.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

This project is expected to reduce operating costs. Because of low alkalinity, Brightwater spends \$1.2 million dollars annually for caustic addition to meet discharge permit limits for pH. The ability to fully or partially denitrify would decrease the demand for caustic addition and air. Modification of the anoxic zones in each basin could reduce the annual cost of chemical addition by about 50 percent. In addition to the cost for caustic addition, the current aeration air flow is as much as 20% higher than expected during high load periods of the day. A more efficient diffuser system could result in substantial energy savings as well improving the plant processes noted above.

8. PROJECT STATUS

Preliminary design.

9. ALTERNATIVES ANALYSIS

Alternatives analysis is underway.

10. OTHER AGENCY INVOLVEMENT

Other agency involvement includes plant operations and maintenance. Flow modeling and comprehensive planning are kept abreast of project progress. Given the location and nature of the project, at this point it has been determined there is little need for permitting, environmental, community planning, Washington State Department of Ecology and Snohomish County Planning and Development Services involvement. However, other agency involvement will continue to be assessed as the project progresses.

11. ART ELIGIBILITY

Project is for equipment replacement.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Inside of existing plant boundaries. No odor or transportation impact. Will increase overall system resiliency and reliability, promoting the region's natural and built environments, economic development and strong neighborhoods

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC BW OPTIMIZE AERATION BASIN

1129532

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project is expected to result in energy savings of approximately 766,500 kWh/year. Implementation of the project will further the SCAP Buildings and Facilities Goal Area target of King County reducing normalized energy use in County owned facilities by at least 5% by 2020 and 10% by 2025, as compared to a baseline year of 2014. To measure progress towards the target, energy savings will be tracked through WTD's normalized energy use reporting after the project is completed. Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES WTC CHELAN AVE CSO 1129533

1. CURRENT PROJECT SCOPE

Chelan Ave. CSO: This project will control the Chelan Combined Sewer Overflow (CSO) to no more than one overflow per year on a rolling twenty year average. It will include the construction of a storage facility for an estimated 4-5 million gallons of mixed storm and wastewater (as determined by the Wastewater Treatment Division's (WTD) modeling group), related conveyance lines and required support facilities including odor control and emergency power generation. This project may also include some Green Stormwater Infrastructure (GSI) elements.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project will prevent CSO overflows into the lower Duwamish River, protect health and public safety and meet the requirements of the consent decree between King County, the Environmental Protection Agency (EPA) and the Department of Ecology (Ecology).

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC CHELAN AVE CSO

1129533

4. PROJECT BENEFITS/OUTCOMES

Reducing CSO overflows will improve the health of area receiving waters in general and the Duwamish River in particular.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

This facility when completed will cause an increase to the divisions operating budget, the cost is not known at this time. This facility is required by the Consent Decree between King County and the EPA.

8. PROJECT STATUS

This project has completed the project planning and alternatives analysis processes. Design activities are currently on hold while the Long-Term CSO plan is updated. The facility plan, due to Ecology by the end of the year, is being finalized with input from the City of Seattle.

9. ALTERNATIVES ANALYSIS

The Wastewater Treatment Division's planning group completed a final review of alternatives to address overflows at Chelan. Alternatives included storage facilities of different types, inline conveyance system storage and Green Stormwater Infrastructure (GSI) systems. At the same time the modeling group worked to determine accurate estimates of the volume of stormwater that will need to be controlled. Project criteria included the following considerations: Technical, Community and Equity and Social Justice, Project Costs and Risk Costs, Construction, Environmental Sustainability, Operations and Maintenance, Permitting, and Right of Way and Property. Alternatives were developed and analyzed in three stages, with management direction incorporated at each stage. The recommended alternative was a result of this staged analysis. An overview of all alternatives, with an identified recommended alternative, was presented to and approved by the Capital Systems Team (CST) on November 14, 2017.

10. OTHER AGENCY INVOLVEMENT

WTD management is currently in discussion with Seattle Public Utilities (SPU) to determine if stormwater management efficiencies can be gained by working in coordination. WTD is also working with Ecology to determine if the delivery timeline of this project should be changed to better achieve the goals of the Long-Term CSO Plan.

11. ART ELIGIBILITY

N/A. Project on hold. No art calculation will be made at this time.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will increase water quality in the Duwamish River for the region as a whole but also directly affect and improve conditions for the minority populations that (in the greatest majority) use the river for fishing and recreating. We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES WTC THTN CK TRK REP REALGN 1129535

1. CURRENT PROJECT SCOPE

Thornton Creek Trunk Replacement and Realignment: Thornton Creek Trunk begins at the confluence of the North Lake City and West Lake City trunks and ends at the Matthews Beach Pump Station. Sections of the Thornton Creek Trunk are operating below the King County Wastewater Treatment Division adopted conveyance capacity standard of 20 year level of service. The project will replace the existing pipe with a larger pipe that has greater capacity to convey sewage. The project will relocated some segments of the existing trunk away from environmentally sensitive areas. In total approximately 4,000 feet of sewer will be replaced.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC THTN CK TRK REP REALGN

1129535

3. PROJECT JUSTIFICATION

Modeling indicates section of the Thornton Creek Trunk have a level of service of less than 2 year flow or a 50% chance or greater of overflow in any given year. There were capacity issues during the last significant rain event (>4 inches of rain in 24 hour period) in the service area in December 2010. The sewer basin Thornton Creek Trunk serves is projected to increase in population by 17.2% between 2010 and 2030. Much of this population growth is centered around the development in the Northgate area. With the soon to be completed Sound Transit Light Rail Station and other development oriented infrastructure improvements in that area realization of the growth by 2030 is highly probable. This project is needed to improve the capacity of the trunk to the 20 year level of service that is the King County Wastewater Treatment Division adopted conveyance capacity standard.

4. PROJECT BENEFITS/OUTCOMES

The project will address a conveyance capacity need. Sections of the Thornton Creek Trunk are operating at less than a 2 year level of service or have a 50% chance of overflow in any given year. The project will increase the capacity of the trunk to 20 year level of service or 5% chance of overflow in any given year. The 20 year level of service is the King County Wastewater Treatment Division adopted conveyance capacity standard.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

This project will likely increase system operational budgets because of the new facilities that will be placed in service.

8. PROJECT STATUS

Not Started

9. ALTERNATIVES ANALYSIS

This is a new project and is set to begin project planning in 2019. Alternatives will be developed in 2019.

10. OTHER AGENCY INVOLVEMENT

This will be developed during the planning phase. A preliminary list would include permitting, flow modeling, environmental, community planning, plant operations, Washington State Department of Ecology and King County Department of Permitting and Environmental Review.

11. ART ELIGIBILITY

This project is an underground sewer pipeline and storage structure.

12. EQUITY AND SOCIAL JUSTICE IMPACT

We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES

WTC CAPITAL PROJECT FORMULATE

1129536

1. CURRENT PROJECT SCOPE

WTD Capital Project Formulation: This program will develop capital project ideas to conceptual planning level of scope, schedule, and budget.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This was initiated as a result of KC Council feedback on process improvements in the development of project scope and cost estimating. This process improvement will reduce the volatility of updates to the stand-alone project scope, schedule and estimate at completion. Wastewater Treatment Division will use the results to better inform future capital budget processes and launch new projects.

4. PROJECT BENEFITS/OUTCOMES

Improvements to the accuracy of conceptual cost estimates will facilitate improved budget management process and better forecast resources needed to complete projects.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project spending.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Depending on the project definition, Operating budgets may be affected.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC CAPITAL PROJECT FORMULATE

1129536

8. PROJECT STATUS

This pilot program has begun and has formulated eight projects in 2017 and 2018 with roughly a dozen more identified to be formulated in the second half of 2018. More projects are anticipated to be formulated in 2019 and 2020, but the total number has not been determined yet.

9. ALTERNATIVES ANALYSIS

Not conducted as part of this program. To be completed in the course of project delivery.

10. OTHER AGENCY INVOLVEMENT

Depending on the project, other jurisdictions may be involved in aspects of the projects such as permitting, SEPA, or community involvement. Potential involvement will be identified as part of this program and will be expanded and completed in the course of project delivery.

11. ART ELIGIBILITY

Project is for planning.

12. EQUITY AND SOCIAL JUSTICE IMPACT

We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan. Will increase overall system resiliency and reliability, promoting the region's natural and built environments, economic development and strong neighborhoods

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project will further implementation of the SCAP Buildings and Facilities Energy Goal Area priority action of maximizing energy efficiency in new King County facility projects by ensuring that conceptual planning level scopes and budgets that are prepared for WTD capital projects assume (1) the SCAP requirement that all King County government capital projects with energy-consuming equipment meet the equivalent energy performance of the city with the most stringent energy code in the county, and (2) energy minimization requirements of Green Building and Sustainable Development policy, Ordinance 17709.

NARRATIVES WTC H2S CORR REHAB 2020-2021 1129537

1. CURRENT PROJECT SCOPE

H2S Corrosion Rehab Program 2020-2021: The scope of the program is to rehabilitate conveyance pipeline damaged due to Hydrogen Sulfide corrosion. This project number is for program planning and a budget placeholder for future pipeline rehabilitation projects. No construction will be performed under this project number.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The primary objective of this project is to maintain reliable sewage conveyance and extend the useful life of existing sewers by the structural rehabilitation or replacement of conveyance system pipelines and/or structures suffering from severe hydrogen sulfide (H2S) corrosion. If this project is not implemented, it may result in failure of the pipeline.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC H2S CORR REHAB 2020-2021

1129537

4. PROJECT BENEFITS/OUTCOMES

Implementing corrosion repairs maintains the structural integrity of the regional conveyance system, reduces the risk of overflows and/or sinkholes, and maintains pipeline capacity

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

None.

8. PROJECT STATUS

Currently researching and planning the next 2020 construction project

9. ALTERNATIVES ANALYSIS

Not conducted yet. To be completed in the course of project delivery.

10. OTHER AGENCY INVOLVEMENT

To be determined.

11. ART ELIGIBILITY

This project takes place within an existing sewer and is not visible or accessible to the public.

12. EQUITY AND SOCIAL JUSTICE IMPACT

We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan. Will increase overall system resiliency and reliability, promoting the region's natural and built environments, economic development and strong neighborhoods

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Subprojects will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Subprojects will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES

WTC TECH ASSESS & INNOVATION

1129538

1. CURRENT PROJECT SCOPE

Technology Assessment and Innovation Project: The Technology Assessment and Innovation Program (TAIP) is involved in numerous concurrent testing and technology assessment activities. In 2018-19, this work will include evaluation of the cost and effectiveness of technologies and process changes that can improve the performance or reduce the costs of wastewater treatment. The recent interest in new ideas/proposals in the energy production/recovery, biosolids management, and nutrient treatment/recovery fields is anticipated to continue through 2018 and 2019. This project is a continuation of Project No. 1037769 which closed at the end of 2016.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The wastewater treatment industry is constantly evolving in an effort to reliably produce high quality effluent while recovering resources and reducing costs. The Technology Assessment and Innovation Program evaluates the potential for new technologies to help the Wastewater Treatment Division meet these goals and, when appropriate, conducts or supports testing of new technologies of particular interest to the Division.

4. PROJECT BENEFITS/OUTCOMES

Make informed decisions regarding new technologies with the potential to improve performance and reduce costs and/or impacts of WTD facilities.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project spending.

6. FUNDING AND REVENUE DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC TECH ASSESS & INNOVATION

1129538

7. OPERATING BUDGET AND OTHER IMPACTS

N/A.

8. PROJECT STATUS

The Technology Assessment and Innovation Program (TAIP) is partnering with the University of Washington to install and operate pilot-scale research treatment units at the Technology Assessment & Innovation Program's Test Facility located at the West Point Treatment Plant under a grant provided by the National Science Foundation and the Water Environment & Reuse Foundation. The research study will investigate the potential for substantial modifications to the standard wastewater treatment approach that have the potential to significantly reduce the cost and energy burden of meeting anticipated future effluent nutrient removal requirements. In Q1 2018 TAIP staff, supported by University of Washington faculty and graduate students, successfully completed startup of the first phase of the pilot-scale system and are currently working to procure and install equipment for Phase 2 of the study. Project completion is anticipated in Q4 2019. TAIP program is supporting work proposed by the Suez R&D Program to test the use a higher membrane packing density at the Brightwater Treatment Plant to increase efficiency of the membrane filtration system.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

The University of Washington Department of Civil & Environmental Engineering supports the Program through graduate student research guided by nationally recognized University Professors.

11. ART ELIGIBILITY

Capital Planning Project.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Project is a technology study.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project supports the evaluation of new technologies, including those pertaining to energy efficiency. For example, it includes studies and pilot projects of technologies that could potentially be used to meet anticipated new nitrogen effluent standards without significantly increasing energy consumption. This supports the SCAP Buildings and Facilities Energy Goal Area target of reducing energy use at County facilities, although the timeframe for this research extends beyond the 2020 date identified in the SCAP target.

NARRATIVES

1. CURRENT PROJECT SCOPE

WPTP Power Monitoring Upgrades : Install power line monitors with transient waveform capture feature on each substation's main breaker. The work includes replacement the 1990's Basler relays with new state of the art solid state units. This affects the switchgear in Facility 722, Intermediate Pump Station; and the Effluent Pump Station

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC WP POWER MON UPGD

1134063

3. PROJECT JUSTIFICATION

West Point suffered a flood on February 9, 2017. One contributor to the flood event was the tripping of main breaker for essential electrical equipment. Investigations into the root cause have not resulted in definitive answers. Not knowing what caused a breaker to trip or equipment to fail creates a vulnerability to the event occurring again. Power monitoring equipment would be able to monitor such events. This would be a maintenance tool to help analyze power system health and forensic analysis of failures. Power line monitors was a recommendation from the AECOM. Recommendation #57.

4. PROJECT BENEFITS/OUTCOMES

The ability to monitor essential electrical equipment will provide operations with a maintenance tool to help analyze power system health and forensic analysis of failures.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Should decrease O&M costs due to system enhancements.

8. PROJECT STATUS

Not started.

9. ALTERNATIVES ANALYSIS

To be completed in the course of project execution.

10. OTHER AGENCY INVOLVEMENT

TBD.

11. ART ELIGIBILITY

Project is for equipment replacement.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Inside of existing plant boundaries. No odor or transportation impact. Will increase overall system resiliency and reliability, promoting the region's natural and built environments, economic development and strong neighborhoods

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

If construction is required, project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. If construction is required, project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES WTC WP ADM/OPS CTR SEIS UPGD 1134064

1. CURRENT PROJECT SCOPE

WPTP Admin/Ops Center Seismic Upgrades: Structural deficiencies at the administration/operations center of the West Point Treatment Plant include a weak story/ geometry configuration, and braced frame with lack of seismic detailing.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

There is potential for significant damage to the facility in a seismic event, increasing the probability of partial building collapse which poses a threat to life safety. Additionally, this facility houses a control room and servers, and a seismic event would pose a threat to WTD's ability to maintain operational capabilities for the west service area.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC WP ADM/OPS CTR SEIS UPGD

1134064

4. PROJECT BENEFITS/OUTCOMES

Project benefits include increasing building and WTD operations resilience to survive a seismic event, and protecting staff and visitors during a seismic event.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency and the timing of property acquisition and implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

None.

8. PROJECT STATUS

Not started.

9. ALTERNATIVES ANALYSIS

To be completed in the course of project execution.

10. OTHER AGENCY INVOLVEMENT

TBD.

11. ART ELIGIBILITY

Project is a major seismic upgrade to facility.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Inside of existing plant boundaries. No odor or transportation impact. Will increase overall system resiliency and reliability, promoting the region's natural and built environments, economic development and strong neighborhoods

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. NARRATIVES WTC SP IPS SEISMIC UPGD 1134065

1. CURRENT PROJECT SCOPE

SPTP Influent Pump Station Seismic Upgrades: This facility is at risk for structural failure or roof collapse which is likely to result in the facility becoming inoperable. Mechanical and electrical system damage may also cause the facility to become inoperable. Influent pump stations are the high flow area of process.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

If the pump station roof collapses, all flow to STP would be cut off, potentially resulting in impacts to life safety. SCADA system backup servers are in this facility and are adequately secured or anchored down. In the event of a partial roof collapse, the facility would be considered uninhabitable, thereby rendering the facility inoperable. if the facility is inoperable, the inflow would not be pumped to South Plant, rendering the treatment facility ineffective and resulting in significant back-up of raw sewage.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC SP IPS SEISMIC UPGD

1134065

4. PROJECT BENEFITS/OUTCOMES

This project upon implementation would provide structural retrofits and additional stability to the pipeline and the vicinity of the raw sewer pump station that convey flows to and from the SPTP

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency and the timing of implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

There will be no foreseeable changes in the operations budget due to the pump station's structural retrofitting.

8. PROJECT STATUS

Not started. Still in the project formulation stage.

9. ALTERNATIVES ANALYSIS

To be completed in the course of project execution.

10. OTHER AGENCY INVOLVEMENT

TBD.

11. ART ELIGIBILITY

Project not visible to the public.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Inside of existing plant boundaries. No odor or transportation impact. Will increase overall system resiliency and reliability, promoting the region's natural and built environments, economic development and strong neighborhoods

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES

WTC COMP SYSTEM PLAN

1134066

1. CURRENT PROJECT SCOPE

Comprehensive System-Wide Plan: The overall objective of this scope of work is to develop a Systemwide Comprehensive Plan for King County's regional wastewater system to guide near-term (up to 10 years) and long-term (10 to 40 years) investments by WTD in regional water quality. In addition to comprehensively assessing all demands on the regional wastewater system, the overall planning process will include regional dialog with stakeholders and the public about investment priorities, water quality benefits relative to cost, wastewater rate affordability, and the priorities and associated tradeoffs. The planning process will be guided by and seeks to define a future direction for the utility that is consistent with WTD's vision and mission. The plan shall identify a path forward for WTD that: provides a strategic plan to guide future investments; allocates the right dollars to the right projects at the right time; ensures the core mission to protect water quality; achieves the best water quality benefit for the investments made; results in affordable wastewater utility rates into the future; reflects the County's initiatives, including equity and social justice and strategic climate action planning.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

It has been nearly 20 years since this last major update to WTD's comprehensive wastewater system plan. With construction of the Brightwater Treatment Plant and improvements made to other parts of the wastewater system, including treatment plants, pump stations, and conveyance pipes, many of the actions called for in the RWSP have been implemented. Therefore, WTD has determined it is an opportune time to update the comprehensive wastewater system plan to define a new path forward. Indeed, the regional wastewater system is facing ever-growing demands such as aging infrastructure, the need for utility resiliency, increasing wastewater volumes, higher solid and organic loadings in raw sewage, changing regulations, regional affordability challenges, potential climate change impacts, and enhancing the recovery of resources from the waste stream.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC COMP SYSTEM PLAN

1134066

4. PROJECT BENEFITS/OUTCOMES

The projected capital improvement work need as well as current and future regulatory requirements are expected to result in large capital expenses. The planning process will explore the demands and the associated water quality benefits. Through doing this the Systemwide Comprehensive Plan seeks to define regional water quality protection priorities to guide WTD in making investments in the regional wastewater system.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending and contingency.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

None. Study only.

8. PROJECT STATUS

Not started.

9. ALTERNATIVES ANALYSIS

N/A. Project is a study.

10. OTHER AGENCY INVOLVEMENT

TBD.

11. ART ELIGIBILITY

Project is for planning study.

12. EQUITY AND SOCIAL JUSTICE IMPACT

We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. This planning project specifically identifies equity opportunities as a core value that requires equitable participation and evaluation of plan proposals through an equity lens. The formal evaluative structure will be developed as part of the planning effort's initial scope. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project will implement the priority action in Section Two of the SCAP (Preparing for Climate Change Impacts) that calls for WTD to incorporate results of an assessment of impacts of climate change/rainfall patterns on wastewater treatment and conveyance into future updates of the Regional Wastewater Services Plan and the King County Combined Sewer Overflow Control Plan. SCAP goals and targets are typically considered in the planning efforts of new projects.

NARRATIVES

WTC ELLIOT W CSO COMP

1134067

1. CURRENT PROJECT SCOPE

Elliott West CSO Compliance: The 240-mgd Elliott West Wet Weather Treatment Station (WWTS) has been unable to consistently meet National Pollutant Discharge Elimination System (NPDES) permit requirements since it was placed into operation in 2005. Permit limitations on annual average settleable solids and total suspended solids removal, monthly fecal coliform concentrations, daily maximum chlorine residual concentration, and instantaneous pH have all been exceeded. Treatment performance optimization and monitoring is hampered by inadequate influent flow monitoring and the inability to perform a solids balance on the facility. With input from Wastewater Treatment Division staff, four locations to collect influent flow measurements and two locations to collect influent composite samples were identified. Permanently installing flow measuring and sampling facilities in these locations is required to more closely determine influent flows and loads to the WWTS.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC ELLIOT W CSO COMP

1134067

3. PROJECT JUSTIFICATION

Combined Sewer Overflow (CSO) facilities that do not meet permit limits are subject to Ecology notices of violation (NOV), United States Environmental Protection Agency (USEPA) violations, fines and supplemental compliance plans. Penalties (for failure to meet effluent limits) are \$20,000 per year, \$2,000 per month, \$2,000 per day and \$2,000 per event. The previous fine for Elliott West was \$63,000 for violations occurring in 2016.

4. PROJECT BENEFITS/OUTCOMES

Penalties (for failure to meet effluent limits) are \$20,000 per year, \$2,000 per month, \$2,000 per day and \$2,000 per event. The previous fine for Elliott West was \$63,000 for violations occurring in 2016.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency and the timing of implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

May increase O&M. Will be investigated during Predesign work.

8. PROJECT STATUS

Project will commence in 2019

9. ALTERNATIVES ANALYSIS

To be completed during project execution which is slated to commence in 2019.

10. OTHER AGENCY INVOLVEMENT

To be determined

11. ART ELIGIBILITY

Project is installation of sampling and monitoring equipment.

12. EQUITY AND SOCIAL JUSTICE IMPACT

We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. This planning project specifically identifies equity opportunities as a core value that requires equitable participation and evaluation of plan proposals through an equity lens. The formal evaluative structure will be developed as part of the planning effort's initial scope. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan. Will increase overall system resiliency and reliability, promoting the region's natural and built environments, economic development and strong neighborhoods

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

If construction is required, project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. If construction is required, project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES

WTC ALKI PERM GENERATOR

1134068

1. CURRENT PROJECT SCOPE

Alki Permanent Standby Generator: The previous feasibility study found that re-purposing/relocating to Alki WWTF to serve it and 63rd PS, one of the existing surplus generator sets from Heathfield PS or Sunset PS is indeed feasible, both technically and permit-wise, with 3 alternatives by three sub-option configurations (six total) outlined and evaluated for the Alki WWTF site, with construction costs estimates (AAECI Class 5) ranging from \$2.8M to \$4.9M, including the major element of bringing a power line from Alki WWTF generator to the 63rd PS. Any of these alternatives would provide adequate backup power to both the Alki Wet Weather Treatment Facility (CSO treatment only), and to the 63rd Avenue Pump Station. The work of this planned CST project is to design, construct/install a new standby generator at the Alki WWTF, with a power line (buried or above ground) connecting to 63rd PS, to provide adequate and reliable standby power for both facilities.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC ALKI PERM GENERATOR

1134068

3. PROJECT JUSTIFICATION

The justification for this improvement project is to prevent and minimize power outage caused sanitary and/or combined sewer overflows into Puget Sound by providing permanent, dedicated, reliable, and instantaneous backup power to both Alki WWTF, and 63rd Pump Station. The existing mobile generator unit stationed at Alki WWTF requires time consuming transportation by truck from Alki WWTF storage location to 63rd PS, and is undersized for the full loads present at 63rd PS and at Alki WWTF. This project would greatly improve the reliability, timeliness, and capacity to maintain these WTD facilities in the event of a power outage in the Alki area of West Seattle, thus preventing and/or minimizing any overflows from these facilities.

4. PROJECT BENEFITS/OUTCOMES

This project will greatly improve the reliability, timeliness, and capacity to maintain these WTD facilities in continuous operation in the event of a power outage in the Alki area of West Seattle, thus preventing and/or minimizing any overflows from these facilities.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency and the timing of implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

There will slight increase in operational budget for fueling the standby generators when it is operated plus maintenance cost.

8. PROJECT STATUS

Not started

9. ALTERNATIVES ANALYSIS

To be completed in the course of project execution.

10. OTHER AGENCY INVOLVEMENT

TBD.

11. ART ELIGIBILITY

Project is for equipment installation.

12. EQUITY AND SOCIAL JUSTICE IMPACT

We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan. Anticipated project area does not project as a high equity opportunity area.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES WTC WP RSP REPLACEMENT 1134069

1. CURRENT PROJECT SCOPE

WPTP Raw Sewage Pump Replacement: The primary objectives of this project are (1) to evaluate the viability of replacing the existing reciprocating engine drives for the Raw Sewage Pumps with electric motors and variable speed drives; and (2) to evaluate increasing the pump capacity to achieve a level of redundancy that would allow for one pump to be out of service and still meet capacity of 440 mgd. The project scope is to perform a business case evaluation to determine the viability of replacing the gas driven reciprocating engines with electric motor drives; and the evaluate the feasibility of increasing the output of the pumps, or replacing the pumps with larger capacity units. Evaluate the feasibility, (including cost, risk, constructability, reliability) of replacing the existing Raw Sewage Pump Engines with variable speed electric driven units. The existing pump station requires all four units to operate at maximum output to meet the 440 mgd capacity. Evaluate the feasibility of increasing the output of the pumps, or replacing the pumps with larger capacity units. The pumps have been in service since the original construction of West Point in the 1960's. This project will produce a report detailing alternatives, evaluation and recommendation(s).

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC WP RSP REPLACEMENT

1134069

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The raw sewage pump engines have been in service for 20 years. A potential to reduce Operating costs may exist by switching to electric drives. The recent flooding event at the plant emphasizes the lack of redundancy in the Raw Sewage Pumps. All four pumps are required to operate at full output to meet 440mgd capacity. Under this scenario, there is no redundancy for influent pumping. This is the only pumps station on-site with this limitation. The Intermediate and Effluent Pumps Station each have an additional pump. The West Point facility has utilized gas driven engines to power the Raw Sewage Pumps since its original construction in the 1960's. The existing engines were installed during the secondary expansion in the mid 1990's. Other pump system equipment such as the gearboxes, and heat recovery equipment need to be included as part of the evaluation. An assessment of the pumps for both remaining life, and capacity requirements are also included in the evaluation. Maintenance costs over the life of the engines have been \$4.1 million, an average \$60K/engine annually. To be clear, these costs are for the engines only. They do not include costs for auxiliary and support equipment such as heat recovery boilers, vent condensers, steam separators, starting air compressors, right angle gear boxes etc.

4. PROJECT BENEFITS/OUTCOMES

The outcome of this project will inform the Capital Systems Team to appropriately charter a capital project to replace the Raw Sewage Pumps at West Point Treatment Plant.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency and the timing of implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

May increase O&M. Will be investigated during Predesign work.

8. PROJECT STATUS

Not started.

9. ALTERNATIVES ANALYSIS

To be completed in the course of project execution.

10. OTHER AGENCY INVOLVEMENT

TBD.

11. ART ELIGIBILITY

Project is for equipment replacement within West Point Treatment Plant and not visible to the public.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Inside of existing plant boundaries. No odor or transportation impact. Will increase overall system resiliency and reliability, promoting the region's natural and built environments, economic development and strong neighborhoods

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES

WTC CMMS UPGRADE

1134070

1. CURRENT PROJECT SCOPE

WTD Computer Maintenance Management System Upgrade - This project will evaluate the feasibility of and implement the replacement of the Wastewater Treatment Divisions (WTD) existing Computer Maintenance Management System (CMMS) software system (Mainsaver) with a new CMMS software.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The Computer Maintenance Management System (CMMS) software system is utilized by over 300 users in coordinating maintenance activities, ordering parts, and payroll input. The existing software was procured and implemented in 1996, and has surpassed 20 years of age, yielding technical limitations. While the Wastewater Treatment Division (WTD) has worked closely with the current vendor in modifying their products to meet our business needs, it has resulted in additional maintenance costs and inefficiencies.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC CMMS UPGRADE

1134070

4. PROJECT BENEFITS/OUTCOMES

A new Computer Maintenance Management System (CMMS) will improve technical development in many key operational areas. For example, it will:

- Significantly improve the accuracy of financial data within the CMMS and allow asset management to make more informed budgeting and asset life-cycle decisions, which should yield an overall cost savings for WTD
- Allow WTD to comply with the independent audit recommendations commissioned by a King County Council Administrative Order following the West Point Treatment Plant Failure on Feb 09, 2017
- Allow the CMMS to be interfaced with plant IOT data and automatically generate work orders based on the data
- Allow preventive maintenance work orders to be generated based on IOT data
- Allow assets history and financial information to be tracked on individual assets as well as by system and/or location.
- Provide users with mobile access to the CMMS
- Allow the CMMS to be interfaced with other systems utilizing a built-in integration framework
- Provide built-in KPIs as well as the ability to generate custom KPIs and reports.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency, and the timing of implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

O&M may increase and will be investigated as part of predesign work.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

To be completed during the typical course of project planning after the project has been initiated.

10. OTHER AGENCY INVOLVEMENT

King County Information Technology (KCIT) will be involved with the project because it is a new software system. The software systems evaluation will be reviewed by KCIT's Project Review Board (PRB). Coordination with King County's Business Resource Center (BRC) will also be necessary to ensure that the new software interfaces with King County's financial and payroll systems. Any additional agency involvement will be determined during the typical course of project planning.

11. ART ELIGIBILITY

Project is a software system.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to this IT project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

N/A. This is an Information Technology project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC CMMS UPGRADE

1134070

14. OTHER CONSIDERATIONS (OPTIONAL)

WTD, under the CMMS project team, is taking an active look at existing asset management systems within the county to determine where they can meet their requirements. An RFP has been drafted for CH2M Hill (Jacobs) consultants specializing in CMMS systems to assist the team in evaluating major attributes of core functional CMMS system components and assessing how well Cityworks, Accella, Lucity, and Infor EAM along w/ Maximo performs for each. We are awaiting WTD funding approval to finalize.

We expect this effort to result in matrixed-type ranking model that KCIT can also leverage in the future to determine a 'best-fit' CMMS approach based on internal customer core business needs. As part of this effort, we have also requested them to conduct a series of interviews with our core user groups in WTD and other County Asset Management user groups to better determine current gaps with the existing system (Mainsaver) and evaluate how effective each of the alternative systems within the County would be in fulfilling them. We are dedicating key functional and technical staff to participate in these assessments.

CIO and PSB Critical Success Factors and Conditions:

- 1) Complete a gap analysis for Inform EAM, Cityworks and Accela.
- 2) Establish a countywide enterprise asset management platform should the gap analysis determine that current county platforms don't meet business requirements.
- 3) Explore leveraging FMD's CFAM project to create countywide enterprise platform.
- 4) No sole source. RFP is required.
- 5) SaaS solution is required.
- 6) Data migration is required: determine if all historic records need to be migrated.
- 7) KCIT Procurement involvement is required.
- 8) KCIT ART and security Review.
- 9) Engage external Quality Assurance reporting to PRB or the project sponsor - based on their agreement.
- 10) Collaborate with PRB staff and KCIT Procurement for external QA Scope of work and Contract.
- 11) Maximum project duration two years.
- 12) Complete By November w/KCIT and PSB alternative analysis and fit/gap with 29 asset systems.

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

"Workforce Empowerment" - IBM Maximo offers unified communications through system integration (plug-ins) with several WTD common access platforms including Sharepoint, Granite XP, ESRI and Oracle EBS.

"Data Driven" - Maximo has a robust reporting module and has partnered with several relational data-systems including OSI-PI and Bi-Cycle KPI tool. Maximo would be uniquely positioned to not only capture transactional data through direct plug-in, but also provide seamless analytics and reporting internally and externally.

"IT Mobility" - Maximo has a highly mature and developed interface geared to support mobility on a wide array of devices.

"Effective Digital Systems" - Maximo is geared to support the most modern digital interfaces inherent among the vast majority of our control and financial systems

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC CMMS UPGRADE

1134070

16. PROJECT COMPLEXITY

The largest factor of complexity for this project will be the need to interface with the Oracle EBS system. While Maximo offers a very robust and configurable adapter to the Oracle EBS system, the BRC will need to provide review and decision authority w/in the team.

Internal to WTD, several other systems will require interface (via plug-in) w/ Maximo including OSI-PI, ESRI, Granite XP (net) and Sharepoint.

Some remaining table alignment will need to take place between both schema's of the current CMMS and a coordinated data migration will need to be executed. The current CMMS (Mainsaver) will be decommissioned w/ old work order files moved to archive.

Maximo EAM specializes in meeting large & complex agency needs. We anticipate this project to be "straight off the shelf" with no mfr customization required.

WTD envisions this to be a phased in approach w/ the current CMMS providing back-up to out core business processes while a phased commissioning plan takes place.

17. CAPACITY TO IMPLEMENT THE PROJECT

The following committees w/in WTD will be the primary support groups for this project: Maintenance Best Practices Steering Committee (MBPSC), Asset Management Steering Committee (AMSC) and CMMS Users Group.

Although this project is likely the largest of its type that WTD has taken on, WTD has engaged in several similar projects designed to unify, analyze and report our business processes. These include 11 Mainsaver interfaces to Oracle EBS, Peoplesoft, Bi-Cycle Metric & Reporting, Paperless Work Order and Payroll system, MS Power BI Reporting and integration of GIS reporting into Mainsaver.

WTD Operations Section Manager is sponsoring this project w/ the WTD Operation Asst Manager - Technical & Engineering and Systems Engineer Assigned. At this time we predict KCIT's involvement to be centered around typical business end processes incl. cloud service coordination, backup and security. KCIT needs to provide a backfill for the open CMMS Administrator position that has been vacant nearly 3 years.

Project Scope incl. an RFP for a Maximo Consultant specializing in large implementations.

18. PROJECT RISKS

While this project entails a moderate level of complexity due to the variety of system interfaces and touch-points in the business processes, the actual risk to project success is 'Low'. Primary drivers for this low risk level are:

- IBM Maximo's core focus is accommodating highly scalable deployments that specialize in an Enterprise Asset Management (EAM) approach; primarily driven by the extensive partnerships IBM has fostered with other business support software entities through the use of native plug-ins or adapters.
- IBM Maximo offers native interfaces and plug-ins for most - if not all - of our business and process software currently deployed.
- WTD expects no mfr custom interface / API development to be part of this project.
- IBM Maximo and its associated interfaces are highly configurable to a wide range of deployment models.
- This project will incorporate a WTD PM and a 3rd party consultant that specializes in Maximo implementation across like agencies.

NARRATIVES WTC PASS WEIR FOR EMG BYPASS 1134072

1. CURRENT PROJECT SCOPE

West Point Treatment Plant Passive Weir for Emergency Bypass: The primary objective of this project is to design and construct a passive bypass weir on the Emergency Bypass Channel to protect the plant from flooding in the event of a failure of the Emergency Bypass gate (EB) and all other gates in the Influent Control Structure (ICS). This work will include review of the current design of the wastewater influent tunnels, ICS, and Emergency Bypass Channels, develop alternative design plans, preliminary design (Baseline), final design, implementation, and project close out. This project will produce a alternative design reports, design plans at various design levels (30%, 60%, 90%, and 100%), bidding documents, a passive bypass weir to handle up to 440 millions gallons per day of influent.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC PASS WEIR FOR EMG BYPASS

1134072

3. PROJECT JUSTIFICATION

This project, upon implementation, would protect the Plant from potential flooding in the instance where the EB gate fails to operate and also protect Ballard Regulator station and 3rd Ave W Weir. AECOM recommended evaluating options for a passive bypass weir in their West Point independent assessment report. A subsequent feasibility study also recommended modification of the existing ICS and convert the existing surge channel into passive bypass weir.

4. PROJECT BENEFITS/OUTCOMES

Implementation of the Passive Bypass Weir would allow the overflow of up to 440 MGD and protect the plant from potential flooding PBW would prevent any additional CSO events at Ballard Regulator station and 3rd Ave Weir

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency and the timing of implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

None

8. PROJECT STATUS

Not started.

9. ALTERNATIVES ANALYSIS

To be completed in the course of project execution.

10. OTHER AGENCY INVOLVEMENT

TBD.

11. ART ELIGIBILITY

Project is for structural modifications of the existing ICS and the surge channel

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Inside of existing plant boundaries. No odor or transportation impact. Will increase overall system resiliency and reliability, promoting the region's natural and built environments, economic development and strong neighborhoods

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES

WTC VFD REPLACEMENT

1134073

1. CURRENT PROJECT SCOPE

Variable Frequency Drive Replacement: The primary objective of this project is to establish a program to proactively replace low voltage (less than 480 volt) variable frequency drives (VFDs) through the King County Wastewater Treatment Division's (WTD) system that have reached the end of their life and prior to their failure.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The projected life span of a VFD is 18 years per Asset Management. Many of WTD's VFDs are obsolete, meaning that the given VFD make and model is no longer manufactured. Replacement parts for obsolete VFDs are difficult, and may even be impossible, to procure. Over half of WTD's VFDs are obsolete. The data analyzed show that there is a substantial backlog of VFD assets that are past their useful life and are failing. Please refer to the program plan for details. See attached projection.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC VFD REPLACEMENT

1134073

4. PROJECT BENEFITS/OUTCOMES

A VFD replacement program proactively manages WTD assets and reduces the number of emergency/urgent replacements due to VFD failure by replacing them at the end of their life.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency and the timing of implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

None, should save on energy costs.

8. PROJECT STATUS

Not started.

9. ALTERNATIVES ANALYSIS

To be completed in the course of project execution.

10. OTHER AGENCY INVOLVEMENT

TBD.

11. ART ELIGIBILITY

Project is for equipment replacement.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Instrument upgrades inside of existing facilities. Will increase overall system resiliency and reliability, promoting the region's natural and built environments, economic development and strong neighborhoods

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES WTC BW RW STORAGE 1134074

1. CURRENT PROJECT SCOPE

Brightwater Reclaimed Water Storage: Staff from the Reclaimed Water (RW) program and Brightwater have identified a need for RW storage to improve system reliability and increase operator and maintenance flexibility. The purpose of this project is to install storage and associated pumping for the Brightwater reclaimed water distribution system. Other sites for the storage tank and/or another disinfection process may be feasible, but for the purpose of obtaining an updated cost estimate, it was assumed that the storage tank would be sited at Brightwater and a UV disinfection system would be added to meet future potential regulations. The project team will continue to evaluate the feasibility of the site during alternatives analysis.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WTC BW RW STORAGE

1134074

3. PROJECT JUSTIFICATION

Reclaimed Water (RW) storage is required to deliver a reliable supply to current and future customers. Currently, the RW system experiences outages on a regular basis when RW must be diverted because it is not meeting Brightwater's permit requirements or customer water quality limits. Outages cause frequent disruptions in service, impact customer operations, and result in customer complaints. The system was designed without any storage and only one customer (Willows Run) has its own onsite storage pond. Additionally, the lack of a stable RW supply has stopped new, large potential customers from connecting.

4. PROJECT BENEFITS/OUTCOMES

The benefits of this project include increasing system and product stability, reliability, and marketability.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency and the timing of implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

May increase O&M. Will be investigated during Predesign work.

8. PROJECT STATUS

Not started

9. ALTERNATIVES ANALYSIS

To be completed in the course of project execution.

10. OTHER AGENCY INVOLVEMENT

TBD.

11. ART ELIGIBILITY

Project is construction of a new water reuse facility.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Inside of existing plant boundaries. No odor or transportation impact. Will revisit if site outside the Brightwater facility is selected.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project will help implement the priority action in Section Two of the SCAP (Preparing for Climate Change Impacts) that calls for WTD to expand the use of reclaimed water. WTD efforts to expand the use of reclaimed water in the Sammamish River valley have been hampered by distribution reliability issues at Brightwater. After the project is implemented, progress will be measured by WTD's ability to have reclaimed water from Brightwater reliably available for distribution to existing customers. Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES

WTC LK HILLS INT A REFURB

1134075

1. CURRENT PROJECT SCOPE

Lake Hills Interceptor A Refurbishment : Rehabilitation of 3,263 linear feet of 48-inch diameter reinforced concrete pipe. This project is identified as priority project #1 in the 2017 prioritization.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project aligns with WTD's mission, vision, and values by protecting public health, creating a resilient clean water enterprise, and safety as a virtue. The pipeline zoned within commercial/residential areas in runs under NE Bellevue-Redmond Road which is very high traffic. It is deteriorating due to the effects of hydrogen sulfide gas exposure. Failure to rehabilitate will result in asset failure with potential overflow of 52.4MGD, creating potential public safety and health issues. The severity of corrosion was ranked as condition 5; high risk.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC LK HILLS INT A REFURB

1134075

4. PROJECT BENEFITS/OUTCOMES

The project maintains the structural integrity of the Lake Hills Interceptor, and extends the useful life of the pipeline.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency and the timing of implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

None.

8. PROJECT STATUS

Not started.

9. ALTERNATIVES ANALYSIS

To be completed in the course of project execution.

10. OTHER AGENCY INVOLVEMENT

TBD.

11. ART ELIGIBILITY

Project is a sewer.

12. EQUITY AND SOCIAL JUSTICE IMPACT

We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan. Anticipated project area does not project as a high equity opportunity area.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES WTC ENV LAB LIMS UPGD 1134076

1. CURRENT PROJECT SCOPE

Environmental Lab Laboratory Information Management System Modernization: The project will upgrade Laboratory Information Management System (LIMS) by replacing the no longer supported Oracle Forms with KCIT supported technology in Phase I. Phase II will upgrade and replace ancillary supporting LIMS applications. Phase III will migrate the Oracle tables to a KCIT supported platform.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC ENV LAB LIMS UPGD

1134076

3. PROJECT JUSTIFICATION

The Environmental Lab's LIMS, is a 25 year old business critical system that manages the entire lifecycle of environmental samples: collection through reporting of data. LIMS is also the repository of over 52 years of past data which is used daily for the purposes of regulatory compliance with local, state and federal regulations and permits and trend analysis.

The risk at this time is the use of the deprecated Oracle Forms which Oracle and KCIT no longer support. Upgrading the system rather than replacing it is less expensive and will be less disruptive to the lab's operations and customers utilizing LIMS data. There are a few key KCIT staff that are nearing retirement and their participation in this effort will be critical to the project's success. Not having a working LIMS system would jeopardize the County's ability to maintain compliance with NPDES permits.

4. PROJECT BENEFITS/OUTCOMES

Modernizing the existing LIMS system will eliminate the risks associated with maintaining depreciated technology (Oracle Forms) and will make the system more secure. It will also eliminate the Oracle Forms' licensing costs and most likely the costs of the Java Client software now required on each PC that runs LIMS. Moving to more modern IT technology will allow for a broader pool of KCIT developers to support the system.

This project will also provide the Lab with Super-User tools which will shift key business functions from KCIT staff to designated Lab staff, thereby reducing the need for future KCIT resources from 5 to 3 FTEs.

Phase I will also incorporate LEAN efficiencies (barcoding, electronic bench, and a LIMS dashboard) which will increase lab capacity, reduce errors, reduce paper and paper storage needs.

Elimination of Oracle Forms will reduce licensing fees and increase the number of KCIT staff that can maintain the system.

5. BUDGET REQUEST BASIS

This project has 3 distinct phases and the funding for all phases is being requested at this time. The request for this budget was determined by working with both KCIT staff and an external consultant with LIMS expertise (Astrix Inc.) to determine the likely resources required for each phase.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

We are not able to estimate the O&M costs at this time because the cost will be dependent on the selected technology solution. It has not been completely determined how much of the Azure model will be used and charges may depend on how much data is downloaded per time.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

In 2016 and 2017, both COTS and SaaS solutions were explored by KCIT and environmental lab staff. Several other environmental labs of similar missions and/or size were contacted for information on their LIMS systems. Additionally, a proof of concept project to migrate existing Oracle Forms to a C#.Net technology was performed by KCIT, demonstrating the feasibility of this approach. Astrix Inc., a technology consulting firm specializing in LIMS replacements and modifications was also brought in for a multi-day evaluation of the current LIMS and to assess a COTS vs. modernization approach. Astrix validated the costs and feasibility of all options and agreed that modernization of this system was a more cost effective and beneficial means of upgrading this critical system.

10. OTHER AGENCY INVOLVEMENT

This project is in the WTD capital program because it is funded by WTD. The LIMS system is used by the Environmental Lab, which is in Water and Land Resources Division. In addition, WTD's Industrial Waste group has a PIMS database that connects to LIMS. The same KCIT Project Manager has been assigned these projects so that coordination of work on LIMS will not adversely affect PIMS and vice versa.

11. ART ELIGIBILITY

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

1134076

12. EQUITY AND SOCIAL JUSTICE IMPACT

N/A

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

N/A

14. OTHER CONSIDERATIONS (OPTIONAL)

CIO and PSB Critical Success Factors and Conditions:

- 1) Engage external Quality Assurance reporting to PRB or the project sponsor - based on their agreement
- 2) Collaborate with PRB staff and KCIT Procurement for external QA Scope of work and Contract
- 3) KCIT architecture review is required prior to implementation
- 4) Establish a countywide platform (since EDMS ILINX doesn't meet requirements according to gap analysis) to leverage this investment across the county for areas (WLRD, Transit, FMD) with similar needs.

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

This projects eliminates deprecated technology (Oracle Forms) and migrates them to a KCIT supported technology. This will make the platform more secure and easier to maintain. It will eliminate licensing fees associated with the Oracle Platform. It will also create Super-User Tools for Lab staff which is anticipated to reduce the number of matrixed IT staff from 5 to 3 FTEs. Because King County owns the source code for LIMS, there will be no additional licensing fees or service contracts associated with the application.

16. PROJECT COMPLEXITY

Phase I will consist of replacing ~78 Oracle Forms. Phase I is moderately complex. The business will first examine all of the associated workflows and streamline them first in order to reduce the number of new "forms" necessary to build and maintain in the future. Phase III will consist of moving the database from an Oracle Platform to a KCIT supported technology. This phase is very complex and must be done in such a way as to not lose data, meta-data, QC data, or their interrelationships. The PIMS and LIMSView applications that use LIMS are required to work with the need for only minor changes. KCEL staff and its customers must have continued, immediate access to all current and future data in its current format. Phase II is making minor changes to ancillary LIMS programs and is expected to be moderately complex, but engender less risk. An external QA consultant will be utilized to mitigate all associated risks.

17. CAPACITY TO IMPLEMENT THE PROJECT

KCEL and its matrixed IT staff have successfully modified and migrated LIMS to more modern technologies over its 25 year history. This includes significant changes to the LIMS operating systems, code language, Oracle Form changes and the creation of new modules such as Pre-Login, QC, SDG reporting options, and EPA LLOQ requirements.

KCEL has a LIMS committee that will examine the workflow through a LEAN lens, document requirements, and work closely with KCIT to test the changes. A lab senior scientist will facilitate the LIMS Committee and work with KCIT during this project. He will provide KCIT with LIMS requirements, documentation, and assist with the creation of testing plans. LIMS committee members will also perform user testing in order to implement new modules as KCIT finishes them. It is expected that KCIT will provide a Project Manager, LIMS SME, testers, and two highly proficient Developers for this project. A steering committee has also been formed and will meet quarterly.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC ENV LAB LIMS UPGD

1134076

18. PROJECT RISKS

The risks to the project are: 1.) Key KCIT staff nearing retirement whose expertise is required through Phase II. The risk is low if we start in early 2019. An MOU will be created outlining key KCEL and KCIT staff that will be dedicated to this project in order to eliminate risks associated with changes in key personnel.

2.) The cost of KCIT services are very high and not all the estimated services are warranted for all phases of this project. KCEL will continue to work with KCIT to insure that we are not asking for or receiving services that are unnecessary to satisfy the project's success. The risk of project overruns are high. The MOU, Charter, and Steering Committee will be used to mitigate this risk.

3.) The risk of migrating the database from Oracle to another platform is risky due to the possibility of data loss, data/metadata/QC data relationships, and data access. An external QA consultant will be used to mitigate this risk.

Capital Appropriation Proposal

NARRATIVES

WTC PIMS REPLACEMENT

1134301

1. CURRENT PROJECT SCOPE

Pretreatment Information Management System Replacement - The project will develop a new database system that supports the day-to-day operations of WTD's Industrial Waste unit, with enhanced features, and retire the legacy system (PIMS). The scope also includes extraction of "Transform Load" historical data between the legacy system and the new system.

2. PROGRAMMATIC PROJECT DISCUSSION

n/a

3. PROJECT JUSTIFICATION

PIMS is limited by a legacy database and an archaic desktop-based user interface that is not web-based. Data that is self-reported by industrial users (Industrial Waste (IW) unit's customers) is manually processed. PIMS does not integrate with GIS and does not integrate with the finance system to automate billing or invoicing. In addition, the current PIMS system does not have the functionality that is required to LEAN IW's efforts nor does it meet e-reporting efforts. The PIMS system currently faces two significant risks, lack of support infrastructure and inflexibility to adapt to emerging business requirements, which are a product of PIMS age and original code/language. The WTD IW unit is, operationally, heavily reliant on PIMS (everyday use by a staff of 15) and this places the group at a significant operational risk, due to lack of support infrastructure for PIMS. PIMS has been a stable system, and King County gained ownership of the source code when the original vendor went out of business, but maintenance and development for PIMS is reliant upon a sole source waiver with a developer from the original PIMS development. As time goes on there is an increasing chance that support and development for PIMS will cease.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC PIMS REPLACEMENT

1134301

4. PROJECT BENEFITS/OUTCOMES

This project aims to maintain current operational abilities within the Industrial Waste (IW) unit and greatly enhance functionality. Benefits of this project include adhering to KCIT standards for mobility and web-enabled. A user-friendly and scalable web application will greatly benefit PIMS internal and external users by providing a more efficient system and reduce administrative costs. It is envisioned that this project will result in a "self-service portal" for IW customers, general public, and external partners (local sewer agencies) that would allow several tasks to be performed on-line such as: completing industrial user surveys, completing applications for permits, entering self-monitoring data by existing customers, accessing data including GIS, accessing billing information, and paying bills via ePayments. This project will increase customer relationship management by better tracking interactions with customers and enhancing automated workflows. System administrative options will result in increased system flexibility, increased role-based security, and will comply with all federal, state, and local environmental regulations for mailing and receiving information and documents. All of these improvements will reduce system administrative overheads, increase staff productivity (with the ability to focus time on more technical matters), and improve the quality and timeliness of communication with stake holders. We believe, adding functionality which enhances our ability to interpret data will improve our capabilities to make data driven decisions and spotlight trends which may have otherwise gone unobserved. Overall, the project will increase operational efficiencies and improve service demands.

5. BUDGET REQUEST BASIS

Seeking appropriation for the completion of this software procurement and implementation project. Supported by wastewater sewer fee revenues and debt proceeds.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Annual operations and maintenance costs after completion of the project are tentatively forecasted at \$200K.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

Preliminary alternative analysis completed by KCIT as a study. Reviewed by consultants who recommended an alternative COTs system. A more robust alternatives analysis will be completed at gate 2.

10. OTHER AGENCY INVOLVEMENT

This project will impact DNR's WLRD Environmental Laboratory (link with LIMS), the BRC with interfaces to EBS and PeopleSoft, and GIS. The project sponsor has met with the Manager of the Environmental Laboratory (EL) on a couple of occasions and is fully aware of the requests related to PIMS changes. There is good communication and a productive working relationship between IW and EL. The BRC has not been notified, but the intent is to subscribe to existing interfaces, with no modification, to improve work-flows within WTD. At this current stage IW is planning to use EBS interfaces related to submitting new customers and transactions to the accounts receivable (AR) module in addition to pulling transaction status information from the AR module (AR_INTF_001, 03 and 06). IW is exploring using interfaces to submit labor to PeopleSoft, to streamline their work order process (TLN2000-TL-Feeder-System-Interface-Standard). WTD GIS staff is aware and supportive of the project. No problems are anticipated.

11. ART ELIGIBILITY

Software. Configurable Off-the-shelf Software (COTS) database system. Likely hosted in the cloud by vendor as a Software - as-a -service (SAS) solution.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to this project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Not applicable. Software solution.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC PIMS REPLACEMENT

1134301

14. OTHER CONSIDERATIONS (OPTIONAL)

CIO and PSB Critical Success Factors and Conditions:

- 1) Integration btw PIMS and LIMS, and BRC and PS in the future will be needed; engage all stakeholders in the implementation
- 2) Evaluate vendor SaaS solutions!
- 3) Continued alignment between LIMS and PIMS that the agency leadership committed to get the both projects approved with PIMS going first; same PM to manage both projects so the risk will be lower

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

This project will replace KC Industrial Waste (KCIW) Program's Pretreatment Information Management System (PIMS) with a SaaS COTS solution. It will align with KCIT's strategic plan by supporting employee mobility, providing Industrial Users (customers of IWP) with new and convenient ways of interacting with WTD, and increase efficiencies through data driven decisions. Our new solution will have a mobile component so our inspectors and samplers can interact with our database from the field, where it is needed. Industrial users will be able to submit and sign sampling reports electronically, for the first time.

16. PROJECT COMPLEXITY

Our project scored in the lower left portion of the Complexity Matrix, low technical complexity and low business complexity. From a business perspective, one group within WTD will be affected the most by the new system, the Industrial Waste group. Training will revolve around system workflows and system configuration; these are existing bodies of work, but they will be presented differently in a new system. The project will be rolled out all at once and some outreach, with Industrial users, will be required regarding the new ways in which they can submit their data to us via a web portal.

From a technology stand point we are looking for a vendor hosted solution. Most system maintenance will be handled through the vendor. This project is looking to integrate with GIS, LIMS and EBS. EBS integration will be through established interfaces. LIMS will need a new interface, but the workflows are already established under the current PIMS system. GIS will be a new interface, but the data elements are known and this would greatly improve the process we use today, which is somewhat manual.

17. CAPACITY TO IMPLEMENT THE PROJECT

WTD has a high capacity to implement this project and are eager to replace a risky system. We are looking to implement a vendor hosted configurable off the shelf (COTS) system. Our agency's responsibilities will be configuration, testing and product acceptance. KCIT will be responsible for connectivity. Similar projects we have worked on are:

- ABT (Oracle EBS): Testing and some configuration
- Mainsaver: WTD CMMS

Key Resources: A steering committee, including the WTD Director, will be formed to guide this project to successful completion. The IW's senior most investigator has been assigned to lead the testing of the system from the business need perspective. The business owner will be the IW Manager and the KCIT Program Manager will have important roles in overseeing the project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC PIMS REPLACEMENT

1134301

18. PROJECT RISKS

There are only a few major risks with this project. We are looking to go with a COTS system designed specifically for our niche market, industrial pretreatment (IPT). IPT is highly regulated at the federal/state/local levels which means any company that is regulated will have to be compliant to those standards. Data migration risks are low; while the data is very important it is not complex and relatively homogeneous across IPT programs. For example waste strengths and discharge locations. Connectivity has low risk and workflows will have to be designed and tested, many of these workflows already exist in the current operating environment. Our chosen solution will use standard technologies like web services, SFTP and FTPS. Configuration risks are low because we have subject matter experts in IPT, who know what the software needs to do, and we have staff members with system configuration experience. Risk of data/system loss will be minimized through project requirements around data handling and emergency management.

The main risk is that the estimated costs of KCIT services are very high and not all of the services are warranted. KCIW will work with KCIT in attempt to mitigate this risk by not accepting services that are unnecessary to satisfy the PIMS project. Hopefully, the Charter and Steering Committee will be used to further mitigate risk.

NARRATIVES

WTC FALL CITY WASTE MANAGE SYS

1134349

1. CURRENT PROJECT SCOPE

Fall City Waste Management System: This project will evaluate the feasibility of implementation, and then design a sewage management system for the Fall City business district.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

There is currently no centralized collection or treatment system for the Fall City business district, the parcels use on-site septic systems. These septic systems are aging and pose a risk to the environment, human health, and the viability of the community. In addition to the septic systems aging, the septic drain field sizes are inadequate due to small lot sizes, limiting business expansion. The businesses currently cannot expand and/or redevelop.

4. PROJECT BENEFITS/OUTCOMES

A new sewage management system for the Fall City business district would improve the viability of the community and allow businesses to expand and/or redevelop.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency and the timing of implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

To be determined.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC FALL CITY WASTE MANAGE SYS

1134349

8. PROJECT STATUS

Not started.

9. ALTERNATIVES ANALYSIS

To be completed in the course of the project.

10. OTHER AGENCY INVOLVEMENT

An agency that still needs to be determined will own and operate the conveyance system upon construction completion. Coordination with this other agency will be needed during design. Depending on the sewage management system chosen, local, state and federal agency coordination may be necessary for permitting. Any additional agency involvement will be determined during the typical course of project planning.

11. ART ELIGIBILITY

12. EQUITY AND SOCIAL JUSTICE IMPACT

We are implementing an ESJ Assessment protocol for all projects, and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

SCAP goals and targets are typically considered in the planning of new projects. Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES WTC SPU JOINT 3RD AVE TUNNEL 1134816

1. CURRENT PROJECT SCOPE

SPU Joint 3rd Ave Tunnel: This joint agency project will cover the costs for upgrading the Fremont Utility Tunnel and replacement of the SPU water pipeline, including related structural supports. The WTD Siphons have been abandoned in the Fremont Utility Tunnel since completion of the WTD Fremont Siphon Replacement project in 2017. SPU is replacing the water pipeline due to a significant leak discovered in 2010. The line is currently out of commission. SPU will perform the work, including both design and construction, with King County paying a share of costs based on ownership of infrastructure to be removed, replaced, or refurbished.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The water pipeline in the Fremont Utility Tunnel has experienced a significant leak since at least 2010, threatening the integrity and longevity of other utility infrastructure in the tunnel. Replacing it and repairing associated infrastructure will protect the life of all other assets in place.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC SPU JOINT 3RD AVE TUNNEL

1134816

4. PROJECT BENEFITS/OUTCOMES

As stated above, this project is beneficial to all utilities with assets in the Fremont Utility Tunnel including SPU, WTD, Seattle City Light, and Comcast as it will prevent the damage and ensure the full useful life of all assets in place.

5. BUDGET REQUEST BASIS

This appropriation will allow for legal contract execution in 2019 and closeout of the project in 2020.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

None.

8. PROJECT STATUS

MOA between agencies will be signed in 2018. Design and construction to begin in 2019.

9. ALTERNATIVES ANALYSIS

The alternatives analysis will occur during design, with SPU as the lead agency and WTD offering support with inputs such as ongoing operational costs.

10. OTHER AGENCY INVOLVEMENT

Joint project with Seattle Public Utilities, who will be the lead agency on this effort. King County will pay share of costs associated with ownership of the infrastructure to be replaced.

11. ART ELIGIBILITY

Below ground sewer tunnel. Not art eligible.

12. EQUITY AND SOCIAL JUSTICE IMPACT

As Seattle Public Utilities is the lead agency on this project, it will be vetted through their equivalency of an ESJ plan, namely the City of Seattle Race and Social Justice Initiative Racial Equity Tool (RET). This is a comprehensive tool that studies the determinants of equity in a project area, adds structure and guidelines for genuine community engagement, and sets parameters for alternatives analysis in order to prevent disproportionate negative effects on historically disadvantaged and primarily people-of-color communities.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

WTD will work with SPU to assure beneficial use and/or recycle of construction materials as well as meeting the other goal areas of the City of Seattle Climate Action Plan.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

WTC WATER QUALITY IMPRV ALTERN

1135013

1. CURRENT PROJECT SCOPE

Water Quality Improvement Alternatives: This project will refine and implement a series of Water Quality Improvement Alternatives, including water quality investments, programs, and policies ("Water quality Projects") identified in the King County Combined Sewer Overflow (CSO) Long-term Control Plan (LTCP) and further opportunities identified in the Systemwide Comprehensive Plan (SCP) for King County's regional wastewater system. This project will refine planning level Water Quality Improvement Alternatives identified in the SCP and LTCP through Problem Definition, further evaluate options, and initiate design and implementation. This project will also further define those Water Quality Projects identified as programs and policies, in accordance with applicable laws and regulations. This process will be guided by the Water Quality Assessment and Monitoring Study, CSO LTCP, SCP for King County's regional wastewater system, King County Code (KCC 28.86) CSO control policies (CSOCP), and Water Quality Protection Policies (WQPP).

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

In support of WTD's vision as an innovative and resilient clean water enterprise, this project will implement Water Quality Improvement Alternatives, in line with the LTCP and SCP, and as guided by the Water Quality Assessment and Monitoring Study (WQA/MS). In 2017, the WQA/MS found that CSOs are a significant pathway of fecal coliform loading, but a small contributor of the other contaminants entering waterways as they only occur for a short period of time throughout the year. It further concluded that after completion of CSO control to the current standard, some receiving waters would still not meet water quality standards for fecal coliform. This project enables WTD to achieve water quality improvements beyond those reached by traditional CSO control. It will incorporate the planning efforts of the LTCP and the SCP to refine and implement alternatives for water quality improvement.

4. PROJECT BENEFITS/OUTCOMES

Implementation of Water Quality Improvement Alternatives will result in water quality improvements beyond traditional CSO projects. These projects can satisfy anticipated regulatory obligations for the King County Wastewater Treatment Division.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC WATER QUALITY IMPRV ALTERN

1135013

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending and contingency.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Operating budget and other impacts will be identified during planning and alternatives for each Water Quality Improvement Alternative.

8. PROJECT STATUS

Not started.

9. ALTERNATIVES ANALYSIS

Alternatives analysis will be conducted for each Water Quality Improvement Alternative included in this project.

10. OTHER AGENCY INVOLVEMENT

TBD.

11. ART ELIGIBILITY

TBD.

12. EQUITY AND SOCIAL JUSTICE IMPACT

We are implementing an ESJ Assessment protocol for all projects and developed an associated Assessment table and survey that fully implements ESJ practices into capital projects. This project specifically identifies equity opportunities as a core value that requires equitable participation and evaluation of LTCP process and applied to Water Quality Improvement Alternatives. The formal evaluative structure will be developed as part of the planning effort's initial scope. Additional information is outlined in the 2019-2020 Wastewater Treatment Division Business Plan and ESJ work plan.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project will implement the priority action in Section Two of the SCAP (Preparing for Climate Change Impacts) that calls for WTD to incorporate results of an assessment of impacts of climate change/rainfall patterns on wastewater treatment and conveyance into future updates of the Regional Wastewater Services Plan and the King County Combined Sewer Overflow Control Plan. SCAP goals and targets are typically considered in the planning efforts of new projects.

NARRATIVES

WTC WP BIOGAS OPT

1134077

1. CURRENT PROJECT SCOPE

West Point Treatment Plant Biogas Optimization: This project will assess the feasibility of adding a third, smaller engine to the existing Cogen facility at West Point to produce additional electricity and heat. This engine will significantly increase the amount of biogas that can be beneficially used at West Point (from about 75% to 88%). Based on the outcome of the assessment the project will either move forward or not.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Installing an additional engine would allow for the biogas that currently goes to these engines to be beneficially used instead of flared.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WTC WP BIOGAS OPT

1134077

4. PROJECT BENEFITS/OUTCOMES

The outcome of this project will inform the Capital Systems Team to appropriately charter a capital project to replace the Raw Sewage Pumps at West Point Treatment Plant.

5. BUDGET REQUEST BASIS

The appropriation request is based on analysis of project schedule, spending, contingency and the timing of implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

May increase O&M. Will be investigated during Predesign work.

8. PROJECT STATUS

Not started.

9. ALTERNATIVES ANALYSIS

To be completed in the course of project execution.

10. OTHER AGENCY INVOLVEMENT

TBD.

11. ART ELIGIBILITY

Project not visible to the public.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project. Inside of existing plant boundaries. No odor or transportation impact. Will increase overall system resiliency and reliability, promoting the region's natural and built environments, economic development and strong neighborhoods

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project aims to maximize the renewable energy generated at West Point Treatment Plant with an additional Combined Heat and Power module. The generated heat and electricity from the unit will further offset the purchase of fossil based gas and higher carbon intensity electricity, thus supporting WTD's effort to achieve SCAP Section 1 (Reduce Greenhouse Gas Emissions) targets. Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

The appropriation request is based on analysis of project schedule, spending, contingency and the timing of implementation contracting.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

May increase O&M. Will be investigated during Predesign work.

8. PROJECT STATUS

PM Assigned – Formulation and project definition to begin 3rd quarter 2018.

9. ALTERNATIVES ANALYSIS

Not started.

10. OTHER AGENCY INVOLVEMENT

TBD.

11. ART ELIGIBILITY

Project is for equipment replacement.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project is expected to result in energy savings of approximately 1,551,000 kWh/year. Implementation of the project will further the SCAP Buildings and Facilities Goal Area target of King County reducing normalized energy use in County owned facilities by at least 5% by 2020 and 10% by 2025, as compared to a baseline year of 2014. To measure progress towards the target, energy savings will be tracked through WTD's normalized energy use reporting after the project is completed. Project will strive for the Platinum level on the Sustainability Scorecard (or approved alternative rating system). This will further the SCAP Green Building Goal Area target of 100% of King County projects achieving Platinum certification or better by 2020. Progress towards the target will be measured by identification of the anticipated and achieved Certification level in Sustainability Scorecards prepared at 30% design and project completion, respectively. Project will maximize construction and demolition waste (C&D) diversion from landfills by striving for an 85% diversion rate. This will further the SCAP Green Building Goal Area target of County capital projects achieving, on average, an 85% percent C&D diversion rate by 2025. Progress towards the target will be measured by identification of a projected C&D diversion rate in a C&D Plan prepared at 30% design and the identification of an actual C&D diversion rate in a C&D Report prepared at project completion.

NARRATIVES

TD ON BOARD SYSTEMS

1027519

1. CURRENT PROJECT SCOPE

On-Board System (OBS) Project - This project replaces and upgrades the legacy on-board systems on King County Metro fixed route buses allowing the transition from an outdated legacy radio/automatic vehicle location system to the new radio system provided by the Transit Radio System Project. OBS also provides integrated GPS-based automated vehicle location, integrated automated passenger counting systems, and new capabilities including automated stop announcements, interior next stop displays, automation of existing destination sign changes, and enhanced performance for data collection and reporting.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The On Board System (OBS) and the Communications Center System (CCS) has been jointly procured under one contract. Combined, OBS/CCS includes all of the technology for vehicle tracking, revenue service management and near real-time customer information except for the new radio system. OBS is being implemented with new Transit Radio System and provides the user interfaces to that system on the coaches. An integrated OBS will increase reliability, integrate data, simplify operator tasks, and improve business system effectiveness.
