NARRATIVES

TDC TRANSIT ORIENTED DEVELOP	1028620
1. CURRENT PROJECT SCOPE	
Transit Oriented Development - The Transit Oriented Development (TOD) project is a programmatic initiative to identify and assess opportunities for Metro Transit's involvement in transit oriented development. The scope of work of this TOD Program project is an ongoing effort that will identify locations and scope for Metro's capital involvement, evaluating the benefit potential of development at these locations, and building partnerships with host communities or developers to achieve the program goals. This project also includes funding for a \$225,000 annual lease for a Park and Ride TOD site.	
2. PROGRAMMATIC PROJECT DISCUSSION	
This programmatic effort is to identify future opportunities for TOD investment in site-specific TOD standalone projects.	

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC TRANSIT ORIENTED DEVELOP

1028620

3. PROJECT JUSTIFICATION

King County (County) is one of the fastest growing regions in the country. In response to the needs of its diverse population and the transportation and environmental challenges presented by growth, the County is developing various initiatives, policies and strategic plans in support of affordable housing, environmental sustainability and transit. METRO CONNECTS identifies significant public investments in transportation facilities around the county. New hubs, parking locations, and other high frequency transportation stops provide an excellent opportunity to expand Metro's TOD program. As the County continues to invest in transit systems through Metro Connects, focus development into cities and urban areas through the Comprehensive Plan and reduce countywide carbon emissions through the Strategic Climate Action Plan, this Transit Oriented Development program is a place-based strategy where the County can address its objectives around community development, equity, climate change and transit. The program seeks to improve quality of life by providing well-designed, mixed-income, sustainable neighborhoods with good transit access. The TOD program embraces equity and can benefit low and mixed-income communities by encouraging investment in economically-challenged areas, while helping to reduce displacement and encouraging business opportunities and employment for current community members.

4. PROJECT BENEFITS/OUTCOMES

Metro's TOD program has potential to increase transit ridership through increasing density of housing, improving housing/job balance and increasing other destinations within proximity to frequent transit service. The program expands access to transit, creates mixed-use communities, and reduces climate emissions.

5. BUDGET REQUEST BASIS

This is based on evaluation of the historic staffing and other resources needed to evaluate and respond to opportunities to expand Metro's TOD development program and future capital projects.

6. FUNDING AND REVENUE DISCUSSION

The program would be funded from Metro Transit funds. Note that property sales from past TOD projects have generated revenue to continue Metro Transit's TOD program.

7. OPERATING BUDGET AND OTHER IMPACTS

NA

8. PROJECT STATUS

Currently the TOD program is identifying opportunities around the County which are suitable for a coordinated County investment. Dedicated staffing with expertise in transit oriented development will provide a consistent program to evaluate opportunities and negotiate Metro Transit's level of participation.

9. ALTERNATIVES ANALYSIS

Each TOD project is evaluated for the real estate feasibility, the needed subsidy, if any, the availability of financing sources, and the support of the local jurisdiction, community, and partners. Filters of demographic and other data are used to identify locations where TOD could promote Equity and Social Justice benefits.

10. OTHER AGENCY INVOLVEMENT

TOD projects often involve numerous other King County agencies, specifically Department of Community and Human Services, and from the local jurisdiction.

11. ART ELIGIBILITY

Not Art eligible, planning project

12. EQUITY AND SOCIAL JUSTICE IMPACT

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC TRANSIT ORIENTED DEVELOP

1028620

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The projects that are created through Metro's TOD program reduce climate emissions by locating residents closer to high frequency public transportation. TOD projects also require compliance with the County's Green Building program requirements. These requirements often exceed what would be pursued by a private developer and as such result in lower energy consumption and reduced climate emissions. Advancing these goals are considered in the feasibility analysis conducted when evaluating Metro's participation in future TOD projects.

NARRATIVES

TDC TOD CONVENTION PLACE

1028624

1. CURRENT PROJECT SCOPE

Convention Place Transit Oriented Development (TOD) - This project would redevelop the existing Transit facility to include: (1) an expansion of the existing Washington State Convention Center; (2) retention of Transit assets of bus layover, passenger load/unload and tunnel access as long as possible; (3) addition of a hotel and/or residential and/or commercial buildings; and (4) public space.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

In June, 2011 the state legislature voted not to fund this project. In 2013, the Washington State Convention Center (WSCC) re-established discussion with Metro Transit to start planning for the project based upon an alternative funding strategy. A Memorandum of Understanding was updated in May 2013, which outlined near term work and funding for both parties. King County has collaborated with WSCC and their consultants on alternative analyses, preliminary planning level design and phasing.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being discontinued and/or some budget from this project is being reappropriated to new standalone or smaller programmatic projects. Specifically, approximately \$25M is being disappropriated from this project and reappropriated to the following: \$6.9 M to "1123790 TDC WSCC AT CONVENTION PL TOD", \$8.2 M to "1128656 TDC CPS LOW VOLT COMM RELOC" and \$4M to "1131130 TDC DSTT 9TH AVE RAMP FROM CPS". The rest, \$6M, is being disappropriated as costs for work performed by the buyer were offset by funds provided at closing.

NARRATIVES TD TUNNEL MODS ENHANCEMENTS 1028625

1. CURRENT PROJECT SCOPE

Tunnel Modifications and Enhancement - This project established King County Metro's anticipated contribution towards remodeling the Downtown Seattle Transit Tunnel for joint bus/rail operations. The funding categories and levels are defined in the tunnel master agreement and maintenance agreements with Sound Transit. The remaining funding is for King County Metro Transit's obligation to the City of Seattle for reconstruction of the Pioneer Square Station escalator entrance at the site of the former Public Safety Building. The project also included funds for the repair/upgrade of systems in the tunnel that were not required for joint operation but were most efficiently/effectively completed during the period of tunnel closure.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TD TUNNEL MODS ENHANCEMENTS

1028625

3. PROJECT JUSTIFICATION

The project enabled the Tunnel to reopen and be ready for joint Bus/Light Rail operation by upgrading the Downtown Seattle Transit Tunnel (DSTT) facility to current standards and installing the necessary track and systems for joint operation. The project supports Transit strategies 3.2.2, coordinate and develop services and facilities with other providers to create an integrated and efficient regional transportation system. The project supports the goal of financial stewardship.

3. PROJECT JUSTIFICATION

Real Time Information Signs (RTIS) are part of the funding made available for the 2006 Transit Now Initiative. Transit Now is a key agency business strategy that provides frequent, fast, reliable, efficient and environmentally friendly bus service in five arterial corridors. The RTIS project goal to provide enhanced customer information correlates with the County's Strategic Technology Goal to improve the quality and/or usability of internal and/or external County services. The project supports Transit Strategy 5.2.1: use available tools, new technologies and new methods to improve communication with customers.

NARRATIVES

TDC MDT REPLACEMENT

1028644

1. CURRENT PROJECT SCOPE

Mobile Data Terminals Replacement - This project's scope is to purchase replacement mobile data terminals, aka mobile data computers and dispatching system for Access paratransit fleet and paratransit control center. King County Metro provides paratransit service in accordance with the Federal ADA requirements and King County Ordinances.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The core technologies and system architecture of Metro's current Mobile Data Computer (MDC) system dates back to 2002 - the last time Metro conducted a competitive procurement for paratransit MDCs. Relying upon an outdated technology and system architecture may adversely affect Access Transportation's ability to provide reliable service and/or enhance existing services into the future.

NARRATIVES

TDC BUS ZONE IMP SHELTERS

1028681

1. CURRENT PROJECT SCOPE

Bus Zone Shelter Improvement - This programmatic project addresses critical safety, comfort, and accessibility needs at bus stops. The program adds new and improves existing passenger facilities including installing shelters, ADA-accessible landing pads and pathways, awnings, benches, trash cans, leaning rails, and lighting. Individual projects may be driven by ridership demands, specific nearby land uses, service change initiatives, or the provision of partnership funding for city- and developer-led projects that impact bus zones and layover areas.

2. PROGRAMMATIC PROJECT DISCUSSION

This program targets the completion of approximately 225 improvements in the 2019-2020 biennium, including adding about 100 shelters, 50 landing pads, 40 benches, and 35 solar-lighting retrofits on existing shelters.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC BUS ZONE IMP SHELTERS

1028681

3. PROJECT JUSTIFICATION

The program is a critical element of meeting the vision for regional service and passenger growth, increased safety, and increased efficiency presented in Metro Connects. Per the Metro Connects Capital Report, new passenger facilities are expected to be needed at more than 1,400 stops by 2025 and more than 2,100 additional locations by 2040, according to existing thresholds (shelters are generally installed at stops with 50 or more daily boarding's within the city of Seattle, and stops with 25 or more daily boarding's outside the city of Seattle). This program also supports the Service Excellence Goal, supporting overall customer satisfaction and Transit Strategy 3.2.2 '...Coordinate and develop services and facilities with other providers to create an integrated and efficient regional transportation system. This project allows Transit to implement an efficient passenger waiting environment including providing weather protection; adjusting and changing existing shelter locations in coordination with the tri-yearly service restructures; addressing security and lighting issues by installing shelters with lighting; and efficiently partnering with jurisdictions and developers when new opportunities arise or when existing shelter locations are impacted by adjacent construction and require relocation.

4. PROJECT BENEFITS/OUTCOMES

This program will help meet the increased demand for transit service driven by population growth, higher density development, and enhanced connections between multi-modal networks. The program address safety concerns by adding hard-wired or solar-powered lighting to new and existing shelter projects. These lighting projects increase visibility at night, mitigate loitering and vandalism, and assist in addressing security concerns. This program places an emphasis on accessibility and comfort for seniors and passengers with limited mobility through the installation of benches, railings, and curb-cuts at crosswalks. These projects are prioritized at locations adjacent to certain land uses such as medical centers, subsidized housing, senior centers, community shelters, schools, libraries, and community centers. Finally, the program cultivates community pride and ownership in the transit system by improving bus shelters with the installation of artwork created by commissioned artists, or murals painted by volunteers. In addition to providing valuable artwork to the community, the mural program has provided savings in maintenance costs to Metro through a decrease in vandalism at shelters with murals or art work.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$15 M is being reappropriated from the programmatic master project 1116073 TD SHELTERS & LIGHTING to fund or partially fund this project. The amount requested is based on estimates of individual project costs and the amount of projects that are needed to maintain, or minimally increase, the number of annual projects completed.

6. FUNDING AND REVENUE DISCUSSION

Metro is working to strengthen partnerships with jurisdictions and developers to fold improvements into larger capital improvements and leverage transit funds. Partnerships will be critical in meeting the targets outlined in Metro Connects.

7. OPERATING BUDGET AND OTHER IMPACTS

Sheltered bus stops require some operating cost to maintain the shelters.

8. PROJECT STATUS

The Shelters Stops Program is an ongoing program that advances and completes improvements to bus stops. At any given time, a portion of these projects will be in planning, design, permitting, or construction. The 2019-2020 budget for this program encompasses the previous appropriations for "Shelters and Lighting" and "Safety and Access".

9. ALTERNATIVES ANALYSIS

Individual projects within this program will be subject to review, vetting, and consideration of alternatives by Route Facilities and Design staff before the project proceeds to permitting. The purpose of this process is to ensure individual projects best meet the safety and accessibility needs of Metro's customers.

10. OTHER AGENCY INVOLVEMENT

This program will emphasize partnership projects whenever possible. The 2019-2020 budget reflects the desire to increase the number of partnership projects in order to help meet programmatic goals based on the needs identified in Metro Connects.

11. ART ELIGIBILITY

N/A, Art eligible

NARRATIVES TD RADIO AVL REPLACEMENT 1028716

1. CURRENT PROJECT SCOPE

Radio and Automatic Vehicle Location (AVL) Project - This project replaces the existing transit 450 MHz system with a new 700 MHz system to provide voice and data communications for all transit stakeholders. The project will also integrate with other on-board systems and provide operational continuity throughout the replacement period.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The Transit Radio and Automatic Vehicle Location (AVL) system is a mission-critical communication system for Operations, Vehicle Maintenance, Power and Facilities, Transit Safety and Transit Security, providing essential voice and data communications for field staff, bus operators and, indirectly, for all fixed route customers served by Metro Transit. The project is required to meet Federal Communications Commission regulations that affect Transit's existing 450 MHz radio system and Transit's operational needs.

NARRATIVES TDC NON REV VEHICLE REPL 1028718

1. CURRENT PROJECT SCOPE

Non-Revenue Vehicle (NRV) Replacement Project - This project provides for both on and off road vehicles to support the King County Metro Transit revenue fleet and transit service. This project provides for the replacement of existing transit non-revenue equipment that have either met or exceeded the expected life or are no longer economical/effective to maintain. Using an established life as the base for the replacement schedule, the criteria for equipment replacement is adjusted based on the type of vehicle, its utilization and application. The mix of vehicles planned for replacement does change year to year, because actual vehicle mileage varies from the projected miles used for the plan. This project proposes to replace a total of 123 vehicles in five different categories - 94 vehicles in 2019 and 29 in 2020.

2. PROGRAMMATIC PROJECT DISCUSSION

This program provides for the replacement of existing transit non-revenue vehicles that support daily transit operations.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC NON REV VEHICLE REPL

1028718

3. PROJECT JUSTIFICATION

This project supports Transit's Goal of Financial Stewardship, keeping assets in a state of good repair, and providing and maintaining capital assets to support efficient and effective service delivery. Non-revenue vehicles support Metro Transit by providing vehicles and other mobile equipment for support, maintenance and/or repair of infrastructure and revenue operations. Vehicles are used to transport operators to shift changes, tow inoperable vehicles, provide transit security and provide facility and bus maintenance.

4. PROJECT BENEFITS/OUTCOMES

This program provides for the replacement of existing transit non-revenue vehicles that support daily transit operations.

5. BUDGET REQUEST BASIS

The replacement budget was determined by a standard replacement threshold based on mileage and age of vehicles also taking into account vehicle condition and maintenance cost. The replacement standards were set from King County policy. Vehicle pricing is based on current model year cost plus a percentage increase for inflation as well as additional costs for aftermarket builds for specific business needs to accommodate users changes in technical specifications as needed. The beginning and ending balances shown in the table above result from the fact that additional appropriation requested in the 2019 omnibus had not been implemented in the system of record at the time that this form was created.

6. FUNDING AND REVENUE DISCUSSION

N/A

7. OPERATING BUDGET AND OTHER IMPACTS

The project is replacing existing vehicles; therefore incremental operating budget impact is minimal.

8. PROJECT STATUS

This project is in the implementation phase. This is an ongoing, recurring project for the purchase of replacement non-revenue vehicles.

9. ALTERNATIVES ANALYSIS

Alternatives to new vehicle purchases are constantly being evaluated. For example, scheduling efficiencies increased the number of road reliefs and not enough base cars are available to perform all scheduled road reliefs. Vehicles are being rented rather than purchased to perform the road reliefs as this is anticipated to be a short term need.

10. OTHER AGENCY INVOLVEMENT

This project does not affect other agencies.

11. ART ELIGIBILITY

Not Art Eligible, technology or vehicle project that does not consist of major physical infrastructure construction.

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The project has the opportunity to advance Metro's sustainable infrastructure and fleet goals.

14. OTHER CONSIDERATIONS (OPTIONAL)

N/A

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

NARRATIVES TDC NORTHGATE TC TOD 1028730

1. CURRENT PROJECT SCOPE

Northgate Transit Center (TC) Transit Oriented Development (TOD) Project - This project consists of integration of the transit center function with the new Northgate Link light rail station, and includes three primary components: the Transit Center for bus passenger loading, a new bus transit roadway, and a new bus layover facility which includes a comfort station building. This project is one of four projects associated with the Northgate TOD Program, previously part of a common appropriation.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC NORTHGATE TC TOD

1028730

3. PROJECT JUSTIFICATION

As part of their Link light rail extension project to Northgate, Sound Transit is initiating the review and redevelopment of Metro's existing Northgate Transit Center and Park and Ride properties. The project supports the Transit goal of Economic Growth and Built Environment and Transit Strategy 3.3.1: Encourage land use, policies and development that lead to communities that transit can serve efficiently and effectively. Planning and feasibility studies conducted for the Northgate TOD site are directed toward accomplishing the goals of increased transit ridership, net positive return on transit assets, and the broader growth management goals of jobs/housing balance and greenhouse gas reduction.

4. PROJECT BENEFITS/OUTCOMES

This project will contribute to the Northgate Regional Growth Center reaching its target population/housing and employment goals by creating a seamless transfer environment between bus and rail operations, helping to reduce congestion on I-5 between Northgate and Downtown Seattle, and creating a bus operating environment that will enable Metro to provide on-time and reliable service for the multiple routes that will serve the Northgate Regional Growth Center. The new transit center will allow redevelopment of the existing transit center and surface parking lot into a high-density, mixed-use TOD community, supporting 1,000 new dwelling units, including over 300 affordable units, retail and office space, and a pedestrian plaza providing direct access to the regional transit facilities adjacent to the new Northgate Link light rail station, as envisioned in the City's Northgate Urban Design Framework.

5. BUDGET REQUEST BASIS

Budget is requested for three components that integrate the bus Transit Center function with Sound Transit's Link Light Rail function. The three components are comprised of: Transit Center elements including Real-Time Information Sign System and bus operations room; a new bus transit roadway abutting the east side of Sound Transit's new bus passenger loading island; and a new bus layover facility. The budget request includes costs for implementation of the Sound Transit property sale transaction for the elevated rail station and guideway, including design and construction of the bus layover facility adjacent to Sound Transit's new Northgate Station/Transit Center. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$4 M is being reappropriated from project 1116057 TD NORTHGATE TOD BUDGET to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

A Federal grant has been secured, and WSDOT has awarded a Regional Mobility Grant for the state biennium July 1, 2017 - June 30, 2019.

7. OPERATING BUDGET AND OTHER IMPACTS

Future operating impacts are unknown at this time.

8. PROJECT STATUS

The project is in final design. The design of the new transit center elements and bus transit roadway are complete. The new bus layover facility design is 90% complete. Construction of the three components is forecast to be complete prior to opening of the new Station/Transit Center in 2021.

9. ALTERNATIVES ANALYSIS

Alternatives analysis was concluded in 2012, resulting in this project concept.

10. OTHER AGENCY INVOLVEMENT

Other agencies involved in the project planning effort included Sound Transit, City of Seattle's Department of Transportation and Department of Planning and Development, Public Health - Seattle King County, Puget Sound Regional Council and Washington State Department of Transportation. Sound Transit is partnering with Metro Transit to design and construct the project. Additionally, the City of Seattle has provided \$10 million in funding for the affordable housing project, in addition to \$10 million provided by the King County Department of Community and Human Services, as part of the redevelopment of the property east of the new Northgate Station and bus transit roadway.

NARRATIVES

TD SYSTEM BRT CORRIDOR

1028770

1. CURRENT PROJECT SCOPE

System Bus Rapid Transit (BRT) Corridor - The scope of the project is to plan, design, and construct the elements of RapidRide that improve transit speed and reliability for five of the RapidRide corridors: Pacific Highway South (A Line), Bellevue-Redmond (B Line), West Seattle to Downtown Seattle (C Line), Ballard-Uptown to Downtown Seattle (D Line), and Aurora Avenue North (E Line), from Shoreline to Downtown Seattle. The project will design, install, and test the intelligent transportation system that provides transit signal priority, as well as the data communication link from the Metro communications control center to real time passenger information signs and stand-alone fare transaction processors located along the corridors.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

King County Ordinance No. 15582 (Transit Now Ordinance) included the five bus rapid transit corridors currently identified as RapidRide Lines A through E. Metro designed the capital improvements associated with the RapidRide to decrease travel times with faster and more frequent service, provide more reliable service, increase system and corridor passenger capacity, and project an image of quality, comfort, and speed. A goal of the BRT Corridors project is to construct improvements that will reduce transit travel time by 10%.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

This master project had multiple subs, all completed. Disappropriating remaining budget.

6. FUNDING AND REVENUE DISCUSSION

NARRATIVES

TD HWY 99N TRANSIT CORRIDOR

1028794

1. CURRENT PROJECT SCOPE

Highway 99 Transit Corridor - This project enables King County, WSDOT, the City of Shoreline and the City of Seattle to work together to make capital investments to improve the safety and operational efficiency of the Highway 99 North/Aurora corridor. The City of Shoreline has completed the roadway widening that includes transit lanes in both directions from N 145th to N 192nd. The remaining portion of the project includes King County funding associated construction of transit lanes in both directions, traffic signal cabinet upgrades to facilitate future transit signal priority installation, and the construction of the foundation for future passenger facility amenities between N 192nd and N 205th.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The project supports Transit Strategic Goal 5.1 Service Excellence, Strategy 5.1.3 Improve transit speed and reliability by maintaining or improving bus travel times and reliability through capital investments. E line is running along the Aurora corridor. Although this project predates the RapidRide initiative, all of the investments are compatible with and supportive of the RapidRide program.

4. PROJECT BENEFITS/OUTCOMES

NARRATIVES

1. CURRENT PROJECT SCOPE

Transit Asset Management Program (TAMP) Administration - This program is intended to support the soft cost requirements for the TAMP. These soft costs include program management, data analysis, functional analysis, and inspection to ensure the sustainability of Metro's assets.

2. PROGRAMMATIC PROJECT DISCUSSION

This program will support oversight, data analysis, functional analysis and asset inspections related to Transit Asset Management.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC TAMP PROGRAM ADMIN

1028795

3. PROJECT JUSTIFICATION

Transit Asset Management is the practice of maximizing the value of Metro's assets. This is accomplished by a multipronged approach that includes 3rd party inspections to evaluate the functionality of the assets, lifecycle monitoring to evaluate the reliability of the asset, and corrective/preventative maintenance evaluation to determine the efficiency of continued operation of the asset. These factors are then calculated with a criticality value to establish prioritized replacements. This process required reliable and consistent data put through complex calculations, requiring program oversight and data verification.

4. PROJECT BENEFITS/OUTCOMES

Replacing assets ensures Metro's operation meets it's performance expectations. Replacing assets through a comprehensive program of inspection and analysis ensures that Transit meets performance expectations but also maintains an efficient and balance asset replacement program.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$4M is being reappropriated from project 1129630 TDC SGR PROGRAM MGMT to fund or partially fund this project. The budget is based on the following activities' expected cost: monitoring progress and performance of fixed asset appropriations and their sub-projects; conducting financial management including developing budget, evaluating cost estimates, and performing fiscal reporting; overseeing the assessment work where asset conditions are evaluated and ranked; responding to audits and other performance evaluations and participating in these evaluations to strive for continual improvements; and responding to FTA requirements and other agencies regarding asset management policies and procedures.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Ensuring that aged and poor conditioned assets are reinvested in a timely manner to keep assets in good, safe working order will stabilize or reduce maintenance costs.

8. PROJECT STATUS

Ongoing.

9. ALTERNATIVES ANALYSIS

N/A for this administrative program, however, each replacement project is required to perform an alternative analysis as a milestone requirement for capital projects.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, administrative project.

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

TD HIGHLINE CC TRN FACILITY

1028815

1. CURRENT PROJECT SCOPE

Highline Community College Transit Facilities - This project consists of design and construction of bus zone and roadway improvements on the Highline College Campus southeast roadway loop to improve passenger and operational safety. The improvements are consistent with and support bus transit service for Sound Transit's planned Kent/Des Moines Link light rail station.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Despite light rail service to the area, Highline College will remain a major destination for bus passengers, many of whom originate west of the college, and buses serving the college from the west will continue to operate on the college's southeast roadway loop, about which passenger and operational concerns have been identified. The modifications proposed under this project will improve pedestrian connections from the college to the bus zones by providing ADA accessible curb ramps and standard pavement markings and signage, eliminating tripping hazards, providing revised curb alignment for improved passenger boarding.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

This project has been cancelled. Disappropriating the budget.

6. FUNDING AND REVENUE DISCUSSION

NARRATIVES TDC TRANSIT PRIORITY IMPR 1028830

1. CURRENT PROJECT SCOPE

Transit Priority Improvement program - This program covers corridor planning studies and conceptual development plans to identify projects that support the METRO CONNECTS vision along congested corridors and individual intersections. Small and low-cost projects typically involve implementing spot improvements at chokepoints where buses experience blockages or delays approaching intersections or merging back into traffic after serving a bus stop. Medium cost projects include improvements like transit priority treatments for a portion of a high ridership route corridor, such as bus lanes along a particular arterial shared by several different routes, or re-timing traffic signals along a corridor. High cost projects can be a variety of speed and reliability improvements along the entire length of a route corridor, such as transit signal priority and other major infrastructure improvements such as a lane widening project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC TRANSIT PRIORITY IMPR

1028830

2. PROGRAMMATIC PROJECT DISCUSSION

The Transit Priority Improvement program identifies and prioritizes projects to improve transit performance and customer experience. The program works with our partner cities to increase the operating efficiency of existing bus service by improving transit speed and travel time reliability on highly congested corridors and at individual intersections. Over the past five years, this program has made investments throughout the county on several corridors and over 80 individual hot spot locations. This program also provides local match funding when seeking state or local grant funding to cover the cost of design and implementation of identified projects.

3. PROJECT JUSTIFICATION

The program supports Transit Strategic Goal 5.1 Service Excellence, Strategy 5.1.3 - "Improve transit speed and reliability by maintaining or improving bus travel times and reliability through capital investments." As the Puget Sound region continues to grow in population and employment, traffic congestion is expected to get worse, with limited opportunity to expand roadway capacity. Maintaining (and improving) transit mobility in the region is one of the options to attract new transit riders as well as to increase transit ridership as the region becomes more congested. The roadway and signal improvements covered in this program may result in operating and capital cost savings by delaying the need to add more buses to the fleet as well as operating savings due to the reductions in running time variability. This program allows Metro to proactively maintain (and improve) transit speed and travel time reliability throughout the region and to leverage and shape project outcomes with local jurisdictions. This program also supports future service change efforts by installing improvements to accommodate new bus routing and turns. Metro's vision as a regional transit provider and maintaining transit service and reliability is a high priority for the Puget Sound region.

4. PROJECT BENEFITS/OUTCOMES

Benefits and outcomes will vary by individual project. However, keeping transit moving through congested locations will be a common thread in all. The performance measure of emphasis is on-time performance and travel time reliability.

5. BUDGET REQUEST BASIS

Current appropriation is sufficient in the biennium, so no additional requested appropriation is requested at this time.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

- Current phase: multiple phases
- Number of hot spot and safety improvement locations currently active: 19
- Number of hot spot locations completed in 2017: 18

9. ALTERNATIVES ANALYSIS

Alternatives analyses will be conducted on a case by case basis depending on the type of improvement and requirements by local jurisdictions.

10. OTHER AGENCY INVOLVEMENT

City of Seattle, City of Shoreline, City of Redmond, City of Renton, City of Kirkland, City of Burien, City of Tukwila, City of Bellevue, City of SeaTac, City of Des Moines, City of Kent, City of Auburn, WSDOT, Sound Transit, Community Transit, and other cities supporting transit speed and reliability program.

11. ART ELIGIBILITY

Not Art Eligible, planning project and roads, airport runways, sewers and solid waste landfills

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES	TDC TRANSIT PRIORITY IMPR	1028830
------------	---------------------------	---------

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

Local jurisdictions maintain the ownership and rights of the traffic signal and roadway infrastructure. Any transit priority treatments that may require changes to a city's infrastructure such as adjusting the signal timing, modifying the traffic signal display, changing the pavement markings, establishing bus lanes, or adding extra fiber cables/signal wiring to the traffic signal system must be approved by the city. A city must concur on each proposed signal and roadway change before design and construction begins. The project schedule is highly dependent a city's interest and support of the program. Furthermore, it is important to gain support from neighborhood groups, political representatives, and businesses that may be impacted by the project.

NARRATIVES

TD VANPOOL VEHICLE PURCHASE

1028854

1. CURRENT PROJECT SCOPE

Vanpool Fleet - The project funds the purchase of new vans needed to support the County's Vanpool Program. New vans are purchased to replace vans at the end of their useful vanpool life and to expand service.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The Vanpool Program helps meet the growing need for transportation services throughout the county and is consistent with the Strategic Plan goal of Economic Growth and Built Environment and the initiative of Record Ridership.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

This is the old vanpool fleet procurement project; van procurement is continuing in a new project (1130169). Disappropriating remaining funds.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

Completed.

NARRATIVES

TDC CAPITAL OUTLAY PROGRAM

1028857

1. CURRENT PROJECT SCOPE

Non-Revenue Vehicle Capital Outlay Program - This programmatic project provides for the purchase of new equipment and vehicles that are not associated with other capital projects. Only items that have been approved by the overseeing committee may be purchased. These assets then become part of the fixed asset base of the Public Transportation Fund and are replaced through one of the asset management projects.

2. PROGRAMMATIC PROJECT DISCUSSION

Every biennial cycle, Transit's needs for new capital items are evaluated and procured through this project.

3. PROJECT JUSTIFICATION

Items submitted for funding must meet the base criteria of providing safety improvements, cost saving efficiencies, increased productivity, service quality, security enhancement or meet new business needs.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC CAPITAL OUTLAY PROGRAM

1028857

4. PROJECT BENEFITS/OUTCOMES

The capital outlay items procured through this project are necessary to support Metro Transit's operations and are evaluated on the case by case basis.

5. BUDGET REQUEST BASIS

The budget is requested based on the needs identified by Transit for the 2019-2020 cycle. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, approximately \$5.3 M is being reappropriated from project 1116036 TDC CAPITAL OUTLAY BUDGET, which is being discontinued, to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

The operating impact of each purchase is reviewed as part of the approval process.

8. PROJECT STATUS

This is an ongoing capital outlay procurement program.

9. ALTERNATIVES ANALYSIS

The analysis of alternatives is done when a request for a new asset is submitted.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, equipment and vehicle purchases are not eligible for art contributions.

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

TD WAREHOUSE REPLACEMENT

1111769

1. CURRENT PROJECT SCOPE

Warehouse Replacement - This project will replace the 50,000 square foot warehouse west of the Atlantic/Central Base campus. The scope of the project will address Metro Transit's system needs for short and long term storage, new bus parts storage, facilities material storage, trolley parts storage, and bulk or oversized storage. The project envisioned assumes a 50,000sf multilevel replacement structure that is located on Transit property.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The current warehouse was built in the 1940's and purchased by Metro Transit in 2002 as part of the base expansion. The building is used for the larger and lesser used bus maintenance parts displaced from the base expansion, facilities equipment, trolley materials, and seasonal equipment like bus tire chains. The warehouse is a wood structure and has deteriorated beyond any reasonable economical repair. The building cannot be occupied when the roof has a snow or ice load.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

This body of work was split into individual (smaller) projects.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

NARRATIVES

TDC FACILITY CONDITION ASSMT

1111778

1. CURRENT PROJECT SCOPE

Facility Condition Assessment - This program funds inspections of all of metro's facilities and generates a report of necessary repair and replacement needs critical to the long term state of good repair for Metro's assets.

2. PROGRAMMATIC PROJECT DISCUSSION

This is an ongoing supporting program that is essential in programming and project development for the State of Good Repair sub portfolio projects.

3. PROJECT JUSTIFICATION

Facility conditions assessment is critical to maintaining facilities in working order and ensuring that adequate replacement planning can be performed proactively.

4. PROJECT BENEFITS/OUTCOMES

Facility Conditions Assessment Report/Facility Needs Report including both capital and operational projects.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC FACILITY CONDITION ASSMT

1111778

5. BUDGET REQUEST BASIS

The budget is based on the awarded value of the work order contract plus employee costs for internal engineering support. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$4.2 M is being reappropriated from project 1129630 TDC SGR PROGRAM MGMT to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Ensuring that aged and poor conditioned assets are reinvested in a timely manner to keep assets in good, safe working order will stabilize or reduce maintenance costs.

8. PROJECT STATUS

Ongoing; being converted from sub a programmatic project.

9. ALTERNATIVES ANALYSIS

Each asset identified for replacement may undergo an alternative analysis as part of it's replacement project as a milestone requirement for capital projects.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, capital planning/admin project

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Facility Conditions Assessment identified aging assets that are likely inefficient.

14. OTHER CONSIDERATIONS (OPTIONAL)

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

16. PROJECT COMPLEXITY

17. CAPACITY TO IMPLEMENT THE PROJECT

18. PROJECT RISKS

NARRATIVES

TD ORCA VENDING MACHINES

1111789

1. CURRENT PROJECT SCOPE

ORCA Vending Machines - This project provides funding to purchase and install eight ticket vending machines throughout King County that will dispense ORCA cards and add value to ORCA cards to provide additional convenient options to individual customers purchasing regional fare media. Machines are currently installed in five locations and three more locations are planned and designed.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Not all individual customers have access to online purchase / revalue options for Orca cards. Some prefer not to purchase or add value by making a telephone call to the Orca call center or need to perform those functions after the call center has closed for the day. Some are not able to or prefer not to deal with the network of 3rd party retail outlets such as Safeway and QFC stores. The vending machines are able to provide this function directly in the boarding and transfer environment.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

Completed, disappropriating remaining budget.

6. FUNDING AND REVENUE DISCUSSION

NARRATIVES

TD TRANSIT CENTER SECURITY

1111978

1. CURRENT PROJECT SCOPE

Transit Center Security - This project replaced lighting at three locations and installed security communication and surveillance equipment at two transit centers. Lighting improvements at the Kenmore and South Bellevue P&R were completed in 2009. Lighting improvements at the Northgate Transit Center were completed in 2008. Emergency call stations, surveillance cameras, recording equipment and break-in alarms were installed at the Northgate Transit Center in 2009 and at the Aurora Village Transit Center in 2013.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports Transit safety goal - Promote safety and security in public transportation operations and facilities. Lighting fixtures at park and rides have reached their 20 year life. Older fixtures results in shadows and dark spots. Security systems were installed at two of Metro's transit centers with the highest security incident rates in the system.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

This project has been completed. Disappropriating the remaining budget.

6. FUNDING AND REVENUE DISCUSSION

NARRATIVES

TDC NORTHGATE TOD SITE DEV

1111997

1. CURRENT PROJECT SCOPE

Northgate Transit Oriented Development (TOD) Site Development - This project consists of the sale of Metro Transit's property located east of the future Northgate Link light rail station and bus transit roadway, and redevelopment of the property into a high-density, mixed-use community including over 300 units of affordable housing, market rate housing, and potentially office and retail space. This project is one of four projects associated with the Northgate TOD Program, previously part of a common appropriation.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC NORTHGATE TOD SITE DEV

1111997

3. PROJECT JUSTIFICATION

As part of their Link light rail extension project to Northgate, Sound Transit is acquiring property and is prompting Metro's review and redevelopment of its existing Northgate Transit Center and Park and Ride properties. The project supports the Transit goal of Economic Growth and Built Environment and Transit Strategy 3.3.1: Encourage land use, policies and development that lead to communities that transit can serve efficiently and effectively. Planning and feasibility studies conducted for the Northgate TOD site are directed toward accomplishing the goals of increased transit ridership, net positive return on transit assets, and the broader growth management goals of jobs/housing balance and greenhouse gas reduction. The project is supported by King County, the City of Seattle, and Sound Transit.

4. PROJECT BENEFITS/OUTCOMES

This project will allow redevelopment of the existing transit center and surface parking lot into a high-density, mixed-use TOD community, supporting 1,000 new dwelling units, including over 300 affordable units, retail and office space, and a pedestrian plaza providing direct access to the regional transit facilities adjacent to the new Northgate Link light rail station, as envisioned in the City's Northgate Urban Design Framework, and the Northgate Regional Growth Center and its target population/housing and employment goals.

5. BUDGET REQUEST BASIS

Budget is requested to continue forward with the property sale for redevelopment into the high-density, mixed-use transit oriented community, as envisioned for this designated Regional Growth Center. This budget request includes estimated costs for the necessary property transactions and ensuring compliance with the terms of property sale agreements. This property transaction is expected to result in revenues to Metro Transit. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$4 M is being reappropriated from project 1116057 TD NORTHGATE TOD BUDGET to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

A Request For Proposals for redevelopment of the Metro Transit property east of the new Northgate Station was issued November 2, 2017 and proposals were received January 18, 2018. This did not yield an acceptable proposal. Plans for the process to select a developer are currently being refined as is the construction schedule forecast.

9. ALTERNATIVES ANALYSIS

Alternatives analysis was concluded in 2012, resulting in this project's scope.

10. OTHER AGENCY INVOLVEMENT

Other agencies involved in the project planning effort included Sound Transit, City of Seattle's Department of Transportation and Department of Planning & Development, Public Health - Seattle King County, Puget Sound Regional Council and Washington State Department of Transportation. The City of Seattle has provided \$10 million in funding for the affordable housing project, in addition to \$10 million provided by King County Department of Community and Human Services.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Transit Oriented Development (TOD) projects reduce climate emissions by linking housing and employment with high capacity transit, as the linkage provided by this TOD project. Additionally, this TOD project will include energy efficiency and green building elements in the buildings as required by the Green Building Ordinance.

NARRATIVES

1. CURRENT PROJECT SCOPE

Shelter Refurbishment - This program consists of maintaining Metro Transit's existing bus stop shelters in a state of good repair by refurbishing 140 to 160 shelters annually. Refurbishment work may involve component repairs and replacements, repainting, new roof standards, built-in lighting upgrades, panel upgrades, and specialized installments such as public art and Rapid Ride components that have more electrical and electronic systems.

2. PROGRAMMATIC PROJECT DISCUSSION

This program addresses "State of Good Repair" principles through timely reinvestment of approximately 140 - 160 shelters per year, to keep the necessary functions in good, safe conditions for employees and the public.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC SHELTER REFURBISHMENT

1115487

3. PROJECT JUSTIFICATION

Metro has over 1,800 shelters at bus stops. Bus shelters have a lifecycle of approximately 10 years, depending on the use (ridership) in the area where shelters are located. The Shelter Refurbishment program is necessary to maximize value and extend a shelter's useful life. If Metro does not routinely refurbish shelters, it would increase the risk of unsafe passenger facilities. Aged and/or deteriorating shelter conditions are removed, refurbished and reinstalled annually to maintain pleasant, safe and "good image" environments for transit riders. It also addresses three Metro Transit strategic goals: safety, service performance and financial stewardship.

4. PROJECT BENEFITS/OUTCOMES

By routinely refurbishing shelters, reduced corrective maintenance costs are anticipated. This work is in support of keeping Metro's facilities safe, increasing customer and employee satisfaction. It also is in support of State of Good Repair principles and quality asset management practices, maximizing value of Metro's shelters.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$9 M is being reappropriated from project 1116015 TD TOH, SHELTER, EQUIP BUDGET to fund or partially fund this project. The 2019-2020 budget is based on past years' expense trends. Anticipated program cost increase fund planning labor increases to inform future capital improvement programs and costs associated with materials with imposed tariffs, new materials contracts, and general wage increases.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

This project is an ongoing project. In 2017, 123 shelters were refurbished. For 2018, the goal is to refurbish 140 - 160 shelters.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, maintenance or minor rehabilitation

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This program advances Metro's progress towards the Strategic Climate Action Plan, by reusing shelter frames and components and minimizing waste during fabrication.

NARRATIVES

TDC TROLLEY POLES

1115489

1. CURRENT PROJECT SCOPE

Trolley Poles Infrastructure - This program supports the maintenance and repair of trolley bus program by replacing trolley poles as needed. Previous efforts have resulted in 80 - 100 wood poles being replaced annually.

2. PROGRAMMATIC PROJECT DISCUSSION

In the 2019 - 2020 biennium the goal is to replace a total of approximately 200 poles.

3. PROJECT JUSTIFICATION

Trolley poles are part of the overall system that supports the trolley bus infrastructure servicing the system in the City of Seattle. The system presently has 4,731 wood poles in service. The lifecycle of wood poles are 15 years. Based on age and/or condition poles are replaced to avoid disruptions in service and prevent safety hazards in the public right-of-way. During this biennium Metro Transit expects to replace approximately 200 poles.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC TROLLEY POLES

1115489

4. PROJECT BENEFITS/OUTCOMES

As part of the State of Good Repair, maintaining these poles are a requirement. Also, by maintaining the trolley infrastructure, it keeps the system functional, allowing for the timely moving of citizens and improves customer satisfaction. It also reduces long term maintenance/operating costs of the system.

5. BUDGET REQUEST BASIS

The 2019-2020 budget is based on past years expense trend for replacement of trolley poles. These costs are including labor, supplies, and equipment to support the timely repair and maintenance of the trolley poles. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$5 M is being reappropriated from project 1116015 TD TOH, SHELTER, EQUIP BUDGET to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Effective Asset Management and Lifecycle Replacement will reduce operational maintenance cost for unplanned and corrective maintenance.

8. PROJECT STATUS

The program is currently in the implementation phase.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

SDOT, SCL, WSDOT, Sound Transit, and CenturyLink

11. ART ELIGIBILITY

Not Art Eligible, maintenance or minor rehabilitation

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The trolley overhead system supports the climate action plan because it provides power to the zero emission fleet operated within the City of Seattle. The timely replacement of poles allows the system to operate in a state of good repair.

NARRATIVES

TDC TROLLEY OVERHEAD SWITCHES

1115490

1. CURRENT PROJECT SCOPE

Trolley Overhead Switches - This program is in support of the maintenance and repair of the trolley switches infrastructure. Past efforts have resulted in five to 15 overhead switches and ancillary hardware being replaced annually.

2. PROGRAMMATIC PROJECT DISCUSSION

In the 2019 - 2020 biennium the goal is to replace a total of approximately 20 to 30 switches.

3. PROJECT JUSTIFICATION

The State of Good Repair principle requires capital assets are maintained or replaced in a manner that supports efficient, effective and safe service delivery. Switches are part of the trolley bus infrastructure servicing the system in the City of Seattle. The system presently has over 400 switches in service. The lifecycle of the switches is about 10 years. Overhead switches are inspected on a regular basis for "wear and tear" issues associated with their level of use. Intersections with higher rates of bus traffic are inspected more frequently. Based on age and/or condition the switches are replaced to avoid disruptions in service and prevent safety hazards in the public right-of-way.

TD TOH, SHELTER, EQUIP BUDGET

1116015

1. CURRENT PROJECT SCOPE

Trolley Poles and Switches, Shelter and Equipment Replacement - This program consists of four subprojects that have annual "routine" asset replacements: 1) trolley switches replacing five to 15 intersection electrical hardware annually, 2) trolley poles including mast arms replacing 100-120 wood poles annually, 3) bus stop shelter refurbishment rebuilding 140-160 shelters annually, and 4) equipment replacement funding of shop, field, grounds, power and custodial equipment.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The State of Good Repair principle requires capital assets to be maintained or replaced in a manner that supports efficient, effective and safe service delivery.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being discontinued and/or some budget from this project is being reappropriated to new standalone or smaller programmatic projects. Specifically, approximately \$18 M is being disappropriated from this project and reappropriated to the following: \$9 M to 1115487 TDC SHELTER REFURBISHMENT; \$5M to 1115489 TDC TROLLEY POLES; \$3M to 1115490 TDC TROLLEY OVERHEAD SWITCHES; and \$1M to 1127254 TDC UNIV BRIDGE POLE REPL.

NARRATIVES

TD CAPITAL OUTLAY BUDGET

1116036

1. CURRENT PROJECT SCOPE

Capital Outlay Budget - This program provides for the purchase of new equipment that is not associated with other capital projects. Requests are submitted from sections within the Transit Division and DOT Administration for new equipment and tools that meet King County's current capital asset definition.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Items submitted must meet the base criteria of providing safety improvements, cost saving efficiencies, increased productivity, service quality, security enhancement or meet new business needs.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being discontinued and/or some budget from this project is being reappropriated to new standalone or smaller programmatic projects. Specifically, approximately \$5.3 M is being disappropriated from this project and reappropriated to 1028857 TDC CAPITAL OUTLAY PROGRAM.

NARRATIVES TD NORTHGATE TOD BUDGET 1116057

1. CURRENT PROJECT SCOPE

Northgate Transit Oriented Development - This program funded the four major elements of the Northgate project. These include 1) the design and construction of a new transit facility integrated with Sound Transit's Northgate Link light rail station, 2) the demolition of the existing facility, 3) coordination and implementation of Transit Oriented Development (TOD), and 4) the integration of the first three elements with non-motorized improvements planned for the station area. This program is being terminated as Transit moves away from large programmatic projects.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TD NORTHGATE TOD BUDGET

1116057

3. PROJECT JUSTIFICATION

Sound Transit's Link extension to Northgate initiated the review and redevelopment of Metro's existing Northgate Transit Center and Park and Ride properties. The project supports the Transit goal of Economic Growth and Built Environment and Transit Strategy 3.3.1: Encourage land use, policies and development that lead to communities that transit can serve efficiently and effectively. Planning and feasibility studies conducted for the Northgate TOD site are directed toward accomplishing the goals of increased transit ridership, net positive return on transit assets, and the broader growth management goals of jobs/housing balance and greenhouse gas reduction.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being discontinued and/or some budget from this project is being reappropriated to new standalone or smaller programmatic projects. Specifically, approximately \$10.5M is being disappropriated from this project and reappropriated to the following: \$4 M to 1028730 TDC NORTHGATE TC TOD, \$4 M to 1111997 TDC NORTHGATE TOD SITE DEV, \$100K to 1123981 TDC NORTHGATE NON-MOTORIZED, \$2.2 M to 1133920 TDC NORTHGATE TC DEMO. The remainder is being disappropriated.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

This project will no longer be used after the budget adjustment. Other remaining components will continue as standalone projects.

NARRATIVES

TD SR 520 UPA BUDGET

1116070

1. CURRENT PROJECT SCOPE

State Route 520 Corridor Improvements - The scope of this project is to increase transit capacity in the SR520 corridor to accommodate increased transit demand that results from tolling the corridor. This project includes the purchase of 28 coaches by King County Metro, fourteen 40 ft buses and fourteen 60 ft buses. Passenger shelters will be added at 4 locations, with real time information signs added at an additional 2 locations.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The project is funded by the SR520 Urban Partnership. This grant is an agreement between King County Metro Transit, the Washington State Department of Transportation and the Puget Sound Regional Council to work together to provide congestion reduction benefits in the SR 520 corridor.

NARRATIVES

TD OP FACILITY IMP BUDGET

1116071

1. CURRENT PROJECT SCOPE

Operating Facilities Improvements - This program supports transit operations and maintenance by adding new assets or by extending the lives of existing assets. Improvements are justified by changes in business practices, technology, regulations, and other criteria. The program improves transit operating facilities (bases, maintenance and support), their work environments for employees, and in certain cases, passenger facilities.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This Program is the only capital fixed asset program that responds to new asset needs due to changes in business practices, technology or new regulations. Past examples are new lifts at VM bases to enable effective and safe handling of hybrid bus batteries, new storm water filtering system to remedy higher Department of Energy regulations, new security systems at key facilities, new fuel additive dispensing system at VM bases as required by new fleet engines, to name a few.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

As part of Metro's move to having fewer large programmatic projects to improve transparency and accountability, this project is being discontinued and/or some budget from this project is being reappropriated to new standalone or smaller programmatic projects. Specifically, approximately \$3 M is being disappropriated from this project and \$2M is being reappropriated to 1134215 TDC FACILITIES IMPROVEMENTS. The remainder is being disappropriated.

6. FUNDING AND REVENUE DISCUSSION

NARRATIVES

TD SHELTERS & LIGHTING

1116073

1. CURRENT PROJECT SCOPE

Shelters and Lighting - This program that makes improvements to bus stops and adds passenger facilities including new shelters, upgraded shelters, awnings, benches, trash cans, leaning rails and lighting. This project also works closely with jurisdictions and developers to coordinate and mitigate impacts to existing bus stops and transit facilities and often coordinates the removal and upgrade of existing facilities.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The Shelters and Lighting program is an important element of a comprehensive passenger facilities management program that coordinates the installation, maintenance and removal of passenger facilities at approximately 8,200 active bus stops.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being discontinued and/or some budget from this project is being reappropriated to new standalone or smaller programmatic projects. Specifically, approximately \$15 M is being disappropriated from this project and reappropriated to 1028681 TDC BUS ZONE IMP SHELTERS.

NARRATIVES	TD TROLLEY MOD BUDGET	1116112
------------	-----------------------	---------

1. CURRENT PROJECT SCOPE

Trolley Modifications Budget - This program is in support of the implementation of trolley projects initiated by partners, including Seattle Department of Transportation (SDOT), Washington State Department of Transportation (WSDOT), Sound Transit, etc. Modifications are required due to changes in road alignments, safety concerns and other matters such as service changes and improvements that mandate a change to the trolley overhead configuration. As a majority of these changes are from external partners, Metro Transit Trolley Program is working to improve the relationship/partnerships with these organizations. It is anticipated that we will be reimbursed for at least 25% of the work from our partners.

2. PROGRAMMATIC PROJECT DISCUSSION

For the 2017-2018 biennium, there were over 14 unplanned project funded by this program.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TD TROLLEY MOD BUDGET

1116112

3. PROJECT JUSTIFICATION

The Trolley Modifications (Trolley Mods) Project was originally established in 1985 to provide funding and a coordinated approach to address ongoing safety and operational needs of the trolley overhead electrical distribution system. Maintaining dependable bus service is a high priority for Metro. The electric trolley bus system provides about 20% of Metro's annual passenger trips. This project supports Transit Goals of Safety and Service Excellence.

4. PROJECT BENEFITS/OUTCOMES

By implementing this project, Metro Transit will be able to address and support the changing needs of the trolley infrastructure in Seattle by supporting our external partners, as well as addressing unplanned projects.

5. BUDGET REQUEST BASIS

As part of Metro's move to having fewer large programmatic projects to improve transparency and accountability, this project is being discontinued and/or some budget from this project is being reappropriated to new standalone or smaller programmatic projects. Specifically, approximately \$1.2 M is being disappropriated from this project and reappropriated to the following: 1124294 TDC FAIRVIEW BRIDGE TOH SUPP - \$500K; 1132794 TDC SR520 TROLLEY INFR REPL - \$400K; and 1133586 TDC TROLLEY OH-BALLARD \$300K.

6. FUNDING AND REVENUE DISCUSSION

It is anticipated that we will be reimbursed at least 25%.

7. OPERATING BUDGET AND OTHER IMPACTS

Project represents modifications to existing assets requiring ongoing maintenance.

8. PROJECT STATUS

9. ALTERNATIVES ANALYSIS

There are no viable permanent alternatives for moving or reconfiguration of the trolley overhead electrical system as may be required for safety or operational considerations.

10. OTHER AGENCY INVOLVEMENT

Metro Transit will partner with Seattle Department of Transportation (SDOT), Seattle City Light (SCL), Washington State DOT (WSDOT), Sound Transit (ST), and others to identify upcoming trolley impact projects and define budget needs and resources.

11. ART ELIGIBILITY

Not Art Eligible, maintenance or minor rehabilitation

NARRATIVES

TD F LINE RAPID RIDE BUDGET

1116246

1. CURRENT PROJECT SCOPE

F Line RapidRide - The scope of the project is to implement the key capital elements of the F Line RapidRide. The capital elements include the design and construction of roadway and Intelligent Transportation System (ITS) improvements including transit signal priority, real time information signs, and fiber optic communications; and the design and construction of passenger facility improvements including stations, enhanced and standard stops.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Metro designed the project to decrease travel times with faster and more frequent service, provide more reliable service, increase system and corridor passenger capacity, and project an image of quality, comfort, and speed. The F Line replaced the Route 140 and provided significant transit service and passenger facility improvements. The F Line provides frequent, direct east/west routing between Burien and Renton via the Tukwila International Boulevard Link Station, Southcenter Mall, the Tukwila Sounder Station, South Renton Park and Ride, the Renton Transit Center, and The Landing in Renton.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

All elements of this master project are completed. Disappropriating remaining budget.

NARRATIVES

TD RT 101 TRANSIT CORRIDOR IMP

1116743

1. CURRENT PROJECT SCOPE

Route 101 Transit Corridor Improvements - Route 101 provides a connection to downtown Seattle from the Renton Transit Center. It carries over 3,700 weekday riders or 947,000 annual riders. It is an all-day transit route with 30 minute headway, with more frequent service every 12 minutes during the peak periods. This project will improve transit speed and reliability along the last 4.5 mile distance from Martin Luther King/S 129th St to Renton Transit Center. The project scope of work includes upgrading traffic signal cabinets and controllers, installing signal cabinet foundations, installing fiber communication infrastructure for transit signal priority (TSP) and future ITS applications, modifying roadway channelization, and retiming traffic signals along the corridor.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The goal of this project is to improve travel times on the southern portion of the trip by at least ten percent to achieve travel time savings all day. The combined improvement from updated signal timings, transit signal priority, improved transit circulation at South Renton park and ride, and signal modification is projected to be a minimum of 10% travel time reduction. This project goal is consistent for the service excellence and the performance measure of emphasis for on-time performance.

NARRATIVES

TD RAPIDRIDE E LINE PASS THRU

1116744

1. CURRENT PROJECT SCOPE

RspidRide E line Pass Through - This project includes grant funded elements of the RapidRide E line that will be performed by the cities of Seattle and Shoreline. The City of Seattle portion includes the design and construction of pedestrian improvements along the Aurora Avenue North RapidRide corridor. The City of Shoreline portion includes the construction of business access and transit (BAT) lanes and sidewalk improvements between N 192nd St and N 195th St. Metro Transit has passed the Federal Transit Administration funds to these jurisdictions. King County is the grant recipient and as such is responsible for seeing that the projects for all of the parties meet FTA rules and regulations.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project supports the three party letter of understanding for financing the E Line Very Small Start grant project and represents an awarded grant. E Line RapidRide is an existing element in the transit capital program and went into service in February 2014.

4. PROJECT BENEFITS/OUTCOMES

NARRATIVES	TD 3RD AVE IMPROVEMENTS	1116745
------------	-------------------------	---------

1. CURRENT PROJECT SCOPE

Third Avenue Transit Corridor Improvement and RapidRide Facilities - This project will provide bus stop, streetscape and transit street priority improvements to the region's primary transit corridor – Third Avenue between S. Jackson Street and Denny Way in Seattle.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project is consistent with speed and reliability improvements called for in METRO CONNECTS. By improving speed and reliability, service will become more attractive, resulting in increased ridership. In addition, the project may allow Metro to save operating dollars that could be used for more service. The project will improve Third Avenue, benefitting millions of bus riders annually and improving operations for nearly forty bus routes with over 2,700 bus trips on an average weekday, including local, regional, and RapidRide bus service.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TD 3RD AVE IMPROVEMENTS

1116745

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

As part of Metro's move to having fewer large programmatic projects to improve transparency and accountability, this project is being discontinued and/or some budget from this project is being reappropriated to new standalone or smaller programmatic projects. Specifically, approximately \$6 M is being disappropriated from this project and reappropriated to the following: approximately \$5 M to 1134232 TDC 3D AVE YESL TO MAIN. The remainder is disappropriated.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

Two subprojects completed (1116745 TD 3RD AVE IMPROVEMENTS, 1122275 TDC SEATTLE SECURE BIKE PARKNG); others are ongoing and will be completed in 2018.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

Final design and construction will be led by the City of Seattle, minimizing permitting requirements. FTA procurement and reporting requirements will be followed. Project planning and development will be coordinated with the City of Seattle's efforts to enhance Third Avenue as a more attractive, safe, and convenient environment for visitors, commuters, and residents, with specific consideration to the City's Third Avenue Streetscape Conceptual Design Plan. Interests of local stakeholders, including the Downtown Seattle Association, various neighborhood groups, and adjacent private property owners will be considered in the final design and construction phases.

NARRATIVES

TDC HASTUS EPM

1116893

1. CURRENT PROJECT SCOPE

HASTUS Employee Performance Module (EPM) - This project is to install and configure the HASTUS EPM module as a fully integrated part of the HASTUS operations planning/dispatch system. This module pulls relevant operator data from the Transit Safety and Customer Comments systems and stores that data in the HASTUS database. KCIT-DOT staff create data interfaces using web services to acquire this data as it is created. The module also provides the ability for Transit Operations to capture and store all time & attendance data as well as any disciplinary actions taken.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Transit Operations is currently required to manually pull data from multiple systems and paper documents to track operator work performance, unavailability, accidents and completed training. This data is used to determine potential disciplinary actions, plan training activities and schedule replacement operators on daily driving assignments as needed.

4. PROJECT BENEFITS/OUTCOMES

NARRATIVES

TD 35 FT HYBRID BUS

1117069

1. CURRENT PROJECT SCOPE

35-Foot Hybrid Bus - This project funds the replacement of 30-ft and 35-ft buses with 35-ft low-floor hybrid buses.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project is for the replacement of revenue service buses, which supports the Transit goal of Financial Stewardship, and maintaining assets in a state of good repair.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

This is an old bus procurement project in Transit's capital fund 3641. Currently, all revenue fleet procurement is executed in the Revenue Fleet Fund. Disappropriating remaining budget.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

Completed.

TDC P&R LIGHTING REPLACE

1121955

1. CURRENT PROJECT SCOPE

Park & Ride Lighting Replacement - This project supports the replacement of existing lighting at all park and rides with LED/High efficiency lighting.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC P&R LIGHTING REPLACE

1121955

3. PROJECT JUSTIFICATION

King County Metro Transit utilized a comprehensive Facilities Conditions Assessment Program conducted by third party engineers to assess and monitor the conditions of our facilities. From these assessments, a Transit Facilities Conditions Needs Report is generated containing a prioritized ranking of assets needing major rehabilitation or replacement. State of Good Repair Program planners then sort and package those needs into efficient projects and schedule those projects to create a sustainable, level loaded, State of Good Repair Program to promote consistent State of Good Repair investment levels and maintain the safe and efficient functionality of our assets. Failure to adhere to the program plan will generate a backlog of State of Good Repair work, leading to increased spending on asset replacement, increased risk of failure and loss of service, and greater risk to the County.

4. PROJECT BENEFITS/OUTCOMES

Completion of this project will result in a renewed, high efficiency asset with a refreshed lifecycle. Asset replacement is a normal part of asset maintenance and is essential to maintaining our system in a state of good repair to minimize unexpected corrective maintenance or emergency replacement cost and prevent service disruptions or challenges for our customers.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$2.2 M is being reappropriated from project 1129627 TDC SITE ASSET MGMT to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Effective Asset Management and Lifecycle Replacement will reduce operational maintenance cost for unplanned and corrective maintenance.

8. PROJECT STATUS

This is an ongoing project.

9. ALTERNATIVES ANALYSIS

Alternatives, if available, will be analyzed as part of the pre-design phase for all State of Good Repair works.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, maintenance or minor rehabilitation

NARRATIVES

TDC RT 50 SPOT IMPROVEMENTS

1122351

1. CURRENT PROJECT SCOPE

Route 50 Spot Improvements - This project funds transit priority improvements along Route 50. It has been a subproject of the Transit Priority Improvement program, which covers corridor planning studies and conceptual development activities for high-ridership corridor improvements and also includes design and implementation phases for localized improvements.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

As the Puget Sound region continues to grow in population and employment, the traffic congestion is expected to get worse. Maintaining transit mobility in the region is one of the options to attract new transit riders as well as increase transit ridership as the region is becoming more congested. The roadway and signal improvements covered in this program may result in operating and capital cost savings by delaying the need to add more buses to the fleet as well as operating savings due to the reductions in running time variability.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

This is an old, completed subproject of the 1028830 TDC TRANSIT PRIORITY IMPR master and is being closed as a standalone. This budget request transfers the budget from the master.

3. PROJECT JUSTIFICATION

King County Metro Transit utilized a comprehensive Facilities Conditions Assessment Program conducted by 3rd party engineers to assess and monitor the conditions of our facilities. From these assessments, a Transit Facilities Conditions Needs Report is generated containing a prioritized ranking of assets needing major rehabilitation or replacement. State Of Good Repair Program planners then sort and package those needs into efficient projects and schedule those projects to create a sustainable, level loaded, State Of Good Repair Program to promote consistent State of Good Repair investment levels and maintain the safe and efficient functionality of our assets. Failure to adhere to the program plan will generate a backlog of State Of Good Repair work, leading to increased spending on asset replacement, increased risk of failure and loss of service, and greater risk to the county.

Sound Transit reimburses Metro for approximately 70% of the work performed in the tunnel. After the buses leave the tunnel, Sound Transit will assume 100% responsibility for capital costs of the tunnel.

4. PROJECT BENEFITS/OUTCOMES

Completion of this project will result in a renewed asset with a refreshed lifecycle.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$3.2 M is being reappropriated from project 1129626 TDC INFRASTR ASSET MGMT to fund or partially fund this project. The budget request is the contracted amount for the refurbishments with the conveyance vendor.

6. FUNDING AND REVENUE DISCUSSION

Sound Transit reimburses Metro for approximately 70% of the work performed in the tunnel. After the buses leave the tunnel, Sound Transit will assume 100% responsibility for capital costs of the tunnel.

7. OPERATING BUDGET AND OTHER IMPACTS

Effective Asset Management and Lifecycle Replacement will reduce operational maintenance cost for unplanned and corrective maintenance

8. PROJECT STATUS

This is an ongoing project that is being converted to a standalone. 10 units are expected to be complete in 2018, with 7 units remaining for the 2019-2020 biennium.

9. ALTERNATIVES ANALYSIS

Alternatives, if available, will be analyzed as part of the pre-design phase for all State of Good Repair works.

NARRATIVES TDC WSCC AT CONVENTION PL TOD 1123790

1. CURRENT PROJECT SCOPE

Washington State Convention Center at Convention Place Transit Oriented Development (TOD) - This project is the effort underway on a larger project previously known as TOD Convention Place. The larger project includes construction of replacement traction power substation, relocation of communications and fire/life/safety systems, and interim access ramp to allow for continuous bi-directional bus service from the Downtown Seattle Transit Tunnel (DSTT) to 9th Avenue until the end of bus/train joint operations in the DSTT. This project's scope consists of assisting with oversight, permitting and management of Washington State Convention Center construction activities and completion of the real property transaction.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC WSCC AT CONVENTION PL TOD

1123790

3. PROJECT JUSTIFICATION

Prepare the Convention Place Station property for sale by removing all necessary Metro/Sound Transit systems and infrastructure. Prepare for the eventual removal of bus service and closure of this station as a precursor to ultimate removal of bus service from the downtown tunnel. These changes enable regional economic benefits of reuse of the property as part of expansion of the Washington State Convention Center and redevelopment of transit property for other uses.

4. PROJECT BENEFITS/OUTCOMES

Income from property sale and expansion of WSCC.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$6.9 M is being reappropriated from project 1028624 TDC TOD CONVENTION PLACE to fund or partially fund this project. The budget request for this project include estimates of remaining Metro Transit staff time to finish and implement agreements with all external stakeholders.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Closure of the Convention Place Station is expected to result in lower facility operation and maintenance costs offset by some higher costs associated with service relocations. Experience after the closure will allow the operating costs differences to be evaluated.

8. PROJECT STATUS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$6.7 M is being reappropriated from project 1028624 TDC TOD CONVENTION PLACE to fund or partially fund this project. Project oversight is ongoing. The real estate transaction has been executed.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

Sound Transit, Washington Department of Transportation, Seattle Department of Transportation, Seattle Department of Construction and Inspections, and Washington State Convention Center.

11. ART ELIGIBILITY

Not Art Eligible, project wholly or partially funded by Metro/Metro grant funding but project managed by another jurisdiction or public agency; the managing jurisdiction or agency is responsible for applying their art rules

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

This project is part of a larger multi-project effort at the Convention Place Station that involves four separate projects: 1) construction of replacement traction power substation (complete), 2) relocation of communications and fire/life/safety systems (1128656); 3) an interim access ramp to allow for continuous bi-directional bus service from the Downtown Seattle Transit Tunnel (DSTT) to 9th Avenue until the end of bus/train joint operations in the DSTT (1131130), and 4) oversight, planning, permitting and management of Washington State Convention Center (WSCC) construction activities, execution of the real property transaction, and implementation of closure of the Convention Place Station.

NARRATIVES

TDC NORTHGATE NON-MOTORIZED

1123981

1. CURRENT PROJECT SCOPE

Northgate Non-Motorized Projects - This project consists of Metro Transit's review and oversight of City of Seattle pedestrian and bicycle (non-motorized) projects to ensure that efficient and safe bus operations are maintained, and that the projects are compatible with the new Northgate Link light rail station/transit center and the Northgate Transit Oriented Development. The City of Seattle projects include non-motorized projects to the local network to improve pedestrian and bicycle connectivity between the neighborhoods in the Northgate area and the new integrated Northgate Station/Transit Center.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC NORTHGATE NON-MOTORIZED

1123981

3. PROJECT JUSTIFICATION

The Northgate Transit Center is a major hub for King County Metro Transit and the new integrated Northgate Link light rail station and bus transit center, opening in 2021, will be the largest integrated facility for Metro Transit and Sound Transit to date. A key component to achieving the ridership targets at the new station/transit center is a successful non-motorized (pedestrian and bicycle) network to provide connectivity to the facility. The project supports the Transit goal of Economic Growth and Built Environment and Transit Strategy 3.3.1: Encourage land use, policies and development that lead to communities that transit can serve efficiently and effectively. Planning and feasibility studies conducted for the Northgate Transit Oriented Development (TOD) site are directed toward accomplishing the goals of increased transit ridership, net positive return on transit assets, and the broader growth management goals of jobs/housing balance and greenhouse gas reduction.

4. PROJECT BENEFITS/OUTCOMES

This project will help ensure efficient and safe bus operations are maintained, and that the City of Seattle pedestrian and bicycle improvements are compatible with the new Northgate Link light rail station/transit center and the Northgate Transit Oriented Development.

5. BUDGET REQUEST BASIS

The budget is based on the cost of review and oversight of proposed pedestrian and bicycle improvements by the City of Seattle to ensure the efficient and effective transit service to, from, and in the vicinity of the new Northgate Station/Transit Center. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$100 K is being reappropriated from project 1116057 TD NORTHGATE TOD BUDGET to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

This project is ongoing and will actively review plans, specifications, construction impacts and eventual opening of the new infrastructure planned for 2021.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

Other agencies involved in the project planning effort included Sound Transit, City of Seattle's Department of Transportation and Department of Planning & Development, Public Health - Seattle King County, Puget Sound Regional Council and Washington State Department of Transportation.

11. ART ELIGIBILITY

Not Art eligible - project wholly or partially funded by Metro/Metro grant funding but project managed by another jurisdiction or public agency; the managing jurisdiction or agency is responsible for applying their art rules

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project helps reduce overall climate emissions by providing non-motorized connectivity between the new Station/Transit Center, TOD and other destinations in the Northgate area, thereby allowing for safe and convenient non-polluting transportation modes and encouraging the elimination of harmful emissions from use of passenger vehicles.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES	TDC NORTHGATE NON-MOTORIZED	1123981
14. OTHER CONSIDERATIONS (OPTIONAL)		
Plan review has just recently begun and will intensify as final design work begins. Continued coordination and oversight during construction will be critical to minimizing impacts to service and ensuring that field changes do not detract from functionality of non-motorized access to Metro service.

NARRATIVES

TDC RADIO LIFE CYCLE REPLACE

1124234

1. CURRENT PROJECT SCOPE

Transit Radio System Replacement - This request will provide funding for a program of life cycle hardware and software updates to maintain the Transit radio system in a state of good repair; avoid early obsolescence of IT components within the system; and allow Transit to ensure vendor support for the system past the current support contract term of 2022.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

King County Metro's Transit Radio System (TRS) was installed starting in 2009 and accepted in 2012. This request will fund an incremental approach to a periodic technology refresh program that amortizes these costs over the system life reducing or eliminating the need to implement a large CIP replacement project prior to 2030.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

This standalone project is completed. Disappropriating remaining budget.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

Completed.

NARRATIVES	TDC REGL TRANSIT CONNECTIVITY	1124256
------------	-------------------------------	---------

1. CURRENT PROJECT SCOPE

Rational Transit Connectivity - This Program supports capital partnership projects that, with Metro's many external partners, help leverage improvements in transit speed, reliability, safety, capacity and customer experience. Presently, the program is providing necessary funding to capital projects that improve bus/rail transit hubs for integrated services at the University of Washington (in support of but separate from One Center City work), critical acquisition of land for layover capacity (north of downtown Seattle), Route 62 terminal improvements, design phase of a new Bellevue College Connector project, capital staff support for activities related to Washington State Department of Transportation improvements on SR 520, Trolley Oversight Program, Seattle Department of Transportation Major Project Coordination on the Seattle Streetcar.

2. PROGRAMMATIC PROJECT DISCUSSION

This is a programmatic project with funding put into specific identified projects to leverage other funding. The funding can be used to enhance scope on existing Metro Transit capital projects or those of another agency or to initiate action to address an emerging need.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC REGL TRANSIT CONNECTIVITY

1124256

3. PROJECT JUSTIFICATION

This Program, particularly its gradual expansion beyond City of Seattle, will provide capital resources for partnership projects that optimize the transit system with the County's 39 cities, WSDOT, Sound Transit and other governmental partners at precisely the same time Metro is expanding its service network between now and 2025 according to METRO CONNECTS. This funding provides timely support to opportunities with Metro's partners to together advance RapidRide, establish and invest in clear Equity and Social Justice objectives, provide ongoing staff support for these activities and similar partnership projects that improve customer experience.

4. PROJECT BENEFITS/OUTCOMES

Metro is launching the largest capital program in its history. It is envisioned that this program of partnership improvements will improve system performance (speed and reliability), public safety, system integration (particularly with Sound Transit at shared multimodal transit stations and hubs), and partner responsiveness with the City of Seattle for continual changes to Metro Transit's trolley network.

5. BUDGET REQUEST BASIS

There is growing demand for capital partnership projects as evidenced by high yield of project proposals from cities throughout King County solicited through Metro Transit's Technical Advisory Committee. Over 1,000 project proposals were received by Metro and have been assigned to improvement packages for consideration of investments over time to support METRO CONNECTS envisioned future networks: 2025 and 2040. There is no additional funding request in 2019-2020, as this program is expected to have significant carryover appropriation from 2-17-2018. The outyear budget requests are based on Metro Transit's funding available to devote to this endeavor when considering other capital program needs.

6. FUNDING AND REVENUE DISCUSSION

This Program has evolved from a Seattle-based transit improvement focus to one serving mutual transit partnerships with other governmental agencies. It is critical at this juncture to apply metrics to how Metro allocates its partnership dollars, administers projects and measures the results towards meeting the system requirements of METRO CONNECTS 2025 and 2040 service networks and the capital support required to ensure overall system expansion, improvement and high performance over time.

7. OPERATING BUDGET AND OTHER IMPACTS

Operating budget impacts will be assessed as specific projects are evaluated for use of this funding and alternatives analysis. Depending on the type of project, one would expect operational savings through improved speed and reliability of routes or enhanced customer experience with some increase in operating or maintenance cost.

8. PROJECT STATUS

Ongoing evaluation of partnership opportunities and advancing capital projects will continue throughout the biennium.

9. ALTERNATIVES ANALYSIS

This program creates new investments via partnerships that must be captured and managed for assignment of future operation and maintenance (O&M) of all said new facilities. This will continue to require staff resources to memorialize appropriate agreements for each partnership project.

10. OTHER AGENCY INVOLVEMENT

These funds are solely for partnership projects with cities, Washington State Department of Transportation, Sound Transit and other like governmental transportation agencies.

11. ART ELIGIBILITY

Not Art Eligible, planning activities and projects involving roadway or technology

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Many of the partnership projects to date, primarily the transit speed and reliability and Trolley System improvements provide zero-emission results in keeping with King County's strong commitment to clean and green energy solutions.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC REGL TRANSIT CONNECTIVITY

1124256

14. OTHER CONSIDERATIONS (OPTIONAL)

The Regional Transit Connectivity Fund (RTCF) began in 2014 in relationship to the then Downtown Seattle Transit Coordination - also known as the "Five-Agency" Planning Initiative to build in 2015 and 2016 a number of transit speed and reliability improvements prioritized by the five partner agencies: Metro, Sound Transit, Seattle Department of Transportation, Community Transit and Washington State Department of Transportation. Over the last 18 months, the Seattle-based One Center City work program expanded upon and separately funded transit and many other mobility improvements that will be installed by the end of 2019. As a result, this program expanded its reach beyond Seattle and is supporting, increasingly, more partner projects outside of Seattle as they emerge. This is very timely given Metro's charge to expand its capital resources commensurate with METRO CONNECTS capital investments countywide.

This is a programmatic project with funding put into specific identified projects to leverage other funding. The funding can be used to enhance scope on existing Metro Transit capital projects or those of another agency or to initiate a newly identified emerging need that improves regional transit connectivity.

NARRATIVES

TDC FAIRVIEW BRIDGE TOH SUPP

1124294

1. CURRENT PROJECT SCOPE

Fairview Bridge Trolley Overhead Replacement - This project is in support of the replacement of the trolley infrastructure in support of the replacement of the Fairview Bridge. The scope of work includes removal and replacement of existing trolley wire on City of Seattle Fairview Bridge during bridge demolition and reconstruction. It includes trolley infrastructure changes to support a detour of trolley service on the Route 70 during the 18 month bridge construction project.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

Project is required to coordinate with City of Seattle bridge replacement project and support a detour of trolley service on the Route 70 during the 18 month bridge construction project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC FAIRVIEW BRIDGE TOH SUPP

1124294

4. PROJECT BENEFITS/OUTCOMES

Ongoing operation of the Route 70 as a trolley route during bridge renovation project.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$500K is being reappropriated from project 1116112 to fund or partially fund this project. The the 2019-2020 request is based on previous expenses for similar projects.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

The project is currently in the planning and pre-design phase.

9. ALTERNATIVES ANALYSIS

Alternative detour routes were identified and analyzed.

10. OTHER AGENCY INVOLVEMENT

Interagency coordination between Metro and the City of Seattle Department of Transportation.

11. ART ELIGIBILITY

Not Art Eligible, maintenance or minor renovation

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Maintenance of trolley operations for the Route 70 supports the goals and objectives of the Strategic Climate Action Plan (SCAP).

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

1. CURRENT PROJECT SCOPE

Real Time Improvements - This project makes a series of improvements to the information systems that produce public facing schedules and real time information for Metro Transit services. The primary asset delivered by the project is a centralized message management system, allowing Metro Transit staff to create, dispatch, and amend messages for bus, light rail, and water taxi service. The tool receives inputs from each service mode's control software and provides standardized outputs to feed all existing communications channels and supplement real time data feeds, delivering messaging to all consumer transit smartphone and web apps. Additional functionality is added to the bus control system, to allow data capture for service cancellations, stop closures, and reroutes. The project adds a module to the bus control system to give transit field supervisors visibility into the real time state of buses, improving Metro's ability to manage and message around unplanned traffic diversions (accidents, civic disruptions), and updates all of the internal data systems to use the general transit feed specification and real time data standards, which have been adopted across the US and Canada, from a variety of European standard and/or proprietary data formats.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC REAL TIME IMPROVEMENTS

1124413

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

Customer satisfaction with available transit real time information has dropped as technology advances at a rapid pace. There are a number of gaps in the quality of Metro Transit's real-time information production. Examples include cancelled trips that are not communicated to customers, alerts and advisories that require redundant data entry in multiple systems, and a limit to the type and number of advisories that can be created. The goals of the project are to 1) provide more consistent and reliable notification of service interruptions, trip cancellations, and other planned service changes, 2) improve and streamline internal data management processes related to customer notification, and 3) provide more descriptive and accurate data output to regional data services and third party application developers. The improvements developed by this project will be scalable solutions that reduce overall complexity so that they provide benefits on a daily basis as well as help the organization communicate and respond more efficiently during major events. The new application will also reduce the workload for customer communication staff, allowing staff to manage more issues simultaneously.

This project supports the following Metro Transit Goals: Goal 5: Service Excellence. Establish a culture of customer service and deliver services that are responsive to community needs - Improve satisfaction with Metro's products and services and the way they are delivered, provide service that is easy to understand and use; and Goal 7: Public Engagement and Transparency - Promote robust public engagement that informs, involves, and empowers people and communities, increase customer and public access to understandable, accurate and transparent information, use of Metro's web tools and alerts.

4. PROJECT BENEFITS/OUTCOMES

This project expects to realize the following benefits:

1. Customer information quality will be improved by providing more timely, consistent and accurate notification of service interruptions, trip cancellations, reroutes, and other planned changes in service;
2. Internal data management processes related to customer notifications will be improved and streamlined, eliminating redundant data entry in multiple systems and providing real time visibility around transit service to staff;
3. Metro Transit will provide a more descriptive and accurate output of data to regional data services and third party application developers.

As discussed in the Benefit Achievements Plan, the target is that 80% of updates about reroutes, service cancellations, delays, and stop closures will be automatically distributed and displayed in Metro Transit's Automated Trip Planner, and Tracker, and in the One Bus Away application as both data points and textual alerts.

5. BUDGET REQUEST BASIS

During project planning seven tasks were identified, consisting of the addition of one new SaaS tool and six modifications or additions to existing technology platforms used in Metro Transit. The revised budget estimates include vendor quotations for services where available and estimates identified by comparing the work to other recent projects with similar components. The project will work with KCIT through the Architecture Review Team to ensure that County standards for solutions and security are adhered to. KCIT support will be required primarily to configure firewall points for publication of public facing data. The project will require: 1) a part time project manager; 2) software solutions and consulting services to implement the solutions. This request covers all project phases from planning through closeout. It will cover the following project activities: project management, requirements and solution analysis, solution implementation and project closeout. This project has completed the planning phase. The budget request funds completion of the scope of work.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Additional operating expense is anticipated to be between \$200,000-250,000/year for SaaS solution costs and additional software licensing. There will be some offset to this from a reduction in KCIT support for existing, home-built tools that translate existing non-standard data feeds.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC REAL TIME IMPROVEMENTS

1124413

8. PROJECT STATUS

This project has completed planning and design as of July 2018, including a thorough gap analysis and review of available technologies, which led to a more refined and slightly increased scope that will more fully deliver on the goals of this project. The project work is broken down into seven areas of effort. Four of these including the primary messaging tool will proceed to implementation through the end of 2018. The remainder of work will be scheduled in 2019. All segments of work are either software as a service or modifications to existing vendor supported transit applications. KCIT will be consulted on design and security issues, but will primarily be involved in managing connections and firewall settings necessary to integrate the various systems and publish real time information. The project will use vendor solutions out of the box, requiring minimal design and configuration effort.

9. ALTERNATIVES ANALYSIS

Alternatives, including partial implementation, were considered during planning but did not substantively address the gaps that were the genesis for this project.

10. OTHER AGENCY INVOLVEMENT

This project affects customer facing systems for Seattle Street Car and Sound Transit service operated by Metro. We are partnering with Sound Transit and expect that the selected solution will at some point become a regional tool providing interagency access to real time alerts and disruption status. Community Transit is implementing the same tool currently.

11. ART ELIGIBILITY

Not Art eligible, technology project that does not consist of major physical infrastructure construction.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will complete an Equity Impact Review (required for this project) by December 2018.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

The Real Time Improvements project will implement a series of technology and business process improvements to increase the accuracy, completeness, and timeliness of public facing information. Internal communications will improve through the adoption of the technology components of the project. This will fill major portions of the public facing information gap at Metro Transit. There are additional data points and processes that the project will address tangentially, that will not be fully realized during the project duration. The Metro Transit Next Generation Wireless (NG Wireless) project will provide a major increase in communication bandwidth between the individual coaches in the fleet and the communication center. This additional bandwidth is necessary to increase the number of data points available to public facing information portals. The project will fully configure the new data feeds to leverage these data points as they are brought online during or after implementation of the NG Wireless project. The NG Wireless project, combined with the improved data from this project will also allow Metro Transit to explore improved on bus visualization of real-time information, including delays, re-routes and impacts to service interconnections. The Next Generation ORCA (NG ORCA) project will also provision the coach fleet with modern driver display technology. The reroute data capture tools implemented in this project will allow drivers to see re-routes in real time with turn by turn directions following completion of the NG ORCA project.

CIO and PSB Critical Success Factors and Conditions:

- 1) EIR is required
- 2) All CIO/PRB conditions

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC REAL TIME IMPROVEMENTS

1124413

15. STRATEGIC IT PLAN ALIGNMENT

The Real Time Improvements Project will support both the "Digital Civic Engagement" and the "Workforce Empowerment" objectives. The primary focus of this project is an increase in timely, accurate and complete real time information about Metro Transit's service offerings which directly supports "Digital Civic Engagement". By increasing information available to the public about their transit options, we will increase satisfaction with service information, and potentially allow an increase in participation of ridership.

The project also supports "Workforce Empowerment". The project will make several improvements to internal processes and tools that will directly result in streamlined event management and communication. Staff in several areas, including Bus Operations, Service Quality, Customer Communications and Service Development will have access to more and better information about service disruptions to assist them with decision making in their roles.

16. PROJECT COMPLEXITY

Medium business complexity due to: (1) multiple business processes and tools will be updated, and (2) multiple internal and external stakeholders. Mitigation: The project team includes representatives from each affected business group, as well as Sound Transit. Additionally the project team has and will continue to provide communication to other external partners. The project is being phased to minimize staff disruptions, and allow testing and fault analysis in one area at a time. The consolidated messaging tool will be implemented at the beginning of the implementation cycle, freeing up customer communications subject matter experts to support later phases of the project.

Medium technical complexity due to: (1) high number of systems using non-standard integrations and data streams, and (2) multiple vendor supported systems requiring a coordinated rollout plan. Mitigation: Each tool in the system will be converted to either create, read or both a widely adopted data standard for transit information. This work will be sequenced in order to ensure that each vendor is able to complete and test modifications to their system off-line while continuing to interact with all other systems.

17. CAPACITY TO IMPLEMENT THE PROJECT

Metro has worked with each of the identified vendors on a variety of similar projects, and combines a strong internal technical team (Systems Development) with support from these vendors and KCIT to ensure capacity to implement the project. The project team also coordinates with other ongoing and planned operational and capital projects that utilize the same vendors to understand and obviate any timing or resource constraints.

18. PROJECT RISKS

(High) – The project is addressing a variety of gaps across a diverse and complex technology and organizational environment. Mitigation: The project is implementing standard, commercial off the shelf (COTS) vendor modules wherever possible, and using software as a service (SaaS) for newly introduced tools. These products are well supported by their vendors, and include training and reference material for staff. The project will provide an integrated data environment, reducing the need for person to person communication, allowing staff to focus efforts and communications on significant events.

Capital Appropriation Proposal

NARRATIVES

TDC HASTUS PLANNING MODULE

1124415

1. CURRENT PROJECT SCOPE

HASTUS Planning Module - This project will allow Metro Transit to acquire a new module for HASTUS, the software suite currently used by the scheduling group to produce vehicle and operator/crew schedules. This new module would be used primarily by service planning staff to develop and evaluate route and transit network concepts, including the associated costs. Service development and systems development & operations staff will work with the software vendor - GIRO - to evaluate out-of-the-box functionality, identify any shortcomings, and customize the software module if necessary to meet the agency's specific needs. Minimal customization is expected and out-of-the-box functionality will be preferred, to be confirmed during the project's planning and design phases with a detailed business and systems analysis.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC HASTUS PLANNING MODULE

1124415

3. PROJECT JUSTIFICATION

Transit Service Planning currently uses a labor-intensive, Excel-based process to produce draft timetables, which are used to estimate costs and evaluate transit service design concepts, a core Transit business function. Service Planning transmits this information and paper based maps and routing instructions to other Transit workgroups, which then need to manually recreate this information in their system. The process improvements that will be enabled by the addition of a new software module to Transit's HASTUS application are expected to result in more efficient service planning and scheduling. This project supports Metro Transit Goal 5: Service Excellence - Establish a culture of customer service and deliver services that are responsive to community needs - Improve satisfaction with Metro's products and services and the way they are delivered. Provide service that is easy to understand and use.

4. PROJECT BENEFITS/OUTCOMES

This project expects to realize the following benefits:

1. Streamlined processes. The Transit Service Planning workgroup currently uses a labor-intensive, Excel-based process to produce draft timetables, which are used to estimate costs and otherwise evaluate transit service design concepts. Service Planning also uses a variety of GIS-based tools to generate spatial views of network design concepts and produce street-by-street instructions for publication in paper-based service change packages. With this project, Metro Transit will acquire a new module for HASTUS, the software suite currently used by the Scheduling group to produce vehicle and operator/crew schedules. The new module would be used primarily by the Service Planning group to develop and evaluate route and transit network concepts, including the associated costs. The HASTUS Planning Module is fully integrated with other HASTUS modules currently used by Metro Transit for scheduling and operations. Incorporating this module would enable planners to easily access current ridership, run-time and trip arrival/departure data and more efficiently incorporate these data in the development of route and network design concepts. This will streamline the service planning task of developing service alternatives and identifying more realistic/accurate cost estimates. It will also reduce steps (and effort) in the handoff of planner guidance to schedulers who could then take that imported planner estimate and develop full vehicle and crew schedules from the same data source inside the same software/platform. This effort may also streamline and simplify the process of creating maps that could then be used for public presentation, both in the planning process or later on for public consumption of live or future transit information.
2. Elimination of duplicate data entry. Service Planning uses different tools than other workgroups similarly involved in the production of service change data. As a result, Service Planning's Excel-based timetables and paper-based maps and routing instructions must be manually re-created in HASTUS by other workgroups in Transit. If this project to implement the HASTUS Planning Module is approved, the need for other Transit workgroups to re-create this information in order to proceed with the production of transit service change data can be eliminated.
3. Improved service efficiencies. Process improvements that will be enabled by the addition of the module to Transit's HASTUS application are expected to result in more efficient service. This will increase the amount of staff time available for serving our customers, which will in turn impact ridership, productivity and the overall value Metro provides to King County.

When combined, both #1 and #2 are expected to result in savings in labor hours that will be reinvested in higher value activities. The project will determine the exact nature of these savings as well as any new costs associated with this module as part of the business process review.

5. BUDGET REQUEST BASIS

The original 2017-2018 capital budget request did not include the cost of purchasing GIRO's Planning Module or GIRO's design and implementation tasks. This budget request adds funding to support all phases of the project, including the system design and implementation phases that will include significant levels of effort by the HASTUS vendor GIRO. The project budget request has been increased to cover contractor costs, including the purchase of the HASTUS planning software module and associated design and implementation tasks by GIRO.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Starting in 2021, the annual operating impact is expected to be \$10,000-35,000 for licensing and vendor support.

8. PROJECT STATUS

Project started in June 2018 and is currently in the planning phase.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC HASTUS PLANNING MODULE

1124415

9. ALTERNATIVES ANALYSIS

The alternative is to continue using the current manual process or explore other technology solutions that will not enjoy the seamless inter-application suite integration (via HASTUS) that this solution provides.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not eligible, as this is an information technology project.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project is not required to complete an Equity Impact Review.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

The HASTUS Planning Module project - as well as the HASTUS Program as a whole - will participate in an external quality assurance effort, to be funded by project contingency. This effort will analyze and assess how well the project is managed and offer best practices advice that we will use to inform our implementation.

CIO and PSB Critical Success Factors:

- PRB/CIO conditions

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

As an effort to replace various internally developed tools with a modern, vendor supported application, the HASTUS Planning project supports the "Data Driven" and the "Workforce Empowerment" objectives.

"Data Driven": Once completed, this project will provide Metro Transit Service Planning staff with improved tools for increased data utilization and analysis as well as an integrated HATUS platform with modules that share - and utilize - common data elements. The project will provide Transit Service Planning staff with improved tools for increased data utilization and analysis, resulting in more effective service planning processes.

"Workforce Empowerment": This project will allow the Service Planning group to abandon the labor-intensive, Excel-based process that produces system timetables in favor of a solution that is fully integrated with the HASTUS platform and utilizes the platform's common data layer. This will save Metro Transit staff significant time and effort, allowing them to consider several improvements to internal processes and tools that will directly result in streamlined service planning and communication.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC HASTUS PLANNING MODULE

1124415

16. PROJECT COMPLEXITY

Low Business Complexity as this is a project scope that impacts a relatively small Service Planning staff and the new module is part of the existing HASTUS platform, which is quite familiar to several other back-office Metro Transit departments. This familiarity should streamline Metro Transit adoption and simplify staff learning curves. Mitigation: The project team intends to work closely with the vendor and Metro staff to ensure a seamless implementation. Training is already part of our implementation plan and since Metro Transit is already intimately familiar with the HASTUS product, we anticipate that the adoption of this new tool for planning will be smooth.

Low technical complexity as the new module is already part of HASTUS and will require limited - if any - modifications and configurations. Mitigation: We intend to eliminate or limit customizations to the module and will map Metro Transit's existing tools and processes to the current manual Excel-driven process. In addition, the new module will dramatically simplify the current excel toolset with a native HASTUS module. Potential customizations will be reviewed by the project's steering committee, Metro Transit's senior management, and KCIT's CIO (or authorized delegate) before any decision is made to implement them.

17. CAPACITY TO IMPLEMENT THE PROJECT

The proposed budget plans for sufficient staffing for the project, including project management, KCIT technical staff, service planning staff, as well as contractor support. In addition, a management level project steering committee will be formed and meet monthly to provide oversight.

18. PROJECT RISKS

1. (Low) - Overall project risk is expected to be relatively low. Metro Transit has worked with GIRO, the HASTUS vendor, for over 20 years and both teams have a deep understanding of our business processes and how they map to the current system. Mitigation: We expect a number of business process changes and will coordinate our implementation very closely with the end user groups and stakeholders in the Service Planning department.

2. (Medium) - This HASTUS project is one of several HASTUS-based projects that will require careful coordination with the vendor and our technical and business teams to avoid introducing new issues and bugs into Metro Transit's current HASTUS platform. Mitigation: We intend to carefully implement the various HASTUS projects in a way that will minimize cross-platform and cross project-issues. Transit has developed a high level roadmap/strategy for implementing newly proposed HASTUS projects. This strategy will include prioritization, sequencing/estimated timelines, dependencies and considerations related to capacity to execute. All work will be sequenced in order to ensure that each vendor is able to complete and test modifications to their system off-line while continuing to interact normally with all other systems. In addition, the project team will invite the Business Resource Center (BRC) to evaluate the project as well as the HASTUS program as a whole.

NARRATIVES TDC REPL SIGNAL PRIORITY EQUIP 1124427

1. CURRENT PROJECT SCOPE

Transit Signal Priority Project - This project funds the replacement of legacy transit signal priority (TSP) equipment and provides a cost effective approach for future expansion. The cost-effective approach is based on using real time and predictive data to drive signal priority instead of hardware installed at intersections. The following features are in the project's current scope: replacement of legacy TSP infrastructure; reduction and/or elimination of King County hardware at TSP intersections; and development of an application programming interface (API) to be shared with jurisdictional traffic management systems.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC REPL SIGNAL PRIORITY EQUIP

1124427

3. PROJECT JUSTIFICATION

Transit signal priority (TSP) is one of several branded elements of Transit's Rapid Ride program. At the end of 2014, there were 180 operating TSP installations with more than 20 under development. The system is designed to improve transit reliability by requesting special treatment for buses at signals on TSP equipped corridors – either by holding a green light to allow a bus to pass or by shortening its wait at a red light. Metro Transit's current infrastructure is end-of-life and in need of replacement. In addition, there is a desire to reduce and/or eliminate King County hardware at TSP intersections.

This project supports Metro Transit Goal 5: Service Excellence - Establish a culture of customer service and deliver services that are responsive to community needs - Improve satisfaction with Metro's products and services and the way they are delivered. Provide service that is easy to understand and use. Technology plays a critical role in improving transit speed and reliability through systems such as transit signal priority.

4. PROJECT BENEFITS/OUTCOMES

Current TSP equipment is owned and operated by King County in cooperation with regional transit agencies. TSP expansion requires King County to procure additional equipment and negotiate with each jurisdiction for installation. The proposed approach will be a software based system so deployment to new intersections will be a configuration change in the software. This approach will allow King County and jurisdictions to expand TSP rapidly without incurring significant cost.

This project expects to realize the following benefits: (1) Performance and reliability improvements will be achieved by leveraging more accurate data from coaches. Location data will be retrieved from on-board systems to request traffic signal changes vs a derived location approach used currently. Derived locations are less accurate and can lead to requests hindering performance. (2) This project will implement a software based system so deployment to new intersections will be a configuration change in the software rather than installing or deactivating physical hardware at intersections. This approach will allow King County and jurisdictions to expand TSP rapidly without incurring significant cost. (3) Expanding the network and improving its accuracy will result in improved travel times for buses reducing the number of hours required to serve the same corridor. Corridors all have unique characteristics and a pre and post evaluation of the transit travel time is part of each expansion decision.

These benefits will be measured with the following data and metrics:

- Reducing King County owned and operated equipment will be realized upon the decommission of existing equipment.
- Service benefits of TSP are measured by comparing TSP intersections with TSP turned on vs turned off. The new system will analyze these criteria: cost of deployment to new intersections; in-service travel time; layover/recovery time through reducing run-time variability; schedule reliability; number of TSP requests successfully sent to other transit agencies; and number of TSP requests successfully fulfilled by other transit agencies.

Baselines were collected for the current TSP system as part of the deployment of TSP on several corridors. Current TSP baseline measurements include:

- \$60K or more - Cost of deployment to new intersections
- 2%-10% - In-service travel time improvement
- 2%-10% - Layover/recovery time through reducing run-time variability
- 2%-10% - Schedule Reliability
- 80% - Number of requests successfully sent to transit agencies
- 55%-60% - Number of requested fulfilled by transit agencies

Future targets for these measures will be updated once the RFP selection process is complete. The new system will either meet or exceed the existing equipment baselines.

- +5% - In-service travel time improvement
- +5% - Layover/recovery time through reducing run-time variability
- +5% - Schedule Reliability
- 90% - Number of requests successfully sent to transit agencies
- 70% - Number of requested fulfilled by transit agencies

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC REPL SIGNAL PRIORITY EQUIP

1124427

5. BUDGET REQUEST BASIS

The budget request includes additional appropriation based on RFI responses received in the initial design phase, which indicate that the original Concept of Operations estimate is not supported by industry conditions. The additional appropriation is necessary based on high level pricing proposed in RFI responses.

6. FUNDING AND REVENUE DISCUSSION

This project is being partially funded by grant funds via WSDOT Agreement GCB2297 for 2015-2017 Tier Projects.

7. OPERATING BUDGET AND OTHER IMPACTS

Future operating costs are expected to remain fairly constant. They will largely depend on how widely the new system is implemented compared to our current TSP deployment.

8. PROJECT STATUS

The project is currently in the planning stage. The design of TSP system is expected to start in Q3 2018. Implementation is expected to begin in 2020.

9. ALTERNATIVES ANALYSIS

Alternatives Analysis has been completed. Multiple options - including a hardware based approach - have been considered and the option most beneficial to Metro overall has been selected to move forward into the preliminary design phase.

10. OTHER AGENCY INVOLVEMENT

King County Roads, KCIT, and multiple signal operation jurisdictions such as WSDOT, City of Seattle, City of Bellevue, City of Burien, City of Redmond, and others are involved in various ways with this project. Special attention will be given to ensure proper coordination and cooperation are occurring.

11. ART ELIGIBILITY

Not Art Eligible, technology project that does not consist of major physical infrastructure construction.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project is not required to complete an Equity Impact Review.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

The new TSP system depends on a stable and comprehensive wireless networking solution. Therefore, TSP development and - ultimately - full implementation rely on the Next Generation Wireless (NGW) project. It is possible to do the development of both projects in parallel, but a full, final, and robust solution will require a stable and effective wireless connection for proper production operation. The team is well aware of the interconnections between the two projects and is working on mitigation plans and alternate ways to test and rollout the system.

CIO and PSB Critical Success Factors:
- CIO/PRB conditions.

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

The Transit Signal Priority project supports the "Data Driven" objective: (1) The project will help reduce King County's total cost of ownership by implementing a software based solution that will allow Metro Transit to eliminate King County owned equipment at new TSP intersections. (2) In addition, the TSP project will allow Metro Transit to effectively (and efficiently) partner with external collaborators and other regional transit organizations by sharing data between agencies to expand TSP across King and neighboring counties.

1124427

16. PROJECT COMPLEXITY

High technical complexity due to: (1) integration with multiple systems across neighboring counties and transit jurisdictions; (2) implementation of a new data service within King County; (3) implementation of a software based solution instead of using hardware at each TSP enabled intersection; and (4) industry best practices have yet to be established for TSP-based data driven solutions. Mitigation: Currently, the project is engaging KCIT Network Engineering and will include a Data Architect and Software Quality Assurance Analysts to address the risks associated with the technical complexity. This is expected in Q4 2018. Also, establishing a robust software API will let fellow transit agencies in the Greater Seattle Area implement TSP in their jurisdictions with less complexity and more flexibility.

Medium Business Complexity due to: (1) system will need to interface with several different Transit agencies and regional jurisdictions, each with different needs, equipment, and systems; (2) implementation of a software based solution instead of one that relies on hardware at each TSP enabled intersection; and (3) increased collaboration and data sharing with key jurisdictional partners (City of Seattle and City of Bellevue). Mitigation: The project has been working with other local agencies for several months to plan and collaborate on how the new system will function, reducing the chance of creating a system that is difficult to integrate with other partners. In addition, the project will support removal of TSP equipment and hardware at intersections in Seattle and Bellevue, replacing them with a configurable, software based system that has great flexibility.

17. CAPACITY TO IMPLEMENT THE PROJECT

Metro Transit has the capacity to manage the project. Labor-in-kind according to negotiated agreements will be required from partner jurisdictions. KCIT Network Engineering, KCIT Architecture, and KCIT Business Analysts will be involved with the design and implementation of TSP.

18. PROJECT RISKS

1. (High) - The TSP system is very complex: it takes data from the INIT On Board System (OBS); it processes complex logic; it passes information over the transit wireless system in a time dependent manner; and integrates with and operates open multiple regional signal systems. Mitigation: The project team is planning a new back-office software based system to replace existing intersection-specific hardware and equipment. All of these complexities are being addressed during the planning phase of the project.

2. (High) - Inter-jurisdictional coordination. This project requires the participation of multiple jurisdictions which own and operate subject signal equipment, such as the City of Seattle and the City of Bellevue. Mitigation: Coordination with these jurisdictions is well established via the existing TSP system, mitigating this risk. Communications and coordination efforts at multiple levels are planned to occur during the project to further mitigate risk.

3. (High) - The benefits and of TSP are difficult to measure and even more difficult to realize operationally. For example, did the bus arrive on-time because it had an extended green or because traffic flow has been optimized? Does 1 min late mean TSP is ineffective or did a passenger require assistance boarding a coach? Mitigation: King County Metro Transit is collaborating with transit agencies across the county to address these questions. Agencies include regional partners along with Chicago, San Francisco, New York City, Santa Clara, and Nashville. This is an industry wide risk to all known TSP implementations. We believe we have established a core set of metrics that will help guide our approach.

In order to manage these (and other risks), the TSP project will maintain a comprehensive Risk Mitigation Plan. The project will provide a risk mitigation report to its steering committee and the PRB before the first funding release. This report will be updated and shared prior to each subsequent funding release.

NARRATIVES

TDC REPL 4.9 NETWK & ROUTERS

1124429

1. CURRENT PROJECT SCOPE

Replace 4.9 Network and Routers with Next Generation Wireless (NGW) - This project funds the replacement of end-of-life wireless equipment with new cellular 4G LTE-based equipment. This equipment will transmit data and real time information from on-board systems - including ORCA - to King County servers. The project scope includes: replacement of the existing 4.9 GHz network; deployment of new wireless network; governance for the wireless network covering how system communicates through the service and how the service is supported; updates to impacted applications to ensure existing functionality is not degraded or lost after deployment of the new wireless network; and maintenance and support plan for King County staff after deployment of new wireless network.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC REPL 4.9 NETWK & ROUTERS

1124429

3. PROJECT JUSTIFICATION

The NGW project will install communication hardware responsible for transmitting most wireless data from coaches to various servers. The new system will transmit location, fare payments, and scheduling data across the NGW solution to other transit systems. This data is currently transmitted via a 4.9 GHz solution; however, the manufacturer will no longer sell or support 4.9 GHz equipment beyond December 2018. This project supports Metro Transit Goal 5: Service Excellence - Establish a culture of customer service and deliver services that are responsive to community needs - Improve satisfaction with Metro's products and services and the way they are delivered; Provide service that is easy to understand and use. Technology plays a critical role in improving transit speed and reliability through systems such as Next Generation Wireless.

4. PROJECT BENEFITS/OUTCOMES

Next Generation Wireless (NGW) is an infrastructure project involving the creation of a new wireless network between coaches and King County servers. Mobile Access Routers (MAR)s on coaches will connect via cellular signal during travel and via Wi-Fi when on bases. This allows King County access to critical data, such as location and fare payments, while a coach is on route and access to audio video data while a coach is on base. Legacy hardware was supported through an agreement between King County and Cisco. The agreement between the two ends December 31, 2018, and King County has limited replacement inventory on hand with no option for new equipment. The decision to end support was made by Cisco.

This project expects to realize the following benefits:

1. This IT investment will expand capacity for data driven systems deployed on coaches while moving away from end-of-life legacy equipment. Examples of data driven systems that will benefit from the new wireless network include:
 - Fare payment. The next generation ORCA project has identified potential enhancements for the next generation, such as the use of open payments (e.g., account-based payments using various credit- and debit-card technologies)
 - Speed and reliability: Transit Signal Priority (TSP) uses location information from coaches to request signal changes from local jurisdictions. The next generation of TSP will benefit from improved accuracy and availability of location information.
 - Improved information: Real Time Information Signs (RTIS) provide scheduling information to the public at stops throughout King County. Improved location information will allow Transit to improve accuracy of data provided to signage at stops.
2. Replacing the 4.9 Network and its Mobile Access Routers (MARs) will benefit Metro Transit by maintaining a state of good repair for its wireless network.

Performance for NGW involves measuring how much data can be transmitted at one time and per month. These measurements vary greatly between coaches on base and on route. The above benefits will be measured with the following data and metrics:

- Compare performance of NGW to legacy network (capacity and speed)
- Decommissioning of legacy equipment

Current wireless networking baseline measurements and performance indicators include:

- Performance of 4.9GHz legacy equipment is limited to 5Mbps (Megabits per second) across the network
- Legacy equipment is deployed and in use throughout Metro Transit's entire fleet and needs to be replaced in 100% of coaches

The new system will either meet or exceed these targets:

- For coaches on route, the minimum targets for transmitting data (bandwidth) is 10Mbps and 15GB per month. This represents a minimum 100% improvement over legacy equipment.
- For coaches on bases, the minimum bandwidth targets are 600Mbps and unlimited data per month. This represents a minimum 12,000% improvement over legacy equipment.
- The target for legacy equipment decommission is 100% removal of all legacy equipment.

5. BUDGET REQUEST BASIS

The appropriation request for 2019-2020 is a planned phase request part of the original budget. The cost estimate was developed through a combination of vendor quotes and a request for information.

6. FUNDING AND REVENUE DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC REPL 4.9 NETWK & ROUTERS

1124429

7. OPERATING BUDGET AND OTHER IMPACTS

Estimated \$1M to \$1.25M per year for cellular data plans and support. Cellular data charges are not offset by decommissioning legacy equipment.

8. PROJECT STATUS

The project is in the design phase and will begin implementation in 2019. The project anticipates completing all deliverables and achieving benefits outlined in the BAP by the end of 2020.

9. ALTERNATIVES ANALYSIS

Alternatives were reviewed and considered and KCIT 's Networking team participated in the selection of the new MARs and cellular technology. Given its maturity, cellular 4G LTE was the best choice, especially since 5G technologies are still being rolled out across the country. Early adoption of 5G risks implementing a system not supported by core regional cellular services or infrastructure.

10. OTHER AGENCY INVOLVEMENT

KCIT provides network hardware installation and cellular assistance. It also surveyed all of our transit bases in order to determine where best to place access points for maximum coverage.

11. ART ELIGIBILITY

Not Art eligible, technology project that does not consist of major physical infrastructure construction.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project is not required to complete an Equity Impact Review.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

The Metro Transit Next Generation Wireless (NG Wireless) project will provide a major increase in communication bandwidth between the individual coaches in the fleet and the communication center. This additional bandwidth is necessary to increase the number of data points available to public facing information portals. The project will fully configure the new data feeds to leverage these data points as they are brought online during or after implementation of the NG Wireless project. The NG Wireless project, combined with the improved data from this project will also allow Metro Transit to explore improved visualization of real-time information, including delays, re-routes, and impacts to service interconnections.

CIO and PSB Critical Success Factors:

- CIO/PRB conditions.

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

The Next Generation Wireless Project will support both the "Data Driven" and the "IT Mobility" objectives. "Data Driven" – NGW allows King County to better gather and transmit data across the entire fleet of coaches. This project meets the King County KCIT strategic plan by improving capacity and utilization of data to understand the current situation, analyze opportunities, measure results and make more informed initial and corrective decisions. "IT Mobility" – An indirect benefit of NGW improves IT Mobility across the fleet of coaches. Applications that leverage NGW for data transmission will see capacity improvements allowing for new functionality and better performance. For example, improved coach location information will allow signage to more accurately display wait times for riders.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC REPL 4.9 NETWK & ROUTERS

1124429

16. PROJECT COMPLEXITY

High Business Complexity due to:

1. Multiple vendor contracts
2. Installations of equipment on entire fleet
3. Coordination with multiple teams within Transit
4. Coordination with KCIT on integration

Mitigation: The project team has included representation from all impacted business units from KCIT and Transit. The project team meets regularly to resolve questions, discuss risks, and share information.

High Technical Complexity due to:

1. New service offering from KCIT requiring comprehensive network design
2. Establishing APN service from AT&T and Verizon, new to King County
3. Implementing a reliable, scalable hardware device across fleet

Mitigation: The project has put forward a competitive demo period with a goal of testing, comparing, and selecting standard hardware. The demo will prove the new service offering meets quality standards for King County.

17. CAPACITY TO IMPLEMENT THE PROJECT

KCIT Networking and Transit are positioned well to design and implement the new service for Transit. Members from Business Analysis, Network Engineering, and Architecture within KCIT have been engaged to provide their expertise. KCIT has designed many networks currently used throughout King County and will leverage knowledge for NGW. Transit has gathered members from Vehicle Maintenance, Radio Maintenance, Design and Construction (D&C), and Service Development and Operations (SDO) to collaborate with KCIT on the design and implementation of NGW. The project is sponsored by Transit SDO Manager Elizabeth Love whose team manages applications using NGW. The project team meets biweekly and the steering committee monthly. An external quality assurance firm tracks project risks, deliverables, and provides recommendations to the team.

18. PROJECT RISKS

1) Legacy equipment fails prior to project implementation (Medium) - Cisco will neither sell nor support the 4.9 GHz solution after Dec 31, 2018. MITIGATION: The project will begin installations in early 2019. Each new installation will remove the existing device which will be placed into inventory as a spare. The increased amount of spares will allow operations contingency should another existing device fail.

2) 5G LTE devices become available mid-design (Low). MITIGATION: Vendors do not have devices road-mapped for 5G LTE so the likelihood of this risk becoming an issue is very low. The NGW project is expected to complete prior to 5G LTE devices becoming available.

In order to manage these (and other risks), the NGW project will maintain a comprehensive Risk Mitigation Plan. The project will provide a risk mitigation report to its steering committee and the PRB before its next funding release. This report will be updated and shared with the steering committee and the PRB prior to each subsequent funding release.

NARRATIVES

TDC ORCA REPLACEMENT

1124456

1. CURRENT PROJECT SCOPE

ORCA Replacement - This project is a joint effort between King County Metro Transit, Sound Transit, and other regional transit agencies to replace and update the existing ORCA smart card regional fare collection system. The future ORCA fare collection system is expected to include the following elements: fare card readers or validators at all fare collection points, including buses, rail and streetcar stations; operator displays and functionality to collect and manage fares while delivering service; fare inspection equipment for fare enforcement officers for next generation ORCA (ngORCA) system; agency servers and other equipment needed to collect fares from readers and otherwise manage system devices and functions; a central clearinghouse and associated financial processing to manage, reconcile, and settle transactions; system websites for agency management, business accounts, and customer use; reporting and management processes required for system implementation and ongoing maintenance; and negotiation and renewal of a long-term support and maintenance agreement.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC ORCA REPLACEMENT

1124456

3. PROJECT JUSTIFICATION

The current system is aging and nearing its end of life. It was originally deployed in 2009 and has an operating and maintenance contract scheduled to end in 2021. This project will ensure that Metro Transit and its regional partners can continue to collect transit fare revenue beyond 2021, using modern, supportable technology. A contract extension with the current ORCA vendor (VIX) is under negotiation to cover the years 2022 and 2023, at King County's option in order to ensure that there is no gap in our ability to collect fares during the transition from one system to another.

The Next Generation ORCA transit fare collection system supports the following Metro Transit Goals: Goal 2: Human Potential - It provides public transportation products and services that add value throughout King County and facilitate access to jobs, education, and other destinations. The ORCA program is a collaborative effort between the region's transit agencies and helps create a seamless transit experience for our riders that crosses county and other jurisdictional boundaries. Goal 3: Economic Growth and Built Environment - This project supports and encourages a strong, diverse, sustainable economy that provides alternatives to driving alone. The program includes a range of bus, rail, and marine options for a regionally comprehensive, integrated, and multimodal transportation system that links a range of destinations to education and employment centers.

If this effort is not funded, King County would not be able to properly participate in the regional ORCA system replacement. If a replacement system is not available when the current O&M contract ends in 2020 fare collection, other than through fare box, could be impacted.

4. PROJECT BENEFITS/OUTCOMES

This project expects to realize the following benefits:

1. Maintain service levels by replacing or upgrading older technology, reducing risk of system failures, or providing regulatory compliance. The current ORCA system was implemented in 2009 on technology platforms that were prevalent in 2003 when the system was originally designed. Implementing a new system will remove the risk inherent with the aging 10-year old program and vendor contract.
2. Maintain regional fare collection functionality and customer satisfaction with the ORCA program.
3. Improve the quality or quantity of services provided to the public, including better access to the ORCA program. This project will improve the ORCA program's electronic and mobile functionality:
 - Making it easier for customers without banking relationships to get the benefits provided by an ORCA card (for example, intersystem transfers)
 - Providing an infrastructure that allows customers almost instantaneous availability of loaded value, eliminating the waiting period that exists with the current system
 - Allowing payment from a variety of devices (smartphone, ORCA card, etc.)
 - Providing more options for off-board fare payment, allowing customers to pay without waiting in line to board the bus

The above benefits will be measured with the following data and metrics:

- ORCA market share
- Customer satisfaction as measured in our annual ridership survey
- Full vendor support for the new technology system

The baseline metrics for the success of these benefits include:

- ORCA King County Metro market share is ~65%
- King County Metro Customer Satisfaction with fare payment is currently 77% (last measured in 2015)

Once the project is complete, we expect to see no loss of total market share or customer satisfaction. Ideally, our target for customer satisfaction with ORCA services is for 90% of riders to be very or somewhat satisfied with the new system.

5. BUDGET REQUEST BASIS

This is a planned appropriation from the original 2017-2018 budget request. This amount requested in 2019-2020 allows the project to approve and sign the various vendor contracts during the current biennium. Additionally, these funds support previously approved staffing costs for this period. The overall project budget of \$57.5M as submitted in the 2017-2018 biennium is unchanged. A future appropriation in the 2021-2022 biennium in the amount of \$7.8M is planned.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC ORCA REPLACEMENT

1124456

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Operating budget impacts have not been determined at this time. The operating budget will be significantly impacted by decisions that have not yet been made by the regional team including: what the operating model will be for next generation ORCA; which agency will house and manage the system (King County or Sound Transit); and which functions the vendor will retain (which cannot be known until a vendor is identified and design is complete) and what functions will be outsourced.

8. PROJECT STATUS

The project is currently in preliminary design. Full design is expected to begin upon the approval to proceed with a system integrator, which is expected in September of 2018.

9. ALTERNATIVES ANALYSIS

The alternative analysis has not been completed as the project is still in preliminary design. Once we know who the system integrator will be, we will conduct a full analysis of the various system design alternatives.

10. OTHER AGENCY INVOLVEMENT

The Next Generation ORCA project is a regional project which includes 6 partner agencies: Sound Transit, Community Transit, Pierce Transit, Everett Transit, Kitsap Transit, and Washington State Ferries. KCIT and King County Finance will also be involved in this process from a systems integration perspective.

11. ART ELIGIBILITY

Not Art eligible, technology project that does not consist of major physical infrastructure construction.

12. EQUITY AND SOCIAL JUSTICE IMPACT

The next generation ORCA project will have several impacts to ESJ communities. A current barrier in the current ORCA system is ease of access to use cash to load value to an ORCA card. Currently there are approximately 200 locations throughout King County where cash transactions can be handled. In the future system, this will increase to as many as 600 locations, providing a much more convenient way for low income riders to manage their accounts. Also, the current 24 to 48 hour delay in accessing newly deposited funds on the ORCA card will also be eliminated, also benefiting low income riders. An equity impact review is required for this project and will be completed by the project by the end of 2018.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

CIO and PSB Critical Success Factors and Conditions:

1) Equity Impact Review - to be completed by December 2018

2) CIO/PRB conditions

3) Evaluate ways to continue using the fare enforcement devices that will have been purchased through project 1134106 TDC FARE ENFORC
ENHANCMTS

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC ORCA REPLACEMENT

1124456

15. STRATEGIC IT PLAN ALIGNMENT

The Next Generation ORCA Replacement project supports the "IT Mobility" and "Effective Digital Systems" objectives.

"IT Mobility" - Free residents and employees to interact and transact business when and where most appropriate and convenient.

- The new system will increase the ability for customers to use cash to load value to an ORCA card. Currently there are approximately 200 locations throughout King County where cash transactions can be handled. In the future system, this will increase to as many as 600 locations, providing a much more convenient way for low income riders to manage their accounts.
- Also, the project will provide an infrastructure that will allow customers almost instantaneous access to recently loaded value, eliminating the waiting period that exists with the current system.
- Providing more options for off-board fare payment, allowing customers to pay without waiting in line to board the bus.

"Effective Digital Systems" - Increase value to customers by providing high quality digital systems to better meet their needs.

- The project will replace a 10 year old technology system that is critical to supporting transit choices made by our riders and customers. The replacement system will adopt current technologies and back end systems as well as provide a new operating and maintenance agreement.
- It will allow payment and account management access from a variety of devices (smartphone, ORCA card, etc.).
- This project will use the latest technologies to increase the accessibility of the ORCA regional fare payment systems by increasing retail locations, improving access for the un-banked and under-banked, increased access to products through mobile access, and continued regional system access using a single form of payment.

16. PROJECT COMPLEXITY

High business complexity due to: (1) multiple business processes, technologies, and tools will be updated; and (2) multiple transit agencies are involved in technology selection and implementation. Mitigation: The project team includes representatives from Metro Transit as well as Sound Transit. Additionally the project team has and will continue to provide communication to our other external partners. The project intends to hire a system integrator to help oversee and implement the new system in concert with our two technology teams.

High technical complexity due to: (1) the size and scope of the ORCA replacement involves on-board coach systems, back-end software, and new hardware and kiosks to accept the next generation of ORCA cards and (2) multiple vendor supported systems requiring a coordinated rollout plan. Mitigation: The primary mitigation tactic involves careful design and planning by Metro and Sound Transit combined with assistance from seasoned, experienced vendors. We will hire a third party system integrator to help oversee and implement the new system in concert with our two technology teams. Also we have already engaged a Quality Assurance vendor to help us assess how we are doing with project implementation and offer suggestions designed to improve our development process. Their first report will be complete by Q4 2018 and subsequent reports will track our progress against this initial analysis.

17. CAPACITY TO IMPLEMENT THE PROJECT

King County has assigned a full time project manager for the implementation of The Next Generation ORCA effort. Transit managers have committed staff to support the review and design of the new system. Vehicle Maintenance, Radio Maintenance, Training, Finance, and Customer Service staff are fully engaged. In addition, we are engaging KCIT early in the process along with a third party system integrator to help guide our technology choices.

18. PROJECT RISKS

A risk mitigation plan has been developed, is being consulted monthly, and will be updated regularly. In addition, a detailed risk matrix is being maintained by the Regional Program Team and will be reviewed and updated on a bi-weekly basis per the risk mitigation plan. A Quality Assurance consultant is currently working on the initial project health report which includes a review of the risk mitigation plan and the risk mitigation process. This report is due in Q4 2018.

NARRATIVES	TDC Strategic Tech Roadmap	1124887
------------	----------------------------	---------

1. CURRENT PROJECT SCOPE

Strategic Technology Roadmap for Transit (STRT) - This project addresses how technology will be used in the future to support Transit in delivering transit service. It is intended to provide a planned, integrated, and forward-looking understanding of the evolving technology needs and solutions over the next five years for transit riders, operations and administration. The STRT shall recommend and prioritize technology solutions and identify the integration points of those solutions with other transit, County, and regional technologies.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC Strategic Tech Roadmap

1124887

3. PROJECT JUSTIFICATION

A 2014 King County budget proviso requires Metro Transit to deliver the STRT to the King County executive and ultimately to the County Council for approval. The STRT will be used by Metro Transit to: 1.Build on the developing Enterprise Architecture framework; 2. Support technology decisions in the future; 3. Communicate with policy makers and the public. This STRT will be a 'living document', used and updated by Metro Transit over the five year life of the plan.

NARRATIVES TDC 500KV SUB BREAKERS 1125742

1. CURRENT PROJECT SCOPE

500 Kilo Volt Sub Breakers - This project will complete design and specifications for breaker procurement, procure material and equipment, and install new breakers. Replace (54) 500KV Trolley Substation Breakers without interruption of electric trolley bus service. Electric Trolley Bus Overhead System wires will remain energized during the breaker replacement work.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

Substation Breakers are used to detect and respond to electrical faults that occur in the Trolley Overhead (TOH) system. This is an essential safety component within the TOH system. The current breakers have been in service for 24+ years and are no longer supported by the vendor who supplied them and replacement parts are increasingly scarce. Failure of this component may result in long-term service disruptions.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC 500KV SUB BREAKERS

1125742

4. PROJECT BENEFITS/OUTCOMES

Completion of this project will result in a renewed asset with a refreshed lifecycle. Asset replacement is a normal part of asset maintenance and is essential to maintaining our system in a state of good repair to minimize unexpected corrective maintenance or emergency replacement cost and prevent service disruptions or challenges for our customers.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$2.4 M is being reappropriated from project 1129626 TDC INFRASTR ASSET MGMT to fund or partially fund this project. The Transit Facilities Conditions Needs Report provides rough order of magnitude replacement costing, generated by third party engineers and incorporating metrics for soft cost factors. Purchase orders have already been issued for the first procurement of breaker replacements

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Effective Asset Management and Lifecycle Replacement will reduce operational maintenance cost for unplanned and corrective maintenance

8. PROJECT STATUS

This is an ongoing project that was part of project 1129626 but is being converted to a standalone. Contract signed, ready to order new breakers, & vendor onboard to build them. 2019/2020 funding will carry the project partially through implementation.

9. ALTERNATIVES ANALYSIS

Alternatives, if available, will be analyzed as part of the pre-design phase for all State of Good Repair works.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The program that supports the operation of the trolley system power infrastructure and aligns with the climate action plan because it provides power to the zero emission fleet operated within the City of Seattle.

NARRATIVES

TDC BROAD ST SUB X-FORMER

1125765

3. PROJECT JUSTIFICATION

Substation transformers and rectifiers are used to convert incoming AC electrical power to DC power that is used to power the Trolley Bus Fleet. This is an essential component within the TOH system. The current switchgear has been in service for 40+ years and is no longer supported by the vendor who supplied it and replacement parts are increasingly scarce. Failure of this component may result in long-term service disruptions. King County Metro Transit utilized a comprehensive Facilities Conditions Assessment Program conducted by 3rd party engineers to assess and monitor the conditions of our facilities. From these assessments, a Transit Facilities Conditions Needs Report is generated containing a prioritized ranking of assets needing major rehabilitation or replacement. State Of Good Repair Program planners then sort and package those needs into efficient projects and schedule those projects to create a sustainable, level loaded, State Of Good Repair Program to promote consistent State of Good Repair investment levels and maintain the safe and efficient functionality of our assets. Failure to adhere to the program plan will generate a backlog of State Of Good Repair work, leading to increased spending on asset replacement, increased risk of failure and loss of service, and greater risk to the county

4. PROJECT BENEFITS/OUTCOMES

Completion of this project will result in a renewed asset with a refreshed lifecycle. Asset replacement is a normal part of asset maintenance and is essential to maintaining our system in a state of good repair to minimize unexpected corrective maintenance or emergency replacement cost and prevent service disruptions or challenges for our customers.

5. BUDGET REQUEST BASIS

Ongoing Project; 2019-2020 funding will support the project through implementation and close out. Budget request has been generated using in-house engineering assessments. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$600k is being reappropriated from project 1129626 TDC INFRASTR ASSET MGMT to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Effective Asset Management and Lifecycle Replacement will reduce operational maintenance cost for unplanned and corrective maintenance

8. PROJECT STATUS

Ongoing

9. ALTERNATIVES ANALYSIS

1. Negotiate a new lease with City Light. City Light will review King County Metro's lease renewal request and make a decision by the end of the year. 2. Replace Broad Street Substation. The replacement cost for the substation could be substantial given both rising property values and low availability of real estate in the Denny Regrade and Queen Anne neighborhoods. 3. If the lease is not renewed, do not replace the Broad Street substation. This could result in power outages and a significant reduction in transit service.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

N/A , Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The program that supports the operation of the trolley system power infrastructure and aligns with the climate action plan because it provides power to the zero emission fleet operated within the City of Seattle.

NARRATIVES

TDC ALTERNATIVE SERVICES

1126349

1. CURRENT PROJECT SCOPE

Alternative Services - This project funds the purchase of vehicles for the Community Connections (formerly known as Alternative Services) program and has the aim to develop, test, and evaluate new transportation services that take advantage of innovative ideas, unique partnerships, or emerging technology. The solution set for each community partner varies depending on need, but often includes products and services that require the purchase of new vehicles. The Community Connections program is a program in which Metro Transit works with local governments and community partners to develop innovative and cost-efficient transportation solutions in areas of King County that don't have the infrastructure, density, or land use to support regular, fixed-route bus service.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC ALTERNATIVE SERVICES

1126349

2. PROGRAMMATIC PROJECT DISCUSSION

Community Connections implements pilot services to meet transportation needs not currently met by Metro's existing fixed-route network. Services in the community are determined by a needs assessment informed by surveying the local community and collaborating with a working group comprised of local stakeholders. Services are launched as a two year pilot demonstration period, and may be extended if successful. New project areas are chosen from local communities who submit an application of interest, with up to 6 new communities prioritized and selected per year.

Currently there are 25 King County communities with active Community Connections projects. Some have active service on the ground, with others in outreach, planning, or implementation stage for new service to launch 2018 or beyond. Additionally, there are another 14 communities as target jurisdictions for future service.

3. PROJECT JUSTIFICATION

Metro Transit's long range vision, METRO CONNECTS, shifts emphasis from only peak-period service towards all-day mobility. In support of this all-day mobility goal, it is anticipated that 23% of service by 2040 will be local/flexible service types. Alternative services play a key role in providing this local/flexible service, as it creates flexible and community-driven mobility solutions in communities without the infrastructure, density or land use to support traditional fixed-route bus service. Capital funding is required to continue to expand alternative services to more communities to support the goal of providing equitable access to transportation for all people in King County. New vehicles are needed to add service to the 6 new communities each year. If capital budget not approved, communities currently in needs assessment or early planning stages--where service launch would not happen until 2019 or beyond, would not receive their service when vehicles are needed. Community Connections services to date have had support of council, as they help fill in service gaps in their districts. A lack of capital budget would adversely impact the ability to deliver on these services.

4. PROJECT BENEFITS/OUTCOMES

New community project areas have been identified each year through application process. In the future, through integration with Service Planning, Transit will be identifying them through an integrated mobility planning process. We know there will be a range of solutions and that additional vehicles will be required as we continue existing products and projects and develop new ones. The assumption is that annual expenditures will be at similar levels of expense to 2017-2018, and a similar mix of vehicles as purchased in 2017-18 will be needed each biennium. In the next two biennium's, services are expected to be added in additional communities at a level similar to program history to date, which will require a similar number of vehicles to be purchased as current rates. In 2023 and beyond, replacement vehicles will also begin to be needed for the existing fleet.

5. BUDGET REQUEST BASIS

In 2018, the anticipated vehicle purchase is: twelve 12-passenger vans, thirteen seven-passenger vans, ten Nissan Leafs, six 29-foot transit buses, and six small transit buses. For 2019 and 2020, the budget request assumes vehicle mix similar to needs of projects to date. There are six projects per calendar year. Half of the six typically require six accessible vans and one Leaf. The other half typically require three transit vehicles, three accessible vans, and a Leaf. The 2019-2020 ask does not include any replacement vehicle needs for current fleet; that need begins starting in 2023.

6. FUNDING AND REVENUE DISCUSSION

N/A

7. OPERATING BUDGET AND OTHER IMPACTS

The alternative services operating budget request assumes Community Connections to continue at its current deployment level. Both capital and operating budget assumes adding service in 6 communities per year, and maintaining service in current Communities. Operating costs are covered by the alternative services budget, and should not have any significant impacts on other program budgets.

8. PROJECT STATUS

Community Connections expanded the program into a number of new communities in 2017, with more communities (and thus vehicles) coming online in 2018. New vehicle needs are expected in the upcoming biennium and beyond for new communities, and, beginning in 2023, replacements for aging vehicles for existing successful alternative service.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC ALTERNATIVE SERVICES

1126349

9. ALTERNATIVES ANALYSIS

Community Connections is an alternative in itself to providing mobility options where there are fixed route gaps.

10. OTHER AGENCY INVOLVEMENT

Numerous local jurisdictions collaborate on Community Connections programs. Partners actively working with Community Connections include: Cities of Burien, Bothell, Woodinville, Kirkland, Kenmore, Redmond, Bellevue, Mercer Island, Seattle, Des Moines, Normandy Park, Issaquah, Kent, Duvall, Snoqualmie, Black Diamond, Enumclaw; King County Parks Department, UW Bothell/Cascadia, Lake Washington Technical Institute, and the Vashon Island Chamber of Commerce.

11. ART ELIGIBILITY

Not Art Eligible, technology or vehicle project that does not consist of major physical infrastructure construction.

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project favorably impacts the following SCAP goals:

- Transportation Choices: Strategy A - Provide and expand public transit service.
- Transportation Choices: Strategy D: Implement new transportation products in rural and suburban areas not well suited to fixed-route transit service.

14. OTHER CONSIDERATIONS (OPTIONAL)

Please note that due to the nature of Community Connections work, it is difficult to project exact vehicle needs beyond 2018. The services deployed are based upon outreach and needs assessment, which has not been completed for any service launching in the next biennium. However, as previously noted, we do know from past experience the typical fleet needs, and have budgeted accordingly based off of 2018 costs.

3. PROJECT JUSTIFICATION

King County Metro Transit utilized a comprehensive Facilities Conditions Assessment Program conducted by 3rd party engineers to assess and monitor the conditions of our facilities. From these assessments, a Transit Facilities Conditions Needs Report is generated containing a prioritized ranking of assets needing major rehabilitation or replacement. State of Good Repair Program planners then sort and package those needs into efficient projects and schedule those projects to create a sustainable, level loaded, State of Good Repair Program to promote consistent State of Good Repair investment levels and maintain the safe and efficient functionality of our assets. Failure to adhere to the program plan will generate a backlog of State of Good Repair work, leading to increased spending on asset replacement, increased risk of failure and loss of service, and greater risk to the County. Average condition of the assets in this project is marginal.

4. PROJECT BENEFITS/OUTCOMES

Completion of this project will result in a renewed asset with a refreshed lifecycle. Asset replacement is a normal part of asset maintenance and is essential to maintaining our system in a state of good repair to minimize unexpected corrective maintenance or emergency replacement cost and prevent service disruptions or challenges for our customers.

5. BUDGET REQUEST BASIS

The Transit Facilities Conditions Needs Report provides rough order of magnitude replacement costing, generated by third party engineers and incorporating metrics for soft cost factors. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$700 K is being reappropriated from project 1129628 TDC BUILDING ASSET MGMT to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Effective asset management and lifecycle replacement will reduce operational maintenance cost for unplanned and corrective maintenance

8. PROJECT STATUS

Ongoing. 2017-2018 funding support the initial alternatives assessment which identified the recommended alternatives for the replacements of all wash and vacuum systems. Preliminary design has been delayed to enable the operational capacity growth program to ensure no impact to this location prior to asset replacement.

9. ALTERNATIVES ANALYSIS

Alternatives, if available, will be analyzed as part of the pre-design phase for all State of Good Repair works.

10. OTHER AGENCY INVOLVEMENT

NARRATIVES

TDC UNIV BRIDGE POLE REPL

1127254

1. CURRENT PROJECT SCOPE

University Bridge Trolley Pole Replacement - This project is in support of the replacement of the 30 trolley poles located on the University Bridge as part of the State of Good Repair.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

A special project to replace steel poles along the University Bridge was initiated in 2016, prompted by the failure of two poles that support the trolley overhead. A subsequent evaluation of all 32 poles on the bridge found other deficiencies. Since the bridge (and the foundations for the poles within) is owned by the City of Seattle and a historic landmark, this work requires coordination and agreements with the City. The goal for Transit and the City is to replace all 32 steel poles to avoid service disruption on the Route 70 and prevent safety hazards to the public right-of-way.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC UNIV BRIDGE POLE REPL

1127254

4. PROJECT BENEFITS/OUTCOMES

This will address a safety issue and restore the trolley infrastructure to full functionality.

5. BUDGET REQUEST BASIS

The funding for this project has been identified based on the previous cost of the poles to replace 3E/12E, as well as identifying the need for consultant/contractor to install the remaining 30 poles. Funding for replacing trolley poles on University Bridge continues in 2019-2020. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$1 M is being reappropriated from project 1116015 TD TOH, SHELTER, EQUIP BUDGET to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

N/A

7. OPERATING BUDGET AND OTHER IMPACTS

Once the new poles are installed, there will be an operational cost to maintain and perform maintenance on them.

8. PROJECT STATUS

The project is currently in the implementation phase with Metro Transit hiring a consultant to complete an inspection of the remaining poles, design review completed and poles 3E/12E have been received. Awaiting installation with our partner SDOT. We will need to add an addendum to the existing agreement with SDOT or craft a new agreement to install the additional 30 poles.

9. ALTERNATIVES ANALYSIS

None, this is a safety issue and needs to be addressed.

10. OTHER AGENCY INVOLVEMENT

SDOT

11. ART ELIGIBILITY

Not Art Eligible, maintenance or minor rehabilitation

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The trolley overhead system supports the climate action plan because it provides power to the zero emission fleet operated within the City of Seattle. The timely replacement of these poles allows the system to operate in a state of good repair.

NARRATIVES

TDC COMFORT STATIONS

1127330

1. CURRENT PROJECT SCOPE

Comfort Stations - This project involves siting, design and construction of permanent comfort stations for transit operators throughout the Metro Transit System.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

King County Metro is committed to improving the availability of operator comfort stations by providing permanent rest room facilities for bus operators on several routes where these facilities are not available. King County Metro adopted a policy in 2015 for the type of restroom facilities that are acceptable and how convenient they need to be to bus routes. Permanent, constructed facilities are planned only when other alternatives, like use agreements with commercial establishments, are not available. King County Metro is required to report progress on these efforts to Labor & Industries as a result of an agreement with the agency.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being discontinued and/or some budget from this project is being reappropriated to new standalone or smaller programmatic projects. Specifically, approximately \$2.4 M is being disappropriated from this project and reappropriated to the following: \$1M to 1127867 TDC COMFORT ST SODO, \$700K to 1127875 TDC COMFORT ST TIBS, \$500K to 1127880 TDC COMFORT ST VASHON, \$100K to 1127864 TDC COMFORT ST WESTWOOD, and \$50K to 1131378 TDC COMFORT STATION 2 SODO.

NARRATIVES

TDC COMFORT ST WESTWOOD

1127864

1. CURRENT PROJECT SCOPE

Westwood Comfort Station - This project involves siting, design, and construction of a permanent comfort station for Transit operators at the Westwood Village layover area. This comfort station may include Living Building Challenge high sustainability goals.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC COMFORT ST WESTWOOD

1127864

3. PROJECT JUSTIFICATION

There is no permanent restroom facility available for drivers at this location. King County Metro is committed to improving the availability of operator comfort stations by providing restroom facilities at operator layovers. Following two citations issued through a State of Washington Labor & Industries (L&I) audit in 2014, Metro established its Comfort Station Policy as part of its mitigation to improve restroom access for its operators, and this investment is consistent with Metro's strategy of "Enabling Employees To Do Top Quality Work". This policy defines acceptable facilities and the maximum distance from the layover. Permanent, constructed facilities are planned only when other alternatives, like use agreements with commercial establishments, are not available.

4. PROJECT BENEFITS/OUTCOMES

The benefit/outcome of this project is a new driver comfort station at this location to support a safe, healthy work environment. It would also support on-time performance and improved customer satisfaction.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$100K is being reappropriated from project 1127330 COMFORT STATIONS to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Operating budget to be impacted by additional maintenance for the new comfort station.

8. PROJECT STATUS

This standalone project is ongoing from 2017-2018. Property use discussions are underway with the City of Seattle Parks Department regarding locating a comfort station on park property. Final design, permitting, and construction will commence upon agreement by the City of Seattle Parks Department, with a target in-service date in 2019.

9. ALTERNATIVES ANALYSIS

Permanent, constructed facilities are planned only when other alternatives, like use agreements with commercial establishments, are not available. Alternatives that were analyzed included the plan described herein which locates the new comfort station on City of Seattle Parks Department property, and also easement and/or purchase of private property to construct the comfort station, for which no willing property owner was found.

10. OTHER AGENCY INVOLVEMENT

The City of Seattle Parks Department owns the park property, and an inter-agency property easement agreement would be needed for the new comfort station.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The King County Green Building Ordinance is being followed which has identified energy reduction, compact development footprint, and material recycling opportunities. This project will improve energy efficiency consistent with the 2010 Energy Plan, compared to previous Metro comfort station projects. The project anticipates implementing energy efficient heating, ventilation, and water use design for the comfort station. This comfort station may include "Living Building Challenge" high sustainability goals.

NARRATIVES

TDC COMFORT ST SODO

1127867

1. CURRENT PROJECT SCOPE

SODO (South of Downtown) Comfort Station - This project involves siting, design, and construction of a permanent comfort station for Metro Transit operators at a key layover area on the SODO Busway which is a part of 5th Avenue South, south of Royal Brougham, in downtown Seattle. It is commonly referred to as the E-3 Busway. This project also includes lighting and other safety improvements to the walkway from the layover area to the comfort station.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC COMFORT ST SODO

1127867

3. PROJECT JUSTIFICATION

There is no permanent restroom facility available for drivers at this location. King County Metro is committed to improving the availability of operator comfort stations by providing restroom facilities at operator layovers. Following a State of Washington Labor & Industries (L&I) audit in 2014, Metro established its Comfort Station Policy as part of its mitigation to improve restroom access for its operators, and is consistent with Metro's strategy of "Enabling Employees To Do Top Quality Work". This policy defines acceptable facilities and the maximum distance from the layover. Permanent, constructed facilities are planned only when other alternatives, like use agreements with commercial establishments, are not available. This project supports 20 layover spaces on the SODO busway with the addition of compliant restroom facilities.

4. PROJECT BENEFITS/OUTCOMES

The benefit/outcome of this project is a new driver comfort station at this location to support a safe, healthy work environment. Comfort Stations on the SODO busway (5th Avenue south of Royal Brougham) would provide much needed layover space as well as easily accessible in-service facilities.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$1M is being reappropriated from project 1127330 COMFORT STATIONS to fund or partially fund this project. The budget request is based on the construction bid received for the project in summer 2018.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Operating budget to be impacted by additional maintenance for the new comfort station.

8. PROJECT STATUS

This project is ongoing from 2017-2018. Final design and permitting is complete, and construction is intended to start in mid-2018, with in-service date in 2019.

9. ALTERNATIVES ANALYSIS

Permanent, constructed facilities are planned only when other alternatives, like use agreements with commercial establishments, are not available. Alternatives that were analyzed included the plan described herein and also to cease use of the SODO Busway as a layover location, which was found to not be a viable option.

10. OTHER AGENCY INVOLVEMENT

The SODO Busway requires an inter-agency agreement with WSDOT and coordination with Sound Transit.

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$700K is being reappropriated from project 1127330 COMFORT STATIONS to fund or partially fund this project. The budget request is based on an engineer's estimate for construction at the time of bid in summer 2018.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Operating budget to be impacted by additional maintenance for the new comfort station.

8. PROJECT STATUS

This standalone project is ongoing from 2017-2018. Final design and permitting is complete, with construction scheduled for completion and the unit in service in 2019.

9. ALTERNATIVES ANALYSIS

Permanent, constructed facilities are planned only when other alternatives, like use agreements with commercial establishments, are not available. Alternatives that were analyzed included the plan described herein and also use of existing onsite public restroom, which was found to not be a safe condition for Metro drivers.

10. OTHER AGENCY INVOLVEMENT

The Tukwila International Boulevard Station site is owned by Sound Transit, and an inter-agency agreement is in process for the new comfort station.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The King County Green Building Ordinance is being followed which has identified energy reduction, compact development footprint, and material recycling opportunities. This project will improve energy efficiency consistent with the 2010 Energy Plan, compared to previous Metro comfort station projects. The project anticipates implementing energy efficient heating, ventilation, and water use design for the comfort station. The project has the opportunity to advance Metro's sustainable infrastructure goals.

NARRATIVES

TDC CPS LOW VOLT COMM RELOC

1128656

1. CURRENT PROJECT SCOPE

Convention Place Station (CPS) Low Voltage Communication Equipment Relocation - This project involves demolition and relocation of existing Transit Control Center/Communications Room at CPS by the Washington State Convention Center's (WSCC) contractor to facilitate construction sequencing. This project scope involved the relocating of the existing equipment located in the current Communication Room which resides in the cut and cover area at CPS. The systems that are going to be relocated are telephone system, radio and communication system, fire detection, protection, SCADA, security and data systems. All of the new systems will be duplicated and located in prefabricated building to be located inside the Downtown Seattle Transit Tunnel (DSTT). This project is part of a larger body of work at CPS.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A.

3. PROJECT JUSTIFICATION

Existing TCC Room houses critical equipment/systems for Metro bus service and Sound Transit rail service. Its functionality cannot be compromised or interrupted. This project is required to continue transportation services in the Downtown Seattle Transit Tunnel (DSTT) for Metro and Sound Transit. The current location of the Communication Room is within the property lines of land that has been sold to Washington State Convention Center (WSCC) for development.

4. PROJECT BENEFITS/OUTCOMES

This benefit to relocating the Communications room is that it has reduced the amount of equipment needed for Metro operations once buses leave the tunnel. It also has significantly reduced the complexity of Communications/SCADA relocation and avoids most of the need to design, procure, install, test and commission duplicated hardware and software.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC CPS LOW VOLT COMM RELOC

1128656

5. BUDGET REQUEST BASIS

The budget request supports the following activities: develop, negotiate, and manage development of all agreements with external stockholders and design, oversight, and construction of this project. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$8.2 M is being reappropriated from project 1028624 TDC TOD CONVENTION PLACE to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

The current location of the CPS is easily approached by driving directly to the electrical room where the unit is housed, the new location does not allow easy access for the maintenance and inspection crews and will not be accessible by vehicles on a day-to-day basis. As a result, this will result in additional costs to the operating budget. A negotiation with ST still needs to be completed regarding the driving access through the DSTT for extensive maintenance after the buses leave the tunnel. However, for general maintenance, access to the facility will be through a pop-up hatch on Ninth Avenue.

8. PROJECT STATUS

Project is in progress and construction of KC elements are currently roughly at 80% complete.

9. ALTERNATIVES ANALYSIS

There were a number of alternatives considered, from incorporation of the communication room into the Communication room of the ST's Pine Street Power room, to the relocation of the unit to a new property that would be procured for this purpose. Ultimately the current location was preferred by transit, as the property is owned by King County Metro and there were no additional costs or time delays for land procurement.

10. OTHER AGENCY INVOLVEMENT

The City of Seattle and Sound Transit agencies will be involved.

11. ART ELIGIBILITY

Not Art Eligible, project is partially or wholly funded by Metro, but is managed by others and their art rules apply.

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

This project is part of a larger multi-project effort at the Convention Place Station that involves four separate projects: 1) construction of replacement traction power substation (complete), 2) relocation of communications and fire/life/safety systems (1128656); 3) an interim access ramp to allow for continuous bi-directional bus service from the Downtown Seattle Transit Tunnel (DSTT) to 9th Avenue until the end of bus/train joint operations in the DSTT (1131130), and 4) oversight, planning, permitting and management of Washington State Convention Center (WSCC) construction activities, execution of the real property transaction, and implementation of closure of the Convention Place Station.

NARRATIVES TDC DT SEATTLE LAYOVER FAC 1129343

1. CURRENT PROJECT SCOPE

Downtown Seattle Layover Facilities - This project includes development of bus layover facilities in the northern downtown area of the City of Seattle, generally in the South Lake Union area, and the southern downtown area of the City of Seattle, generally in the Pioneer Square/International District area.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC DT SEATTLE LAYOVER FAC

1129343

3. PROJECT JUSTIFICATION

Layover is an essential component of transit service. Time spent in layover enables operators to rest between trips and provides a schedule buffer so new trips can begin on time. Historically, bus layover in the downtown Seattle area has been accommodated on-street or in a small number of off-street facilities such as the Convention Place Station (CPS) and International District Station (IDS). In the coming years, as Metro removes routes from the Downtown Seattle Transit Tunnel, buses currently utilizing off-street layover at CPS and IDS will be shifted to other locations.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being discontinued and/or some budget from this project is being reappropriated to new standalone or smaller programmatic projects. Specifically, approximately \$18M is being disappropriated from this project and reappropriated to the following: \$17M to 1134206 TDC DT SEATTLE LF EASTLAKE and \$1M to 1134212 TDC DT SEATTLE LF NORTH AREA.

NARRATIVES TDC NE SEATTLE TRANSF ENV IMP 1129510

1. CURRENT PROJECT SCOPE

Transfer Environment Northgate ULink - This project will design and construct bus stop improvements identified in the "Work Plan for Improving the Transfer Environment at Locations Impacted by University Link Bus Integration" prepared in January 2016 by Metro Transit for the King County Council, and at bus stops with high rider transfers in other areas of King County in conjunction with the 2019 and 2020 Service Change plans. The package of improvements will include bus shelters, benches, lighting, trash receptacles, and real time information signs (RTIS). The Sound Transit Link Integration improvements identified within the Work Plan will be managed under a separate capital program focused on Sound Transit Link Station Integration.

2. PROGRAMMATIC PROJECT DISCUSSION

This program will construct a series of improvements as identified in the scope and referenced in "Work Plan for Improving the Transfer Environment at Locations Impacted by University Link Bus Integration"

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC NE SEATTLE TRANSF ENV IMP

1129510

3. PROJECT JUSTIFICATION

The integration between bus and rail services provides an opportunity for Metro to expand service and to increase rider choices to take transit to more destinations. Transfers by riders connecting between bus routes, and as well as intermodal transfers between rail and bus services, are expected to increase with the extension of rail services to Northgate. Metro's vision for key transfer locations is to provide an environment that is convenient, safe, and accessible, and include bus stops that are within reasonable walking distance and connected to a good sidewalk network.

4. PROJECT BENEFITS/OUTCOMES

This project will provide amenities for riders to make their wait between buses comfortable and safe. Amenities include bus shelters, benches, lighting, trash receptacles, and printed or electronic information for customers including schedules, maps, and a real time bus information sign.

5. BUDGET REQUEST BASIS

The budget is based on a planning level estimate using past cost estimates from projects that designed and constructed similar improvements. Key budget drivers include the installation and integration of RTIS and the amount of sidewalk work a project will include.

6. FUNDING AND REVENUE DISCUSSION

The project will seek partnership with other agencies where applicable, including the current roadway capital projects that the Seattle Department of Transportation (SDOT) is leading on NE 65th Street.

7. OPERATING BUDGET AND OTHER IMPACTS

Annual operating costs associated with the project when complete is under \$1,000 per RTIS location. Additionally there will be marginal increase in cost for utility power and bus shelter maintenance where applicable.

8. PROJECT STATUS

The bus stop improvements have been identified. 2018: Begin project prioritization and pre-design; 2019: Begin Design; 2019-2020: Construction.

9. ALTERNATIVES ANALYSIS

N/A (not a new project).

10. OTHER AGENCY INVOLVEMENT

The City of Seattle will include bus stop improvements at two stops identified in the Transfer Environment Improvements, in their NE 65th Street Vision Zero corridor project. This includes providing the foundation and electrical conduits for the RTIS. Metro is coordinating the design of these improvements with SDOT.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This program will complete an annual Green Building and Sustainability Report per the King 'Sustainable Infrastructure Scorecard and Guidelines' found on the King County Green Tools Website. As part of this process, this program completes a bi-annual Eco Charrette and completes a Life-Cycle Cost Assessment. This process also evaluates greenhouse gas emissions, erosions control, 30% diversion plans, energy reductions, air quality construction management plan, recycling and reuse, and minimal development footprint impacts.

14. OTHER CONSIDERATIONS (OPTIONAL)

Some bus stop improvements are in vicinity of the UW and others are beyond the UW, within the same Council District.

NARRATIVES TDC BICYCLE PARKING EXP 1129621

1. CURRENT PROJECT SCOPE

Bicycle Parking Expansion - This Program improves and expands bike parking at transit facilities, supporting the access to Transit vision of Metro's long-range plan, Metro Connects. Project includes design, site prep and permitting, purchase, and installation of equipment. Equipment will include on-demand (electronic access) bike lockers, bike racks and corrals, or other bike parking equipment suited to the site. Site prep may include relocating or removing older equipment. During 2019-2020, this program will fund bike parking improvements of various types at 10-15 locations throughout King County. The locations will be primarily at major transit facilities where Metro Connects anticipates significant shares of biking and walking access to transit. Additional locations will be identified on a continuing basis.

2. PROGRAMMATIC PROJECT DISCUSSION

This program assures continuing additions and improvements to bike parking as part of Metro's Access to Transit efforts planned in Metro Connects. Metro Connects calls for significant investments to support biking and walking to transit in order to increase the number and proportion of riders who reach transit by bike and on foot in all identified Transit Access Zones. This project supplements smaller bike parking installations that will be completed by 2020 (submitted separately). This project will become the on-going bike parking program.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC BICYCLE PARKING EXP

1129621

3. PROJECT JUSTIFICATION

Metro's existing bike lockers are in high demand, with wait lists at some locations. Metro Connects calls for significant investments in access to transit improvements including adding secure bike parking. More bike parking supply will support first/last mile connections to transit, increase the share of transit riders reaching transit by bike, reduce pressure for car parking at park-and-rides, manage capacity for bikes on-board bus racks. This project spends initially against a state grant awarded to help manage over-crowded Park & Rides. This program plan includes on-going bike parking needs to 2027.

4. PROJECT BENEFITS/OUTCOMES

The projects in this program will result in a net increase and wider distribution of high quality bike parking throughout the system, benefiting Metro and its riders. The intent is to meet existing demand and to address latent demand in underserved areas. On-demand (electronic) lockers offer flexibility to use any locker in the system at any time. These lockers enable user turnover, allowing Metro to serve more people per locker than traditional leased lockers. Providing secure bike parking helps manage auto parking demand at Park & Rides and in neighborhoods, addresses excess demand for bike racks on buses, and reduces localized congestion by shifting riders from driving to biking and transit. All of these features may attract more transit riders who can reach frequent transit service reliably at distances that may feel too far to walk but close enough to bike (the FTA bike shed is 3 miles).

5. BUDGET REQUEST BASIS

Costs are based on vendor pricing for similar equipment previously purchased and preliminary identified locations.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

This is a programmatic project. Preliminary site assessments conducted to identify needs and set priority locations. Working with Metro's Design & Construction and Transit Facilities Division work groups for design and site prep needs. Locations or order of installations may be revised after site design.

9. ALTERNATIVES ANALYSIS

Analysis has been performed to identify the most efficient and secure use of bike parking capacity available on the market.

10. OTHER AGENCY INVOLVEMENT

Local cities for permitting if required. WSDOT coordination for state-owned lots. Coordination with Sound Transit to adjust bike parking needs as their stations open.

11. ART ELIGIBILITY

NA. Art Eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

SCAP Goal 1: Transportation & Land Use. Priority Action: Expand Access to the Transit System. Adding bike parking and other non-motorized access projects are included as action items.

NARRATIVES

TDC INFRASTR ASSET MGMT

1129626

1. CURRENT PROJECT SCOPE

Infrastructure Asset Management - This program keeps assets in good, safe conditions through timely maintenance and repair and reinvests in assets when conditions and/or age affect its performance reliability. Infrastructure assets are defined as assets that function or operate collectively and/or systematically and can be situated in one or multiple locations. Qualifying targets for sub-projects in this master project are radio transmission sites, electric trolley overhead, diesel & gas fueling systems, bus shelters and security systems, to name a few examples.

2. PROGRAMMATIC PROJECT DISCUSSION

The work plan for infrastructure sub-projects through 2021 are based on inspections and condition assessments that rank and prioritize needs against Transit's ability to deliver service.

3. PROJECT JUSTIFICATION

This master project supports Transit Strategy 6.2.2 which states in part, "Provide and maintain capital assets to support efficient and effective service delivery," and is the backbone requirement of transit agencies that receive funds from the Federal Transit Authority. The work plan for infrastructure sub-projects through 2021 are based on inspections and condition assessments that rank and prioritize needs against Transit's ability to deliver service.

4. PROJECT BENEFITS/OUTCOMES

Renewed asset.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being discontinued and/or some budget from this project is being reappropriated to new standalone or smaller programmatic projects. Specifically, approximately \$6.1 M is being disappropriated from this project and reappropriated to the following: \$ 2.4 M to project 1125742 TDC 500KV SUB BREAKERS and \$600K to 1125765 TDC BROAD ST SUB X-FORMER and \$3.2 M to 1125765 TDC DSTT ELEVATORS RENOV.

NARRATIVES

TDC SITE ASSET MGMT

1129627

1. CURRENT PROJECT SCOPE

Site Asset Management - This program is one of five categorical fixed asset appropriations managed by the Power & Facilities section in Transit. "State of Good Repair" or SGR is the principle underlying Transit's asset management plan; to keep assets in good, safe conditions through timely maintenance and repair, and to reinvest assets when conditions and/or age affect their performance reliability. Site assets are defined as assets installed on, above or below the ground/property. It excludes buildings or structures. Qualifying targets for sub-projects in this master project are paving, drainage vaults, storm water systems, underground tanks, yard lighting, to name a few examples.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This master project supports Transit Strategy 6.2.2 which states in part, "Provide and maintain capital assets to support efficient and effective service delivery," and is the backbone requirement of transit agencies that receive funds from the Federal Transit Authority. The work plan for infrastructure sub-projects through 2021 are based on inspections and condition assessments that rank and prioritize needs against Transit's ability to deliver service.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being discontinued and/or some budget from this project is being reappropriated to new standalone or smaller programmatic projects. Specifically, approximately \$4.3 M is being disappropriated from this project and reappropriated to the following: \$1.8 to 1131793 TDC NB I-5 RETAIN WALL and \$2.2 to 1121955 TDC P&R LIGHTING REPLACE.

NARRATIVES

TDC BUILDING ASSET MGMT

1129628

1. CURRENT PROJECT SCOPE

Building Asset Management - This program is one of five categorical fixed asset appropriations managed by the Power & Facilities section in Transit. "State of Good Repair" or SGR is the principle underlying Transit's asset management plan; to keep assets in good, safe conditions through timely maintenance and repair, and to reinvest assets when conditions and/or age affect its performance reliability. Building assets are defined as components within, over and beneath building structures. Qualifying targets for sub-projects in this master project are electrical systems, roof/skylights, HVAC systems, lighting, glazing (windows), and floors and subfloors, to name a few examples.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This master project supports Transit Strategy 6.2.2 which states in part, "Provide and maintain capital assets to support efficient and effective service delivery," and is the backbone requirement of transit agencies that receive funds from the Federal Transit Authority. The work plan for infrastructure sub-projects through 2021 are based on inspections and condition assessments that rank and prioritize needs against Transit's ability to deliver service.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being discontinued and/or some budget from this project is being reappropriated to new standalone or smaller programmatic projects. Specifically, approximately \$7 M is being disappropriated from this project and a portion of this is being reappropriated to the following: \$900 K to 1131481 TDC BB EMERG LIFT REPL; \$400 K to 1133368 TDC CSC FRAME RACK, and \$700K to 1127241 TDC SB BUS WASH VAC REPL.

6. FUNDING AND REVENUE DISCUSSION

NARRATIVES

TDC SGR PROGRAM MGMT

1129630

1. CURRENT PROJECT SCOPE

State of Good Repair (SGR) Program Management - This project includes the planning for programs and projects within the SGR Sub Portfolio and includes prioritization of projects within programs, feasibility studies, exploration of funding and partnership opportunities, and consideration of benefits of the various projects within the programs. This project also involves monitoring of projects for progress and changes in scope, schedule, and budget; adapting other projects within the programs to maintain the program benefits anticipated in a coordinated and complementary manner; and tracking interdependencies and coordinating with projects in other programs. Program management activities will also be responsible for ensuring adequate coordination with Vehicle Maintenance and Operations Divisions internal to Metro to meet their needs and mitigate impacts to operations during design and construction.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC SGR PROGRAM MGMT

1129630

2. PROGRAMMATIC PROJECT DISCUSSION

The State of Good Repair Sub Portfolio contains the following programs: Building Envelope, Building Systems, Equipment, Infrastructure, Site and Paving, and SGR Administrative functions to ensure compliance with FTA requirements. Staff will conduct program management activities including: prioritization of projects within programs, feasibility studies, exploration of funding and partnership opportunities, and consideration of benefits of the various projects within the programs. Monitor projects for progress and changes in scope, schedule and budget and adapt other projects within the programs to maintain the program benefits anticipated in a coordinated and complimentary manner. Track interdependencies and coordinate with projects in other programs.

3. PROJECT JUSTIFICATION

Coordination of these programs is critical to leveraging funding opportunities with other agency partners and improving route and customer experience improvements that support existing and expansions of service. All activities are devoted to moving capital projects and programs forward expeditiously into design and completion.

4. PROJECT BENEFITS/OUTCOMES

All activities are devoted to moving capital projects and programs forward expeditiously into design and completion. Benefits include setting projects on a path of steady progress towards completion, identifying and addressing flaws and risks where possible in advance of passing on to a project manager for design. Work done to improve scope and schedule will help define needed staff resources so that projects do not move into design prematurely until resources are available. In many cases, programming will work to package projects so they can be implemented concurrently, minimizing impact to operations to the extent possible.

5. BUDGET REQUEST BASIS

The budget request is based on staffing in the capital planning and program management organization chart responsible for the capital planning and program management duties within the State of Good Repair Sub Portfolio. A modest amount of professional services are included to augment staff expertise. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, some budget from this project is being reappropriated to new standalone or smaller programmatic projects. Specifically, approximately \$9.2 M is being disappropriated from this project and reappropriated to the following: \$4 M to 1028795 TDC TAMP PROGRAM ADMIN; \$4.2 M to 1111778 TDC FACILITY CONDITION ASSMT; and \$1 M to 1111780 TD ASSET MGMT INTEGRATION.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Ten percent of the staffing costs are assumed to be born by the operation budget.

8. PROJECT STATUS

Ongoing project.

9. ALTERNATIVES ANALYSIS

Alternatives, if available, will be analyzed as part of the pre-design phase for all State of Good Repair works.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, capital planning project

12. EQUITY AND SOCIAL JUSTICE IMPACT

ESJ consideration is part of the prioritization process of projects and the benefits expected from project implementation. Program managers are responsible for ensuring benefits are achieved through implementation of projects within the programs.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC SGR PROGRAM MGMT

NARRATIVES TDC SOUTH KING BASE 1129631

1. CURRENT PROJECT SCOPE

South King Base (formerly known as 8th Base) Construction - This project will include the search for and purchase of suitable property on which a new bus base can be built as well as planning, pre-design, and design of the new base. The 10 year funding is to prepare us to be ready to construct for an opening as early as 2030, pending confirmation of need based upon monitored fleet growth and electric bus integration efforts, thereby enabling Transit to realize the long range plan for service by supplying more long-term base capacity and a fully electric fleet.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC SOUTH KING BASE

1129631

3. PROJECT JUSTIFICATION

The Puget Sound region is expected to grow by approximately 1 million people and 850,000 jobs in the next 25 years. For the region to meet future transportation demand, the Puget Sound Regional Council's Transportation 2040 Plan identifies the need for all transit agencies to double their ridership. Per Metro's Long Range Plan, that means adding 70% more service hours than currently provided, through an expanded bus fleet. To support the expanded fleet, Metro needs to site and construct at least two new bases. High levels of growth are currently centered in the urban areas, particularly Seattle, but are forecasted to extend into more affordable suburban areas—something that is already beginning to occur, especially in south King County. Thus, the significant increase in service projected in south King County results in this area being the target for the next new base.

Due to the region's escalating prosperity, demand for industrial properties in the Puget Sound region, and especially the Kent Valley and environs, continues to increase. Property prices are increasing and large parcels are becoming significantly less available. With investors moving into the industrial market, it is likely that this trend will continue, making it increasingly difficult for Metro to both find and afford property for a new base in the future.

4. PROJECT BENEFITS/OUTCOMES

- 1) Operational base with battery-electric charging capacity for 250 buses
- 2) Support of Equity and Social Justice by providing much needed affordable transit service to diverse communities living and, in some cases working in, more affordable, but growing, suburban areas; and by removing transportation barriers that directly affect equal service access to higher compensating jobs, higher education, housing, advanced medical care, commerce and recreation.
- 3) Support of Strategic Climate Action Plan by providing mass transit to growing communities, thereby reducing carbon pollution footprint and maintaining sustainable transportation choices, along with advancing Metro's goal of a zero emission fleet.
- 4) Support economic growth by bringing new jobs to diverse communities.

5. BUDGET REQUEST BASIS

The requested budget accounts for the activities and costs associated with the property search, evaluating suitability, negotiations, feasibility studies, title reports and ALTA surveys, environmental due diligence, entitlements and appraisals/review appraisals, and the purchase prices. Work will be conducted by internal staff with consultant support. Real estate consultants provided estimates of property value. External relocation experts were consulted for costs of typical relocations. Estimates for other external services, such as title, appraisal, environmental due diligence, were provided by internal staff with experience procuring and overseeing these services. Staff also provided estimates of staff time required to conduct all property purchase activities. Design cost utilized agency metrics and expertise. Construction cost were developed in partnership with a third party consultant. The scope has not been modified from its 2017-2018 biennium plan.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Additional staff will be required to operate the base, maintain the vehicles, and operate the vehicles.

8. PROJECT STATUS

Ongoing. Notice to proceed has been given for the property search and conceptual planning contract for future South King County Base. Presentation to Council of recommended property(ies) is expected to occur Q3 2020. Upon Council approval, activities to acquire the selected property(ies) is next, followed by planning, pre-design, and design of the new base with a targeted operational readiness of 2030.

9. ALTERNATIVES ANALYSIS

Alternatives considered were to do nothing and to expand other existing Metro bases. Expansion of North Base and Bellevue/East base had fatal flaws; South Base and Central Base expansion were feasible, but not enough for the service growth of 70% that is shown in Metro Connects; and expansion at the other Metro bases were considered to have fatal flaws. Modest expansion of Central Base is currently planned to augment new base construction.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC SOUTH KING BASE

1129631

10. OTHER AGENCY INVOLVEMENT

The Transit Division leads this project with assistance from the Prosecuting Attorney's Office. The latter will also lead any condemnation efforts, if this strategy is used. External agencies include FTA (review of property purchases) and the property's jurisdiction (entitlements). The FTA reviews property purchases on which FTA-supported projects may be located. In this case, subsequent capital projects needed to develop base functionality may have FTA financial participation and, therefore, trigger federal review of underlying land purchases.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will enable Transit to improve service to a growing minority, low-income, and English as a second language population in south King County.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project provides mass transit to growing communities, thereby reducing carbon pollution and maintaining sustainable transportation choices and supporting zero emission fleets.

14. OTHER CONSIDERATIONS (OPTIONAL)

This project is part of the Operational Capacity Growth program plan. The plan includes: (1) Construction of a 125 bus capacity interim base on King County Tukwila Extension Site; (2) A parking expansion at Central Base and accompanying body shop to vehicle maintenance bay conversion and design/construction of a designated body shop to increase central capacity by 90 buses; (3) Construction of a permanent 250 bus capacity base on the existing King County Metro South Annex, including temporary relocation of safety and training facilities to leased space; and (4) Construction of a permanent 250 bus capacity base on yet-to-be acquired land on South King County.

NARRATIVES

TDC MOVE SEATTLE RR EXP

1129632

1. CURRENT PROJECT SCOPE

Move Seattle RapidRide Expansion - This project begins Metro's activities to expand the RapidRide program throughout King County. Corridors for the next RapidRide lines to be implemented in the 2019 - 2025 timeframe have been identified in Metro Connects, King County Metro's draft long range plan.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

With the implementation of 13 new RapidRide lines identified in Metro Connects, King County's draft long range transportation plan, Metro will expand the amount of RapidRide service throughout the county. The experience with the A - F lines has shown that creating a transit option that is frequent, easy to understand, and "the best of Metro" makes transit an attractive transportation alternative for the people of King County. As such, RapidRide will continue to bring new riders to transit and existing riders will use transit more often.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being discontinued and/or some budget from this project is being reappropriated to new standalone or smaller programmatic projects. Specifically, approximately \$4 M is being disappropriated from this project and reappropriated to the following 1132324 TDC MADISON RR.

NARRATIVES	TDC CCMP 2019 PROGRAM	1129633
------------	-----------------------	---------

1. CURRENT PROJECT SCOPE

Center City Mobility Program (CCMP) 2019 - This project plans, designs, and implements a set of multi-modal transportation capital investments, designed to keep people and the economy moving during a period when major public and private construction projects will reduce travel and roadway capacity (2018-2023). The capital investments will be completed by 2019 in order to coincide with the end of joint bus-rail operations in the Downtown Seattle Transit Tunnel. Program elements will be implemented jointly by partner agencies in several broad categories, including: 1) signal improvements on Second and Fourth avenues, including the addition of dedicated vehicular turn signals to separate conflicting pedestrian and vehicular movements, improve safety, and provide corridor efficiencies for transit operations; 2) a new transit pathway on Fifth and Sixth avenues to increase transit capacity, speed, and reliability for northbound buses; 3) public realm and user experience improvements for commuters, residents, and visitors of downtown Seattle to enhance safety at street crossings, add lighting, and activate public spaces around transit hubs; 4) transit hub improvements including new and improved bus stops and pedestrian wayfinding at key transfer locations throughout downtown Seattle, at the Montlake Triangle, and at the International District/Chinatown Station; and 5) other strategies to help urban goods delivery, motorists, and commuters.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC CCMP 2019 PROGRAM

1129633

2. PROGRAMMATIC PROJECT DISCUSSION

This is a project of the One Center City (OCC) program of mobility improvements described in detail at: onecentercity.org. The OCC program represents a \$30M + investment in capital improvements by the funding agencies of Metro Transit, the Seattle Department of Transportation, and Sound Transit and formalized by a funding agreement. The OCC program also includes the Seattle Office of Planning and Community Development (OPCD) and the Downtown Seattle Association (DSA), as non-funding agency partners.

3. PROJECT JUSTIFICATION

In 2019, buses will no longer be able to operate in the Downtown Seattle Transit Tunnel (due in part to the closure of Convention Place Station to accommodate the expansion of the Washington State Convention Center), construction related to the expansion of Sound Transit Link light rail service through the East Link project, and to provide more capacity in the tunnel to accommodate ongoing increases in Link light rail services.

OCC partner agencies have agreed to work cooperatively to implement a broad array of multi-modal solutions to address the impacts of population growth and development of large-scale construction projects in order to maintain downtown and regional viability.

Without such investment (the do-nothing alternative) Metro and other regional transit partners, and their riders, would experience:

- Longer travel times and less reliable travel for bus riders and vehicle drivers (up to 40% longer than 2017 baseline conditions).
- More passengers waiting on already busy sidewalks
- Additional transit operating cost estimated at over \$4.5M annually for Metro, and an additional \$2.2M annually for other transit providers

4. PROJECT BENEFITS/OUTCOMES

The OCC program expects to result in the following outcomes:

- Improve safety and security: affecting all users of Center City streets, particularly those who are most vulnerable.
- Keep people moving on downtown streets: improve customer experience by keeping people and goods moving using the most space-efficient means for mobility.
- Use Limited Street Space wisely: use space wisely to ensure efficient and reliable movement of people and goods.
- Provide efficient travel options: provide a variety of affordable, sustainable, and convenient alternative travel modes to driving alone.
- Enhance public realm and pedestrian spaces: provide a vibrant and inviting public realm that is accessible and welcoming to people of all ages and abilities.

5. BUDGET REQUEST BASIS

The budget includes Metro's in-kind program expenses for staff, equipment, and contracts procured by King County for the program elements included in this request, plus an estimated \$5.6 million payment to another program partner, Seattle Department of Transportation, whose total in-kind expenses exceed their one-third share in total program costs. Additional project-level scope, schedule, and budget information for each component project element will be included in the OCC Program Management Plan. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being discontinued and/or some budget from this project is being reappropriated to new standalone or smaller programmatic projects. Specifically, approximately \$12 M is being disappropriated from this project and reappropriated to the following: \$100K to 1132367 TDC MONTLAKE HUB and \$1.4 M to 1132532 TDC OCC OFF BOARD FARE EQ. The remainder is being disappropriated.

6. FUNDING AND REVENUE DISCUSSION

The 2017-2018 approved Metro Transit budget included capital funding for this project within the Appropriation A00684 CCMP 2019 Program.

The set of program 17 OCC program elements included here, totaling \$30 million, will be funded equally by partner agencies Metro Transit, Seattle Department of Transportation, and Sound Transit, under a joint-agency funding agreement expected to be executed in 2018.

7. OPERATING BUDGET AND OTHER IMPACTS

Projects included in this request will result in approximately \$600,000 new transit assets (primarily bus shelters and signs) which are incidental to the existing Bus Zone Shelter program.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC CCMP 2019 PROGRAM

1129633

8. PROJECT STATUS

The project elements are currently in the pre-design phase. Agencies have established responsibilities for project deliver which are detailed in the OCC Program Management Plan.

9. ALTERNATIVES ANALYSIS

A two-year planning process, undertaken jointly by program partners evaluated many project alternatives across several metrics that include transit and vehicular travel time impacts, improvements to the passenger experience, and pedestrian enhancements. This alternatives analysis is described in the One Center City Near Term Action Plan Report, April 2018, published jointly by program partners.

10. OTHER AGENCY INVOLVEMENT

The project is sponsored through the One Center City partnership of Metro Transit, Seattle Department of Transportation, Sound Transit, Seattle Office of Planning and Community Development, and the Downtown Seattle Association.

Extensive public outreach has included meetings with a 35-member advisory group representing a variety of region perspectives, over 80 briefings with stakeholder and community groups, broad public outreach including surveys and on-line engagement, and presentations to agency leadership (including a 5 member Executive Steering Committee, comprised of executive-level staff from each partner agency) and governing bodies, including the King County Council Transportation, Economy and Environment (Tree) committee and the Regional Transit committee (a joint-jurisdictional body that makes recommendations to the King County Council on countywide policies and plans for public transportation services operated by King County).

11. ART ELIGIBILITY

N/A , Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The One Center City program supports the Strategic Climate Action Plan strategies by increasing transit capacity, thereby resulting in a long-term increase in the use of transit county-wide. Project components that will be provided by Metro Transit, including passenger facilities infrastructure, will use Metro's standard set of amenities, which have been designed to use sustainable strategies. Green Building Reporting requirements will be followed for project components that are provided by Metro Transit.

14. OTHER CONSIDERATIONS (OPTIONAL)

This project request does not include commitments made by King County Metro management to use a portion of the existing CCMP 2019 Program capital project appropriation 1129633 to fund approximately \$5.5 M in expenses referred to as the CPS Layover Loop, as described in an email summary include in the backup tab.

CPS-1. Roadway channelization, striping, signage

CPS-2. Traffic signal and other ITS modifications

CPS-3. Civil street improvements (including: Pavement, Curbs, Grading, Bus Shelters foundations)

CPS-4. Traffic Control during construction

CPS-5. Removal and restoration of unused transit facilities

CPS-6. Safety improvements throughout all OCC project element

NARRATIVES TDC AB VM TM NRV HVAC REPL 1129634

1. CURRENT PROJECT SCOPE

Atlantic Base Maintenance Building Heating, Ventilation and Air Conditioning (HVAC) Replacement - This project includes replacement of the Atlantic Base Vehicle Maintenance Building air conditioning and vehicle exhaust system and other central campus HVAC works including HVAC air handlers and vehicle exhaust system in Non Revenue Vehicle Building; air handlers, exhaust, and ductwork in Tire and Millwright Shop; and air handler units in Transit Control Center.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC AB VM TM NRV HVAC REPL

1129634

3. PROJECT JUSTIFICATION

King County Metro Transit utilized a comprehensive Facilities Conditions Assessment Program conducted by 3rd party engineers to assess and monitor the conditions of our facilities. From these assessments, a Transit Facilities Conditions Needs Report is generated containing a prioritized ranking of assets needing major rehabilitation or replacement. State of Good Repair Program planners then sort and package those needs into efficient projects and schedule those projects to create a sustainable, level loaded, State of Good Repair Program to promote consistent State of Good Repair investment levels and maintain the safe and efficient functionality of our assets. This project's assets have an average score of 2.5 on the 5 point Transit Economic Requirements Model. Failure to adhere to the program plan will generate a backlog of State of Good Repair work, leading to increased spending on asset replacement, increased risk of failure and loss of service, and greater risk to the County.

4. PROJECT BENEFITS/OUTCOMES

Completion of this project will result in a renewed asset with a refreshed lifecycle. Asset replacement is a normal part of asset maintenance and is essential to maintaining our system in a state of good repair to minimize unexpected corrective maintenance or emergency replacement cost and prevent service disruptions or challenges for our customers.

5. BUDGET REQUEST BASIS

2019-2020 appropriation is expected to support final design, implementation and closeout of the project. The Transit Facilities Conditions Needs Report provides rough order of magnitude replacement costing, generated by third party engineers and incorporating metrics for soft cost factors.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Effective Asset Management and Lifecycle Replacement will reduce operational maintenance cost for unplanned and corrective maintenance.

8. PROJECT STATUS

Ongoing. Pre-Design is underway and expected to transition to design at the end of the year.

9. ALTERNATIVES ANALYSIS

Alternatives, if available, will be analyzed as part of the pre-design phase for all State of Good Repair works.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The project will comply with King County Energy Plan requiring energy calculation of Life Cycle Cost Analysis (LCCA) and will reduce energy consumption.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

TDC ST LINK STATION INTEGR

1129636

1. CURRENT PROJECT SCOPE

Sound Transit Link Integration - This program will provide King County Metro and Sound Transit (ST) with a coordinated effort to assist in the planning and design of Sound Transit's Link, Sounder, and bus rapid transit capital projects to ensure seamless integration among different modes. This includes planning of new light rail, commuter rail, and bus rapid transit stations and other passenger facilities. Well-designed bus-rail integration is a critical component of a successful regional high-capacity transit network. This scope also includes planning and design associated with the ST program for access improvements at existing Sound Move and ST2 stations. The access improvements projects include improvements to bus, pedestrian, and bicycle access to Sound Transit Move and Sound Transit 2 stations. As Sound Transit projects move through construction, Metro will develop separate project budgets to design and construct adjacent bus stop (station area) improvements. The Hubs Program (beginning in 2021) will execute the predesign through closeout phases of Metro's station area improvements.

2. PROGRAMMATIC PROJECT DISCUSSION

This program is ongoing.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC ST LINK STATION INTEGR

1129636

3. PROJECT JUSTIFICATION

It is essential for King County Metro to actively participate in the planning, environmental review, and design of Sound Transit's Link, Sounder, and bus rapid transit capital projects in order to deliver well-designed and seamless connections between services. This is consistent with the METRO CONNECTS vision of an integrated transportation system that connects people to opportunity, protects our environment, and knits together our growing cities.

4. PROJECT BENEFITS/OUTCOMES

The primary benefit of this program is to ensure seamless integration between Sound Transit and King County Metro, providing improved access and better connections for our shared customers. Advance planning and coordination will yield better access and mobility outcomes than in the past through these collaborative efforts and improved design. By participating in Sound Transit's projects, Metro can also position itself to leverage Metro capital investments to provide even greater benefit to the regional transit network and its users.

5. BUDGET REQUEST BASIS

The budget request for 2019-2020 is a planning-level estimate for Metro staff participation in Sound Transit's capital program. For each Sound Transit ST3 or ST2 project, staff time was estimated based on project schedule, including major milestones and deliverables, to aggregate into total estimated full time staff equivalents that comprise the program's appropriation request. King County Metro's capital investments will be funded via separate projects in the Hubs Program. The 2018 budget is inclusive of ST integration planning activities and Northgate/U Link improvements design and construction. For 2019 Northgate/U Link improvements will become a new project with its own appropriation.

6. FUNDING AND REVENUE DISCUSSION

This is a local funds request with additional reimbursement from Sound Transit. Through a Transit Integration Agreement signed by Sound Transit and King County in May 2018, Sound Transit will reimburse King County Metro for up to two full time staff for 2018 and 2019, with annual review by both parties to update and amend the financial arrangement. The agreement will only reimburse time spent by traffic engineering, service planning, and civil engineering staff and only for ST3 projects. Sound Transit agreed to revisit the funding amount in January of 2019.

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

Sound Transit's ST3 and ST2 capital projects are in various phases of planning, design, and construction. Metro's participation with regard to this program is at the planning level across all of these projects. This work began in 2017, is ongoing in 2018, and will continue for the 2019-2020 biennium and beyond due to the long horizon periods of Sound Transit capital projects. Metro does not produce design concepts or manage the construction of these projects, but rather reviews technical documents and provides input. This is especially true for some of the project delivery methods like design-bid-build, where the contractor can restart project planning with a new concept in the design phase. Other stations, like the Mercer Island Station, have seen radical design changes to the bus program even during the construction phase.

9. ALTERNATIVES ANALYSIS

As this program is a partnership with Sound Transit, who is leading the planning, environmental review, and design of ST3 and ST2 capital projects, an alternatives analysis is not part of the scope of this project. With King County Metro as an interagency partner to Sound Transit, the planning, design, and construction of capital projects will continue with or without Metro participation. In the past, when Metro hasn't been engaged in these projects, the result has been suboptimal bus-rail transfer environments.

10. OTHER AGENCY INVOLVEMENT

Sound Transit sets the timelines for these projects and provides technical documents for review by Metro. Sound Transit and King County Metro have reached an agreement on the provision of Metro staff to participate in ST3 projects and sets a framework for ongoing ST2 participation. Up to full time equivalent staff will be reimbursed by Sound Transit as part of the agreement.

11. ART ELIGIBILITY

Not Art Eligible, project wholly or partially funded by Metro/Metro grant funding but project managed by another jurisdiction or public agency; the managing jurisdiction or agency is responsible for applying their art rules

NARRATIVES TDC SOUTH BASE EXPANSION 1129642

1. CURRENT PROJECT SCOPE

South Base Expansion - The primary scope is to purchase property and buildings located at 12400 E. Marginal Way S., in Tukwila, Washington. This property is located just south of the South Transit Operating Base. This acquisition will enable the Transit Division to increase bus base capacity and remedy overcrowded conditions of the support functions presently located around South Base. A secondary scope is to relocate various work groups into the acquired building and demolish the training facility for reuse as interim bus parking in order to begin increasing capacity at the Base.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC SOUTH BASE EXPANSION

1129642

3. PROJECT JUSTIFICATION

Metro's Long Range Plan forecasts a 70% increase in service by 2040. To support this service, the bus fleet will expand. This places capacity demands on all of Transit's existing seven bus bases, of which only Central Base and South Base have opportunities to add more property. At present, six of the seven bases are already at overcapacity, operating at tight maintenance levels in order to not impact current service delivery.

4. PROJECT BENEFITS/OUTCOMES

- 1) Expansion Parcel adjacent to South Base to support future expansion needs and interim base capacity needs.
- 2) Support of Equity and Social Justice by providing much needed affordable transit service to diverse communities living and, in some cases working in, more affordable, but growing, suburban areas; and by removing transportation barriers that directly affect equal access to higher compensating jobs, higher education, housing, advanced medical care, commerce and recreation.
- 3) Support of Strategic Climate Action Plan by providing mass transit to growing communities, thereby reducing carbon pollution and maintaining sustainable transportation choices, and supporting zero emission fleets.
- 4) Support of economic growth by bringing new jobs to a diverse community.

5. BUDGET REQUEST BASIS

After the procurement of Group Health property, the base expansion in South King County will continue in two separate projects: 1134218 TDC INTERIM BASE and 1134223 TDC SOUTH ANNEX BASE. The disappropriated budget (\$15.8M) from this project is re-allocated as follows: \$10 M to 1134218 TDC INTERIM BASE, \$4.8 M to 1134223 TDC SOUTH ANNEX BASE, \$600K to 1134213 TDC EAGLE TRAILER LEASE, and \$400K to 1134217 TDC GH GARAGE REPAIR.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

NA

8. PROJECT STATUS

Property has been purchased in Q2 2018. Concept studies and alternatives for future use are underway in Q3 & Q4 2018, continuing into 2019.

9. ALTERNATIVES ANALYSIS

Alternatives considered were to do nothing and to expand other existing Metro bases. South Base and Central Base expansion were feasible, and expansion at the other Metro bases were considered to have fatal flaws.

10. OTHER AGENCY INVOLVEMENT

The Transit Division leads this project with assistance from the Prosecuting Attorney's Office. The latter will also lead any condemnation efforts, if this strategy is used. External agencies include FTA (review of property purchases) and the property's jurisdiction (entitlements). The FTA reviews property purchases on which FTA-supported projects may be located. In this case, subsequent capital projects needed to expand base functionality may have FTA financial participation and, therefore, trigger federal review of underlying land purchases.

11. ART ELIGIBILITY

NA, Art Eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will enable Transit to improve service to a growing minority, low-income, and English as a second language population in south King County.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project provides mass transit to growing communities, thereby reducing carbon pollution and maintaining sustainable transportation choices and supporting zero emission fleets.

NARRATIVES

TDC YESLER WAY ELECTRIFIC

1129643

1. CURRENT PROJECT SCOPE

Yesler Way Electrification - This project included the first two phases of a project that would construct approximately 0.6 miles of new trolley overhead wire and support structures along Yesler Way between Third Avenue and 8th Avenue, along 8th Avenue between Yesler Way and Fir Street, and along 9th Avenue between Fir Street and Jefferson Street. The work under this appropriation involved the planning and predesign phases required to proceed with the design of the construction of the identified trolley system improvements. The information from this effort will provide direction to management on the scope and costs of the proposed improvements including the requirements to provide support structures on the bridge over I-5. With management approval the project would be programmed to complete the design and construct the project under the following year budget cycle (2019-2020).

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Routes 3 and 4 are two of Metro's most productive routes serving approximately 3.5 million riders annually. The routes currently experience poor on-time performance due to constrained operations through a congested choke point on James Street near the I-5 ramp. If this project moved forward, trolley routes 3 and 4 could be routed via Yesler Way to avoid heavy congestion and provide more reliable operations. The expected impact of this project is improved speed and reliability of routes 3 and 4, providing a more attractive service to Metro riders. This request is justified in the 2017-18 biennium in the context of a host of projects that will bring even more congestion to downtown Seattle surface streets in the near future, including the expansion of the Convention Center, construction of a new waterfront Alaskan Way corridor, and end of joint operations in the Downtown Seattle Transit Tunnel. This request would also allow Metro to plan to more directly serve the Yesler Terrace redevelopment project with electric trolley buses, which is consistent with Equity and Social Justice goals. Providing improved electric trolley bus service is also consistent with the Strategic Climate Action Plan goals of improving transit ridership and reliability.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

In 2017 and 2018, Metro conducted public outreach and additional feasibility, travel time, and cost analysis of this project. That additional work identified substantial public concern about impacts of the project and that the potential travel time benefits would not be significant enough to justify the high cost of new infrastructure. Therefore, Metro is cancelling this project. The budget request disappropriates the bulk of the balance of the budget as this project has been discontinued.

NARRATIVES TDC CNTRL/ATL BASE EXP 1129644

1. CURRENT PROJECT SCOPE

Central Atlantic Base Expansion - This project comprises all the activities that will lead to the purchase and development of additional parcels of land adjacent to the Atlantic/Central Base. The development will include the construction of both interim and long term facilities to increase base capacity. Purchases of land will extend the base property, thereby enabling Transit to realize the long range plan for service by supplying more base capacity. The activities will enable Transit to implement the 2013 Atlantic-Central Base Master Plan which calls for 1) increasing bus parking and bus maintenance and 2) relocating non-direct base functions that will be displaced.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

NARRATIVES

TDC CNTRL/ATL BASE EXP

1129644

3. PROJECT JUSTIFICATION

The Puget Sound region is expected to grow by approximately 1 million people and 850,000 jobs in the next 25 years. For the region to meet future transportation demand, the Puget Sound Regional Council's Transportation 2040 Plan identifies the need for all transit agencies to double their ridership. Per Metro Long Range Plan, that means adding 70% more service hours than currently provided with an expanded bus fleet. High levels of growth are currently centered in the urban areas, particularly Seattle.

Except for Central and South bases, Transit's other five bases have little to no ability to expand. While the Long Range Plan urges the development of additional bases, the time-frame for building a new base and putting it into operation is approximately fifteen years. Thus, Transit's ability to meet all expansion needs in the next fifteen years rests with Central and South bases.

4. PROJECT BENEFITS/OUTCOMES

- 1) Additional parking, fueling, and washing capacity for 90 buses at Central
- 2) Support of Equity and Social Justice by adding much needed expanded and affordable transit service to diverse communities living and, in some cases working in, more affordable, but growing, suburban areas; and by removing transportation barriers that directly affect equal access to commute options for higher compensating jobs, higher education, housing, advanced medical care, commerce and recreation.
- 3) Support of Strategic Climate Action Plan by providing mass transit to growing communities, thereby reducing carbon pollution footprint and maintaining sustainable transportation choices and supporting zero emission fleets.
- 4) Support of economic growth by bringing new jobs to a diverse community.

5. BUDGET REQUEST BASIS

The requested budget accounts for the activities and costs associated with negotiations, feasibility studies, title reports and ALTA surveys, environmental due diligence, entitlements and appraisals/review appraisals, and the purchase prices. Work will be conducted by internal staff and consultants. The budget includes costs associated with condemnation, if a purchase/sale agreement cannot be achieved by negotiation. Real estate consultants provided estimates of property value. External relocation experts were consulted for costs of typical relocations. Estimates for other external services, such as title, appraisal and environmental due diligence, were provided by internal staff with experience procuring and overseeing these services. Staff also provided estimates of staff time required to conduct all property purchase activities. The budget is being reduced based on recent changes to the site plan (less new land acquisition) based on the updated base planning efforts.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

With the completion of Central Base Expansion in 2023, there will be added costs for additional staff of operators, vehicle maintenance, facilities maintenance, power distribution (battery-electric infrastructure for battery-electric coaches), training, and administration. These additional assets will also increase utility bills, asset insurance, and other associated costs for capital assets.

8. PROJECT STATUS

Ongoing. Work is currently underway for Central Base Expansion. National Environmental Policy Act (NEPA) study has been concluded, and Programming has begun.

Additional work for this effort includes alternatives analysis, retrofitting and/or tenant improvements, and construction of new facilities. Recent base planning activities have resulted in changes to planned expansion at the site.

9. ALTERNATIVES ANALYSIS

Alternatives considered were to do nothing or to expand other existing Metro bases. South Base and Central Base expansion were feasible, and expansion at the other Metro bases were considered to have fatal flaws.

10. OTHER AGENCY INVOLVEMENT

The Transit Division leads this project with assistance from the Prosecuting Attorney's Office. The latter will also lead any condemnation efforts. External agencies include FTA (review of property purchases) and City of Seattle (entitlements). The FTA (Federal Transit Administration) reviews property purchases on which FTA-supported projects may be located. In this case, subsequent capital projects needed to expand base functionality may have FTA financial participation and, therefore, trigger federal review of underlying land purchases. Since surrounding parcels being considered for acquisition are located in the City of Seattle, the city's land use and building codes determine whether and how Transit can utilize the properties for transit purposes.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

Transit service from the three bases that comprise Central Campus has the highest ridership and reaches many underserved communities where buses are the sole mode of travel in the Seattle proper area. There is a high demand for Seattle bus service. Sound Transit U-Link stations at minority and/or low-income communities compel more bus service for multi-modal connections. In addition, recent transportation studies indicate people who live in Seattle are driving less, some foregoing cars altogether, and relying on Metro and Sound Transit for mobility. Transit's ability to continuing serving Seattle underserved neighborhoods can only happen with expanding operational base capacity.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project will create a transit base expansion that is able to support zero-emission buses.

14. OTHER CONSIDERATIONS (OPTIONAL)

This project is part of the Operational Capacity Growth program plan. The plan includes: 1) Construction of a 125-bus capacity interim base on the King County Tukwila Extension site; 2) A parking expansion at Central Base, the accompanying body shop-to-vehicle maintenance bay conversion, and the design/construction of a designated body shop to increase Central Base capacity by 90 buses; 3) Construction of a permanent 250-bus capacity base on the existing King County Metro South Annex site, including temporary relocation of Safety and Training facilities to leased space; and 4) Construction of a permanent 250-bus capacity base on yet-to-be acquired land at South King County.

NARRATIVES TDC MC RR EXPANSION 1129747

1. CURRENT PROJECT SCOPE

Metro Connects RapidRide Expansion - This program is tied to Metro's efforts to expand its RapidRide system from the existing 6 lines to a total of 13 lines by 2027. Program activities include developing an overall program delivery plan, updating the branding and kit of parts for RapidRide and performing preliminary feasibility and scoping studies for candidate RapidRide corridors. Additionally, this budget covers the cost of the expansion program management including staff time.

2. PROGRAMMATIC PROJECT DISCUSSION

The METRO CONNECTS RapidRide Expansion Program includes 7 new RapidRide lines by 2027. Four lines will receive funding from the Move Seattle levy and be co-led with the City of Seattle.

3. PROJECT JUSTIFICATION

This project supports Metro's strategic service goals. This project will result in improved service and increased ridership along the corridors and support regional growth.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC MC RR EXPANSION

1129747

4. PROJECT BENEFITS/OUTCOMES

This project will contribute to the planning of 7 new RapidRide corridors. Historically RR corridors have been a successful way to increase ridership within a corridor area. Most of the previous 6 RapidRide lines have increased daily trips by more than 50% within the first few years of operations.

5. BUDGET REQUEST BASIS

This budget request is required to coordinate planning and management of seven of the identified RapidRide projects in the Metro Connects 2025 network. Detailed estimates for project costs have been developed using past agency experience delivering the six original RapidRide lines, along with a detailed work breakdown structure and resource-loaded project schedule identifying the cost associated with each individual component of RapidRide delivery. This budget request reflects the most updated project schedule. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being rescoped to represent planning and management activities and some budget from this project is being reappropriated to new standalone or smaller programmatic projects. Specifically, approximately \$7 M is being disappropriated from this project and reappropriated to the following: \$ 3 M to 1132325 TDC DELRIDGE BURIEN RR; \$2 M to 1132326 TDC RAINIER AVE MT BAKER DT RR; and \$250 K to 1132327 TDC SEATTLE RR LINE TBD. The remainder is being disappropriated.

6. FUNDING AND REVENUE DISCUSSION

This program is for program management, program planning and early work on yet to be future RapidRide corridors. This work is in support of the individual project budget requests for specific RapidRide lines.

7. OPERATING BUDGET AND OTHER IMPACTS

This capital project will involve planning for assets which, when implemented, will need to be maintained along the corridor. These future assets include shelters, real time information signs, trash bins and ORCA fare collection equipment.

8. PROJECT STATUS

The METRO CONNECTS vision outlined a goal of 13 new lines by 2025. After a careful review of agency delivery capacity, available funding for capital, service hour constraints, and partner capacity, the current CIP proposes 7 new lines by 2027. This change in program delivery pacing allows for a responsible rollout of the program that is sustainable over time and works within existing constraints.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

SDOT, ST, WSDOT and other local jurisdictions

11. ART ELIGIBILITY

Not art eligible, planning project only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project directly supports Goal Area 1 (Transportation and Land Use) in King County's Strategic Climate Action Plan and overall reduction in emissive pollution by promoting transit along these proposed RapidRide corridors. Capital assets built and installed along the corridor will meet King County's Green Building ordinance where required and allowable.

NARRATIVES TDC TR BUSINESS INTEL DATA 1129801

1. CURRENT PROJECT SCOPE

Transit Business Intelligence Resource Data (TBIRD) - This project implements a new, enterprise-class reporting platform to replace several limited-function, siloed, legacy reporting tools. TBIRD's initial scope does not cover the build out of Transit's entire data warehouse but aims to develop a foundational data warehouse structure and populate data from four source systems (GIRO HASTUS, Infor EAM, INIT Mobile Statistics and Asset Works FleetFocus M5). The core focus of TBIRD is the transit service network and the systems and performance metrics related to that service, including on-time performance, ridership, fare collection, asset costs, incidents, accidents and other historical performance data.

2. PROGRAMMATIC PROJECT DISCUSSION

NARRATIVES

TDC TR BUSINESS INTEL DATA

1129801

3. PROJECT JUSTIFICATION

The new platform will significantly advance Metro Transit's analytical capabilities to include data mining, data discovery, business intelligence and data visualization tools, including geo-spatial analysis and presentation. Staff across Transit will use TBIRD. The project will implement a technology platform which is intended to grow in the future with the addition of new data sources after the project itself is complete.

Metro Transit is highly dependent on multiple systems that collect or produce data about service delivery, including on-time performance, passenger counting, fare collection, customer complaints, incidents, accidents and other events. These data are analyzed in various ways throughout the organization: to report federally required performance metrics; to evaluate productivity and plan service enhancements; to determine capital investments such as fleet purchases and facility upgrades; to research complaints and respond to customers; to review operational trends and develop management priorities; and to provide decision makers with data and recommendations for informed policy decisions. Several applications that support these reporting needs are running on unsupported technology and need to be replaced. These applications have been implemented over many years, by different projects or initiatives, using older technology that is cumbersome to use, or no longer supported. The data are stored in different databases and cannot be analyzed in an integrated manner. Some systems collect data that are not readily accessible outside the operational system, or are available only by manual analysis, resulting in lost opportunities to derive potential insights or value. The lack of integration and outdated tools frequently limits Transit staff analysis and has stymied or constrained some potentially significant continuous improvement efforts.

In the 2009 Performance Audit, the King County Auditor recommended that Metro Transit create "cost reductions by improving planning via improved data analysis, revisions to its performance indicator reporting processes, and utilizing staff resources more efficiently." The lack of tools and access to data has hampered Transit's ability to fully respond to this finding. The TBIRD project will deliver an integrated, modern analytics platform that replaces legacy tools, incorporates multiple data sources, and provides new data and analytical requirements to meet the changing needs of the organization. This strategy and the project are aligned with KCIT's other business intelligence initiatives and goals.

4. PROJECT BENEFITS/OUTCOMES

The Transit Business Intelligence Resource Data (TBIRD) project will implement a new, enterprise-class reporting platform that replaces several limited-function legacy reporting tools. This project expects to realize the following benefits: (1) the new platform will significantly advance Transit's analytical capabilities to include data mining, data discovery, business intelligence and data visualization tools, geo-spatial analysis and presentation; (2) with TBIRD, Transit foresees using modern business intelligence tools, as well as continuous process improvements, to increase efficiencies and accountability in its bus services and operations; and (3) TBIRD will allow individual work groups and divisions within Transit to create their own reports, initiate data mining and discovery independent of KCIT, and prepare custom data analyses to improve their own groups' performance and identify opportunities for improvement.

The project will deliver capabilities in phases, with new data sources and tools coming online every six to twelve months. We have identified methods for provisioning four data sets into the cloud based data warehouse, and have scheduled an initial development period of 6 months, beginning in August of 2018. This project represents a new body of work for both Metro Transit and King County Information Technology and we intend to use the initial data warehouse development period to guide budgeting and schedule for the remainder of Metro Transits extensive (100 plus) catalog of data bearing systems.

5. BUDGET REQUEST BASIS

This is a planned phased appropriation project. The requested budget has been estimated based on the capacity of Metro and KCIT to manage the design and implementation of a data warehouse. Given the nature of this effort and the relative lack of experience at the County, Transit is taking a conservative approach to scope, with a goal of implementing as many data sources across Metro Transit as possible by the end of 2020, but Transit will request future funding in a separate project to complete the overall body of work.

6. FUNDING AND REVENUE DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC TR BUSINESS INTEL DATA

1129801

7. OPERATING BUDGET AND OTHER IMPACTS

Unknown at this time. Some software licensing and hardware support costs for legacy applications will be eliminated, but these savings will be offset by subscription and support costs for the new platform and business intelligence tools, which cannot be accurately determined at this time as costs are based on both storage and computational loads.

8. PROJECT STATUS

The project has completed its planning phase as of Q2 2018. We will develop the initial data warehouse structure and populate data from four source systems (GIRO HASTUS, Infor EAM, INIT Mobile Statistics and Asset Works FleetFocus M5) with implementation and rollout scheduled for end of January 2019. Proof of concept testing for business intelligence tools is currently underway.

9. ALTERNATIVES ANALYSIS

The KCIT Data Services team has reviewed alternatives for data warehouse architecture and design, and they are close to adopting a standard for cloud based, scalable data warehouse architecture. The TBIRD project plans to implement KCIT standard architecture and security models and build all data transfer functions on KCIT's standard platform, Informatica.

10. OTHER AGENCY INVOLVEMENT

The project will not directly involve other agencies. That said, other agencies such as Sound Transit, Seattle Department of Transportation and other jurisdictions are indirect stakeholders in the sense that they often request and use data about transit service and the performance of the transit network. A key project goal is to improve Transit's analytic capabilities and data accessibility, which will support future data requests from these partners.

11. ART ELIGIBILITY

Not Art eligible, technology project

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project is not required to complete an Equity Impact Review.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

CIO and PSB Critical Success Factors:

- CIO/PRB conditions

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

The TBIRD Project will support both the "Data Driven" and "Workforce Empowerment" objectives.

"Data Driven" – TBIRD will replace several unsupported and siloed reporting applications with an integrated, modern analytics platform. This will dramatically improve Transit's access to actionable data which supports improved decision making.

"Workforce Empowerment" - The project will democratize our data, allowing a wider audience within Transit to access information. In turn, this will enable a cross section of Metro Transit staff to identify and drive business improvements through data analysis currently unavailable to most teams.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC TR BUSINESS INTEL DATA

1129801

16. PROJECT COMPLEXITY

Medium business complexity due to: (1) rollout of new tools and technology to all business units with Metro Transit, and (2) new roles and responsibilities for operationalizing the Data Warehouse. Mitigation: The project will introduce an experienced vendor to host workshops and trainings for Metro Transit leaders and staff, focusing decisions on a scalable approach to adopting and implementing the capabilities for data driven decision making and analytics. An internal stakeholder group has been formed to collaborate on change management and long term operation of the system, in regards to business driven decisions that affect the availability of features within the data warehouse.

Medium technical complexity due to; (1) emerging technology for King County IT and Metro Transit and (2) a large volume of systems and data to incorporate into the data warehouse. Mitigation: The project team is fully engaged with KCIT standards development in this area. The project will adopt a common infrastructure architecture and security model in tandem with the Integrated Health data warehouse. The project team is adopting a bulk data loading strategy to rapidly connect large data systems to the data warehouse. Once systems become available, data scientist within Metro will partner with KCIT's data architect to design the interconnected Symantec layer of the warehouse. This approach allows a more efficient approach to data loading, allows access to data sooner, and will minimize the amount of rework required when building out the more expensive Symantec layers.

17. CAPACITY TO IMPLEMENT THE PROJECT

Prior Technology Projects: While King County has not built a data warehouse of this size and scope previously, the project team can adopt best practices and the latest technologies used and developed by the ongoing Oracle Electronic Business Suite and the Integrated Health data warehouse projects. Project team members continuously partner with their colleagues on these projects to identify opportunities for synergy and to standardize approaches. John Resha, Assistant General Manager for Finance and Administration, chairs this project. Chief Technology Officer Aaron Barak leads KCIT's data services team and is involved in guiding strategy for the project. KCIT and Metro Transit have allocated project management, technical, and subject matter expert staff to the project. County staff will be supplemented by contract technical staff as needed. The project includes a steering committee as well as several subject matter expert teams focused on sub parts of the project, including prioritizing data sets for implementation in the warehouse and beta testing business intelligence and analytics toolsets. The project is using a phased development approach coupled with an Agile (SCRUM) project management approach to manage and track the progress of work. Each phase will be used to inform overall budget and resource requirements to complete the data warehouse.

18. PROJECT RISKS

(High) - Implementing a new technology and practice. Business intelligence and advanced data analytics is a relatively new domain for King County. Some early initiatives are underway, such as the Business Resource Center's ERP Business Intelligence/Analytics Project, but it is still considered an emerging field at the county. Mitigation: KCIT is in the process of developing enterprise leadership, planning, and technical assistance for department initiatives. This project is fully aligned with these strategic efforts, and will be structured and staffed to engage KCIT staff and consultants and provide iterative feedback on guidelines, policies, and results that will contribute to its maturation.

NARRATIVES

TDC DSTT 9TH AVE RAMP FROM CPS

1131130

1. CURRENT PROJECT SCOPE

Downtown Seattle Transit Tunnel (DSTT) 9th Avenue Ramp from Convention Place Station (CPS) - This project funds work on the negotiations regarding the contract between King County and WSCC (led by consultant SOJ), cost of managing other sub-consultants on the contract and the review and monitoring of the design of the temporary access onto the Ramp via 9th Avenue to and from CPS. Work also includes review and monitoring of the schedule to ensure no conflicts exist with operations.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A.

3. PROJECT JUSTIFICATION

This project is needed to minimize impacts to Transit operations while facilitating the sale of the CPS site to WSCC.

4. PROJECT BENEFITS/OUTCOMES

Ramp to 9th Avenue supports continued use and access to surface streets from the DSTT.

5. BUDGET REQUEST BASIS

The budget request includes development of all agreements with external stakeholders, management of design and construction for the 9th avenue ramp and street improvement for layover on street, and construction of the ramp. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$4 M is being reappropriated from project 1028624 TDC TOD CONVENTION PLACE to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES TDC COMFORT STATION 2 SODO 1131378

1. CURRENT PROJECT SCOPE

Comfort Station 2 SODO (south of downtown) - This is the second comfort station project in the SODO area. This project involves siting, design, and construction of a second and potentially third permanent comfort station(s) for Transit operators at key layover locations on SODO Busway which is a part of 5th Avenue South, south of Royal Brougham, in downtown Seattle. It is commonly referred to as the E-3 Busway. The project includes lighting and other safety improvements to the walkway from the layover area to the comfort station.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC COMFORT STATION 2 SODO

1131378

3. PROJECT JUSTIFICATION

This project supports approximately 20 layover spaces on the SODO busway with the addition of compliant restroom facilities. King County Metro is committed to improving the availability of operator comfort stations by providing restroom facilities at operator layovers. Following a State of Washington Labor & Industries (L&I) audit in 2014, Metro established its Comfort Station Policy as part of its mitigation to improve restroom access for its operators, and is consistent with Metro's strategy of "Enabling Employees To Do Top Quality Work". This policy defines acceptable facilities and the maximum distance from the layover. Permanent, constructed facilities are planned only when other alternatives, like use agreements with commercial establishments, are not available.

4. PROJECT BENEFITS/OUTCOMES

The benefit/outcome of this project is a new driver comfort station at this location to support a safe, healthy work environment. Comfort Stations on the SODO E-3 (5th Avenue south of Royal Brougham) busway would provide much needed layover space as well as easily accessible in-service facilities.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$50K is being reappropriated from project 1127330 COMFORT STATIONS to fund or partially fund this project. The budget request is based on cost metrics for three comfort station projects that have progressed to construction in 2018.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Operating budget to be impacted by additional maintenance for the new comfort station.

8. PROJECT STATUS

This standalone project is ongoing from 2017-2018. Preliminary design is underway in 2018 and construction is intended to start in early 2019.

9. ALTERNATIVES ANALYSIS

Permanent, constructed facilities are planned only when other alternatives, like use agreements with commercial establishments, are not available. Alternatives that were analyzed included the plan described herein and also to cease use of the SODO Busway as a layover location, which was found to not be a viable option.

10. OTHER AGENCY INVOLVEMENT

The SODO Busway requires an inter-agency agreement with WSDOT and coordination with Sound Transit.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

NARRATIVES

TDC BB CB LIFT REPL

1131481

3. PROJECT JUSTIFICATION

King County Metro Transit utilized a comprehensive Facilities Conditions Assessment Program conducted by 3rd party engineers to assess and monitor the conditions of our facilities. From these assessments, a Transit Facilities Conditions Needs Report is generated containing a prioritized ranking of assets needing major rehabilitation or replacement. State of Good Repair Program planners then sort and package those needs into efficient projects and schedule those projects to create a sustainable, level loaded, State of Good Repair Program to promote consistent State of Good Repair investment levels and maintain the safe and efficient functionality of our assets. Failure to adhere to the program plan will generate a backlog of State of Good Repair work, leading to increased spending on asset replacement, increased risk of failure and loss of service, and greater risk to the County. This project's assets have an average condition rating of poor - They have been tagged out by engineering due to a catastrophic failure.

4. PROJECT BENEFITS/OUTCOMES

Completion of this project will result in a renewed asset with a refreshed lifecycle. Asset replacement is a normal part of asset maintenance and is essential to maintaining our system in a state of good repair to minimize unexpected corrective maintenance or emergency replacement cost and prevent service disruptions or challenges for our customers.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$900 K is being reappropriated from project 1129628 TDC BUILDING ASSET MGMT to fund or partially fund this project. 2019-2020 funding is expected to support the project through design and implementation, with the remaining implementation and close out occurring in 2021-2022. Facilities Conditions Needs Report provides rough order of magnitude replacement costing, generated by third party engineers and incorporating metrics for soft cost factors.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Effective asset management and lifecycle replacement will reduce operational maintenance cost for unplanned and corrective maintenance.

8. PROJECT STATUS

Ongoing. This is an ongoing project but is being converted to a standalone project.

9. ALTERNATIVES ANALYSIS

Alternatives, if available, will be analyzed as part of the pre-design phase for all State of Good Repair works.

NARRATIVES

TDC NB I-5 RETAIN WALL		1131793
1. CURRENT PROJECT SCOPE		
North Base Interstate 5 Retaining Wall - This project will repair and upgrade the retaining wall under I-5 that provides access to Metro's North Base. This retaining wall failed in 2015.		
2. PROGRAMMATIC PROJECT DISCUSSION		
N/A		
3. PROJECT JUSTIFICATION		
The retaining wall failed October 2015 and now is a risk to the I-5 roadway above and transit operations below. The wall needs to be repaired and upgraded. Without repairs, the area could become unusable and block off access to North Base. The detour would be significant, would affect operations and last for up to two years.		

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC NB I-5 RETAIN WALL

1131793

4. PROJECT BENEFITS/OUTCOMES

Completion of this project will result in a renewed asset with a refreshed lifecycle. Asset replacement is a normal part of asset maintenance and is essential to maintaining our system in a state of good repair to minimize unexpected corrective maintenance or emergency replacement cost and prevent service disruptions or challenges for our customers.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, approximately \$1.8 M is being reappropriated from project 1129627 TDC SITE ASSET MGMT to fund or partially fund this project. The budget is based on 1987 agreement with WSDOT for repair and maintenance of the wall.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

This is an ongoing project that is being converted to a standalone. First phase to repair the wall is complete. The second phase which provides a structural coating is planned for 2019.

NARRATIVES TDC MADISON RR 1132324

1. CURRENT PROJECT SCOPE

RapidRide Madison/G Line - This project extends from downtown Seattle to through First Hill to the Central Area via Madison Street. This project would plan, design and implement the necessary infrastructure improvements to launch RapidRide service. These infrastructure projects include Passenger Facilities, Roadway, Signal and ITS improvements which result in better transit speed and reliability, access to transit projects which reduce barriers for people to reach transit, and necessary communication and technology efforts to support the service. This budget also includes the associated costs for public outreach and marketing (launch of the service). This budget does not include vehicles.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC MADISON RR

1132324

3. PROJECT JUSTIFICATION

This project is part of the METRO CONNECTS RapidRide Expansion Program. Of the seven new lines anticipated by 2027, four will be partially funded and co-led by the City of Seattle, including the Madison RapidRide G Line. This project supports Metro's strategic service goals and is identified in METRO CONNECTS as a RapidRide corridor in the 2025 network. The project will result in improved service and ridership along the corridor and support regional growth. The Madison RapidRide G Line was prioritized for implementation based on criteria developed in METRO CONNECTS, including geographic balance, equity and social justice factors, ridership growth potential, implementation complexity, partnership opportunities and commitments, grant funding opportunities, and high capacity transit network connectivity.

4. PROJECT BENEFITS/OUTCOMES

This project will create a new RapidRide corridor. Historically RR corridors have been a successful way to increase ridership within a corridor area. Most of the previous 6 RapidRide lines have increase daily trips by more than 50% within the first few years of operations.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$4 M is being reappropriated from project 1129632 TDC MOVE SEATTLE RR EXP to fund or partially fund this project. This budget request is required to complete the identified RapidRide project in the Metro Connects 2025 network. Detailed estimates for project costs have been developed using past agency experience delivering the six original RapidRide lines, along with a detailed work breakdown structure and resource-loaded project schedule identifying the cost associated with each individual component of RapidRide delivery. The requested budget will move the project through the construction phase of project delivery.

6. FUNDING AND REVENUE DISCUSSION

The G Line is funded jointly between SDOT, ST and Metro, with SDOT being the lead agency. SDOT is expecting \$60 million in FTA funds as part of a Small Starts grant award. SDOT will primarily provide the grant match. The budget included in this request is to install Metro assets on the corridor and to launch the service. This includes all staff time associated with the RR project planning, design and implementation.

7. OPERATING BUDGET AND OTHER IMPACTS

This capital project will create assets which need to be maintained along the corridor. These assets include shelters, real time information signs, trash bins and ORCA fare collection equipment.

8. PROJECT STATUS

This project is currently in the design stage and is being led by the City of Seattle. This project is ongoing and through this budget process is being converted to a standalone project.

9. ALTERNATIVES ANALYSIS

N/A (not a new project).

10. OTHER AGENCY INVOLVEMENT

This project will require the involvement of the City of Seattle to lead design and construction of all roadway civil elements of the project. SDOT is the lead agency for the capital corridor delivery of this project.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project directly supports Goal Area 1 (Transportation and Land Use) in King County's Strategic Climate Action Plan and overall reduction in emissive pollution by promoting transit along these proposed RapidRide corridors. Capital assets built and installed along the corridor will meet King County's Green Building ordinance where required and allowable.

NARRATIVES TDC DELRIDGE BURIEN RR 1132325

1. CURRENT PROJECT SCOPE

RapidRide Delridge/Burien/H Line - This project extends from the Burien Transit Center to downtown Seattle via Delridge Way. This project would plan, design and implement the necessary infrastructure improvements to launch RapidRide service. These infrastructure projects include passenger facilities, roadway, signal and intelligent transportation system (ITS) improvements which result in better transit speed and reliability, access to transit projects - which reduce barriers for people to reach transit - and necessary communication and technology efforts to support the service. This budget also includes the associated costs for public outreach and marketing. This budget does not include vehicles.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC DELRIDGE BURIEN RR

1132325

3. PROJECT JUSTIFICATION

This project is part of the METRO CONNECTS RapidRide expansion program. Of the seven new lines by 2027, four will be partially funded and co-led by the City of Seattle, including the Delridge Burien RapidRide H Line. The project will result in improved service and ridership along the corridor and will support regional growth. The Delridge Burien RapidRide H Line was prioritized for implementation based on criteria developed in METRO CONNECTS, including: geographic balance, equity and social justice factors, ridership growth potential, implementation complexity, partnership opportunities and commitments, grant funding opportunities, and high capacity transit network connectivity.

4. PROJECT BENEFITS/OUTCOMES

This project will create a new RapidRide corridor. Historically RR corridors have been a successful way to increase ridership within a corridor area. Most of the previous 6 RapidRide lines have increase daily trips by more than 50% within the first few years of operations.

5. BUDGET REQUEST BASIS

This budget request is required to complete the identified RapidRide project in the Metro Connects 2025 network. Detailed estimates for project costs have been developed using past agency experience delivering the six original RapidRide lines, along with a detailed work breakdown structure and resource-loaded project schedule identifying the cost associated with each individual component of RapidRide delivery. The requested budget will move the project through the Construction phase of project delivery. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$3 M is being reappropriated from project 1129747 TDC MC RR EXPANSION to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

This project is funded primarily through King County Metro funds. The total spending authority being request is approximately 70% of the METRO CONNECTS cost estimate with approximately 17-20% of the project funds coming from assumed, yet to be identified, grants. The remaining 30% of the cost estimate assumed by METRO CONNECTS is assumed to come from partner agency contributions and or projects carried out by partners.

7. OPERATING BUDGET AND OTHER IMPACTS

This capital project will create assets which need to be maintained along the corridor. These assets include shelters, real time information signs, trash bins and ORCA fare collection equipment.

8. PROJECT STATUS

This project is currently in the predesign stage executed through a consolidated planning and design contract with a consultant. This project is ongoing and through this budget process is being converted to a standalone project.

9. ALTERNATIVES ANALYSIS

Alternative analysis is anticipated to be carried out during the planning phase and includes a substantial public engagement element. A preferred alignment will then be approved via the existing King County Council alignment approval process.

10. OTHER AGENCY INVOLVEMENT

This project will require the involvement of the cities of Burien and Seattle where work will be conducted for permitting and potentially funding partnership. The METRO CONNECTS proposed 2025 network was discussed both regionally and locally with the impacted jurisdictions. As the project enters the design phase, other agency involvement will significantly increase.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project directly supports Goal Area 1 (Transportation and Land Use) in King County's Strategic Climate Action Plan and overall reduction in emissive pollution by promoting transit along these proposed RapidRide corridors. Capital assets built and installed along the corridor will meet King County's Green Building ordinance where required and allowable.

NARRATIVES TDC ROOSEVELT RR 1132327

1. CURRENT PROJECT SCOPE

Roosevelt/K Line RapidRide - This project would build a yet to be specified RapidRide corridor within the City of Seattle. Currently the city has several candidate corridors (Roosevelt, Routes, 40 , 44 & 48). Metro is working with SDOT to convert one these efforts to a RapidRide corridor for an opening date of 2025. This project would plan, design and implement the necessary infrastructure improvements to launch RapidRide service. These infrastructure projects include passenger facilities, roadway, signal and intelligent transportation system (ITS) improvements which result in better transit speed and reliability, access to transit projects - which reduce barriers for people to reach transit - and necessary communication and technology efforts to support the service. This budget also includes the associated costs for public outreach and marketing. This budget does not include vehicles.

NARRATIVES

TDC ROOSEVELT RR

1132327

3. PROJECT JUSTIFICATION

Once selected, this project will be part of the METRO CONNECTS RapidRide Expansion Program. Of the seven new lines by 2027, four will be partially funded and co-led by the City of Seattle, including this future line. The project will result in improved service and ridership along the corridor and support regional growth. RapidRide lines are prioritized for implementation based on criteria developed in METRO CONNECTS, including: geographic balance, equity and social justice factors, ridership growth potential, implementation complexity, partnership opportunities and commitments, grant funding opportunities, and high capacity transit network connectivity.

4. PROJECT BENEFITS/OUTCOMES

This project will create a new RapidRide corridor. Historically RR corridors have been a successful way to increase ridership within a corridor area. Most of the previous 6 RapidRide lines have increase daily trips by more than 50% within the first few years of operations.

5. BUDGET REQUEST BASIS

This budget request is required to complete the identified RapidRide project in the Metro Connects 2025 network. Detailed estimates for project costs have been developed using past agency experience delivering the six original RapidRide lines, along with a detailed work breakdown structure and resource-loaded project schedule identifying the cost associated with each individual component of RapidRide delivery. This budget accounts for Metro Assets, trolley wire expansion/modification (if needed) and, staff time during the project and costs associated with service launch. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$250K is being reappropriated from project 1129747 TDC MC RR EXPANSION to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

This future RapidRide line will be jointly funded by SDOT and Metro with some of the funds coming from the Move Seattle Levy.

7. OPERATING BUDGET AND OTHER IMPACTS

This capital project will create assets which need to be maintained along one of the candidate corridors. These assets include shelters, real time information signs, trash bins and ORCA fare collection equipment. RapidRide service cost impacts are discussed elsewhere as part of the fixed route service budgets.

8. PROJECT STATUS

This project is currently in pre-planning and a candidate corridor will be selected based on an assessment of the candidate corridors within the City. This project is ongoing and through this budget process is being converted to a standalone project.

9. ALTERNATIVES ANALYSIS

An alternatives analysis will be conducted during the pre-design phase.

10. OTHER AGENCY INVOLVEMENT

This project will require the involvement of the City of Seattle to co-lead design and construction of all roadway civil elements of the project. SDOT is the co-lead agency for the capital corridor delivery of this project and a funding partner.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project directly supports Goal Area 1 (Transportation and Land Use) in King County's Strategic Climate Action Plan and overall reduction in emissive pollution by promoting transit along these proposed RapidRide corridors. Capital assets built and installed along the corridor will meet King County's Green Building ordinance where required and allowable.

NARRATIVES

TDC MONTLAKE HUB

1132367

1. CURRENT PROJECT SCOPE

Montlake Triangle Hub - This project plans, designs, and implements a set of capital facility improvements in the vicinity of the Montlake Triangle, at Montlake Blvd. and NE Pacific Street. Project elements include passenger facilities, new bus stops, roadway and signal improvements and pedestrian enhancements that facilitate the integration of all modes at the important University of Washington Link station. Improvements made as part of this project will include: 1) New bus stops on Montlake Blvd NE, which will shorten the walking distance between University of Washington (UW) Station and buses, 2) A transit-only lane and signal changes on northbound Montlake Blvd NE, allowing buses to serve stops in front of UW Station and then turn left onto NE Pacific PI before continuing to the University District, and 3) A realigned intersection at NE Pacific St and NE Pacific PI, allowing vehicles to travel straight from Pacific PI into the UW Medical Center.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC MONTLAKE HUB

1132367

3. PROJECT JUSTIFICATION

This is a project of the One Center City program of mobility improvements. The Montlake Triangle project will improve the transfer environment, bus stops, and pedestrian connections in the vicinity of the University of Washington Link station. The project provides additional facilities that will be required beginning in September 2019 with revisions to the routing of some routes now serving this vicinity, as well as new route(s) to be added. The project also supports future increases to bus capacity at this important transit hub.

4. PROJECT BENEFITS/OUTCOMES

- Creates improved opportunities for transfer connections between bus and rail transit
- Allows for increased transit service connecting the Eastside to the University of Washington and Link light rail, with fast, frequent trips to Downtown Seattle and beyond
- Includes bus stop amenities, including shelters and signage, with the potential for off-board fare payment

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$100 K is being reappropriated from project 1129633 TDC CCMP 2019 PROGRAM to fund or partially fund this project. This budget represents King County's in-kind contribution of staff and equipment towards the implementation of this \$5.3 M project, which will be partially funded by other project partners. It is currently assumed that the Seattle Department of Transportation, as a One Center City/ project partner, will design and construct all improvements.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

The project is currently in the pre-design phase under consultant contract (SDOT-held contract). The project is expected to be complete in 2019. The project is undergoing conversion from a sub project to a stand alone project.

9. ALTERNATIVES ANALYSIS

The project developed and reviewed a set of alternatives, described in the Technical Report Titled: One Center City Montlake Hub Alternatives Analysis, September 2017. This option perform the best across a variety of metrics that include transit and vehicular travel time impacts, improvements to the passenger experience, and pedestrian enhancements. The alternatives were vetted through additional stakeholder engagement by WSDOT, Sound Transit, University of Washington, and Eastside jurisdictions.

10. OTHER AGENCY INVOLVEMENT

This is a project of the One Center City program of mobility improvements described in detail at: onecentercity.org. The OCC program represents a \$30M + investment in capital improvements by the funding agencies of King County, the Seattle Department of Transportation, and Sound Transit. The OCC program also includes the Seattle Office of Planning and Community Development (OPCD) and the Downtown Seattle Association (DSA), as non-funding agency partners. The project was vetted through a stakeholder group comprising Metro, the Seattle Department of Transportation (SDOT), Washington State Department of Transportation (WSDOT), Sound Transit (ST), the University of Washington, and Eastside jurisdictions.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The One Center City program supports the Strategic Climate Action Plan strategies by increasing transit capacity, thereby resulting in a long-term increase in the use of transit county-wide. Project components that will be provided by King County, including passenger facilities infrastructure, will use Metro's standard set of amenities, which have been designed to use sustainable strategies. Green Building reporting requirements will be followed for project components that are provided by King County.

NARRATIVES

TDC OCC OFF BOARD FARE EQ

1132532

1. CURRENT PROJECT SCOPE

Off Board Fare Collection Equipment - This project plans, designs, and implements the provision of new off-board fare equipment at bus stops on Third Avenue in Downtown Seattle. This equipment will enable King County to extend the successful practice of Metro's RapidRide all-door boarding to all routes using Third Ave. This will improve transit speeds that result from faster customer boarding. Buses can operate more quickly in and out of each bus stop, thereby speeding travel and increasing the overall capacity of the Third Ave transit corridor. Improvements made as part of this project will include: 1) off board fare collection equipment at bus stops on Third Ave between Jefferson Street and Pine Street and 2) all civil and electrical construction and installation of all equipment.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC OCC OFF BOARD FARE EQ

1132532

3. PROJECT JUSTIFICATION

The capacity of Third Avenue through downtown Seattle is constrained by a number of factors including dwell-time, the period of time that a bus serves the bus stop actively loading and unloading passengers. The RapidRide program has successfully shown that providing fare validation equipment on the sidewalk within the bus stops can speed boarding and lower dwell time. More buses can get in and out of the stops quicker, thereby improving capacity. In addition to the benefits of speeding the boarding process, a better customer experience is provided and riders benefit from avoiding queues at the stop. This is a project of the One Center City (OCC) program of mobility improvements.

4. PROJECT BENEFITS/OUTCOMES

- Speeds buses and gains capacity on the constrained Third Ave transit corridor.
- Results in an enhanced customer experience

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$1.4 M is being reappropriated from project 1129633 TDC CCMP 2019 PROGRAM to fund or partially fund this project. Included in the cost estimates are King County's expenses for staff, equipment, and contracts procured by King County for design and implementation phase activities.

6. FUNDING AND REVENUE DISCUSSION

This project element has been awarded about \$1M external funding through a Federal Transit Administration grant: FTA WA-90-x513, award 114707.

7. OPERATING BUDGET AND OTHER IMPACTS

The project requires additional fare enforcement officers, to be submitted as a separate operating budget request in the 2019-20 operating budget process, by King County Transit Security program. The project increases maintenance requirements by adding locations where off-board fare validation equipment is required, however less than a 5% increase in the total number of such locations that currently being maintained by King County.

8. PROJECT STATUS

The project is currently in the pre-design phase under consultant contract. The project is undergoing conversion from a sub project to a stand alone project.

9. ALTERNATIVES ANALYSIS

During the development of the RapidRide program, in 2007, a number of alternatives were developed and evaluated for the means of providing off-board fare equipment. The type of equipment chosen for RapidRide is expected to be used for this initiative. The alternatives for RapidRide off board fare equipment were vetted through broad jurisdictional and stakeholder involvement.

10. OTHER AGENCY INVOLVEMENT

This is a project of the One Center City (OCC) program of mobility improvements described in detail at: onecentercity.org. The OCC program represents a \$30M + investment in capital improvements by the funding agencies of King County, the Seattle Department of Transportation, and Sound Transit. The OCC program also includes the Seattle Office of Planning and Community Development (OPCD) and the Downtown Seattle Association (DSA), as non-funding agency partners. King County will lead all aspects of delivering this OCC program element.

NARRATIVES TDC MAJOR SPOT IMPR 1133179

1. CURRENT PROJECT SCOPE

Major Spot Improvements - This project will design and construct spot improvements to reduce bus delay and increase transit performance at six prioritized locations. Within the city of Seattle, the proposed improvements are located at NE 65th and 62nd Ave NE, Fremont Ave and N 35th St, 8th Ave and Roxbury St, and 22nd Ave W from Gilman to Thorndyke Ave intersections. Improvements are location-specific and can include turn radius improvements, bus activated left-turn signals, channelization improvements, or a combination of these. The remaining two intersection improvement locations are SR 900 and S 129th St as well as 148th Ave NE and NE 51st.

2. PROGRAMMATIC PROJECT DISCUSSION

This program includes up to six specific spot improvement locations as described in the scope.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC MAJOR SPOT IMPR

1133179

3. PROJECT JUSTIFICATION

Buses operate on roadways in mixed traffic and can experience delays due to re-entering traffic flow at bus stops, encountering oncoming traffic on narrow arterial streets, and delays at constrained intersections. These delays are typically 20 to 120 seconds in length but can be longer at times. Delays become significant when more service hours are needed to run buses passing through the congested areas. As traffic volumes at these locations increase, delays at these choke points increase, sometimes exponentially. Travel times and schedule reliability can degrade significantly.

4. PROJECT BENEFITS/OUTCOMES

Reduce bus delays at the congested intersection.

5. BUDGET REQUEST BASIS

The estimated cost to design and implement this project was based on similar project improvements in other areas. The budget request is based on the anticipated grant award from the State. The State grant funding distribution is related to the progress in the 2019-2020 biennium. The cost of the project and the level of effort to implement each spot improvement project depends on support and active involvement of each partner agency.

6. FUNDING AND REVENUE DISCUSSION

The project has a secured Regional Mobility Grant funding of \$2.0M. Local and non-eligible grant funds come from the Public Transportation Fund, capital sub fund.

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

New project.

9. ALTERNATIVES ANALYSIS

The alternative study will be conducted for SR 900 and S 129th St as required by the Washington State Department of Transportation to justify the roundabout configuration for the improvements.

10. OTHER AGENCY INVOLVEMENT

Washington Department of Transportation (WSDOT) and the cities of Seattle, Redmond and others as projects are identified.

11. ART ELIGIBILITY

Not Art Eligible, roads, airport runways, sewers and solid waste landfills

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

The project's success highly depends on support and approval of local agency partners and their availability to participate in, review, and approve the proposed improvements. The success of this project is also related to how each agency treats this project with respect to their workload and/or program priorities.

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

NARRATIVES

TDC CSC FRAME RACK

1133368

1. CURRENT PROJECT SCOPE

Component Supply Center Auto Body Frame Rack Replacement - This project is to plan, design and implement a safe, modern frame rack replacement for repairing bus and non-revenue vehicle (NRV) frames after accidents.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

The current auto body frame rack was placed in service in approximately 1979. The frame rack is beyond its useful life, under powered and unreliable for today's business needs. The rack has been "red tagged" by King County Metro Safety indicating the equipment is unsafe to operate.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC CSC FRAME RACK

1133368

4. PROJECT BENEFITS/OUTCOMES

Efficiently repair revenue buses and non-revenue vehicles damaged in accidents. Repairs may be made quickly and by in-house staff which allows for buses to return to the road quickly. Returning buses to service quickly helps maintain on-time performance and customer satisfaction.

5. BUDGET REQUEST BASIS

The budget request is based on the purchase cost and estimated installation of three similar frame racks. The budget request was developed by King County Metro engineering and corroborated by a design consultant. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$400K is being reappropriated from project 1129628 TDC BUILDING ASSET MGMT to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

The project is ongoing from 2017-2018 and currently in the design phase.

9. ALTERNATIVES ANALYSIS

Three alternatives will be considered: 1) do nothing, 2) send vehicles to a third party repair shop, 3) repair buses in-house.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, maintenance or minor rehabilitation

12. EQUITY AND SOCIAL JUSTICE IMPACT

NARRATIVES TDC NORTHGATE TC DEMO 1133920

1. CURRENT PROJECT SCOPE

Northgate Transit Center Demolition - This project consists of decommissioning and demolition of the existing Northgate Transit Center above-ground structures after bus transit service is relocated to the new integrated Northgate Link light rail station/transit center, forecast to occur in 2021. This project is one of four projects associated with the Northgate TOD Program, previously part of a common appropriation.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

Decommissioning and demolition of the existing Northgate Transit Center is necessary to prevent vandalism, minimize future maintenance costs prior to redevelopment of the property as a transit oriented development, and minimize potential for customer injury as pedestrians walk to and from the park-and-pool to the east and Sound Transit's new Northgate Station/Transit Center to the west.

Capital Appropriation Proposal

NARRATIVES

TDC NORTHGATE TC DEMO

1133920

4. PROJECT BENEFITS/OUTCOMES

This project will secure the existing Northgate Transit Center property after bus transit service is relocated to Sound Transit's new Northgate Station/Transit Center.

5. BUDGET REQUEST BASIS

This appropriation is requested to continue to prepare to decommission and demolish the existing Northgate Transit Center after bus transit service is relocated to Sound Transit's new Northgate Station/Transit Center. It is based on cost estimates from 10% design. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$2.2 M is being reappropriated from project 1116057 TD NORTHGATE TOD BUDGET to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

This project is currently in the planning phase.

9. ALTERNATIVES ANALYSIS

Alternatives analysis was concluded in 2012 for the Northgate TOD Program, resulting in this project concept. An alternatives analysis for this project will be performed during the predesign phase to determine the extent of the decommissioning necessary to provide safe and secure property until the property is redeveloped.

10. OTHER AGENCY INVOLVEMENT

Key agencies involved in include Sound Transit, City of Seattle's Department of Transportation and Department of Planning & Development, Public Health - Seattle King County, Puget Sound Regional Council and Washington State Department of Transportation.

11. ART ELIGIBILITY

Not Art Eligible - Demolition

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Demolition activities will follow King County's Green Building Ordinance.

NARRATIVES	TDC TECH PROGRAM MGMT	1134100
------------	-----------------------	---------

1. CURRENT PROJECT SCOPE

Technology Program Management - This project involves planning for programs and projects within the technology sub portfolio. Program management activities will ensure adequate coordination with Operations and Vehicle Maintenance Divisions, Technology Project Delivery, Operations Systems, Fleet Purchasing, and Fixed Assets and other groups internal to Metro to meet their needs. The project scope of work will also include prioritization of projects within programs, feasibility studies, exploration of funding and partnership opportunities, and consideration of benefits of the various projects within the programs. Project also involves monitoring projects for progress and changes in scope, schedule and budget; adapting other projects within the programs to maintain the program benefits; and tracking interdependencies and coordinate with projects in other programs. An important element of this work will be understanding the scope and business requirements of the existing projects and participation in the Technology Steering Committee. This ongoing work will feed a Metro-wide process for consideration of Technology needs and priorities for development of future budgets' investment in capital technology projects.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC TECH PROGRAM MGMT

1134100

2. PROGRAMMATIC PROJECT DISCUSSION

The Technology sub portfolio contains the following programs: Asset Management; Customer Information Management; Data Analytics and Reporting; Networks, Tools, and Communications; Safety and Security; Service Delivery; and Service Development.

3. PROJECT JUSTIFICATION

Coordination of technology with Metro programs is critical to keeping Metro's operating systems current with state of technology, ensuring reliable operations of our mobility and customer services, and supporting all transit business needs. All activities are devoted to moving capital projects and programs forward expeditiously into design and completion.

4. PROJECT BENEFITS/OUTCOMES

All activities are devoted to moving capital projects and programs forward expeditiously to completion. Benefits include setting projects on a path of steady progress towards completion and identifying and addressing flaws and risks where possible in advance of passing on to a project manager for design. Work done to improve scope and schedule will help define needed staff resources so that projects do not move into design prematurely.

5. BUDGET REQUEST BASIS

The request is based on staffing in the capital planning and program management organization chart responsible for the Planning and Portfolio Coordination duties within the Technology sub portfolio. A modest amount of professional services are estimated to augment staff expertise. A PPM IV and one business analyst will conduct program management activities.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Ten percent of the staffing costs are assumed to be born by the operation budget.

8. PROJECT STATUS

New project.

9. ALTERNATIVES ANALYSIS

NA

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible - Planning project.

12. EQUITY AND SOCIAL JUSTICE IMPACT

ESJ consideration is part of the prioritization process of projects and the benefits expected from project implementation. Program managers are responsible for ensuring benefits are achieved through implementation of projects within the programs.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Strategic Climate Action Plan goals are considered as part of the prioritization process of projects and the benefits expected from project implementation. Program managers are responsible for ensuring benefits are achieved through implementation of projects within the programs.

NARRATIVES

TDC ONLINE REDUCD FARE REG

1134101

1. CURRENT PROJECT SCOPE

Online Reduced Fare Registration - This project supports the development of an online HIPAA & PPI compliant application/service for reduced fare passes. Currently, customers who apply for a Regional Reduced Fare Permit based on their disability or a low-income ORCA LIFT card are required to do so in person in order to validate their eligibility. This project will design and implement a web-based application would allow our customers to enroll and prove their eligibility online, where they can choose the type of pass/permit needed (low-income, youth, senior, or disabled), enter their personal information, and upload their documentation and photo online. Once implemented, all reduced fare programs - including low-income and disabled - will be available online.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC ONLINE REDUCD FARE REG

1134101

3. PROJECT JUSTIFICATION

While other reduced fare types - senior and youth - for example- can apply for reduced fare status in person or by mail with a completed application and proof of age, our low-income and differently-abled customers must apply and provide proof of income or disability in person at the King Street Center Customer Service office or one of our authorized service centers. Because low-income and disabled customers often have time or mobility constraints that can complicate their efforts to prove their eligibility for these reduced fares, Metro Transit proposes a web-based portal or application which would allow these customers to apply online. The project is in line with King County's vision for Equity and Social Justice (ESJ). In 2017, the King County Council mandated that ORCA lift registrations be increased and made more accessible to the public by increasing outreach. Providing an online application for reduced fare programs would increase accessibility and registrations while following King County's ESJ goals and supporting Metro's goals for excellent customer service.

This project supports the following Metro Transit Goals: Goal 2: Human Potential: Provide public transportation products and services that add value throughout King County and that facilitate access to jobs, education, and other destinations; and Goal 5: Service Excellence: Promote robust public engagement that informs, involves, and empowers people and communities and increase customer and public access to understandable, accurate and transparent information.

4. PROJECT BENEFITS/OUTCOMES

The project's main benefits are external and customer facing. The ORCA system does not currently support an online application process for certain reduced fares and cards. The current proof of eligibility requirement places an unfair burden on some of the most vulnerable people in our county, the disabled and low-income. Providing an online application tool would: (1) substantially increase accessibility while following King County's Equity and Social Justice (ESJ) goals and supporting Metro's goals for excellent customer service, (2) reduce barriers for senior, disabled and low-income riders who are currently required to apply in-person and (3) allow customers to apply on their own time, after work, evening or on weekends.

Once this project is complete, we anticipate an increase in the number of low-income ORCA LIFT and RRFp registrations processed online and a corresponding reduction of in-person customers in our Customer Service Center. We believe we will see an increase in the first year following implementation. For measurement purposes, we currently receive zero online applications for these fare categories as the ability to apply for a reduced fare product/card does not currently exist in the ORCA card system. The baseline for ORCA LIFT registration is currently at an average of 1,500 per month and the RRFp baseline average is 2,000 per month. Once the project is complete, we expect to see a 10% of ORCA LIFT and 25% of RRFp registrations move to the online platform.

5. BUDGET REQUEST BASIS

Budget estimates for the project are based on past experience with designing, developing, and testing of similar web projects. Transit will add functionality to the existing ORCA card purchase system. The budget is based on what it would take to design and deliver new functionality to an existing web-based system. This request covers all project phases from planning through closeout. It will cover the following project activities: project management, requirements and solution analysis, solution implementation, and project closeout.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Development of an online application is anticipated to reduce Customer Communication & Service's budget for the verifying agencies who are currently being paid for their services. The amount will depend on how quickly people start using the online service. We will still need to utilize these verification services to process certain financial and medical documents for customer eligibility, whether in person or online. This project is also expected to reduce the costs related to ORCA card inventory. Agencies are required to keep cards on hand to distribute to the customers who apply in person. These cards have a "hard" expiration date encoded in the card's chip which requires the stale inventory to be returned and destroyed then replaced with card inventory with a longer expiration date. The online application process will allow Metro Transit to reduce their on-hand or pre-issued ORCA card inventory which will lower the per card cost of the program.

8. PROJECT STATUS

Project is a new proposal and has not started.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC ONLINE REDUCD FARE REG

1134101

9. ALTERNATIVES ANALYSIS

Our current assumption (which will be revisited in the project planning and design stages) is that KCIT will either make updates to the current ORCA Lift Registry database or create a new database for the project. An alternative would be to explore an off the shelf product, but this would more than likely add additional time and increased costs to adapt the program to meet our needs.

10. OTHER AGENCY INVOLVEMENT

Although the ORCA cards issued are valid on all of the ORCA partners, the online application process would still follow the same requirements for verification as the other ORCA agencies. We are currently not planning on involving the partner agencies in the development of the application.

11. ART ELIGIBILITY

Not Art eligible, technology project

12. EQUITY AND SOCIAL JUSTICE IMPACT

This online application will be a system improvement that provides tangible benefits to our most vulnerable customers, including low-income, senior, youth, and people with disabilities. It would also expand access (determinants of equity) to transportation and increase mobility for these populations. Providing an online application process will allow the reduced fare customer the same opportunity and access to public transportation that a standard adult ORCA rider currently enjoys. The in-person requirement to prove eligibility adds an additional financial burden for the customer because they may need to take time off their work to drive to an enrollment site or - in the case of disabled riders - travel to our customer service center downtown where they will more than likely need to pay for parking.

An equity impact review is required for this project and will be completed as part of the project's planning phase.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

CIO and PSB Critical Success Factors and Conditions:

- 1) Evaluate and document changes to the current business process for impacts. Changes need to be agreed upon by Transit and other impacted agencies. Jointly (Transit, PH, DCHS, ...) and community orgs present to PSB and/or PRB.
- 2) KCIT engagement to build the application.
- 3) ART review is required; Security review is required.
- 4) Provide to PRB an updated Roadmap should any project on the roadmap be delayed and extended.
- 5) Complete an Equity Impact Review (EIR) by December 2018.

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

This project will support both the "Digital Civic Engagement" and the "IT Mobility" objectives.

"Digital Civic Engagement" - Free residents and employees to interact and transact business when and where most appropriate and convenient. Providing an online application will substantially increase accessibility. This project will reduce barriers for senior, disabled and low-income people who are currently required to apply in-person. The change would also allow customers to apply on their own time, after work, evening or on weekends.

"IT Mobility" - Leverage IT platforms and tools to increase the opportunities, convenience, and audience engagement with Metro Transit's services. This project will help remove the barrier of in-person verification for remote areas of the county like Vashon, Enumclaw and the Eastside and promote public transportation. The policy of the "in-person" application process and the current system limitations is placing an unfair added barrier on a population of people who already are struggling with poverty, age, and/or disabilities. Providing online access to the reduced fare cards will not only help remove barriers for the customer, providing greater opportunities and convenience for our riders, but will also move Metro in the direction of equal treatment and accessibility to public transportation.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC ONLINE REDUCD FARE REG

1134101

16. PROJECT COMPLEXITY

Medium technical complexity due to the fact that processing eligibility paperwork can include sensitive personally identifiable information, including medical history and proof of income. Depending on how we implement this project, we may need to adhere to PCI-DSS guidelines and HIPAA requirements. Mitigation: The more work we do in the planning stages for this project the better, as it will help us clearly define what sorts of data and personal information need special protection. Resolving the issue of sensitive information early in the project will allow us to approach development with a clear understanding of what we need to implement.

Medium Business Complexity due to the fact that: (1) the system is highly visible and directly customer facing and (2) the project will impact other regional transit agencies using ORCA reduced fare plans. Mitigation: We do not plan on involving the partner agencies in the development of the application at this time, which will help simplify its complexity as we will be working on our own systems. Also, the online application process will follow the same requirements for verification as the other ORCA agencies, again reducing complexity by not changing key functionality or processes that support the system.

17. CAPACITY TO IMPLEMENT THE PROJECT

King County Metro and KCIT have the capacity to manage and complete this project. We have sufficient technical project managers on our Transit team to handle this project alongside our other commitments. As for KCIT, much of the work will involve the existing CCS team with some database expertise from a KCIT database specialist. Additionally, KCIT recently hired a data security and risk lead who will be able to offer in-house consultation for any HIPAA or PCI issues, should they arise.

18. PROJECT RISKS

1. (Low) - Overall project risk is expected to be relatively low because we are adding to an existing system and not impacting the business processes of our fellow regional Transit agencies. Mitigation: This is low risk, but we will coordinate our implementation very closely with KCIT and the CSS group. Also, we intend to restrict the business process impacts to Metro Transit so we will not need to integrate with other agencies.
2. (Medium) - As this project will develop system functionality that collects and manages sensitive data, we will need to identify and secure data covered by HIPAA or other data regulations. Appropriate standards for data security must be incorporated into the design and implementation of the project, increasing its complexity. KCIT recently hired a Data and Security professional who has been made aware of the potential HIPAA implications and will be available to review and assess our plans. Mitigation: We will identify the data elements that require special security measures early in the planning stage. We will also work closely with KCIT's new data security professional who has been made aware of the potential HIPAA implications and will be available to review and assess our plans.
3. (Medium) - Potential for Fraud: How will Transit ensure there is no fraud? Mitigation: While we can never eliminate all fraud, we can take concrete steps early in the project to make it more difficult. We intend to continue the verification process for these passes and fares, although there may be some process changes we'll need to make. We intend to consult with the Performance, Strategy, and Budget (PSB) team as well as with KCIT's new data security specialist. Also, we will research fraud mitigation strategies for this type of process during the planning and design stages of the project. Finally, we anticipate that our current customer service agents have seen attempts at fraud even with the in-person requirement and intend to work with them to get insight into how we currently review and assess the documentation requirements. If necessary, we will hire an online security consultant to advise us on common approaches to minimize fraud.

NARRATIVES TDC HASTUS UPGR FROM V2014 1134104

1. CURRENT PROJECT SCOPE

HASTUS Upgrade From Version 2014 - This project upgrades Metro Transit's scheduling and operational support system (HASTUS) from the 2014 version currently in use to the 2018, newest version. The upgrade will primarily involve the vendor (GIRO) applying Metro Transit's existing customizations to the base HASTUS module. These customizations have been added to the base HASTUS application over a number of years and continue to be required to meet our specific business requirements and labor agreements. While GIRO will shoulder nearly all of the development work and configuration, Metro Transit staff will test the updated system extensively to verify that all required functionality works correctly.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC HASTUS UPGR FROM V2014

1134104

3. PROJECT JUSTIFICATION

The current HASTUS system is mission critical to Transit, and was last upgraded from version 2006 to version 2014 after a lengthy upgrade project. A more frequent upgrade cycle is recommended to help avoid the complexities and delays experienced with the previous upgrade. In addition, a substantial number of system improvements have been made by the HASTUS vendor each year since 2014. Upgrading to a more recent HASTUS version will offer additional Metro Transit additional functionality and improved system performance that will benefit both our operations and scheduling groups.

This project supports Metro Transit Goal 5: Service Excellence - Improve satisfaction with Metro's products and services and the way they are delivered. HASTUS plays a critical role in improving transit services by supporting complex scheduling and route assignments.

4. PROJECT BENEFITS/OUTCOMES

The HASTUS Upgrade will support one of Metro Transit's key technology investments by updating an older version of the HASTUS application to the latest version for additional functionality, better performance, and improved stability. This project expects to realize the following benefits: (1) integrate Metro Transit's customizations with the base application for improved stability and performance and (2) maintain and support our technical investments by upgrading and improving older technology. Upgrading Metro Transit's mission critical HASTUS system at a regular cadence will help mitigate the risks of an inherently complex system upgrade and increase the likelihood of success. The updates and system changes will tend to be smaller, easier to adapt, test, and validate. This will also allow business owners and support staff to easily leverage the benefits of new features, functionality, and options with the upgrade. An upgraded, modern HASTUS implementation benefits Transit internal operations by providing business continuity and more effective tools for scheduling efficient and reliable transit service as well as managing daily transit base operations and staffing.

The success metrics for this upgrade are straightforward: We will have achieved success when the current system is upgraded to the latest version and fully operational, with all current (and pending) custom functionality integrated into the base system.

5. BUDGET REQUEST BASIS

The requested budget will fund the effort to upgrade from HASTUS version 2014 to HASTUS version 2018. The budget funds the effort from project start up and planning through implementation and includes the cost of the upgraded HASTUS software, vendor services from GIRO (the HASTUS vendor), KCIT staff time, and Transit staff to support the project. Costs for the upgraded HASTUS software and contractor services have been estimated by the contractor; other costs were estimated based on the previous HASTUS Upgrade.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Operating costs are not expected to increase substantially due to the upgrade.

8. PROJECT STATUS

Project is a new proposal and has not started.

9. ALTERNATIVES ANALYSIS

Conducting the HASTUS Upgrade in a timely manner as proposed increases the likelihood of success and provides county and contract staff with ample opportunity to prepare for the effort. Delaying the system upgrade would increase the complexity, risk, and resource requirements of the effort. HASTUS is one of Metro's mission critical systems and it would not be practical at the present time to entertain alternative software packages as Metro Transit has invested heavily in system customizations and intends to use a new HASTUS module to support the Service Planning team as well as two other proposed projects that rely on HASTUS data or functionality.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art eligible, IT Project

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC HASTUS UPGR FROM V2014

1134104

12. EQUITY AND SOCIAL JUSTICE IMPACT

An equity impact review is required for this project and will be completed as part of the project's planning phase.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

The HASTUS Upgrade - as well as the HASTUS Program as a whole - will participate in an external quality assurance effort, to be funded by project contingency. This effort will analyze and assess how well the project is managed and offer best practices advice that we will use to inform our implementation.

CIO and PSB Critical Success Factors and Conditions:

- 1) Agency Director, PSB and CIO will need to sign off on any customizations.
- 2) EIR is required.
- 3) External QA is required.

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

The HASTUS Upgrade project supports the "Data Driven" objective. "Data Driven": Once completed, this project will provide Metro Transit staff with the latest HASTUS functionality and backend database for increased data utilization and analysis as well as a HASTUS platform that is fully integrated across modules that share - and utilize - common data elements. The project will increase Transit staff's ability to utilize, analyze, and report on HASTUS data for more effective business processes and decisions

16. PROJECT COMPLEXITY

Medium business complexity: HASTUS is a large, multifaceted system that supports a significant portion of Metro Transit's service planning, development, and operational needs. Several teams rely on this application and have overlapping needs, which could complicate the implementation and testing of the system. Mitigation: The project team intends to work closely with the vendor and current staff to ensure a seamless implementation. While the upgrade is very expansive and labor-intensive, Metro Transit, KCIT and GIRO have knowledge and experience with the necessary technical work from the previous upgrade. HASTUS user groups will be heavily involved in planning upgrade activities to mitigate potential operational impacts on the production system and Transit staff.

Medium technical complexity due to the need to integrate customizations made over the past decade into the base HASTUS system. Mitigation: Transit has already implemented these customizations alongside the core application and needs to integrate them into the base system for better stability and ease of support. In the future, Transit intends to eliminate or limit customizations to the HASTUS System and will try to adapt Metro Transit's tools and processes to existing application functionality. In addition, Transit will pay special attention to the customizations that are being integrating with the core platform as this is a prime area for bugs and integration problems. Transit will rely on business users as well as KCIT analysts to thoroughly test these areas before releasing the upgrade to production.

17. CAPACITY TO IMPLEMENT THE PROJECT

The proposed capital budget for this project addresses lessons learned from the previous HASTUS Upgrade 2014 project, including capital funding for scheduling and Transit operations as well as dedicated technical leads for design review, testing, and implementation support. A steering committee and full-time Transit project manager will also monitor and manage the project from cradle to implementation.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC HASTUS UPGR FROM V2014

1134104

18. PROJECT RISKS

1. (Medium) - Dedicated availability of technical and transit staff to support the project, based on prior experience with the previous HASTUS system upgrade. Mitigation: The proposed capital budget mitigates these risks by proposing significant technical and transit business resources, as well as contingency to address unanticipated changes to scope or schedule.
2. (High) - Transit intends to manage other HASTUS related projects in parallel with the system upgrade. This will introduce complexity to the core implementation effort as well as require careful planning and coordination of resources. Mitigation: Metro Transit recognizes that this project is but one of several related HASTUS projects that Transit wants to implement over the coming biennium. Metro intends to retain an external quality assurance team to analyze and assess how well the upgrade is managed as well as evaluate the health of the HASTUS program as a whole. In addition, the project will need to monitor the progress of related projects scheduled for completion prior to the upgrade, and coordinate the various technical efforts within the HASTUS environment among stakeholders.

NARRATIVES TDC FARE ENFORC ENHANCMTS 1134106

1. CURRENT PROJECT SCOPE

Fare Enforcement Enhancements - This project replaces and modernizes the Portable Fare Transaction Processors (PFTP), the handheld devices used by fare enforcement officers (FEOs) to validate fare payments, with lightweight Android devices and software that will facilitate the automated data-push of citations to the cloud each night. Transit intends to leverage an existing City of Seattle contract with Gtechna (the software vendor) and will thereby implement the same architecture and business processes currently utilized by our business partner, Sound Transit.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC FARE ENFORC ENHANCMTS

1134106

3. PROJECT JUSTIFICATION

Fare Enforcement conducts almost 300,000 fare payment inspections per year and increases are projected with new routes and off-board fare payment. Fare Enforcement Officers (FEOs) currently carry telephones, cameras, as well as the PFTP device, which is large, bulky, and unwieldy. Replacing the PFTPs with new Android devices will allow the FEOs to use a single device, which when combined with VIX software, will be able to scan ORCA cards for proof of payment. The implementation of new devices and software will reduce customer interaction times and automate data collection. Reduced interaction times will allow an increase in the number of rider interactions as well as support better productivity from the FEOs. Finally, updating the devices and automating the data feed will save the FEOs approximately 4 hours a week of manual data entry. This project supports the following Metro Transit Goal: Goal 5: Service Excellence - Establish a culture of customer service and deliver services that are responsive to community needs.

4. PROJECT BENEFITS/OUTCOMES

The Fare Enforcement Enhancements Project expects to realize the following benefits:

- Manual Data Entry by Fare Enforcement Officers will be eliminated.
- Repair costs for end of life and fragile Portable Fare Transaction Devices (PFTPs) will be eliminated.
- With new enforcement devices, Fare Enforcement can procure new hardware on demand as the Rapid Ride program expands (PFTPs are no longer manufactured).
- New equipment will streamline FEO contact with the public and allow for increased numbers of fare scans each day.
- Fare Enforcement Officers will have a smaller technology profile (reduce number of devices FEOs carry).
- Fare Enforcement Officers can spend more time working in the field each week.

The success of this project will be measured with the following metrics:

- Manual Data Entry: FEOs currently spend at least four hours each week performing manual data entry in FEO offices. After implementation, manual data entry should be nearly eliminated.
- Equipment repair and maintenance costs: Equipment repair costs are expected to decrease by at least 80%. Current baseline is \$4,000-5,000 annually.
- Rider Contacts: Each FEO should interact with 500 riders each day. The current average is 400 contacts a day per FEO.
- Required Equipment: The amount of equipment that FEOs are required to carry will decrease by 75%. Currently, each FEO carries 4 devices, which will be replaced by a single Android device.

5. BUDGET REQUEST BASIS

The current budget request is based on vendor quotations for new hardware and software.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

Project is a new proposal and not started.

9. ALTERNATIVES ANALYSIS

The alternative is to do nothing and continue using end of life equipment, thereby contributing to significant ongoing inefficiencies for the Fare Enforcement program.

10. OTHER AGENCY INVOLVEMENT

We will coordinate with Sound Transit and Community Transit when we replace the handheld devices.

11. ART ELIGIBILITY

Not Art eligible, technology project

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC FARE ENFORC ENHANCMTS

1134106

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will complete an Equity Impact Review (required for this project) by December 2018.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

CIO and PSB Critical Success Factors and Conditions:

- 1) KCIT ART review is required.
- 2) SaaS solution should be evaluated for implementation.
- 3) Engage KCIT Procurement for contracting.
- 4) Provide to PRB an updated roadmap should any project on the roadmap be delayed and extended.
- 5) Complete a lifecycle and a cost-benefit analyses of purchasing devices that will not be compatible with ngOrca expected in 2022.
- 6) Complete an Equity Impact Review (EIR) by December 2018.

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

The Fare Enforcement Enhancements Project is consistent with County technology goals in the following ways:

Workforce Empowerment:

- Significant and continuous business process improvement
- More positive work environment
- Improved citizen value through higher levels of services and engagement

Data Driven:

- Better decisions in all aspects of government leads to a better run government
- Better response to rapidly changing business needs within and across agencies
- Better enables ability to partner with external collaborators
- Improved workplace efficiency through better performing business applications and reporting

16. PROJECT COMPLEXITY

Low technical complexity due to: (1) the focus of this project is to replace the current FEO hardware and integrate with VIX software to allow ORCA card scanning and (2) no integration is required with other county, city, or state systems. Mitigation: Talk with our fellow transit agencies and discuss lessons learned in order to proactively guard against known issues, problems, and challenges.

Low business complexity due to: (1) Fare Enforcement Team is also enthusiastic to modernize their approach and is highly receptive to a positive change in business practices and (2) FEOs will need training on the new hardware devices and may need to revisit their existing business processes. Mitigation: Work closely with Fare Enforcement to understand their current processes and challenges. Use that information to develop training and quick start programs that will minimize the challenges that come with new equipment or new processes.

17. CAPACITY TO IMPLEMENT THE PROJECT

FEO staff are eager to assist with the project and has promised full cooperation. A Metro Transit project manager as well as KCIT and vendor support will be available given current resourcing levels.

18. PROJECT RISKS

The project is not particularly risky in either a business or technical sense. The biggest risk is the obsolescence of the current PFTPs and their rates of failure. There is, however, a significant risk to not executing this project: the current hardware is beyond end of life and subject to failure/repair on a regular basis. The ability to procure the number of legacy devices currently needed is also problematic. Not moving forward with this project limits Metro's ability to expand the Fare Enforcement Program and increase productivity with modern business processes.

NARRATIVES

TDC EL SIGN IN FOR OPRTORS		1134108
1. CURRENT PROJECT SCOPE		
Electronic Sign-In for Operators - This project will implement a badge reader based sign-in/sign-out process to record start and stop times and document overtime for Metro Transit coach, rail, and street car operators as agreed to in a settlement with the U.S. Department of Labor concerning pay practices. The project scope includes provisioning of necessary hardware, software, network infrastructure, and integration to log actual start and end times for operators, using card reader technology and existing King County ID cards. The software will also allow/require entry of reason codes for additional work beyond scheduled hours.		
2. PROGRAMMATIC PROJECT DISCUSSION		
N/A		

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC EL SIGN IN FOR OPRTORS

1134108

3. PROJECT JUSTIFICATION

In 2017 Metro Transit worked with the U.S. Department of Labor to identify and address deficient pay practices for Transit Operators. In September of 2017 Metro and the DOL entered into a settlement agreement that included back pay for staff, business practice changes, and a commitment to implement an electronic time recording system for Transit operators. This project is necessary to comply with a December 2017 settlement agreement reached between Metro and the United States Department of Labor concerning improper time recording and pay practices. By implementing the system, Metro Transit will be able to reduce manual data entry work and eliminate four special duty staff positions currently entering this information.

4. PROJECT BENEFITS/OUTCOMES

The project will implement hardware and software to ensure compliance with relevant federal and state mandates for wage and hour practices, ensure timely and accurate reporting, and streamline business processes required to track and manage transit operations costs. This project will address one of the agreements in the Metro Transit/Federal Department of Labor negotiated settlement from fall 2017. The project will deliver improvements to the existing operations time tracking system (HASTUS) to ensure that the system is accurate, easily accessible, automated, and environmentally responsible. The solution will automate the majority of current manual data entry. The solution supports business process changes that have eliminated the "15" minute extra requirement by electronically restricting early sign-ins to a three minute window prior to the new pre-trip time. At completion of the project, four special duty staff positions currently used to manually enter operations timekeeping data will be eliminated, with those staff returning their regular positions.

5. BUDGET REQUEST BASIS

Metro Transit worked with the KCIT Business Analysis service to document requirements, identify available technologies to meet the business need, and estimate costs for this project. The estimate assumes purchase of hardware and in-house (KCIT) design, implementation and integration support. The project will require: 1) a project manager, 2) software solutions, 3) vendor services, 4) network (Wireless) infrastructure, and 5) workstation deployment to implement the solution. This request covers all project phases from planning through closeout and will cover the following project activities: project management, requirements and solution analysis, solution implementation, and project closeout.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

The project will result in annual costs between \$68,000 and \$165,000 for KCIT hardware and software support, depending on which models are chosen for kiosks. This will be offset by a reduction of four special duty positions currently needed to manually enter the required timekeeping data that the system will collect.

8. PROJECT STATUS

Project is a new proposal and has not started.

9. ALTERNATIVES ANALYSIS

Multiple options were initially evaluated, including three vendor solutions. As the primary requirement is interoperability with the HASTUS software system, it was determined that using GIRO (HASTUS vendor) to configure HASTUS functionality is the least risky approach for a successful solution.

10. OTHER AGENCY INVOLVEMENT

The project will coordinate with the King County Information Technology department and the Business Resource Center to negotiate any necessary support or changes to integrated systems during planning. Direct impacts should be limited, this technology solution will implement new tools but use existing software and data points.

11. ART ELIGIBILITY

Not Art eligible, technology project

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will complete the Equity Impact Review (EIR) process (required for this project) by December 31, 2018.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC EL SIGN IN FOR OPRTORS

1134108

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

The Electronic Sign-In for Operators project - as well as the HASTUS Program as a whole - will participate in an external quality assurance effort, to be funded by project contingency. This effort will analyze and assess how well the project is managed and offer best practices and advice that we will use to inform our implementation.

CIO and PSB Critical Success Factors and Conditions:

- 1) Engage BRC, Records Mgmt. to evaluate for impacts and coordination and collaboration needs; report outcomes to PRB.
- 2) Provide to PRB an updated Roadmap should any project on the roadmap be delayed and extended.
- 3) EIR is required.

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

This project supports the Workforce Empowerment objective. The solution, when delivered, will allow Transit operators to directly input their start and end times and provide coded justification for overtime worked, removing several layers of paper forms and secondary input.

16. PROJECT COMPLEXITY

This project has low technical complexity; it will use existing software with commercially available hardware to support a new data entry method. This project has moderate business complexity; the project affects the daily work practices of all transit operators and involves changes to work rules. Mitigation: The Transit operations training team will be used to roll out training to all affected staff.

17. CAPACITY TO IMPLEMENT THE PROJECT

Metro and KCIT resources are available for this work. This work will be prioritized with GIRO (HASTUS Vendor) to ensure that necessary vendor resources are available. This project has been sequenced against other HASTUS projects for prioritization and to ensure that vendor support limitations are adequately managed.

18. PROJECT RISKS

This project's main risk involves rolling out a new business process and tools to a large number of staff with varying levels of technical competence. To mitigate this, the solution has been designed to use a combination of badge swipe and touch screen technologies. Screens will be designed with simple menus and will be relatively self-explanatory. The Transit operations training group will work with the project to develop effective training and support materials, which will be provided to staff immediately before implementation.

NARRATIVES

1. CURRENT PROJECT SCOPE

Comfort Stations Management for Operators (CoSMOS) - This project will provide modern, sustainable tools to support more effective planning, scheduling, and management of restroom facilities for operators (comfort stations) along Metro Transit routes. Through this project, comfort station data will be added to Transit's current HASTUS system where it can be accessed by service planners and schedulers to plan and schedule Transit service and provide effective monitoring and reporting of comfort station locations and accessibility statistics. The HASTUS scheduling process will be configured to improve operators' access to comfort stations, and new reports will be developed to assess policy compliance.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC COMFORT STAT MGMT SYS

1134110

3. PROJECT JUSTIFICATION

Metro Transit currently plans and manages comfort station data (operator restrooms) using a mix of spreadsheets, HASTUS (Transit enterprise scheduling software) data, and highly manual, inefficient processes. A recently conducted Lean process improvement effort with Transit staff, the HASTUS vendor GIRO, and Transit senior management analyzed the current manual methods used for planning and scheduling comfort station access for transit operators. The group recommended incorporating comfort station data directly into HASTUS, where it will leverage Metro Transit's use of the recently acquired HASTUS Geo functionality that utilizes GIS map data and stop-based scheduling. The effort is considered a high priority for Metro Transit due to its potential benefits for ensuring that transit service planning and scheduling meets service guidelines for comfort station access. Once implemented, this tool will help Metro Transit: meet its own service guidelines for Comfort Stations and meet Department of Labor guidance ensuring that transit operators will have ready access to Comfort Stations during their routes.

4. PROJECT BENEFITS/OUTCOMES

This project expects to realize the following benefits:

- Adding comfort station data, including GIS location and comfort station hours of operation, to HASTUS will enable effective data management and improved restroom access for approximately 4,600 transit operators.
- Transit staff will be able to identify trips which are out of compliance during the process of developing route schedules, allowing management to add new stations as necessary.
- Metro Transit will be better able to comply with Department of Labor & Industry regulations for transit operator access to restrooms. By ensuring that operators have adequate time to use Comfort Stations, Metro will improve transit operator safety and morale, and foster Metro's relationship with the transit operators' labor union, Amalgamated Transit Union Local 587.
- The system will allow the creation, modification and tracking of comfort station location and operating hours.
- The system will generate necessary reports to allow staff to monitor and assess performance over time.

Because this functionality will be completely new, Metro does not have a clear baseline against which to easily measure the success of the project. After implementation, Metro will develop a baseline against the service plan for the period prior to project implementation. To do this, Metro will create reporting functionality that will allow measurement of the percentage of trips that include appropriate comfort station identification. Ultimately, the project will be successful if 90%-95% of each week's scheduled trips followed by a scheduled layover have restroom access.

5. BUDGET REQUEST BASIS

The requested budget will fund the effort to add comfort station data to HASTUS for improved data management, service scheduling, and reporting. The budget will fund the project from initiation and planning through implementation and includes the cost of contractor services from GIRO, KCIT staff time, and Transit staff to support the project. Project costs were developed from estimates by GIRO, KCIT, and Transit project management staff.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

No additional operating budget impacts have been identified to date, as the project does not add new HASTUS licensing requirements or County staffing requirements.

8. PROJECT STATUS

Project is a new proposal and has not started

9. ALTERNATIVES ANALYSIS

Adding Comfort Station data to HASTUS is the preferred strategy as it leverages KCM's existing system and contractor and County expertise. The "do nothing" alternative would indefinitely delay the benefits of the project, including improved management of comfort station data, more effective scheduling and planning, and improved reporting and monitoring of service guidelines and DOL requirements.

10. OTHER AGENCY INVOLVEMENT

None expected at this time

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC COMFORT STAT MGMT SYS

1134110

11. ART ELIGIBILITY

Not Art eligible, technology project

12. EQUITY AND SOCIAL JUSTICE IMPACT

An equity impact review is required for this project. It will be completed as part of the project's planning phase.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

Pending funding request approval, the Comfort Station project - as well as the HASTUS Program as a whole - will participate in an external quality assurance effort, funded by project contingency release. This effort will analyze and assess how well the project is managed and offer best practices and advice that we will use to inform our implementation.

PSB-CIO Critical Success Factors and Conditions:

- 1) Confirm to PRB that a contract amendment is needed to accomplish this scope.
- 2) Provide to PRB an updated Roadmap should any project on the roadmap be delayed and extended.
- 3) EIR is required.

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

This project supports the King County Strategic Information Technology Plan "Data Driven" objective. Specifically, the project will allow Transit service schedulers to utilize HASTUS to store, track, and analyze Comfort Station data with newly created reports, ensuring compliance with DOL and Union regulations.

16. PROJECT COMPLEXITY

The project is assessed as relatively low on both technical and business complexity, based on initial high level business and technical requirements that were discussed and analyzed by Transit staff and GIRO, the HASTUS contractor. The project scope and business impacts are relatively small as they affect a small number of HASTUS users within Transit. Technical complexity is also low, because the technical issues are well-understood and we are modifying a vendor product that has been in use at King County Metro for many years.

17. CAPACITY TO IMPLEMENT THE PROJECT

The proposed capital budget includes requested resources for Transit project management and Scheduling staff, as well as KCIT and GIS technical support to implement the project. A project steering committee will be formed in the project start up/planning phase of the effort.

18. PROJECT RISKS

The availability of sufficient, qualified technical and transit staff to support the project is a potential risk. Transit will mitigate this risk by proposing sufficient technical and transit business resources in the capital budget as well as adequate contingency to address unanticipated issues.

NARRATIVES

TDC FAREBOX REPL STUDY

1134161

1. CURRENT PROJECT SCOPE

Farebox Replacement Study - This planning project is an effort that will develop program recommendations for either replacing the existing fareboxes with new fareboxes or identifying an alternative path forward. This study would include first-hand data collection as necessary in addition to review of existing data sources and public outreach to analyze topics such as: evaluation of existing cash collection system including the costs associated with handling and processing cash payments on-board fixed-route vehicles; best practices review of peer agencies nationally and internationally with regard to speeding boarding, improving equity, and reducing costs associated with fare collection; identification of scenarios for evaluation, including replacement of farebox infrastructure or alternative scenarios; evaluation of scenarios with an emphasis on equity impacts and implications; and decision-making and identification of capital or operating projects as necessary to implement recommended solutions.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC FAREBOX REPL STUDY

1134161

3. PROJECT JUSTIFICATION

METRO CONNECTS envisions a dramatic expansion of service, in addition to a vastly improved customer experience, where service is fast and reliable, easy to understand and use, and where the agency applies innovative and creative thinking to keep pace with changing technology and customer expectations. Fare payment is one of the first contacts that many customers have with Metro service, and making sure fares are easy to pay is a critical component of customer service. Additionally, fare payment today can contribute significantly to service delays, as individuals board through a single door and present valid payment, either visually verified by the operator, validated by an ORCA reader, or by using the farebox to pay with cash or a paper ticket.

Existing fare payment infrastructure such as the fareboxes are over 20 years old. These fareboxes require significant maintenance (\$400,000 annually in 2013), and several components (motherboard, logic board, bill transporter, and coin validator) are no longer made by the manufacturer. Metro has not conducted analysis of this issue since a brief review was carried out in 2013. Detailed study is required to understand the costs, benefits, and considerations associated with possible paths forward.

4. PROJECT BENEFITS/OUTCOMES

The primary outcome of this project will be a clear path forward with respect to Metro's aging fareboxes. If a decision is made to replace the fareboxes, this study will produce the information needed to develop a capital or technology project for the 2021-2022 biennium. If a decision is made to pursue an alternative path, a plan outlining the necessary policy changes, capital projects, technology projects, operating changes, or other program components will be developed, with accompanying schedule and budget.

5. BUDGET REQUEST BASIS

The total budget request is to conduct an assessment of alternatives and to develop an implementation plan for the selected alternative. This effort is envisioned to be a consultant-led effort with Metro support. A project manager, project planner, and support from subject matter experts will make up the Metro support team. This planning effort could result in capital, technology, or operating projects in the 2021-2022 biennium and beyond. This is a planning level estimate based on previous experience in conducting similar projects.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

As part of the project's program development, no impacts to the operating budget are anticipated. During this phase, operating budget impacts (additions or reductions to operating and maintenance requirements) will be identified at the planning level for project capital budgets that will be developed for the 21/22 biennium. Any change in fare collection on-board fixed-route vehicles, or even a no-action scenario, will have implications for operating and vehicle maintenance costs.

8. PROJECT STATUS

The initial work in the 2019-2020 biennium will only include capital planning functions. The implementation plan will form the basis of subsequent project capital budgets and cash flows beginning in 2021.

9. ALTERNATIVES ANALYSIS

This project will examine at least two alternatives as part of the study.

10. OTHER AGENCY INVOLVEMENT

Partner agencies in the region have a range of policy and practice around fareboxes and will be involved as key stakeholders in this process. Metro has full jurisdiction of the relevant planning decisions.

NARRATIVES

TDC EASTGATE MOBILITY HUB

1134192

1. CURRENT PROJECT SCOPE

Eastgate Mobility Hub - This project includes planning, pre-design, final design and construction of physical and information technology improvements at Eastgate Park and Ride. Improvements will include bicycle and pedestrian elements, circulation and safety elements, customer wayfinding elements, passenger amenities such as shelters and benches, accommodations for shuttles and other mobility services, and electronic terminals to broadcast real-time arrival information and allow for customer dispatch of mobility options. Project elements will work together to improve circulation at and around the facility, and to improve accommodations for existing and new first/last mile access modes.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC EASTGATE MOBILITY HUB

1134192

3. PROJECT JUSTIFICATION

This project is an initiative of Metro's Connecting to Transit program. The program is developing a range of projects and pilots to get more value out of existing and committed capital and service investments by expanding first/last mile access to the transit system. By better accommodating existing and emerging first and last mile access modes, this project will reduce travelers' reliance on personal vehicles and bring more travelers within easy reach of the frequent transit service and critical connections available at Eastgate Park and Ride. Project elements will work together to improve circulation at and around the facility, and to improve accommodations for existing and new first/last mile access modes. These improvements will enhance functionality of Eastgate Park and Ride, transitioning it from a primarily peak period, car-to-bus transfer facility into an all-day, multi-modal mobility hub.

Metro Connects calls upon the use of innovation, partnerships, technology and shared modes – including transportation network companies, and other types of mobility providers and services to provide first/last mile solutions that improve access to Metro's fixed route services. Metro is developing new ways of partnering and doing business, and working to integrate innovative modes in the public transportation landscape. Metro has prioritized Eastgate as the first site for a mobility hub project because within a single facility, it embodies a full range of the opportunities and complexities Metro could encounter across other park and ride sites. These factors include: complex ownership and operational arrangements, fixed-route service provided by multiple transit agencies, high demand for parking from transit customers as well as unauthorized users, interest in service integration from operators of private and employer shuttles, and a jurisdictional vision for future TOD (transit-oriented development) in the area. Lessons learned from implementation at Eastgate will be applied to other Metro mobility hubs in subsequent projects.

4. PROJECT BENEFITS/OUTCOMES

This project will make transit more predictable and easier to navigate for customers by providing wayfinding and real-time information about transit arrivals and mobility services. It may expand first/last mile access options for all travelers, especially those who do not travel during peak times. It will improve safety and access to pedestrians and cyclists. It will provide transit riders with improved waiting areas, walkways and signage. It may create a safer, more seamless trip experience, regardless of the modes a traveler is transferring to and from. Long-range, it may catalyze transit-oriented development around Eastgate, consistent with the City of Bellevue's Comprehensive Plan and METRO CONNECTS' vision for compact development near transit.

5. BUDGET REQUEST BASIS

The budget request for this project was based on the standard planning, design and construction unit costs for representative facility elements including specific bicycle and pedestrian improvements, lighting, signage, and passenger amenities.

6. FUNDING AND REVENUE DISCUSSION

Metro anticipates applying for grant funding for use in 2021-2022.

7. OPERATING BUDGET AND OTHER IMPACTS

This project presents no impacts to the 2019-2020 operating budget. Impacts to subsequent biennia will depend upon the specific elements identified for implementation and what operational support will be needed to sustain them.

8. PROJECT STATUS

This project is in the early planning phase as Metro coordinates with the City of Bellevue and other stakeholders. Currently, Metro and the City of Bellevue are engaged in a planning/visioning effort. Planning work is expected to continue throughout 2018, followed by pre-design, final design and implementation complete in 2022.

9. ALTERNATIVES ANALYSIS

Alternatives will be developed and evaluated during planning for this project.

10. OTHER AGENCY INVOLVEMENT

Metro will coordinate closely with the City of Bellevue, WSDOT (the Washington State Department of Transportation) and Sound Transit on this project.

11. ART ELIGIBILITY

NA, Art Eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project favorably impacts the following SCAP goals:

Goal Area 1 - Transportation and Land Use

- Transportation Choices: Strategy E - Expand pedestrian connectivity and bicycle parking at transit stations and park-and-ride lots to increase access to transit.
- Alternative Vehicles, Fuels and Technologies: Strategy A - Collaborate with private industry, community groups, utilities, and other agencies to build demand/markets and infrastructure for alternative vehicles, fuels and technologies.

NARRATIVES

TDC FACILITY IMPR PLANNING

1134193

1. CURRENT PROJECT SCOPE

Facility Improvement Planning - This program involves planning and program management for programs and projects within the Facility Improvements Sub Portfolio and involves planning for expansion of facility capacity by building or leasing new facility capacity. Program management activities will be responsible for ensuring adequate coordination with internal end-users in Metro and will include: prioritization of projects, feasibility studies, exploration of funding and partnership opportunities, and consideration of benefits of the various projects within the programs; monitoring of projects for progress and changes in scope, schedule, and budget and adapting other projects within the programs to maintain the program benefits anticipated in a coordinated and complimentary manner; and tracking interdependencies and coordinating with projects in other programs.

2. PROGRAMMATIC PROJECT DISCUSSION

The Facility Improvements Sub Portfolio contains the following programs: Operational Capacity Growth, Access to Transit, Layovers, Comfort Stations and Operational Facility Improvements.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC FACILITY IMPR PLANNING

1134193

3. PROJECT JUSTIFICATION

Coordination of these programs is critical to operating facilities that support existing and expansions of service. All activities are devoted to moving capital projects and programs forward expeditiously into design and completion of delivery.

4. PROJECT BENEFITS/OUTCOMES

All activities are devoted to moving capital projects and programs forward expeditiously into design and completion of delivery. Benefits include setting projects on a path of steady progress towards completion, identifying and addressing flaws and risks where possible in advance of passing on to a project manager for design. Work done to improve scope and schedule will help define needed staff resources so that projects do not move into design prematurely until resources are available.

5. BUDGET REQUEST BASIS

The budget is based on staffing in capital planning and program management organization chart responsible for the capital planning and program management duties within the Facility Improvements Sub Portfolio. Modest amount of professional services are estimated to augment staff expertise.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Ten percent of the staffing costs are assumed to be born by the operation budget.

8. PROJECT STATUS

New project.

NARRATIVES TDC REDMOND LAYOVER 1134196

1. CURRENT PROJECT SCOPE

Redmond Layover - This project creates off-street layover facilities in conjunction with Transit Oriented Development (TOD) activities occurring at the Redmond Transit Center. Metro is currently partnering with the housing entity carrying out the development to acquire land and develop a concept for off-street layover on the TOD site.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

This project will provide improvements to the speed and reliability of service and the operator environment by creating layover facilities in an optimal area near the Redmond Transit Center. Additionally this project contributes to Transit Oriented Development (TOD) and partnership goals by co-locating development of Layover Facilities with desirable and compatible land uses. This facility would be located at the terminus of the East Link rail project and would provide long term capacity for bus/rail integration.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC REDMOND LAYOVER

1134196

4. PROJECT BENEFITS/OUTCOMES

This project will increase service efficiency and improve the working environment for Bus Operators.

5. BUDGET REQUEST BASIS

The initial cost is a commitment to reimburse for land option payment in the event purchase is not successful or project is not feasible. Rough Order Magnitude estimate of consultant cost for layover siting with larger development.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

This project will reduce operating cost for travel time that would be incurred if traveling to a less optimally located layover facility.

8. PROJECT STATUS

This standalone project is ongoing from 2017-2018. The partnership is well established and ongoing coordination is in place. The property negotiation, being led by the partner, is underway.

9. ALTERNATIVES ANALYSIS

Site is optimally located and a partnership will be more cost effective than siting on property that Metro must purchase, construct and maintain alone.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, project to be owned, developed, and constructed by others, whose art rules will apply.

NARRATIVES TDC SAFE ROUTES TO TR INV RR 1134197

1. CURRENT PROJECT SCOPE

Safe Routes to Transit Investment - This program works with cities to plan, design and construct safe pedestrian and bicycle improvements to reach transit services and facilities and to support bike share to connect with transit. Improvements will include sidewalks, bikeways, safe crossings, traffic calming devices, lighting, traffic counters, and other methods to enhance safety, comfort, and access. Projects will support RapidRide corridors and other existing and future services. Projects will be on jurisdiction rights-of-way, not Metro owned assets. Most projects will involve pass-through of funds to cities to design and construct improvements.

2. PROGRAMMATIC PROJECT DISCUSSION

Safe Routes to Transit is Metro's program to develop and fund bike and walk improvements to reach transit services and facilities. This program will create an on-going stream to support access to transit improvements for RapidRide and other transit corridors in partnership with jurisdictions. Some grant funds are awarded and future grants will be sought. Funding for this program had historically been via the operating budget.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC SAFE ROUTES TO TR INV RR

1134197

3. PROJECT JUSTIFICATION

Metro Transit's adopted long-range plan, Metro Connects, envisions significant investments in access to transit improvements including sidewalks, bikeways and other treatments to help transit riders reach transit safely without dependence on driving. Some requested funds for 2019-2020 are revenue-backed from awarded grants. Future years assume revenue from other grants and partner cities, leveraging approximately 50% of costs.

4. PROJECT BENEFITS/OUTCOMES

The program's safe access improvements will attract more riders, reduce pedestrian & bike crashes and risks, help manage auto demand at over-crowded Park & Rides, help manage demand for bike racks on buses, reduce localized congestion and emissions by shifting riders from driving to transit. Program will benefit jurisdictions by helping them fund these improvements as part of their CIPs and transportation master plans, filling gaps in sidewalk and bike networks and installing other safety treatments near transit.

5. BUDGET REQUEST BASIS

The budget request cost estimates come from local city capital improvement programs and WSDOT published estimates for pedestrian and bicycle infrastructure improvements. Expenditures are assumed in the year before the corridor opens. The estimates include the 6 future Metro-funded RapidRide corridors and do not include SDOT-funded RapidRide corridors.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by awarded State Regional Mobility Park & Ride Efficiency & Access grant (\$1.5M for this scope element to June 2019); awarded federal TAP grant (\$1.133M) for RR H Line SW 100th St; awarded state Eastside Bike share grant (\$175K to June 2019). Future grants expected and partnerships with jurisdictions at 50% match.

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

Starting new program with 2019-2020 budget. Future projects are anticipated to help deliver high quality access to our services.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

City partners and King County Roads for use of their rights-of-way, Sound Transit for coordination with their Station Access planning.

11. ART ELIGIBILITY

NA, Art Eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

SCAP Goal 1: Transportation & Land Use. Priority Action: Expand Access to the Transit System. Non-motorized access projects are included as action items.

NARRATIVES TDC BASE SECURITY 2021-22 1134198

1. CURRENT PROJECT SCOPE

Base Security 2021-2022 - This project is a placeholder for security investments that will be identified for 2021-2022. Activities to be funded include retrofit or installation of new security components in Transit facilities throughout the Metro system. The level of placeholder funding is consistent with past investments and is needed in order to maintain physical security at transit facilities. Specific investments will be defined in the next budget cycle.

NARRATIVES

TDC CB BODY TO VM CONVERT

1134199

1. CURRENT PROJECT SCOPE

Central Base Body Shop to Vehicle Maintenance Conversion - This project involves the conversion of the Central Base body shop bays to vehicle maintenance bays and includes addition of mobile column lifts and required electrical infrastructure for lifts, addition of vehicle exhaust systems, lighting enhancements necessary for vehicle repair, addition of fall protection, additional of hose reels and fluid dispensing systems, and increase in lockers and cabinetry to support increased staff counts.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC CB BODY TO VM CONVERT

1134199

3. PROJECT JUSTIFICATION

Operational Capacity Growth planning requires the maximization of Central base parking capacity. Current Vehicle Maintenance Capacity is constraining the ability to utilize all available bus parking on property, due to the lack of Vehicle Maintenance Bays available in the Central Vehicle Maintenance Building. Four bays in Central Vehicle Maintenance are utilized for body work and must be relocated in order to convert those bays into Vehicle Maintenance bays to support the required increased capacity of central base. The four new vehicle maintenance bays will enable the full realization of available parking and support vehicle maintenance work from buses in the future expansion site. Utilization of existing Metro property is also being considered as part of 1129644 TDC CNTRL/ATL BASE EXP.

4. PROJECT BENEFITS/OUTCOMES

Four additional vehicle maintenance bays inside the Central Vehicle Maintenance Building.

5. BUDGET REQUEST BASIS

A full engineering analysis of the required components to convert Central Base Body Shop bays to vehicle maintenance bays, including rough order of magnitude (ROM) costing from subject matter experts, was performed in 2009. Escalation was applied to this costing, as well as additional premiums for current market conditions in the region.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

With the completion of Central Base Expansion in 2023, there will be added operational costs for additional staff of operators, vehicle maintenance, facilities maintenance, power distribution (battery-electric infrastructure for battery-electric coaches), training, and administration. These additional assets will also increase utility bills, asset insurance, and other associated costs for capital assets.

8. PROJECT STATUS

New project.

9. ALTERNATIVES ANALYSIS

Alternatives considered were to do nothing and to expand other existing Metro bases. South Base and Central Base expansion were feasible; and expansion at the other Metro bases were considered to have fatal flaws.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

Transit service from the three bases that comprise Central Campus has the highest ridership and reaches many underserved communities where buses are the sole mode of travel in the Seattle proper area. There is a high demand for bus service within Seattle. Sound Transit U-Link stations at minority and/or low-income communities compel more bus service for multi-modal connections. In addition, recent transportation studies indicate people who live in Seattle are driving less, some foregoing cars altogether, and relying on Metro and Sound Transit for mobility. Transit's ability to continuing serving Seattle underserved neighborhoods can only happen with expanding operational base capacity.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC CB BODY TO VM CONVERT

1134199

14. OTHER CONSIDERATIONS (OPTIONAL)

This project is part of the Operational Capacity Growth program plan. The plan includes: 1) Construction of a 125-bus capacity interim base on the King County Tukwila Extension site; 2) A parking expansion at Central Base, the accompanying body shop-to-vehicle maintenance bay conversion, and the design/construction of a designated body shop to increase Central Base capacity by 90 buses; 3) Construction of a permanent 250-bus capacity base on the existing King County Metro South Annex site, including temporary relocation of Safety and Training facilities to leased space; and 4) Construction of a permanent 250-bus capacity base on yet-to-be acquired land at South King County.

NARRATIVES

TDC CC BODY SHOP WELL CNTR

1134200

3. PROJECT JUSTIFICATION

Operational Capacity Growth program planning requires the maximization of Central Base bus and non-revenue vehicle parking capacity. Current vehicle maintenance capacity is constraining the ability to utilize all available bus parking on the property, due to the lack of vehicle maintenance bays available in the Central Vehicle Maintenance building. Four (4) bays in Central Vehicle Maintenance are currently utilized for body work and said body work must be relocated in order to convert the body work bays into vehicle maintenance bays. To regain much needed body shop capacity in the central business district, a Central Campus Body Shop must be constructed to support the displaced body work. Utilization of existing Metro property is being studied as part of this project - 1129644 TDC CNTRL/ATL BASE EXP.

The Puget Sound region is expected to grow by approximately 1 million people and 850,000 jobs in the next 25 years. For the region to meet future transportation demand, the Puget Sound Regional Council's Transportation 2040 Plan identifies the need for all transit agencies to double their ridership. Per the Metro Long Range Plan, that means adding 70% more service hours than currently provided, which requires an expanded bus fleet. High levels of growth are currently centered in the urban areas, particularly Seattle.

Except for Central and South Bases, Metro's other five (5) bases have little to no ability to expand. While the Long Range Plan urges the development of additional bases, the time-frame for building a new base and putting it into operation is approximately 15 years. Thus, Metro's ability to meet all expansion needs in the next 15 years rests with Central and South Bases.

4. PROJECT BENEFITS/OUTCOMES

Expanded Emergency Operations Center, expanded Security Monitoring Center, permanent Central Campus Wellness Center, and a 4-bay Central Campus Body Shop Facility.

5. BUDGET REQUEST BASIS

The requested budget accounts for the activities and costs associated with negotiations, feasibility studies, title reports and ALTA surveys, environmental due diligence, entitlements, appraisals/review appraisals, and the purchase prices. Work will be conducted by internal staff with support from consultants.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

With the completion of Central Base expansion in 2023, there will be added operational costs for additional staff of operators, vehicle maintenance, facilities maintenance, power distribution (battery-electric infrastructure for battery-electric coaches), training, and administration. These additional assets will also increase utility bills, asset insurance, and other associated costs for capital assets.

8. PROJECT STATUS

NARRATIVES TDC COMFORT STATION KENT 1134201

1. CURRENT PROJECT SCOPE

Comfort Station Kent - This project involves siting, design, and construction of one or two permanent comfort stations for Transit operators at a Kent Station layover area. There is one permanent restroom facility available for drivers at this high capacity rail and bus station.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC COMFORT STATION KENT

1134201

3. PROJECT JUSTIFICATION

One restroom serves 356 layovers per weekday and 324-weekend layovers resulting in lines for restroom use, and delays for in-service and the departures of operators scheduled for a break. King County Metro is committed to improving the availability of operator comfort stations by providing restroom facilities at operator layovers. Following a State of Washington Labor & Industries (L&I) audit in 2014, Metro established its Comfort Station Policy as part of its mitigation to improve restroom access for its operators, and is consistent with Metro's strategy of "Enabling Employees To Do Top Quality Work". This policy defines acceptable facilities and the maximum distance from the layover. Permanent, constructed facilities are planned only when other alternatives, like use agreements with commercial establishments, are not available.

4. PROJECT BENEFITS/OUTCOMES

The benefit/outcome of this project is at minimum, one new driver comfort station at this location to support a safe, healthy work environment. This project may support up to two comfort stations at the Kent Rail Station, greatly reducing operator use lines which allows buses to return to service quickly. These benefits contribute to on-time performance and improved customer satisfaction.

5. BUDGET REQUEST BASIS

The budget request is based on cost metrics for the three comfort station projects that have progressed to construction in 2018, scaled up for this two bathroom facility. Funding is intended for planning and pre-design efforts in 2020. Additional funding for implementation to be requested in subsequent biennium.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Operating budget to be impacted by additional maintenance for the new comfort station.

8. PROJECT STATUS

This is a new standalone project.

9. ALTERNATIVES ANALYSIS

Permanent, constructed facilities are planned only when other alternatives, like use agreements with commercial establishments, are not available.

10. OTHER AGENCY INVOLVEMENT

Sound Transit's participation is anticipated at this Kent Rail Station location.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The King County Green Building Ordinance is being followed, which has identified energy reduction, compact development footprint, and material recycling opportunities. This project will improve energy efficiency consistent with the 2010 Energy Plan, compared to previous Metro comfort station projects. The project anticipates implementing energy efficient heating, ventilation, and water use design for the comfort station. The project has the opportunity to advance Metro's sustainable infrastructure goals.

NARRATIVES TDC COMFORT ST FUTURE #1 LBC 1134203

1. CURRENT PROJECT SCOPE

Future #1 Living Building Challenge (LBC) Comfort Station - For this project, Metro Transit participated in an eco-charrette with the International Living Futures Institute. This resulted in a recommendation that a comfort station project pursue the highest level Living Building Challenge Certification. Following the alternatives analysis, this project will involve siting, design, and construction of a permanent comfort station at a to-be-determined location.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC COMFORT ST FUTURE #1 LBC

1134203

3. PROJECT JUSTIFICATION

Transit participated in an eco-charrette with the International Living Futures Institute resulting in a recommendation that the comfort station project pursue Living Building Challenge Certification. Metro is committed to improving the availability of operator comfort stations by providing restroom facilities at operator layovers, and is consistent with Metro's strategy of "Enabling Employees To Do Top Quality Work". Following a State of Washington Labor & Industries (L&I) audit in 2014, Metro established its Comfort Station Policy and included it in the mitigation to improve restroom access. This policy defines acceptable facilities and the maximum distance from layovers. Permanent, constructed facilities are planned only when other alternatives, like agreements with commercial establishments, are not available.

4. PROJECT BENEFITS/OUTCOMES

The benefit/outcome of this project is a new driver comfort station at this location to support a safe, healthy work environment and a facility that achieves Living Building Challenge Certification. Benefit also includes development of a design for comfort stations that is LBC or highly sustainable that may be replicated in other projects.

5. BUDGET REQUEST BASIS

The budget request is to fund LBC enhancements to a standard Metro comfort station, and to conduct a pilot project case study. The funding addresses the LBC enhancements that will be added to a selected future comfort station project. The budget estimate is conceptual at this time with the funding request for 2019 to conduct the planning and pre-design efforts to establish the LBC implementation plan.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

The annual budget for maintenance of a typical comfort station is approximately \$30,000, but the impact of a Living Building Comfort Station is unknown.

8. PROJECT STATUS

This is a new standalone project.

9. ALTERNATIVES ANALYSIS

Alternatives Analysis will be completed during the design phase to assess higher efficiency alternatives and decision-making for construction activities that include energy and water consuming equipment. Permanent, constructed facilities are planned only when other alternatives, like use agreements with commercial establishments, are not available. Metro Transit participated in an eco-charrette with the International Living Futures Institute, which resulted in a recommendation that the comfort station project pursue the highest level Living Building Challenge Certification.

10. OTHER AGENCY INVOLVEMENT

Some imperatives required for Living Building Challenge Certification are being pursued at the County level and coordinated through the King County Green Tools Program. These include developing a materials pallet to standardize landscaping and maintenance choices and practices; Urban Agriculture and Habitat Exchange petals can be done at the county-level more efficiently and with greater impact; JUST label for King County/owner to cover all projects; possibly sharing a materials specialist and/or database for purchasing non-Red List materials (a requirement for certification). For Metro Transit projects, King County may need to work with jurisdictions on code requirements to build the LBC projects.

11. ART ELIGIBILITY

N/A, Art eligible

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC COMFORT ST FUTURE #1 LBC

1134203

12. EQUITY AND SOCIAL JUSTICE IMPACT

The Living Building Challenge includes criteria for Equity. There are several imperatives required for Living Building Certification. There is an opportunity for the County to attain a JUST Label, a voluntary disclosure tool for organizations to help optimize policies that improve social equity and enhance employee engagement. This helps to fulfill goal 2 (Develop an organization where all employees are change agents who actively apply their ESJ knowledge to their work) and goal 4 (County operations, programs and services are pro-equity in our service delivery-responsive and adaptive, focused on those whose needs are greatest - and collaborate with other King County and external service providers) of the Leadership Operations and Service goal area, and also goal 2 (Policy guidance incorporates the ESJ Shared Values into analysis and decision-making for operations and service delivery) of the Plans, Policies, and Budgets area of the ESJ strategic plan.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

In the 2015 Strategic Climate Action Plan, King County committed to register at least ten new construction, or retrofit projects, by 2020 that meet the International Living Future Institute's (ILFI) Net Zero Energy (NZE), Petal, or Living Building Challenge (LBC) certification. This is one of the two projects Metro Transit is proposing to pursue for certification. Achieving the Living Building Challenge certification for an Operator Comfort Station will be congruent with King County's efforts to deliver carbon-neutral services via electric buses, bus charging stations, and Green Direct energy. The project has the opportunity to advance Metro's sustainable infrastructure goals.

NARRATIVES TDC DT SEATTLE LF EASTLAKE 1134206

1. CURRENT PROJECT SCOPE

Downtown Seattle Layover Facility - This project is to design and construct an Eastlake site as a long term bus layover facility located along the east side of Eastlake Ave E within Washington State Department of Transportation (WSDOT) right-of-way (ROW), between Harrison street and Roy street. This project includes the following major elements: 1) approximately six 60-foot bus layover parking spaces within WSDOT I-5 ROW; 2) approximately six 60-foot bus layover parking spaces in approximately 740 linear feet of bus layover parking space northbound within Eastlake Ave E ROW; 3) roadway and intersection modifications as necessary to support the efficient operation of the facility, including modification to existing traffic signals at two intersections and installation of a new traffic signal system at one additional intersection; and 4) a comfort station/operations support building for transit operators, first-line supervisors, transit police, facilities maintenance staff, etc., forecast to include four water closets, a service quality office, Metro Transit operator break space, custodial closet, and service quality storage space

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Bus layover is an essential component of transit service. Time spent in layover enables operators to rest between trips and provides a schedule buffer so new trips may begin on time. Historically, bus layover in the downtown Seattle area has been accommodated on-street or in a small number of off-street facilities such as the Convention Place Station (CPS) and International District Station (IDS). In the coming years, as Metro removes routes from the Downtown Seattle Transit Tunnel, buses currently utilizing off-street layover at CPS and IDS will be shifted to other locations. The planning effort for replacement off-street bus layover facilities is the Center City Layover Study. The study has and continues to evaluate potential off-street sites for interim and long term layover facilities in the northern and southern areas of downtown Seattle, as well as replacement options for existing on-street layover displaced by the City of Seattle's reallocation of street right-of-way use due to new developments, bike facilities, Green Streets, and other changes in its street right-of-way.

4. PROJECT BENEFITS/OUTCOMES

This project will provide reliable long-term on and off-street bus layover spaces, comfort stations, and operations support facilities necessary, replacing existing on-street bus layover spaces lost due to competing demands for on-street layover precipitated by development in the South Lake Union area.

5. BUDGET REQUEST BASIS

The budget estimate is based on professional consultant estimates with additional knowledge of similar projects. Funding for this request is for design and implementation in 2019-2020. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$17 M is being reappropriated from project 1129343 TDC DT LAYOVER DESIGN to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

WSDOT has awarded a Regional Mobility Grant in the amount of \$1.76 M in the state biennium July 1, 2017 - June 30, 2019.

7. OPERATING BUDGET AND OTHER IMPACTS

Operating budget and other impacts will be evaluated during the project.

8. PROJECT STATUS

This project is ongoing from 2017-2018 and currently in the pre-design phase under consultant contract.

9. ALTERNATIVES ANALYSIS

An alternatives analysis has been completed and is pending final City of Seattle approval and subsequent completion of final report.

10. OTHER AGENCY INVOLVEMENT

WSDOT and the City of Seattle are partner agencies, providing right-of-way for the project. Additionally, WSDOT has awarded a Regional Mobility Grant for this project.

NARRATIVES

TDC DT SEATTLE LF PLANNING

1134209

1. CURRENT PROJECT SCOPE

Downtown Seattle Layover Planning - This project will continue the existing partnership with the Seattle Department of Transportation to study opportunities for off-street layover to replace recently lost off-street layover at Convention Place Station, as well as displaced on-street layover. The scope will include site feasibility analysis, concept site evaluation, site schematics/conceptual costing, traffic/transit analysis, planning level financial analysis, site acquisition strategy, partner negotiation, stakeholder and steering committee coordination, land use and regulatory analysis, initial environmental review, and public outreach.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC DT SEATTLE LF PLANNING

1134209

3. PROJECT JUSTIFICATION

Throughout downtown Seattle, many curb zones are currently designated for bus layover for Metro, Community Transit, and Sound Transit. Many of these zones are competing for space in the right-of-way with other uses, including green street improvements, protected bike facilities, bike share stations, commercial loading, passenger loading, and vehicle parking. This pressure is most acute in dense urban areas because of the heavy demand for layover resulting from the large amount of transit service in these areas. Adequate and accessible layover bus layover is an essential component of transit service and system reliability. The 2040 service network identified in METRO CONNECTS anticipates up to a 50% increase in the demand for layover spaces. Metro will need to make significant investments in new, off-street facilities to meet this demand.

4. PROJECT BENEFITS/OUTCOMES

The objective of this project is to evaluate the layover environment in north and south downtown Seattle and provide recommendations for replacement off-street facilities. Recommendations approved by the Interagency Steering Committee would result in capital facility projects. Benefits of off-street layover are numerous and focus heavily on the Transit Core Mission. They include:

- Helping to keep buses on time and reliable throughout the day
- Freeing street space for other uses
- Moving "out of service" buses into off-street hubs instead of scattering them around city streets
- Improving workplace quality, safety, and security by providing safe and reliable restrooms and break areas for bus drivers and supervisors
- Supporting future extensions of bus service to new neighborhoods

5. BUDGET REQUEST BASIS

This budget will perform feasibility studies, concept level capital planning, interagency coordination, partnership negotiations, and public outreach. This effort is envisioned to be a Metro led effort with consultant support. A project manager from Mobility/Capital Planning plus subject matter experts from Design and Construction would be key staff during the duration of the project. This planning effort would result in capital projects for the 2021-2022 biennium and beyond. This is a planning level estimate based on previous experience in conducting feasibility analysis, interagency coordination, and outreach.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

This planning only phase would not result in impacts to the operating budget.

8. PROJECT STATUS

This is a new project. This project is designed to enable the necessary capital planning functions in the 2019-2020 biennium in order to continue the ongoing study process and partnership with the Seattle Department of Transportation. This effort will continue to locate, evaluate, and recommend new off-street layover projects that help maintain, grow and deliver the transit system according to METRO CONNECTS. Prior study efforts determined that thirty to thirty-five spaces are necessary in the north and ten to twenty spaces are necessary in the south downtown Seattle areas.

9. ALTERNATIVES ANALYSIS

This capital planning effort is inclusive of the program's alternatives analysis for off-street layover site feasibility and site control. Prior work has evaluated north and south downtown Seattle sites. This effort will develop new evaluation criteria and framework to find new off-street opportunities.

10. OTHER AGENCY INVOLVEMENT

The program is a joint effort between King County Metro and Seattle Department of Transportation. All sites to be developed will be reviewed and approved by the Interagency Steering Committee, comprised of senior management from King County Metro and City of Seattle, prior to moving to the pre-design phase. Other stakeholders include the Downtown Seattle Association and individual property owners.

11. ART ELIGIBILITY

Not Art Eligible, capital planning project

NARRATIVES

1. CURRENT PROJECT SCOPE

Eagle Trailer Lease - This project involves a lease at 12119 East Marginal Way South, across from South Base, where new-coach preparation work will be relocated from the Component Supply Center; this allows the subsequent relocation of body work from Central Base to the Component Supply Center, which then allows the expansion of Central Base Vehicle Maintenance services by converting the vacated body work bays into vehicle maintenance bays. This lease is expected to provide said capacity until this project- 1134200 CC BODY SHOP WELL CNTR - is completed to provide the permanent body shop capacity.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC EAGLE TRAILER LEASE

1134213

3. PROJECT JUSTIFICATION

This project allows for the capacity needed to grow by providing the space needed to receive and outfit new coaches, resulting in additional body work bay capacity at Component Supply Center, which in turn results in additional maintenance bays at Central Base. This lease is expected to provide said capacity until this project -1134200 CC BODY SHOP WELL CNTR - is completed to provide the permanent body shop capacity.

4. PROJECT BENEFITS/OUTCOMES

This project ultimately generates vehicle maintenance capacity at Central Base. It provides the space needed to receive and outfit new coaches, resulting in additional body work bay-capacity at Component Supply Center, which in turn results in additional maintenance bays at Central Base. This lease is expected to provide said capacity until this project -1134200 CC BODY SHOP WELL CNTR - is completed to provide the permanent body shop capacity.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$600K is being reappropriated from project 1129642 TDC SOUTH BASE EXPANSION to fund or partially fund this project. Estimates leverage Real Properties triple net fee estimates plus monthly lease cost. 2019-2020 includes triple net fees, monthly lease cost, plus limited assumptions for building fit-out cost.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

This project is ongoing with a lease signed in May 2018 as part of project 1129642 but is being converted from a task to a standalone project. Negotiations have been completed and a lease has been signed. Project is in the implementation phase involving outfitting the building with tenant improvements.

9. ALTERNATIVES ANALYSIS

Upon comparing the trajectory between 2017 and 2040 of Metro Connects, Metro Fleet Plan, and base capacity (LOS C and LOS D) studies conducted by Metro Strategy & Performance, significant constraints in operational capacity from 2019 to 2025 that would not be met with the existing Base Expansion and New Metro Base (2030) projects that were identified in Q4 2017. Also in Q4 2017, leadership directed Metro to build a base in 5 years. Alternatives considered were to do nothing, possible expansion at other existing Metro bases, and lease of available properties for bus parking and maintenance. This project supports immediate expansion of interim capacity for new coach preparation and training.

10. OTHER AGENCY INVOLVEMENT

Metro currently operates and services an excess of 100 ST coaches. While Metro's current expansion plan does not take into consideration an increase in ST coaches that Metro will operate and service, it does allow Metro to continue servicing the current number of ST coaches in Metro's care.

Expansion may impact traffic, economy, sustainability, and equity & social justice.

11. ART ELIGIBILITY

Not Art Eligible, project wholly or partially funded by Metro/Metro grant funding but project managed by another jurisdiction or public agency; the managing jurisdiction or agency is responsible for applying their art rules

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will enable Transit to improve service to a growing minority and/or low-income population in south King County.

NARRATIVES TDC FACILITIES IMPR ADMIN 1134214

1. CURRENT PROJECT SCOPE

Facilities Improvement Program Administration - The program is a request for dedicated Metro Transit facilities improvements support for program planning, administrative oversight and project implementation support for improvements at existing Metro facilities. General scope of work includes, but is not limited to: facilities improvement program support, coordinating liaison between operation and capital divisions to inform project sequencing, and implementing best practices for facilities operations and maintenance. This body of work is discrete for strategic facility planning as it relates to space planning, space optimization, continual improvement processes and integration with focus to Transit Facilities Division's processes.

2. PROGRAMMATIC PROJECT DISCUSSION

This dedicated resource will conduct program management activities for the Transit Facilities Division, including: coordination of project support within programs, feasibility studies, assess impacts, and consideration of benefits of the various projects within the programs, as well as track interdependencies and coordinate with projects in other capital programs and operational processes.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC FACILITIES IMPR ADMIN

1134214

3. PROJECT JUSTIFICATION

Metro will benefit from a dedicated resource to champion best practices to develop and support strategic capital and operating planning. This program may serve as an intermediary to the Facilities Master Plan, assisting with defining and documenting executable strategic facility plans and assisting with appropriate lifecycle management practices for Transit facilities real and personal property.

4. PROJECT BENEFITS/OUTCOMES

Documented and data driven program support for Metro Transit facilities management and implementation strategies, in support of a common vision.

5. BUDGET REQUEST BASIS

The budget is based on an anticipated staff resource required for the program to be successful.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

This is a new programmatic project.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

May involve interviewing or consulting with other Transit agencies to incorporate industry best practices.

11. ART ELIGIBILITY

Not Art Eligible, capital planning project

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This program will take into consideration opportunities for improvement and compliance with SCAP

NARRATIVES

TDC FACILITIES IMPROVEMENTS

1134215

1. CURRENT PROJECT SCOPE

Facilities Improvements - This program is a master project that supports Metro Transit operations and maintenance by adding new assets or by extending the lives of existing assets. Improvements are justified by changes in business practices, technology, and regulations, to name a few of the criteria for proposed projects. The program improves transit operating facilities (bases, maintenance and support), their work environments for employees, and in certain cases, passenger facilities. Where feasible, ideally the sub projects will be packaged with other projects to minimize disruption to operations.

2. PROGRAMMATIC PROJECT DISCUSSION

The program addresses three Metro Transit strategic goals: safety, sustainability and financial stewardship. The types of projects that are within the scope of this master project are, for example, tenant improvements, facility security, energy reduction, facility and equipment modifications related to new bus fleets and regulatory requirements. Approved projects strive to meet "State of Good Repair" principles. Planned projects include: reconfiguring work areas in existing Metro Transit facilities to accommodate staff growth and drainage mitigation at Ryerson base.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC FACILITIES IMPROVEMENTS

1134215

3. PROJECT JUSTIFICATION

This Program is the only capital fixed asset program that responds to new asset needs due to changes in business practices, technology or new regulations. Past examples are new lifts at vehicle maintenance bases to enable effective and safe handling of hybrid bus batteries, new storm water filtering system to remedy higher Department of Energy regulations, new security systems at key facilities, and new fuel additive dispensing system at vehicle maintenance bases as required by new fleet engines.

4. PROJECT BENEFITS/OUTCOMES

Providing funds for this work enables Metro to advance small scope projects in a timely manner. Without this program, Metro risks not being able to respond to near term or critical needs. Projects in this program further Metro Transit's goal of being a great place to work by improved employee morale.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project will receive reappropriation of approximately \$2M from project 1116071 TD OP FACILITY IMP BUDGET (master), which is being discontinued. This program budget request is based on cost estimates of the sub-projects in its work plan.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Potential increased cleaning and added routine maintenance at Metro Transit Facilities, due to increased occupancy.

8. PROJECT STATUS

This is an new programmatic project.

9. ALTERNATIVES ANALYSIS

Alternatives analysis will be completed for each sub project.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, primarily minor maintenance and rehabilitation projects

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

TDC FACILITY MASTERPLAN

1134216

1. CURRENT PROJECT SCOPE

Facility Master Plan - This project is the continued development of the Facility Strategic Plan & Facility Master Plan efforts (Bus Base Expansion focused effort started in 2017 and complete in 2018). The Plan will identify - via integration with Metro Connects, Mobility, and Strategic Planning - all Metro capital fixed assets required for Operational Capacity Growth, including bus bases, passenger facilities, Vanpool, Access, facilities maintenance locations, Metro back-end services (training, Revenue Processing Center, warehousing), etc.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC FACILITY MASTERPLAN

1134216

3. PROJECT JUSTIFICATION

Metro Connects established substantial capital investment needs across our service portfolio, furthered by the Metro Connects Capital Report. Detailed analysis of potential alternatives for supporting our Access fleets, facilities maintenance needs, and other service needs are essential to ensuring we are investing the correct dollars for the correct functions at the correct time. The previous Masterplan effort has focused largely, if not exclusively, on operating bases - this effort will supplement the rest of our system.

4. PROJECT BENEFITS/OUTCOMES

Benefits include: fully informed capital investments in new infrastructure; anticipation of and strategic planning for future challenges and investments; and responsible spending of tax dollars.

5. BUDGET REQUEST BASIS

This project is expected to be executed by a consultant with internal support from subject matter experts, project management, contract administration, and quality control.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

It is anticipated that the Facility Master Plan will be revisited on a regular basis, and that cycle is yet to be determined. It has the potential to require an operating budget, depending on the determined maintenance of the Plan.

8. PROJECT STATUS

This is a new standalone project.

9. ALTERNATIVES ANALYSIS

The need for a Facility Master Plan has been identified by Metro Capital Programs for sometime now. With the development Metro Connects, it became imperative to support responsible planning and spending. The alternative has been to not have a Facility Master Plan, which puts Metro in a position to be reactive to service growth needs and potentially limit the ability to increase service when needed.

10. OTHER AGENCY INVOLVEMENT

A consultant was procured for the development of the initial 2017-2018 Operating Facilities Focused Facilities Master Plan. As part of its development, peer transit agencies were interviewed to determine best practices and generate ideas for overcoming challenges. This inter-agency coordination and knowledge sharing will continue with the 2019-2020 Facility Master Plan Project focused on the remaining Metro facilities (park and rides, Vanpool distribution/maintenance, Access fleet, facilities maintenance locations, etc.)

11. ART ELIGIBILITY

Not Art Eligible, capital planning project

12. EQUITY AND SOCIAL JUSTICE IMPACT

This effort supports Equity and Social Justice in that it looks into the trends of where disadvantage population can be expected to grow, and Metro will use this information to strategically plan the appropriate supporting capital.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This effort supports by SCAP in that it will keep Metro up to date on the most current ways to reduce carbon pollution, maintaining sustainable transportation choices, and supporting zero emission fleets.

14. OTHER CONSIDERATIONS (OPTIONAL)

This project is part of the Operational Capacity Growth program plan. The plan includes: 1) Construction of a 125-bus capacity interim base on the King County Tukwila Extension site; 2) A parking expansion at Central Base, the accompanying body shop-to-vehicle maintenance bay conversion, and the design/construction of a designated body shop to increase Central Base capacity by 90 buses; 3) Construction of a permanent 250-bus capacity base on the existing King County Metro South Annex site, including temporary relocation of Safety and Training facilities to leased space; and 4) Construction of a permanent 250-bus capacity base on yet-to-be acquired land at South King County.

NARRATIVES

1. CURRENT PROJECT SCOPE

Tukwila Extension (former Group Health) Garage Repair - This project supports the repair/refit of the Group Health parking garage, including structural repairs, security system transfer to King County system, restriping, elevator repair, and other miscellaneous small works required to bring the parking garage up to Metro's standards. Decommissioning/demolition of the former Group Health building, and ongoing cleaning and maintenance of the garage are captured in other projects.

2. PROGRAMMATIC PROJECT DISCUSSION

NARRATIVES

TDC GH GARAGE REPAIR

1134217

3. PROJECT JUSTIFICATION

Tier II Seismic report identified required structural upgrades to bring the facility in line with current seismic standards. Additionally, facility inspections occurring as part of the closing process identified deficiencies in the fire system and conveyance systems that must be addressed to provide a safe and efficient facility for Metro use. Further efforts to integrate the facility with King County Information Technology's data and security system, as well as provide a walkway between this property and the adjacent South Base are required to support the operational requirements.

4. PROJECT BENEFITS/OUTCOMES

600+ stall parking garage adjacent to South Base ready for Metro use. Supports Operational Capacity Growth efforts. Garage allows relocation of Component Supply Center Parking to this garage, which allows additional bus parking at the existing Component Supply Center Parking Lot.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$400K is being reappropriated from project 1129642 to fund or partially fund this project. King County in-house engineering staff prepared the rough order of magnitude estimates for repair and refit work of the general garage systems. A conveyance vendor provided the rough order of magnitude cost for the elevator refit work. Seismic retrofit cost was generated by a third party engineering firm during the execution of a Tier II seismic evaluation.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

There will be added operating costs for facilities maintenance and any necessary safety related staffing or equipment starting in 2019. This additional asset will also potentially increase utility bills, asset insurance, and other associated costs for capital assets.

8. PROJECT STATUS

This project is ongoing as part of project 1129642 but is being converted from a task to a standalone in 2019-2020. Project is currently in design phase.

9. ALTERNATIVES ANALYSIS

High level assessment conducted by Metro engineers, subject matter experts, and professional engineers yielded the activities budgeted in this request.

10. OTHER AGENCY INVOLVEMENT

City of Tukwila for permitting.

11. ART ELIGIBILITY

Not Art Eligible, maintenance or minor rehabilitation

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project indirectly supports Equity and Social Justice (ESJ) as it provides parking for King County employees that are necessary to support a fully functional Interim Base and South Annex Base. The aforementioned bases directly supports ESJ by providing much needed affordable transit service and jobs to a diverse population living in, and in some cases working in, more affordable, but growing, suburban areas; and by removing transportation barriers that directly affect equal access to higher compensating jobs, higher education, housing, advanced medical care, commerce and recreation.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project indirectly supports the Strategic Climate Action Plan (SCAP) as it provides parking for King County employees that are necessary to support a fully functional Interim Base and South Annex Base, and are unable to use public transportation from their home. The Interim Base and South Annex Base directly supports SCAP by providing mass transit to a larger population residing in growing communities, thereby reducing carbon pollution and maintaining sustainable transportation choices and supporting zero emission fleets.

NARRATIVES TDC INTERIM BASE 1134218

1. CURRENT PROJECT SCOPE

Interim Base - This project involves the construction of a temporary 125-bus transit base adjacent to South Base. Transit base will include vehicle maintenance functions (estimated 6 bays) via prefabricated or modular steel buildings as well as operator spaces (break, locker, restroom, dispatch, chief, superintendent) and miscellaneous other business functions required for base operations (safety, health and wellness, etc.) via portable buildings or temporary trailers. This facility will also support the development and beta testing of large scale depot-based electric bus charging infrastructure via temporary or de-mountable means.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC INTERIM BASE

1134218

3. PROJECT JUSTIFICATION

Upon comparing the trajectory between 2017 and 2040 of Metro Connects, Metro Fleet Plan, and base capacity (LOS C and LOS D) studies conducted by Metro Strategy & Performance, significant constraints in operational capacity from 2019 to 2025 that would not be met with the existing Base Expansion and New Metro Base (2030) projects were identified in Q4 2017. Permanent facilities require substantial design and development timelines, exceeding the timeline necessary to increase our system capacity and provide desired service to our customer, birthing the concept for a temporary/non-traditional transit base. By using modular construction and deployable solutions on a existing county owned site, system capacity can be increased in the near term, providing relief to current overcrowded conditions.

The Puget Sound region is expected to grow by approximately 1 million people and 850,000 jobs in the next 25 years. For the region to meet future transportation demand, the Puget Sound Regional Council's Transportation 2040 Plan identifies the need for all transit agencies to double their ridership. According to the Metro Long Range Plan, that means adding 70% more service hours than currently provided with an expanded bus fleet. To support the expanded fleet, Metro needs to site and construct at least two new bases. High levels of growth are currently centered in the urban areas, particularly Seattle, but are forecasted to extend into more affordable suburban areas—something that is already beginning to occur, especially in south King County.

The current modeling of system-wide base capacity reflects that the current fleet surpasses optimal base capacity levels (LOS D). Transit would continue to be over-capacity even when additional parking is made available within the current fence line at Atlantic-Central bases by 2018. Over-capacity pose significant injury and damage related risks to base employees and coaches due to over-crowding and lowered yard visibility. Vehicle maintenance processes take longer due to over-crowding, and risks of cancelling service and inability to add service to meet the demands also increase.

4. PROJECT BENEFITS/OUTCOMES

- 1) Operational base with capacity for 125 buses by 2020. Charging capacity for electric buses on this site is expected by 2021.
- 2) Support of Equity and Social Justice by providing much needed affordable transit service to diverse communities living and, in some cases working in, more affordable, but growing, suburban areas; and by removing transportation barriers that directly affect equal service access to higher compensating jobs, higher education, housing, advanced medical care, commerce and recreation.
- 3) Support of Strategic Climate Action Plan by providing mass transit to growing communities; thereby reducing carbon pollution footprint and maintaining sustainable transportation choices, as well as advancing Metro's zero-emission fleet goal
- 4) Support of economic growth by bringing new jobs to a diverse community

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$10 M is being reappropriated from project 1129642 to fund or partially fund this project. Construction cost is based on rough order of magnitude estimates generated by Capital Program staff in coordination with third party consultants, in-house project management, and Design and Construction engineers. 2019-2020 funding supports the design and construction of the base facility and development and deployment of electric bus charging infrastructure.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

2020 Interim Base – With the opening of the Interim Base in 2020, located at South Base, there will be added operational costs for additional staff of operators, vehicle maintenance, facilities maintenance, power distribution (battery-electric infrastructure for battery-electric coaches), training, and administration. These additional assets will also increase utility bills, asset insurance, and other associated costs for capital assets.

8. PROJECT STATUS

This project is ongoing as part of project 1129642 but is being converted from a task to a standalone in 2019-2020. Project is currently in the design phase.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC INTERIM BASE

1134218

9. ALTERNATIVES ANALYSIS

Alternatives considered were to do nothing, possible expansion at other existing Metro bases, and lease of available properties for bus parking and maintenance. Review of these alternatives showed fatal flaws, therefore, the existing base expansion projects were amended to include the interim base and the South Annex Base.

10. OTHER AGENCY INVOLVEMENT

Metro currently operates and services an excess of 100 ST coaches. While Metro's current expansion plan does not take in consideration an increase in ST coaches that Metro will operate and service, it allows Metro to continue servicing the current number of ST coaches in Metro's care.

The Federal Transportation Agency (FTA) reviews property purchases on which FTA-supported projects may be located.

The expansion of existing bases and the construction of new bases will impact Tukwila's traffic, as well as their economy, sustainability, and equity & social justice.

11. ART ELIGIBILITY

NA, Art Eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project provides operational capacity needed to support the growth as discussed in Metro Connects. This project supports affordable transit service and jobs to a diverse population living and, in some cases working in, more affordable, but growing, suburban areas; and by removing transportation barriers that directly affect equal access to higher compensating jobs, higher education, housing, advanced medical care, commerce and recreation.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Provides mass transit to growing communities, thereby reducing carbon pollution and maintaining sustainable transportation choices and supporting zero emission fleets.

14. OTHER CONSIDERATIONS (OPTIONAL)

This project is part of the Operational Capacity Growth program plan. The plan includes: 1) Construction of a 125-bus capacity interim base on the King County Tukwila Extension site; 2) A parking expansion at Central Base, the accompanying body shop-to-vehicle maintenance bay conversion, and the design/construction of a designated body shop to increase Central Base capacity by 90 buses; 3) Construction of a permanent 250-bus capacity base on the existing King County Metro South Annex site, including temporary relocation of Safety and Training facilities to leased space; and 4) Construction of a permanent 250-bus capacity base on yet-to-be acquired land at South King County.

TDC NB GARAGE VENTILATION

1134219

1. CURRENT PROJECT SCOPE

North Base Garage Ventilation - This project is in response to an air quality study performed at the North Base parking garage. The air quality study was initiated after employee complaints were received at the base for "less than optimal" air quality within the bus garage. Scope of work includes design and installation for approximately 25 ceiling-mounted dilution fans rated at 10,000 cubic feet per minute of air each to improve airflow, associated controls and switches in the parking garage at North Base.

NARRATIVES

TDC NB GARAGE VENTILATION

1134219

3. PROJECT JUSTIFICATION

A consultant assessment was funded on operating project 1131828. The Consultant's Certified Industrial Hygienist performed air quality testing in the garage during 'typical' and 'worst case' daily operating conditions. All monitored contaminants (CO, NOx, Diesel particulates and components) were below safety limits. These efforts resulted with alternatives analysis and conceptual design scopes. This information led to continued development of design to more effectively ventilate the garage in case of engine failure or other bus issues that could produce excessive smoke.

4. PROJECT BENEFITS/OUTCOMES

Improved air quality within the bus garage, improved employee morale, health and safety.

5. BUDGET REQUEST BASIS

This budget is based on an alternatives analysis and conceptual design scope for 25 dilution fans rated at 10,000 cubic feet per minute of air each. Funding is for design and implementation in 2019-2020.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

May lead to additional maintenance and operating impacts.

8. PROJECT STATUS

This is a new standalone project.

9. ALTERNATIVES ANALYSIS

A consultant assessment was funded on operating project 1131828 and an alternatives analysis was completed in 2018.

NARRATIVES TDC OCG RELOCS & DISPLACMNTS 1134220

1. CURRENT PROJECT SCOPE

Operational Capacity Growth (OCG) Relocations & Displacements - This project is intended to capture relocation and displacement costs associated with clearing the South Annex Site in order to begin site preparation for the construction of the South Annex Base (project 1134223). The South Annex currently supports Metro Transit safety and training facilities, including classroom, office, driver training pad (skid pad), and employee parking. The South Annex is also utilized as a storage yard for new buses, decommissioned buses, spare fleet, historic fleet, and facilities shelter and maintenance equipment. This project will fund purchase of land, leases, and relocation costs.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC OCG RELOCS & DISPLACMNTS

1134220

3. PROJECT JUSTIFICATION

Utilizing currently owned Metro property substantially expedites the construction of Metro's first new permanent operating base (South Annex Base - Project 1134223), likely saving several years of land search and procurement time. The South Annex site is ideal in location and size and has been identified as the best candidate for South Annex Base, requiring the relocation of current business functions off the site until permanent facilities in an alternate location can be designed and constructed.

Urgency for base capacity has been identified by comparing the trajectory between 2017 and 2040 of Metro Connects, Metro Fleet Plan, and base capacity (LOS C and LOS D) studies conducted by Metro Strategy & Performance. The comparison showed significant constraints in operational capacity from 2019 to 2025 that would not be met with the existing Base Expansion and New Metro Base (2030) projects were identified in Q4 2017. Also in Q4 2017, leadership directed Metro to build a base in 5 years. Therefore, the existing base expansion projects were amended to include the interim base and the South Annex Base. The Puget Sound region is expected to grow by approximately 1 million people and 850,000 jobs in the next 25 years. For the region to meet future transportation demand, the Puget Sound Regional Council's Transportation 2040 Plan identifies the need for all transit agencies to double their ridership. According to the Metro Long Range Plan, that means adding 70% more service hours than currently provided with an expanded bus fleet. To support the expanded fleet, Metro needs to site and construct at least two new bases. High levels of growth are currently centered in the urban areas, particularly Seattle, but are forecasted to extend into more affordable suburban areas—something that is already beginning to occur, especially in south King County.

The current modeling of system-wide base capacity reflects that the current fleet surpasses optimal base capacity levels. Transit would continue to be over-capacity even when additional parking is made available at Atlantic-Central bases by 2018.

4. PROJECT BENEFITS/OUTCOMES

Project creates a buildable site for development of South Annex Base project 1134223 as well as providing facilities to continue the efforts of Metro Transit Safety & Training Staff.

5. BUDGET REQUEST BASIS

Rough order of magnitude calculated by capital program staff.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Potential increase in staff required to move buses to remote sites.

8. PROJECT STATUS

This is a new standalone project.

9. ALTERNATIVES ANALYSIS

Schedules were developed including the time required to locate, analyze, and procure land versus time required to utilize existing land. Utilization of existing land saves between 1 and 3 years depending on the complexity of the procurement and/or assemblage of parcels. Upon comparing the trajectory between 2017 and 2040 of Metro Connects, Metro Fleet Plan, and base capacity (LOS C and LOS D) studies conducted by Metro Strategy & Performance, significant constraints in operational capacity from 2019 to 2025 that would not be met with the existing Base Expansion and New Metro Base (2030) projects were identified in Q4 2017. Also in Q4 2017, leadership directed Metro to build a base in 5 years. Alternatives considered were to do nothing, possible expansion at other existing Metro bases, and lease of available properties for bus parking and maintenance. Review of these alternatives showed fatal flaws, therefore, the existing base expansion projects were amended to include the interim base and the South Annex Base.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC OCG RELOCS & DISPLACMNTS

1134220

10. OTHER AGENCY INVOLVEMENT

Sound Transit (ST): Metro currently operates and services an excess of 100 ST coaches. While Metro's current expansion plan does not take in consideration an increase in ST coaches that Metro will operate and service, it allows Metro to continue servicing the current number of ST coaches in Metro's care.

The Federal Transportation Agency (FTA) reviews property purchases on which FTA-supported projects may be located.

City of Tukwila: The expansion of existing bases and the construction of new bases will impact Tukwila's traffic, as well as their economy, sustainability, and equity & social justice.

King County Council, Executive Services, and Metro staff are internal agencies that would be negatively impacted if Metro is unable to provide the service to meet the growth as well as the declaration of added facilities.

11. ART ELIGIBILITY

Not Art Eligible, leased land, relocation costs, acquisition

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will enable Transit to improve service to a growing minority and/or low-income population in south King County; and will remove transportation barriers that directly affect equal access to higher compensating jobs, higher education, housing, advanced medical care, commerce and recreation.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project will support the creation of a transit base that is able to support zero-emission buses, which is a direct impact to Metro's commitment to a 100% zero-emission fleet.

14. OTHER CONSIDERATIONS (OPTIONAL)

This project is part of the Operational Capacity Growth program plan. The plan includes: 1) Construction of a 125-bus capacity interim base on the King County Tukwila Extension site; 2) A parking expansion at Central Base, the accompanying body shop-to-vehicle maintenance bay conversion, and the design/construction of a designated body shop to increase Central Base capacity by 90 buses; 3) Construction of a permanent 250-bus capacity base on the existing King County Metro South Annex site, including temporary relocation of Safety and Training facilities to leased space; and 4) Construction of a permanent 250-bus capacity base on yet-to-be acquired land at South King County.

NARRATIVES

TDC SOUTH ANNEX BASE

1134223

3. PROJECT JUSTIFICATION

Upon comparing the trajectory between 2017 and 2040 of Metro Connects, Metro Fleet Plan, and base capacity (LOS C and LOS D) studies conducted by Metro Strategy & Performance, significant constraints in operational capacity from 2019 to 2025 that would not be met with the existing Base Expansion and New Metro Base (2030) projects were identified in Q4 2017. Also in Q4 2017, leadership directed Metro to build a base in 5 years. Therefore, the existing base expansion projects were amended to include the interim base and the South Annex Base.

The Puget Sound region is expected to grow by approximately 1 million people and 850,000 jobs in the next 25 years. For the region to meet future transportation demand, the Puget Sound Regional Council's Transportation 2040 Plan identifies the need for all transit agencies to double their ridership. According to the Metro Long Range Plan, that means adding 70% more service hours than currently provided with an expanded bus fleet. To support the expanded fleet, Metro needs to site and construct at least two new bases. High levels of growth are currently centered in the urban areas, particularly Seattle, but are forecasted to extend into more affordable suburban areas—something that is already beginning to occur, especially in south King County. Thus, the significant increases in service projected in south King County result in this area being the target for the next new base.

The current modeling of system-wide base capacity reflects that the current fleet surpasses optimal base capacity levels. Transit would continue to be over-capacity even when additional parking is made available at Atlantic-Central bases by 2018.

4. PROJECT BENEFITS/OUTCOMES

- 1) A permanent and fully operational electric-bus ready transit base of 250 buses which directly supports the capacity needed for the 70% service increase described in Metro Connects
- 2) Supports the expansion of Metro's fleet size from roughly 1500 to its goal of about 2150 (an increase of 650)
- 3) Support of Equity and Social Justice by providing much needed affordable transit service to diverse communities living and, in some cases, working in more affordable, but growing, suburban areas; and by removing transportation barriers that directly affect equal service access to higher compensating jobs, higher education, housing, advanced medical care, commerce and recreation
- 4) Support of Strategic Climate Action Plan by providing mass transit to growing communities; thereby reducing carbon pollution footprint and maintaining sustainable transportation choices, as well as advancing Metro's zero-emission fleet goal
- 5) Support of economic growth by bringing new jobs to a diverse community

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$4.8 M is being reappropriated from project 1129642 to fund or partially fund this project. Construction cost are based on rough order of magnitude estimates generated by Capital Program staff in coordination with third party consultants, in-house project management, and design and construction engineers. 2019-2020 funding supports the planning, pre-design, and initial design phases of the project with out-years funding expected to support the continued design and construction of the facility.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

With the completion of South Annex Base sometime in the next 5-7 years, there will be added operational costs for additional staff of operators, vehicle maintenance, facilities maintenance, power distribution (battery-electric infrastructure for battery-electric coaches), training, and administration. These additional assets will also increase utility bills, asset insurance, and other associated costs for capital assets.

8. PROJECT STATUS

This project is ongoing as part of project 1129642 but is being converted from a sub project to a standalone in 2019/2020. Project is currently in the planning phase and expected to be entering into design at the beginning of the 2019/2020 biennium.

NARRATIVES

TDC SOUTH ANNEX BASE

1134223

9. ALTERNATIVES ANALYSIS

Upon comparing the trajectory between 2017 and 2040 of Metro Connects, Metro Fleet Plan, and base capacity (LOS C and LOS D) studies conducted by Metro Strategy & Performance, significant constraints in operational capacity from 2019 to 2025 that would not be met with the existing Base Expansion and New Metro Base (2030) projects were identified in Q4 2017. Also in Q4 2017, leadership directed Metro to build a base in 5 years. Alternatives considered were to do nothing, possible expansion at other existing Metro bases, and lease of available properties for bus parking and maintenance. Review of these alternatives showed fatal flaws, therefore, the existing base expansion projects were amended to include the interim base and the South Annex Base.

10. OTHER AGENCY INVOLVEMENT

Sound Transit (ST): Metro currently operates and services an excess of 100 ST coaches. While Metro's current expansion plan does not take in consideration an increase in ST coaches that Metro will operate and service, it allows Metro to continue servicing the current number of ST coaches in Metro's care.

The Federal Transportation Agency (FTA) reviews property purchases on which FTA-supported projects may be located.

City of Tukwila: The expansion of existing bases and the construction of new bases will impact Tukwila's traffic, as well as their economy, sustainability, and equity & social justice.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will enable Transit to improve service to a growing minority and/or low-income population in south King County; and will remove transportation barriers that directly affect equal access to higher compensating jobs, higher education, housing, advanced medical care, commerce and recreation.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project will create a transit base that is able to support zero-emission buses, which is a direct impact to Metro's commitment to a 100% zero-emission fleet.

14. OTHER CONSIDERATIONS (OPTIONAL)

This project is part of the Operational Capacity Growth program plan. The plan includes: 1) Construction of a 125-bus capacity interim base on the King County Tukwila Extension site; 2) A parking expansion at Central Base, the accompanying body shop-to-vehicle maintenance bay conversion, and the design/construction of a designated body shop to increase Central Base capacity by 90 buses; 3) Construction of a permanent 250-bus capacity base on the existing King County Metro South Annex site, including temporary relocation of Safety and Training facilities to leased space; and 4) Construction of a permanent 250-bus capacity base on yet-to-be acquired land at South King County.

NARRATIVES

1. CURRENT PROJECT SCOPE

South Campus Substation for Electric Bus Charging - This project includes siting, design, and construction of a substation and bus charging power supply components in partnership with Seattle City Light to support the charging needs of Metro's initial deployment of 120 electric buses into revenue service.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC SOUTH CAMPUS SUBSTATION

1134225

3. PROJECT JUSTIFICATION

King County Executive Dow Constantine announced that King County Metro Transit will transition to a 100% zero-emission bus fleet by 2034-2040. In order to advance the development of large scale depot charging systems and study the implementation requirements and challenges, Metro plans an initial deployment of 120 battery-electric buses in the 2020-2022 timeframe. This project funds the required electrical supply and components to meet the charging needs of 120 buses, providing the infrastructure supply for the Interim Base (project 1134223) to be used during this initial deployment with the goal of eventually redirecting this substations supply and charging components to the permanent conversion of Metro's South Base.

4. PROJECT BENEFITS/OUTCOMES

The project will provide the following benefits: 1) ability to provide battery-electric charging for 125 buses at Metro's interim site, and eventually, 275 buses at South Base; 2) support of Equity and Social Justice by providing much needed affordable transit service to diverse communities living and, in some cases working in, more affordable, but growing, suburban areas; and by removing transportation barriers that directly affect equal service access to higher compensating jobs, higher education, housing, advanced medical care, commerce and recreation; and 3) support of Strategic Climate Action Plan by providing mass transit to growing communities, thereby reducing carbon pollution footprint and maintaining sustainable transportation choices - this substation is a direct need for Metro's conversion to a 100% zero-emission fleet.

5. BUDGET REQUEST BASIS

Initial feasibility conversations with partners at Seattle City Light were used to establish a rough order of magnitude estimate for the design and construction cost. Biennium appropriation supports the design and initial construction of the substation.

6. FUNDING AND REVENUE DISCUSSION

Metro submitted an application for the Federal Transportation Agency (FTA) No/Lo Grant to support this project

7. OPERATING BUDGET AND OTHER IMPACTS

The supporting structures and maintenance requirements of electric-battery buses are currently being studied. It is unknown at this time the full impact on the operating budget.

8. PROJECT STATUS

This is a new standalone project.

9. ALTERNATIVES ANALYSIS

A study was conducted by consultants led by Metro's Zero Emission team that determined the need for a substantial power supply and distribution infrastructure to support battery bus charging.

10. OTHER AGENCY INVOLVEMENT

City of Tukwila and corresponding utility company for permitting and any other requirements related to supplying power to South Base substation. If applicable, the Federal Transportation Agency (FTA) reviews property purchases on which FTA-supported projects may be located.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will enable Transit to improve the environment in an area largely populated by people of color, low-income, and English as a second language King County constituents.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project directly supports Metro's commitment to lower pollution by converting to a 100% zero emission fleet.

14. OTHER CONSIDERATIONS (OPTIONAL)

This project is a pre-requisite for the ability of Interim Base (project 1134223) to be able to charge electric buses.

NARRATIVES TDC WELLNESS CENTERS PROGRAM 1134226

1. CURRENT PROJECT SCOPE

Wellness Centers - This project is to define space and locations which best serve as Wellness Centers for Metro Transit employees and plan and implement new and/or reconfigured space(s) to accommodate Wellness Center function. A site may consist of a modular or built structure or utilize existing facilities for up to three potential types of centers: Full size up to 1,300 sq ft, Express up to 1,000 sq ft or Micro up to 600 sq ft. These sites at a minimum will provide access to potable water, electricity, data, and restroom(s). They will be occupied by a contracted external wellness vendor(s) to provide health and human services to Metro Transit employees. Once feasibility analysis is complete and implementation solutions defined, subprojects will be generated. Pending further analysis, permanent locations are anticipated at or near the following existing transit properties: Central Complex, South Campus, East/Bellevue Campus, and North Base. Additional locations may be added as the program matures.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC WELLNESS CENTERS PROGRAM

1134226

2. PROGRAMMATIC PROJECT DISCUSSION

This project is a new initiative to help enhance Metro Transit employee access to wellness services. The first temporary location, on the Frye site (Central Complex), is anticipated for implementation in fall/winter 2018. This initial start-up effort was selected as a pilot located by the highest Metro Transit employee population. This pilot will be vital to inform programming and sequencing implementations at other sites.

3. PROJECT JUSTIFICATION

In order to enhance employee access to wellness services, which Metro believes will lead to better health, higher job satisfaction, longer retention, and improved morale, Metro plans to develop a location near each Metro base where employees may access these services at their convenience. Metro is working to design a Wellness Center Program that will be a benefit for employees, helping them maintain and improve their well-being and overall health. It may help employees manage their pain or injury, provide information to prevent future on the job strains/injuries, provide wellness screenings, and provide health awareness information.

4. PROJECT BENEFITS/OUTCOMES

Wellness Centers improve employee morale by providing a variety of services, including but not limited to: musculoskeletal work and adjustments, toning, repetitive injury prevention and mitigation, general health and weight management assistance, training for avoiding common issues related to occupational and some non-occupational (but nonetheless relevant) hazards, and associated wellness offerings which could include concentration, relaxation, dental health, financial fitness, and stress management.

5. BUDGET REQUEST BASIS

This budget request is based off of cost estimates for similar projects for modular structures being installed on existing transit properties. Opportunities will be explored to partner with other programs, such as Operational Growth Capacity, to maximize efficient use of facility space and minimize expenditures.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Anticipated increased operations and maintenance costs.

8. PROJECT STATUS

This is a new project. Planning efforts anticipated in 2019, with design in 2020.

9. ALTERNATIVES ANALYSIS

Alternatives analysis is to be completed, on a per project basis.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, capital planning project

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Projects will comply with Green Building Ordinance requirements.

NARRATIVES

TDC PASSENG INFASSTR PLANNING

1134229

1. CURRENT PROJECT SCOPE

Passenger Infrastructure Planning - This project is for the program development of projects within the Passenger Infrastructure Sub Portfolio. Program management activities will also be responsible for ensuring adequate coordination with Metro service planning. Staff will conduct program management activities including: prioritization of projects within programs; feasibility studies; exploration of funding and partnership opportunities; and consideration of benefits of the various projects within the programs; monitoring of projects for progress and changes in scope, schedule, and budget and adapting other projects within the programs to maintain the program benefits anticipated in a coordinated and complimentary manner; and tracking interdependencies and coordinating with projects in other programs.

2. PROGRAMMATIC PROJECT DISCUSSION

The Passenger Infrastructure Sub Portfolio contains the following programs: Bus Stops and Transit Hubs.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC PASSENG INFASSTR PLANNING

1134229

3. PROJECT JUSTIFICATION

Coordination of these programs is critical to supporting service and improving the customer experience that support existing and expansion of service. All activities are devoted to moving capital projects and programs forward expeditiously into design and completion of delivery and are supported by capital funds.

4. PROJECT BENEFITS/OUTCOMES

All activities are devoted to moving capital projects and programs forward expeditiously into design and completion of delivery and are supported by capital funds. Benefits include setting projects on a path of steady progress towards completion, identifying and addressing flaws and risks where possible in advance of passing on to a project manager for design. Work done to improve scope and schedule will help define needed staff resources so that projects do not move into design prematurely until resources are available.

5. BUDGET REQUEST BASIS

This budget request is based on staffing in capital planning and program management organization chart responsible for the capital planning and program management duties within the Facility Improvements Sub Portfolio. Modest amount of professional services are estimated to augment staff expertise.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Ten percent of the staffing costs are assumed to be born by the operation budget.

8. PROJECT STATUS

New project.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, capital planning project

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Strategic Climate Action Plan goals are considered as part of the prioritization process of projects and the benefits expected from project implementation. Program managers are responsible for ensuring benefits are achieved through implementation of projects within the programs.

NARRATIVES

TDC LIVING BLDG CERTF RR ST

1134230

1. CURRENT PROJECT SCOPE

Living Building Challenge Certified RapidRide Station - This project will plan, design, and construct a pilot RapidRide station using a variety of sustainability materials, technologies, and techniques. The Living Building Challenge is a green building certification program and sustainable design framework that focuses on an ideal built environment. Using lessons learned from the pilot project, Metro will consider incorporating additional elements into future RapidRide station designs.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

In the 2015 Strategic Climate Action Plan, King County committed to register at least ten new construction, or retrofit projects, by 2020 that meet the International Living Future Institute's (ILFI) Net Zero Energy (NZE), Petal, or Living Building Challenge (LBC) certification. The Metro Sustainability Steering Committee selected the project to pursue certification beginning in 2019.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC LIVING BLDG CERTF RR ST

1134230

4. PROJECT BENEFITS/OUTCOMES

The project provides an opportunity for Metro, adapting the Living Building Standard to a RapidRide station in supporting sustainable transit infrastructure. The pilot project will create a station that produces its own energy, manages storm water, avoids toxic materials, and incorporates place making elements. The pilot will advance green storm water management techniques, renewable energy, and a reduction in toxins.

5. BUDGET REQUEST BASIS

The current budget request is based on conceptual planning-level cost estimates derived from historical costs incurred in prior years for designing and constructing RapidRide station improvements. The project budget estimate anticipates a project budget at two to three times the cost of this established design due to the additional staff and consultant support to develop a new design. The budget appropriation request only includes planning, pre-design, and design costs, with the implementation cost estimate to be developed during design. The implementation cost is unknown at this time.

6. FUNDING AND REVENUE DISCUSSION

Grant funding for this project is being actively pursued. Metro, in coordination with the International Living Futures Institute, submitted a grant proposal on 3/23/2018 for the Edwards Mother Earth Foundation Climate Wise Building Program for the LBC-certified RapidRide Station and Comfort Station. Grant awards typically range from \$25-100K. If awarded, the grant would fund additional technical assistance for LBC projects, technical support including Eco charrettes, and technical review/analysis to meet zero energy/LBC certification requirements, such as design solutions/alternatives.

7. OPERATING BUDGET AND OTHER IMPACTS

The typical estimated annual operational cost for a RapidRide station is less than \$10,000. This estimate is based on the 2016 RapidRide passenger facilities program, where approximately \$165,800 additional annual operational costs were associated with over 200 sheltered RapidRide stops system wide. The annual operational cost for maintenance of the LBC-certified RapidRide Station is unknown, but could be higher than a typical station. Different construction materials and project elements, such as solar power battery backup and green storm water infrastructure, are not typical RapidRide Station components. One of the goals of this project is to learn what the additional maintenance costs are and how to minimize them as LBC elements are rolled out to future RapidRide stations.

8. PROJECT STATUS

Staff initiated discussions to consider LBC projects 2017. Metro and the International Living Futures Institute completed a feasibility report in Nov 2017. In early 2018 the Steering Committee agreed to move the project forward with the 2019-2020 budget. In 2019 the project will select a consultant for design support and complete planning and predesign. Final design with the construction cost estimate will be completed in 2020. The project will request construction funding in the 2021-2022 budget.

9. ALTERNATIVES ANALYSIS

Metro Transit project teams participated in an eco-charrette with the International Living Futures Institute (ILFI), which resulted in a feasibility study indicating that Living Building Challenge certification is feasible and aligned with the goals of Metro Transit RapidRide Stations. ILFI recommended that the project pursue the highest level of certification possible on this project, which is full Living Building Challenge Certification. An alternatives analysis will be completed during the design phase.

10. OTHER AGENCY INVOLVEMENT

Local jurisdiction involvement will include plan and design review, permitting, and project acceptance.

11. ART ELIGIBILITY

N/A, Art eligible

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC LIVING BLDG CERTF RR ST

1134230

12. EQUITY AND SOCIAL JUSTICE IMPACT

The Living Building Challenge includes criteria for Equity, and there are several imperatives required for Living Building Challenge Certification. County projects already meet some elements due to requirements already in place, such as ADA compliance. There is an opportunity with this project for the County to attain a JUST Label, which is a voluntary disclosure tool for organizations to help optimize policies that improve social equity and enhance employee engagement. This helps to fulfill goal 2 (Develop an organization where all employees are change agents who actively apply their ESJ knowledge to their work) and goal 4 (County operations, programs and services are pro-equity in our service delivery-responsive and adaptive, focused on those whose needs are greatest - and collaborate with other King County and external service providers) of the Leadership Operations and Service goal area, and also goal 2 of the Plans, Policies, and Budgets area of the ESJ strategic plan.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

In the 2015 Strategic Climate Action Plan, King County committed to register at least ten new construction, or retrofit projects, by 2020 that meet the International Living Future Institute's (ILFI) Net Zero Energy (NZE), Petal, or Living Building Challenge (LBC) certification. This RapidRide Station project is one of the two projects Metro Transit is proposing to pursue for certification. Achieving the Living Building Challenge certification for the RapidRide Station will be congruent with King County's efforts to deliver carbon-neutral services via electric buses, bus charging stations, and Green Direct energy. Additionally, budget guidance from the Executive Office related to the SCAP specifically requests proposals to support the LBC goal.

NARRATIVES TDC NGATE LINK AND U LINK IMP 1134231

1. CURRENT PROJECT SCOPE

Northgate Link and Ulink Improvement - This project is to improve transfer environments at ten bus stops next to Northgate Link Extension stations. The stations are the Roosevelt Station, U-District Station, University of Washington Station, and the Capitol Hill Station. This project will design and construct Metro capital improvements to bus stops adjacent to Sound Transit's (ST) station or improve bus facilities within the station. Metro's capital improvements may include upgraded bus stop signs and shelters, real-time information systems, and improved pedestrian amenities such as sidewalks or lighting between the station and bus stops.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC NGATE LINK AND U LINK IMP

1134231

3. PROJECT JUSTIFICATION

These capital improvements are essential to delivering seamless transfer environments. At some stations, Metro's bus facilities fall outside of Sound Transit's station area and are not upgraded. In other cases, Metro Transit may seek additional capital improvements beyond the scope of Sound Transit's project. These improvements are in line with the METRO CONNECTS passenger facilities vision, which calls for upgrades at 85 new or existing hubs, including the stations listed in this project.

4. PROJECT BENEFITS/OUTCOMES

The benefit of this program is improved transfers between Sound Transit and Metro Transit's systems.

5. BUDGET REQUEST BASIS

The budget request for 2019-2020 is a planning-level estimate for Metro staff participation in Sound Transit's capital program. For each Sound Transit ST3 or ST2 project, staff time was estimated based on project schedule, including major milestones and deliverables, to aggregate into total estimated full time staff equivalents that comprise the program's appropriation request.

6. FUNDING AND REVENUE DISCUSSION

Metro Transit has entered into a grant agreement with the Washington State Department of Transportation to make these improvements. The Regional Mobility Grant will fund this project.

7. OPERATING BUDGET AND OTHER IMPACTS

Annual operating costs associated with the project when complete is under \$1,000 per Real Time Information Sign (RTIS) location. Additionally there will be marginal increase in cost for utility power and bus shelter maintenance where applicable.

8. PROJECT STATUS

This project is in the planning phase and will soon enter pre-design. The project experienced delays in procuring a design consultant so staff decided to do the design in-house.

9. ALTERNATIVES ANALYSIS

The alternatives analysis took place in earlier phases. Metro Transit worked with Sound Transit and the City of Seattle to identify bus facility improvements needed at the U District and Roosevelt Stations. Metro committed to specific improvements in a 2016 agreement with Sound Transit and in a Regional Mobility Grant agreement.

10. OTHER AGENCY INVOLVEMENT

Metro Transit entered into an agreement with Sound Transit on March 24, 2016 regarding improvements at the U District and Roosevelt Stations. In the agreement, Metro committed to making improvements to bus shelters and signs and to provide real-time information systems. Sound Transit committed to provide other components such as shelter footings and conduit.

NARRATIVES

TDC 3D AVE YESL TO MAIN

1134232

1. CURRENT PROJECT SCOPE

3rd Avenue Yesler Way to Main St Block Face Improvement - This project is a standalone project that builds on a larger scale project known as the Third Avenue Transit Corridor Improvement and RapidRide Facilities project (1116745). It provides bus stop, streetscape and transit street priority improvements to a portion of the region's primary transit corridor – Third Avenue between S. Jackson Street and Denny Way in Seattle. The current scope includes design and construction of a new bus stop, streetscape, and roadway between S Main St and Yesler Way/Prefontaine Place South. This work builds on 30% design that was done for the entire corridor between Jackson and Denny under 1116745.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC 3D AVE YESL TO MAIN

1134232

3. PROJECT JUSTIFICATION

The project will improve Third Avenue on the segment between Yesler Way and S Main St, benefitting transit riders who use bus stops in the area and pedestrians who travel through the area. The project implements the City of Seattle's urban design conceptual plan for the Third Avenue streetscape. It is supported by the Downtown Seattle Association (DSA). It is consistent with the passenger facilities component of METRO CONNECTS by upgrading a bus stop and the surrounding area to enhance safety and provide new amenities.

4. PROJECT BENEFITS/OUTCOMES

Transit ridership will be increased by enhancing the street environment near bus stops and by improving the comfort, convenience, safety, accessibility, and rider information for transit customers and all pedestrians. If not implemented, customer satisfaction with the waiting environment and customer perceptions of personal security at bus stops along this area of Third Avenue will decline, leading to an overall reduction in ridership.

5. BUDGET REQUEST BASIS

As part of Metro's move to having fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$5 M is being reappropriated from project 1116745 TD 3RD AVE IMPROVEMENTS to fund or partially fund this project. The current budget request for this stand alone project is based on a 30-percent design cost estimate for corridor-wide improvements completed in fall 2015 and costs associated with the specific project components to be advanced to final design and construction as agreed-to by Seattle Department of Transportation and Metro in 2017. Inflation has been factored into the cost estimate.

6. FUNDING AND REVENUE DISCUSSION

Funding for the overall Third Avenue Corridor project (1116745), of which this is a part, has been awarded from three separate federal grants. Metro Transit provides approximately 10% of the total project cost with Seattle contributing approximately the same amount for the overall project. As a component project of the larger, grant funded initiative, Metro Transit's share of this project is approximately 10%. Under an interagency agreement between agencies, Metro Transit will pass through Federal Transit Administration grant funds to the City of Seattle to fund pre-design, design and construction costs associated with this project.

7. OPERATING BUDGET AND OTHER IMPACTS

Metro-owned assets that will be added in this project are assumed to be minimal, and within current budgets for bus stop maintenance.

8. PROJECT STATUS

Approximately \$4 million of work has been accomplished under the overall project and other sub projects (1116745, 1123552 and 1123555). This project builds on Preliminary Design activities completed with 30% design in 2015, including urban design treatments for all block faces between S Jackson Street and treatments for all block faces between S Jackson Street and Denny Way including sidewalk treatments, transit canopy design, illumination, signage, and roadway channelization. This project work is for final design and construction of the specific project components selected in 2017 by Metro Transit and SDOT to be completed. This includes final design of transit and sidewalk amenities proposed in the 30% design submittal on four block faces of 3rd Ave. between Yesler Way and Main St.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

The project includes significant work expected to be completed by the City of Seattle. Final design and construction will be led by the City of Seattle, minimizing permitting requirements. FTA procurement and reporting requirements will be followed. Under an interagency agreement between agencies, Metro Transit will pass through Federal Transit Administration grant funds to the City of Seattle to fund pre-design, design and construction costs associated with this project.

Project planning and development will be coordinated with the City of Seattle's efforts to enhance Third Avenue as a more attractive, safe, and convenient environment for visitors, commuters, and residents, with specific consideration to the City's Third Avenue Streetscape Conceptual Design Plan. Interests of local stakeholders, including the Downtown Seattle Association, various neighborhood groups, and adjacent private property owners will be considered in the final design and construction phases.

NARRATIVES

TDC HUBS PLANNING

1134233

1. CURRENT PROJECT SCOPE

Hubs Planning - This project will develop the passenger facility capital improvement program that meets the intent of the METRO CONNECTS vision to provide our customers with a high-quality transit experience. METRO CONNECTS anticipates improvements at 85 existing and new transit centers and at more than 4,500 bus stops through 2040. For the 2019-2020 biennium, this project will consist of a planning effort to identify and program capital improvements at and adjacent to Metro's passenger facilities. The key aspect of this project will be a study effort that looks holistically at the network of passenger facilities and considers the entire customer experience around boarding and alighting the bus, including access, safety, information, amenities, and transfers. The study is envisioned to include an existing conditions and needs assessment, public engagement, development of toolkit of improvements, development of an evaluation framework, and performance criteria to evaluate and prioritize locations, partnership assessment, and a recommendation of projects with planning level cost estimates and schedule for inclusion in the 2021-2022 biennium.

NARRATIVES

TDC HUBS PLANNING

1134233

2. PROGRAMMATIC PROJECT DISCUSSION

NA

3. PROJECT JUSTIFICATION

Today, 20% of King County citizens have access to frequent service. Based upon regional growth anticipated the system would be expanded three-fold: by 2040, 70% of people will have access to frequent service. METRO CONNECTS envisions top-notch passenger facilities that would give customers the high-quality transit experience needed to support and complement the growing network. This capital planning effort seeks to realize this vision by first creating, evaluating, and recommending a customer experience improvement program and then spinning off new capital projects to develop Metro stops at or adjacent to transit hubs and other high activity locations. Consistent with METRO CONNECTS, improvements would increase safety and reduce criminal activity, provide for new types of customer amenities, enhance wayfinding and transit information, ensure that stops and stations are accessible to all, and apply urban design/landscape design principles to better integrate facilities into the surrounding built environment on a context sensitive basis. Metro would also incorporate public engagement into the design process for improvements, ensuring that our customer's voices are heard. This program supports the Metro Business Drivers to provide great service and improve schedule reliability.

4. PROJECT BENEFITS/OUTCOMES

The purpose and primary benefit of this capital planning effort is to develop a passenger facilities improvement program that focuses on providing a top-notch customer experience. Key outcomes of this effort would include site identification using social justice and equity criteria, a toolkit of best practice and context-sensitive customer experience improvements, and an implementation plan (scope, schedule, budget) for the resulting capital projects identified through this planning effort.

5. BUDGET REQUEST BASIS

The budget request funds a feasibility assessment and implementation plan including site identification, site evaluation, prioritization, development of standards, menu concept improvements, order of magnitude cost estimates, resource requirements, and a CIP schedule/timeline. This effort is envisioned to be a Metro led effort with consultant support. This planning effort would result in capital projects for the 2021-2022 biennium and beyond, and the cost is based on previous experience in conducting feasibility assessments.

6. FUNDING AND REVENUE DISCUSSION

For capital projects that result from this capital planning effort, it is anticipated that those projects will seek a variety of sources including the Public Transportation Fund, federal and state grants, and local jurisdiction funds.

7. OPERATING BUDGET AND OTHER IMPACTS

As part of the project's feasibility assessment and improvement program development, no impacts to the operating budget are anticipated. During this phase, operating budget impacts (additional operating and maintenance requirements) will be identified at the planning level for project capital budgets that will be developed for the 2021-2022 biennium. Any increase in the number of sheltered bus stops or the number/type of amenities offered requires additional operating costs associated with maintenance.

8. PROJECT STATUS

New project. The initial work in the 2019-2020 biennium will only include capital planning functions. The implementation plan will form the basis of subsequent project capital budgets and cash flows beginning with the 2021-2022 biennium.

9. ALTERNATIVES ANALYSIS

A key aspect of this capital planning effort is to conduct a feasibility assessment using a multi-criteria evaluation approach to identify and prioritize elements and locations for customer experience improvements. This capital planning effort will develop goals, objectives, evaluation framework, and performance criteria to support the alternatives analysis.

10. OTHER AGENCY INVOLVEMENT

Planning, design and construction of passenger facilities requires coordination with other jurisdictions within King County through all project phases as well as with project financing. During the capital planning phase, partner jurisdictions will be part of a stakeholder advisory group that helps review scope and deliverables, and shapes the development of the improvements toolkit. Partnerships will help define and design context-sensitive customer improvements and be a key driver for construction/implementation of the facilities.

12. EQUITY AND SOCIAL JUSTICE IMPACT		
13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT		
Metro would incorporate principles of sustainability into the design process to minimize Green House Gas (GHG) emissions.		
14. OTHER CONSIDERATIONS (OPTIONAL)		
<p>The types of customer-related improvements will be identified, evaluated, and recommended through the capital planning effort. Improvements will be identified not just for the stop itself (i.e. shelter, bench, trash can) but adjacent to it as well. Current best practice in transit customer experience focuses on passenger amenities and pedestrian/bicycle access improvements such as:</p> <ul style="list-style-type: none">• Unique and highly visible shelter w/enhanced amenities• Wayfinding and information (Transit, pathways, and neighborhood amenities)• Improved sense of security and safety while waiting for bus, day or night• Weather protection• Pavement treatments/markings• Integrated urban design with surrounding built environment• Landscape design and tree plantings• Concrete bus pads• High visibility crosswalks• Curb bulbs• Pedestrian scale lighting• Safe, attractive, and convenient pedestrian access

NARRATIVES TDC REGNAL TR INTEGR PR MGMT 1134235

1. CURRENT PROJECT SCOPE

Regional Transit Integration Program Management - This project includes planning for capital programs and projects within the Regional Transit Integration Sub Portfolio. The Regional Partnership Integration Sub Portfolio contains the following programs: Partnerships and Transit Oriented Development. Program management activities will include coordination across Metro's strategic and service planning functions and with partner agencies as well as prioritization of projects within programs, feasibility studies, exploration of funding and partnership opportunities, and consideration of benefits of the various projects within the programs. Ongoing monitoring of projects for progress and changes and tracking interdependencies allows for ongoing coordination of projects in other programs.

2. PROGRAMMATIC PROJECT DISCUSSION

This is a programmatic project. The scope of work includes the capital program management and planning for Partnerships and Transit Oriented Development programs.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC REGNAL TR INTEGR PR MGMT

1134235

3. PROJECT JUSTIFICATION

Coordination of these programs is critical to leveraging funding opportunities with other agency partners and improving route and customer experience improvements that support existing and expansions of service. All activities are devoted to moving capital projects and programs forward expeditiously into design and completion of delivery and are supported by capital funds.

4. PROJECT BENEFITS/OUTCOMES

All activities are devoted to moving capital projects and programs forward expeditiously into design and completion of delivery and are supported by capital funds. Benefits include setting projects on a path of steady progress towards completion, identifying and addressing flaws and risks where possible in advance of passing on to a project manager for design. Work done to improve scope and schedule will help define needed staff resources so that projects do not move into design prematurely until resources are available. In many cases, partners will conduct the final implementation of the capital projects, saving Metro staff resources.

5. BUDGET REQUEST BASIS

This budget request is based on estimated staffing in the capital planning and portfolio management organization needed to perform the project planning and program management duties within the Regional Transit Integration Sub Portfolio. Includes a modest amount of professional services to augment staff expertise.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

New project.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, capital planning project

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Strategic Climate Action Plan goals are considered as part of the prioritization process of projects and the benefits expected from project implementation. Program management entails monitoring that the anticipated benefits are achieved through implementation of the projects.

14. OTHER CONSIDERATIONS (OPTIONAL)

This project provides capital planning to two specific capital programs- Partnerships and Transit Oriented Developments. Capital planning and program management ensures that Metro Transit makes the right level of investment in the right projects in these program areas through prioritization, feasibility study, partnership and funding agreements and project formulation work.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC AUBURN TC RENTON TC RR

1134237

3. PROJECT JUSTIFICATION

This project is part of the METRO CONNECTS RapidRide Expansion Program and will be led by King County Metro. The project will result in improved service and ridership along the corridor and support regional growth. The Renton-Kent-Auburn RapidRide Line was prioritized for implementation based on criteria developed in METRO CONNECTS, including: geographic balance, equity and social justice factors, ridership growth potential, implementation complexity, partnership opportunities and commitments, grant funding opportunities, and high capacity transit network connectivity.

4. PROJECT BENEFITS/OUTCOMES

This project will create a new RapidRide corridor. Historically RR corridors have been a successful way to increase ridership within a corridor area. Most of the previous 6 RapidRide lines have increase daily trips by more than 50% within the first few years of operations.

5. BUDGET REQUEST BASIS

Detailed estimates for project costs have been developed using past agency experience delivering the six original RapidRide lines, along with a detailed work breakdown structure and resource-loaded project schedule identifying the cost associated with each individual component of RapidRide delivery. The requested budget will move the project through the construction phase of project delivery. The 2019-2020 appropriation will fund planning, preliminary design and a portion of final design. Acquisition expenditures are aligned with when it would be expected that acquisition activities would take place.

6. FUNDING AND REVENUE DISCUSSION

This project is funded primarily through Metro funds. The total spending authority being request is approximately 90% of the Metro Connects cost estimate with approximately 50% of the project funds coming from assumed, yet to be identified, grants. The remaining 10% of the cost estimate assumed by Metro Connects is assumed to come from partner agency contributions and or projects carried out by partners.

7. OPERATING BUDGET AND OTHER IMPACTS

This capital project will create assets which need to be maintained along the corridor. These assets include shelters, real time information signs, trash bins and ORCA fare collection equipment.

8. PROJECT STATUS

This project is currently in the pre-planning stage, which is being conducted via program planning work as part of Project 1129747. This project is expected to be advertised for a consolidated planning and design contract in 2018.

9. ALTERNATIVES ANALYSIS

Alternative analysis is anticipated to be carried out during the pre-design phase and will include a substantial public engagement element. A preferred alignment will then be approved via the existing King County Council alignment approval process.

10. OTHER AGENCY INVOLVEMENT

This project will require involvement of other agencies where work will be conducted. As part of the Metro Connects the proposed 2025 network was discussed both regionally and local with the impacted jurisdictions. As the project enters the pre-design phase, other agency involvement will significantly increase.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project supports Metro's climate action plan and overall reduction in emissive pollution by promoting transit along these corridors. Capital assets built and installed along the corridor will meet Metro's green building ordinance where required/allowable.

NARRATIVES TDC DUCT LEASE 1134238

1. CURRENT PROJECT SCOPE

Duct Lease - This project supports the annual billing from Seattle City Light for the lease of ducts and vaults around the City of Seattle. These have previously billed to Project 1130328 TDC Harrison Duct Replacement which utilized this lease as a mitigation to additional duct construction.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

Trolley infrastructure (power and control) navigate from substations and control rooms to points of use by using underground pathways know as ducts. As a mitigation to construction of new, designated ducts, Metro Transit has leased duct space within existing City Of Seattle ducts. Failure to fund this lease risks removal of Metro Transit infrastructure from City of Seattle Ducts, causing service disruptions.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

3. PROJECT JUSTIFICATION

King County Metro Transit utilized a comprehensive Facilities Conditions Assessment Program conducted by 3rd party engineers to assess and monitor the conditions of our facilities. From these assessments, a Transit Facilities Conditions Needs Report is generated containing a prioritized ranking of assets needing major rehabilitation or replacement. State of Good Repair Program planners then sort and package those needs into efficient projects and schedule those projects to create a sustainable, level loaded, State of Good Repair Program to promote consistent State of Good Repair investment levels and maintain the safe and efficient functionality of our assets. This project's assets have an conditional assessment rating of poor. Failure to adhere to the program plan will generate a backlog of State of Good Repair work, leading to increased spending on asset replacement, increased risk of failure and loss of service, and greater risk to the County.

4. PROJECT BENEFITS/OUTCOMES

Completion of this project will result in a renewed asset with a refreshed lifecycle. Asset replacement is a normal part of asset maintenance and is essential to maintaining our system in a state of good repair to minimize unexpected corrective maintenance or emergency replacement cost and prevent service disruptions or challenges for our customers.

5. BUDGET REQUEST BASIS

The Transit Facilities Conditions Needs Report provides rough order of magnitude replacement costing, generated by third party engineers and incorporating metrics for soft cost factors.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Effective asset management and lifecycle replacement will reduce operational maintenance cost for unplanned and corrective maintenance.

8. PROJECT STATUS

This is a new capital project request.

9. ALTERNATIVES ANALYSIS

Alternatives, if available, will be analyzed as part of the pre-design phase for all State of Good Repair works.

NARRATIVES TDC 19&20 HVAC SM WRKS 1134241

1. CURRENT PROJECT SCOPE

2019-2020 Heating Ventilation and Air Conditioning Small Works - This project includes replacement of North and Ryerson Base vehicle maintenance dust collection and vehicle exhaust systems and replacement of back up boiler at Bellevue Base.

2. PROGRAMMATIC PROJECT DISCUSSION

This is a programmatic project with assorted task for each project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC 19&20 HVAC SM WRKS

1134241

3. PROJECT JUSTIFICATION

King County Metro Transit utilized a comprehensive Facilities Conditions Assessment Program conducted by 3rd party engineers to assess and monitor the conditions of our facilities. From these assessments, a Transit Facilities Conditions Needs Report is generated containing a prioritized ranking of assets needing major rehabilitation or replacement. State of Good Repair Program planners then sort and package those needs into efficient projects and schedule those projects to create a sustainable, level loaded, State of Good Repair Program to promote consistent State of Good Repair investment levels and maintain the safe and efficient functionality of our assets. This project's assets have an conditional rating of marginal to poor. Failure to adhere to the program plan will generate a backlog of State of Good Repair work, leading to increased spending on asset replacement, increased risk of failure and loss of service, and greater risk to the County.

4. PROJECT BENEFITS/OUTCOMES

Completion of this project will result in a renewed asset with a refreshed lifecycle. Asset replacement is a normal part of asset maintenance and is essential to maintaining our system in a state of good repair to minimize unexpected corrective maintenance or emergency replacement cost and prevent service disruptions or challenges for our customers.

5. BUDGET REQUEST BASIS

2019-2020 funding is expected to support the complete project lifecycle/replacement of the asset. The Transit Facilities Conditions Needs Report provides rough order of magnitude replacement costing, generated by third party engineers and incorporating metrics for soft cost factors.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Effective asset management and lifecycle replacement will reduce operational maintenance cost for unplanned and corrective maintenance.

8. PROJECT STATUS

This is a new capital project request.

9. ALTERNATIVES ANALYSIS

Alternatives, if available, will be analyzed as part of the pre-design phase for all State of Good Repair works.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, maintenance or minor rehabilitation

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Strategic Climate Action Plan Alignment (and Green Building): Per the County's Green Building Ordinance, this project is required to report on sustainability at 30% predesign and at substantial completion. In addition the project will comply with King County Energy Plan requiring energy calculation of Life Cycle Cost Analysis (LCCA) and will reduce energy consumption.

14. OTHER CONSIDERATIONS (OPTIONAL)

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC BB WASH PH2 BUS LIFT

1134245

3. PROJECT JUSTIFICATION

King County Metro Transit utilized a comprehensive Facilities Conditions Assessment Program conducted by 3rd party engineers to assess and monitor the conditions of our facilities. From these assessments, a Transit Facilities Conditions Needs Report is generated containing a prioritized ranking of assets needing major rehabilitation or replacement. State of Good Repair Program planners then sort and package those needs into efficient projects and schedule those projects to create a sustainable, level loaded, State of Good Repair Program to promote consistent State of Good Repair investment levels and maintain the safe and efficient functionality of our assets.

This project's assets have a conditional rating of poor. Failure to adhere to the program plan will generate a backlog of State of Good Repair work, leading to increased spending on asset replacement, increased risk of failure and loss of service, and greater risk to the County.

4. PROJECT BENEFITS/OUTCOMES

Completion of this project will result in a renewed asset with a refreshed lifecycle. Asset replacement is a normal part of asset maintenance and is essential to maintaining our system in a state of good repair to minimize unexpected corrective maintenance or emergency replacement cost and prevent service disruptions or challenges for our customers.

5. BUDGET REQUEST BASIS

2019-2020 funding is expected to support the planning and preliminary design for the project with final design and implementation occurring in 2021-2022 biennium. The Transit Facilities Conditions Needs Report provides rough order of magnitude replacement costing, generated by third party engineers and incorporating metrics for soft cost factors.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Effective asset management and lifecycle replacement will reduce operational maintenance cost for unplanned and corrective maintenance.

8. PROJECT STATUS

This is a new capital project request.

9. ALTERNATIVES ANALYSIS

Alternatives, if available, will be analyzed as part of the pre-design phase for all State of Good Repair works.

1134249

3. PROJECT JUSTIFICATION

King County Metro Transit utilized a comprehensive Facilities Conditions Assessment Program conducted by 3rd party engineers to assess and monitor the conditions of our facilities. From these assessments, a Transit Facilities Conditions Needs Report is generated containing a prioritized ranking of assets needing major rehabilitation or replacement. State of Good Repair Program planners then sort and package those needs into efficient projects and schedule those projects to create a sustainable, level loaded, State of Good Repair Program to promote consistent State of Good Repair investment levels and maintain the safe and efficient functionality of our assets. This project's assets have an average conditional assessment of marginal. Failure to adhere to the program plan will generate a backlog of State of Good Repair work, leading to increased spending on asset replacement, increased risk of failure and loss of service, and greater risk to the County.

4. PROJECT BENEFITS/OUTCOMES

Completion of this project will result in a renewed asset with a refreshed lifecycle. Asset replacement is a normal part of asset maintenance and is essential to maintaining our system in a state of good repair to minimize unexpected corrective maintenance or emergency replacement cost and prevent service disruptions or challenges for our customers.

5. BUDGET REQUEST BASIS

2019-2020 funding will support 30% of the design phase. Implementation and closeout will occur in 2021-2022 biennium. The Transit Facilities Conditions Needs Report provides rough order of magnitude replacement costing, generated by third party engineers and incorporating metrics for soft cost factors.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Effective asset management and lifecycle replacement will reduce operational maintenance cost for unplanned and corrective maintenance.

8. PROJECT STATUS

This is a new capital project request.

9. ALTERNATIVES ANALYSIS

Alternatives, if available, will be analyzed as part of the pre-design phase for all State of Good Repair works.

3. PROJECT JUSTIFICATION

King County Metro Transit utilized a comprehensive Facilities Conditions Assessment Program conducted by 3rd party engineers to assess and monitor the conditions of our facilities. From these assessments, a Transit Facilities Conditions Needs Report is generated containing a prioritized ranking of assets needing major rehabilitation or replacement. State of Good Repair Program planners then sort and package those needs into efficient projects and schedule those projects to create a sustainable, level loaded, State of Good Repair Program to promote consistent State of Good Repair investment levels and maintain the safe and efficient functionality of our assets. This project's assets have an average condition of poor to marginal. Failure to adhere to the program plan will generate a backlog of State of Good Repair work, leading to increased spending on asset replacement, increased risk of failure and loss of service, and greater risk to the County.

4. PROJECT BENEFITS/OUTCOMES

Completion of this project will result in a renewed asset with a refreshed lifecycle. Asset replacement is a normal part of asset maintenance and is essential to maintaining our system in a state of good repair to minimize unexpected corrective maintenance or emergency replacement cost and prevent service disruptions or challenges for our customers.

5. BUDGET REQUEST BASIS

2019-2020 funding is expected to support the complete project lifecycle for the project identified in the project scope section. The Transit Facilities Conditions Needs Report provides rough order of magnitude replacement costing, generated by third party engineers and incorporating metrics for soft cost factors.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Effective Asset Management and Lifecycle Replacement will reduce operational maintenance cost for unplanned and corrective maintenance.

3. PROJECT JUSTIFICATION

King County Metro Transit utilized a comprehensive Facilities Conditions Assessment Program conducted by 3rd party engineers to assess and monitor the conditions of our facilities. From these assessments, a Transit Facilities Conditions Needs Report is generated containing a prioritized ranking of assets needing major rehabilitation or replacement. State of Good Repair Program planners then sort and package those needs into efficient projects and schedule those projects to create a sustainable, level loaded, State of Good Repair Program to promote consistent State of Good Repair investment levels and maintain the safe and efficient functionality of our assets. Failure to adhere to the program plan will generate a backlog of State of Good Repair work, leading to increased spending on asset replacement, increased risk of failure and loss of service, and greater risk to the County. Further, the manufacturers warranty on these tanks expires in 2019, increasing the risk to Metro Transit should these tanks remain in place.

4. PROJECT BENEFITS/OUTCOMES

Completion of this project will result in a renewed asset with a refreshed lifecycle. Asset replacement is a normal part of asset maintenance and is essential to maintaining our system in a state of good repair to minimize unexpected corrective maintenance or emergency replacement cost and prevent service disruptions or challenges for our customers.

5. BUDGET REQUEST BASIS

The Transit Facilities Conditions Needs Report provides rough order of magnitude replacement costing, generated by third party engineers and incorporating metrics for soft cost factors.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Effective asset management and lifecycle replacement will reduce operational maintenance cost for unplanned and corrective maintenance.

8. PROJECT STATUS

This is a new capital project request.

9. ALTERNATIVES ANALYSIS

Alternatives, if available, will be analyzed as part of the pre-design phase for all State of Good Repair works.

NARRATIVES TDC TRLY SCADA REPL 1134260

1. CURRENT PROJECT SCOPE

Trolley Supervisory Control And Data Acquisition (SCADA) Replacement - This project will include the engagement of consultant to study required SCADA replacements across Metro trolley substations and related systems and implementation of those recommendations.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

Metro Transit's existing SCADA systems have been in place for many years and are suffering substantial failure rates, leading to increased maintenance cost and risk of loss of service while the system is offline. Modernization of the SCADA system will ensure continuing functionality, system reliability, and will reduce overall risk to operations of critical systems.

NARRATIVES

1. CURRENT PROJECT SCOPE

Building Management Systems Replacement - This project will replace the building management system control and monitoring components at all bases (North, East, Bellevue, Central, Atlantic, Ryerson, and South) and transit operating facilities (North, South, Central Facilities, Component Supply Center, Transit Control Center, and Non-Revenue Building).

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC BLD MGMT SYSTEM REPL

1134261

3. PROJECT JUSTIFICATION

A building automation controls assessment was performed in early 2017 which identified the need to modernize Metro Transit's existing Building Management Systems in order to increase efficiency of building systems and replace legacy systems that are no longer supported by the manufacture. Delay of this work further increases the risk of system failure and increases the complexity of system replacement at time of failure (legacy products may trigger an emergency system replacement due to lack of compatible replacements). Equipment has reached the end of its planned lifecycle, increasing the urgency.

4. PROJECT BENEFITS/OUTCOMES

Completion of this project will result in a renewed asset with a refreshed lifecycle. Asset replacement is a normal part of asset maintenance and is essential to maintaining our system in a state of good repair to minimize unexpected corrective maintenance or emergency replacement cost and prevent service disruptions or challenges for our customers.

5. BUDGET REQUEST BASIS

The 2017 Building Automation Controls Assessment was used to formulate budget assumptions for this project. 2019-2020 funding is expected to support the complete project lifecycle and full replacement of the assets.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Effective Asset Management and Lifecycle Replacement will reduce operational maintenance cost for unplanned and corrective maintenance.

8. PROJECT STATUS

This is a new capital project request.

9. ALTERNATIVES ANALYSIS

Alternatives, if available, will be analyzed as part of the pre-design phase for all State of Good Repair works.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, maintenance or minor rehabilitation.

NARRATIVES TDC YARD LIGHT REPL 1134262

1. CURRENT PROJECT SCOPE

Yard Light Replacement - This project will initiate a feasibility and alternatives analysis to determine optimal methods to achieve required lighting levels and then move forward to systematically replace and augment existing fixtures with means to achieve the minimum required lighting levels.

2. PROGRAMMATIC PROJECT DISCUSSION

This is a programmatic project with assorted task for each project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC YARD LIGHT REPL

1134262

3. PROJECT JUSTIFICATION

The site lighting at Metro's facilities has been in place and operating since these facilities were constructed between the mid-late 1970's and about 1990. Light from the perimeter of the site/lot does not do an acceptable job of lighting the center of the bus parking yard in any of our facilities. In 2001, the requirements for lighting were inserted into the Washington Administrative Code, which requires all employers to "Provide and maintain adequate lighting for all work activities in your workplace." (WAC 296-800-210), which also states that for Task Areas the employer is required to provide an average of 5 foot-candles (fc) throughout the space, with the minimum light level in that space being 2.5 fc. For Non-Task areas the requirement is an average of 3 fc with the minimum level set at 1.5 fc. Metro Transit is not in compliance with the requirement above and has received a citation from Washington State Labor and Industries. This project is in response to that citation. Failure to perform the replacements may lead to further citations, legal action, or operational challenges.

4. PROJECT BENEFITS/OUTCOMES

Completion of this project will result in a renewed asset with a refreshed lifecycle. Asset replacement is a normal part of asset maintenance and is essential to maintaining our system in a state of good repair to minimize unexpected corrective maintenance or emergency replacement cost and prevent service disruptions or challenges for our customers.

5. BUDGET REQUEST BASIS

Budget estimate was generate by in house engineering analysis. 2019-2020 funding is expected to support planning and preliminary design with final design occurring in 2020-2021 and implementation across the following years.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Effective asset management and lifecycle replacement will reduce operational maintenance cost for unplanned and corrective maintenance.

8. PROJECT STATUS

This is a new capital project request.

9. ALTERNATIVES ANALYSIS

Alternatives, if available, will be analyzed as part of the pre-design phase for all State of Good Repair works.

NARRATIVES TDC EQUIPMENT REPL 2019-20 1134265

1. CURRENT PROJECT SCOPE

Equipment Replacement - This program for 2019-2020 supports the replacement of major and minor equipment at Metro Transit Facilities. The 2019-2020 major equipment replacements includes air compressors at Atlantic, Ryerson, and South facilities; crane replacement at South Base, pump stations for non-revenue vehicles; generators at South Base; and parts steamers at Bellevue and North Bases. The program also includes approximately 15-20 minor equipment replacements across the system.

2. PROGRAMMATIC PROJECT DISCUSSION

This program addresses "State of Good Repair" principles through timely reinvestment of assets to keep the necessary functions in good, safe conditions for employees and the public. It also addresses three Metro Transit strategic goals: employee safety, service performance and financial stewardship.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC EQUIPMENT REPL 2019-20

1134265

3. PROJECT JUSTIFICATION

This program addresses "State of Good Repair" principles through timely reinvestment of assets to keep the necessary functions in good, safe conditions for employees and the public. It also addresses three Metro Transit strategic goals: Employee safety, service performance and financial stewardship. Replacement criteria are condition (poor to inoperable), age, depreciated value at or near zero, repair costs would exceed cost to buy new, or premature failure. The lifecycle of equipment varies depending on the use and purpose.

4. PROJECT BENEFITS/OUTCOMES

Safe operations, safe work environments, reliable equipment and reduced corrective repair costs.

5. BUDGET REQUEST BASIS

This program budget request is based on historical and engineering cost estimates of the projects in its work plan. There are approximately 15 minor equipment assets and approximately 10 major equipment asset replacements anticipated in 2019-2020.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

This is an ongoing work effort in a new project.

9. ALTERNATIVES ANALYSIS

To be determined, on a per project basis.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, maintenance or minor rehabilitation

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Where feasible, old capital equipment is replaced by more energy efficient models to save energy. Applicable sub projects will comply with Green Building Ordinance requirements.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

1. CURRENT PROJECT SCOPE

Furniture Replacement - This program is to replace furniture that is past the end of its useful life or in poor condition. Initial purchases are planned to replace furniture located in the operator's lounge, general seating and quiet room areas at Metro Transit bases. Additional locations may be considered for furniture replacement as furniture conditions are assessed at all locations.

2. PROGRAMMATIC PROJECT DISCUSSION

This program addresses "State of Good Repair" principles through timely reinvestment of assets to keep the necessary functions in good, safe conditions for employees. It also supports Metro Transit strategic goals related to employee safety and provides a quality work environment for improved morale.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC FURNITURE REPLACEMENT

1134267

3. PROJECT JUSTIFICATION

For the 2019-2020 biennium, this furniture replacement program is being formed to adequately track future furniture investments as assets and maintain safe environments for employees. Replacement criteria are condition (poor), age, depreciated value at or near zero, repair costs would exceed cost to buy new, or premature failure. Replacement furniture will be capitalized via the pooled asset method, which is in compliance with Generally Accepted Accounting Principles.

4. PROJECT BENEFITS/OUTCOMES

Safe work environments and improved employee morale.

5. BUDGET REQUEST BASIS

This program budget request is based on cost estimates of the sub-projects in its work plan. Projects anticipated in 2019-2020 are replacement of furniture located in operator's lounges, general seating areas and quiet rooms at Metro Transit bases.

6. FUNDING AND REVENUE DISCUSSION

NARRATIVES TDC ROUTINE PAV REPAIR 2019-20 1134268

1. CURRENT PROJECT SCOPE

Routine Paving Repair 2019 to 2020 - This project includes the repair and replacement of asphalt and concrete paving at Metro transit facilities including Atlantic, East base, E3 busway, North Base, South Base, and Kenmore, Federal Way, Overlake, Star Lake Park & Rides.

2. PROGRAMMATIC PROJECT DISCUSSION

This is a programmatic project with assorted tasks for each project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC ROUTINE PAV REPAIR 2019-20

1134268

3. PROJECT JUSTIFICATION

This program supports Transit strategy to maintain our system in a state of good repair and to support efficient and effective service delivery. Routine paving repair needs are ongoing, and this project supports those needs to keep the system in a State of Good Repair (SGR). SGR is the principle underlying Transit's asset management plan; to keep assets in good, safe conditions through timely maintenance and repair, and to reinvest assets when conditions and/or age affect its performance reliability. Routine paving assets are defined as assets that support operational bases, transit centers and Park and Ride facilities, and other routine surface repairs excluding buildings. Failure to adhere to the program plan will generate a backlog of State of Good Repair work, leading to increased spending on asset replacement, increased risk of failure and loss of service, and greater risk to the County. Failure to maintain pavement, specifically, increases maintenance cost with vehicles that traverse damaged pavement sections. It may also lead to potential trip hazards and safety risk.

4. PROJECT BENEFITS/OUTCOMES

Completion of this project will result in a renewed asset with a refreshed lifecycle. Asset replacement is a normal part of asset maintenance and is essential to maintaining our system in a state of good repair to minimize unexpected corrective maintenance or emergency replacement cost and prevent service disruptions or challenges for our customers.

5. BUDGET REQUEST BASIS

This budget request is based on recent inspections of the facilities and scheduled repairs and maintenance in accordance with programmatic life cycle schedules. The dollar amount is derived from comparison with previous years repairs, and current on call contract unit prices. 2019 -2020 funding is expected to include the completion of all works indicated in the scope of work for this biennium, from planning through implementation and close out.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Routine paving repair and maintenance extends the useful life of paving assets and defers major capital replacement.

8. PROJECT STATUS

This is a new capital project request.

9. ALTERNATIVES ANALYSIS

Alternatives, if available, will be analyzed as part of the pre-design phase for all State of Good Repair works.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, maintenance or minor rehabilitation

12. EQUITY AND SOCIAL JUSTICE IMPACT

The smaller contracts used to complete these projects will allow smaller contractors and firms to be more competitive and create growth opportunities, in alignment with Goal 2 of King County ESJ Strategic Plans, Policies, and Budgets (Policy guidance incorporates the ESJ Shared Values, into analysis and decision-making for operations and service delivery) and Goal 2 Community Partnerships (Expand and promote diversity among applicant pool by creating pro-equity contracting processes that are visible and accessible to contractors of varied size and capacities, consistent with state and federal law).

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Green Building will be implemented where feasible in the form of recycled base course, recycled concrete in the mix (concrete), RAS mix (Recycles Asphalt shingles), and recycled steel reinforcement.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC ROUTINE PAV REPAIR 2019-20

1134268

14. OTHER CONSIDERATIONS (OPTIONAL)

Material choices such as Asphalt versus Concrete have been investigated to reduce the overall lifecycle costs and minimize disruptions to operations.

NARRATIVES

1. CURRENT PROJECT SCOPE

South Base Vehicle Maintenance Fluid Underground Storage Tanks - This project includes the review of the existing underground fluid storage tank locations and development of an alternatives analysis report around replacing the tanks, with a focus on the single waste oil tank with a warranty expiration in 2019. The project will then implement the replacement of the single tank at the end of its service life.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC SBVM FLUID US TANKS

1134269

3. PROJECT JUSTIFICATION

King County Metro Transit utilized a comprehensive Facilities Conditions Assessment Program conducted by 3rd party engineers to assess and monitor the conditions of our facilities. From these assessments, a Transit Facilities Conditions Needs Report is generated containing a prioritized ranking of assets needing major rehabilitation or replacement. State of Good Repair Program planners then sort and package those needs into efficient projects and schedule those projects to create a sustainable, level loaded, State of Good Repair Program to promote consistent State of Good Repair investment levels and maintain the safe and efficient functionality of our assets. Failure to adhere to the program plan will generate a backlog of State of Good Repair work, leading to increased spending on asset replacement, increased risk of failure and loss of service, and greater risk to the County. The manufacturers warranty on these tanks expires in 2019, increasing the risk to Metro Transit should these tanks remain in place.

4. PROJECT BENEFITS/OUTCOMES

Completion of this project will result in a renewed asset with a refreshed lifecycle. Asset replacement is a normal part of asset maintenance and is essential to maintaining our system in a state of good repair to minimize unexpected corrective maintenance or emergency replacement cost and prevent service disruptions or challenges for our customers.

5. BUDGET REQUEST BASIS

The Transit Facilities Conditions Needs Report provides rough order of magnitude replacement costing, generated by third party engineers and incorporating metrics for soft cost factors. 2019-2020 funding is expected to support final design and implementation of the tank replacement.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Effective asset management and lifecycle replacement will reduce operational maintenance cost for unplanned and corrective maintenance.

8. PROJECT STATUS

This is a new capital project request.

9. ALTERNATIVES ANALYSIS

Alternatives, if available, will be analyzed as part of the pre-design phase for all State of Good Repair works.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, maintenance or minor rehabilitation

NARRATIVES

1. CURRENT PROJECT SCOPE

Pass Sales Security Camera Replacement - This project is to replace and upgrade the security cameras and other systems in the Transit Pass Sales area on the first floor of King Street Center. The project will also provide motion detectors for after hours intrusion monitoring, duress buttons, upgraded recording capability and a new keypad/controller for arming and disarming alarms for after hours. The equipment will be connected to the County Enterprise system for King County's Facilities Management Division monitoring and response.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC PASS SALES SECURITY CAMS

1134273

3. PROJECT JUSTIFICATION

This project supports Metro goals for safety and service excellence as well as the business driver of making Metro a great place to work. The existing security camera system is more than 18 years old and past its useful life. The existing system does not link into Facilities Management Division's monitoring systems, as it should do now that King County owns the King Street Center building. The existing system does not currently include duress buttons and motion detectors, both of which have been identified by Facilities Management Division Security as important to the safety and security of customers, employees and fare media on site.

4. PROJECT BENEFITS/OUTCOMES

Creating a safer, more secure area for pass sales benefits customers as well as employees. It provides modern tools for security staff to respond to events. The obvious presence of security cameras throughout the area may prevent some types of disruptive or criminal activity.

5. BUDGET REQUEST BASIS

The King County Facilities Management Division (FMD) systems management and analysis supervisor performed a security assessment in early March 2018 at Transit's request. He provided recommendations and pricing quotes. These estimates form the basis for this request to replace the 18 year old system and make the new system compatible with FMD standards and monitoring systems.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

No known operating budget impacts are forecast for this replacement project.

8. PROJECT STATUS

This is a new standalone project.

NARRATIVES TDC BATT-ELECTR BUS-NRV INFR 1134274

1. CURRENT PROJECT SCOPE

Battery Electric Bus & Non-Revenue Vehicle Planning - This program is for the overall planning and programming of the vehicle infrastructure facilities needs to support a zero-emissions fleet. With the recent investment of new trolley buses, the goal to be totally green by 2040, the expansion of the battery electric bus infrastructure and environment, and the implementation of the Rapid Ride system, it is important to develop a battery electric infrastructure program within King County Metro to address the increasing workload, complexity, and the necessity of developing a strategic, system wide plan for the future of the battery electric infrastructure.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC BATT-ELECTR BUS-NRV INFR

1134274

2. PROGRAMMATIC PROJECT DISCUSSION

The buses that we are currently utilizing are only "short" range charging buses. Because of that, a majority of the routes (specifically in South King County) that we would like to place the buses at would not work. In the 2019-2020 biennium, we will begin testing long range buses at the South Base facility with the intent to deploy in the South County starting in the 2021-2022 biennium. Due to the technology on the BEB's currently there are issues with grade, duration of use/charging, location of layover/charging infrastructure, and other issues that have to be mitigated prior to a full county deployment. The intent of the testing during the biennium will allow Metro Transit to identify the issues and solutions necessary to complete a full deployment of the BEB's across the county.

3. PROJECT JUSTIFICATION

With the directive to be a 100% Battery bus fleet by 2040, it will be important to prepare our new & existing bases, address issues with existing diesel buses, and prepare future development of electric base expansion.

4. PROJECT BENEFITS/OUTCOMES

A clear strategic vision for the battery electric planning, operation, and implementation. Having a dedicated individual/program will allow for understanding and guidance of the departments' Battery Electric infrastructure program.

5. BUDGET REQUEST BASIS

This budget request was developed by reviewing past costs in support of similar programs (like the Trolley infrastructure project/program). The budget costs identified here are to support planning staff.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

This is a new capital project request.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

Coordination will be required with various divisions within King County Metro, SDOT, SCL, WSDOT, Sound Transit, and others.

11. ART ELIGIBILITY

Not Art eligible, planning project

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The program supports the implementation of the Battery Electric Bus/Infrastructure and aligns with the climate action plan because it provides power to the zero emission fleet operated within the City of Seattle.

NARRATIVES

1. CURRENT PROJECT SCOPE

RapidRide G Line Trolley Restructure - This project is in support of the trolley infrastructure work that will need to be completed in support of the G Line. New overhead wire, switches, poles, and other additional trolley infrastructure will be needed to accommodate a restructure of existing trolley routes when the RapidRide G Line is implemented. At the time of this budget process, the following trolley related projects are anticipated as part of the Trolley Route restructure around the implementation of the G Line: approximately 800 feet of new wire needed along E Pine Street between Madison Street and 15th Avenue (Route 12 restructure), and new wire/switches at the S Jackson Street and 12th Ave S Intersection to allow northbound and southbound operations through the intersection (Routes 49/36 Restructure).

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC G LINE TROLLEY RESTR

1134275

3. PROJECT JUSTIFICATION

The planned RapidRide G Line will follow a fixed alignment that is not currently used by any existing fixed route in Metro's system network. If this project is not pursued, Metro may be unable to restructure some existing trolley routes, and/or run diesel buses along corridors that have been traditionally operated by fully electric trolleys. This project advances Metro CONNECTS vision by expanding our trolley overhead network, and allowing for envisioned trolley route restructures to be realized.

4. PROJECT BENEFITS/OUTCOMES

This project will reduce duplicative fixed route service, and prevent Metro from having to use diesel buses along corridors that have been traditionally operated by fully electric trolleys when the RapidRide G Line is implemented.

5. BUDGET REQUEST BASIS

The funding for this project has been identified based on the previous cost of trolley removal/integration, consultant/contractor expenses, and additional costs associated with implementation of the new RR accounts are also included.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

This is a new capital project request.

9. ALTERNATIVES ANALYSIS

The alternatives identified were as follows: duplicate RapidRide G Line service by not moving forward with a trolley bus restructure and maintaining existing trolley routes, or move forward with a restructure, but place diesel buses along corridors that have been traditionally operated by fully electric trolleys when the RapidRide G Line is implemented. Rider impacts, Metro's Service Guidelines, Fleet Constraints, and additional service network alternatives were all considered as part of this process.

10. OTHER AGENCY INVOLVEMENT

This project was informed by input from SDOT, Sound Transit, and the general public.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

New Trolley wire will be used by Trolley buses that are 100% fully electric.

14. OTHER CONSIDERATIONS (OPTIONAL)

While the propulsion system for the RapidRide G Line is still unknown at the time of Metro's 2019-2020 budgeting process, it is known that Metro will restructure some of our existing Trolley Routes to accommodate the implementation of the RapidRide G Line. This project will be to modify and add to our existing trolley overhead network to accommodate trolley service changes around the G Line, and provide flexibility to our overall trolley service network.

NARRATIVES

TDC NE 43RD TROLLEY MODS

1134276

1. CURRENT PROJECT SCOPE

NE 43rd Avenue Trolley Modifications - This project is for the planning, design, & implementation of additional trolley infrastructure in support of the new U-District Station. This appropriation will be used to implement approximately one-quarter mile of new one-way trolley wire on NE 43rd Street (between 15th Ave NE and 12th Ave NE) and 12 Ave NE (between NE 45th Street and NE 43rd Street). When the U-District Station opens in Spring 2021 (at the northeast corner of Brooklyn Ave and NE 43rd Street), this new trolley pathway will create the opportunity to provide a seamless transfer environment between bus-bus and bus-rail for riders by implementing one-way, westbound trolley wire along NE 43rd Street (between 15th Ave NE and 12th Ave NE) to 12th Ave NE (between NE 45th St and NE 43rd St).

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC NE 43RD TROLLEY MODS

1134276

3. PROJECT JUSTIFICATION

When the U-District Station opens in Spring 2021 (at the northeast corner of Brooklyn Ave and NE 43rd Street), Metro will provide a seamless transfer environment between bus-bus and bus-rail for riders by implementing one-way, westbound trolley wire along NE 43rd Street (between 15th Ave NE and 12th Ave NE) to 12th Ave NE (between NE 45th St and NE 43rd St). This project responds directly to community concerns about having seamless, safe, and convenient transfers between bus-bus and bus-rail at Sound Transit Link Stations - westbound trolley routes will board and alight passengers at the south entrance of the U-District Station, while eastbound trolley routes will board and alight passengers at the north entrance. When transferring no passengers will have to cross a major arterial. This is a HIGH PRIORITY project as it is directly tied to the opening of the University District Station in 2021.

4. PROJECT BENEFITS/OUTCOMES

This project responds directly to community concerns about having seamless, safe, and convenient transfers between bus-bus and bus-rail at Sound Transit Link Stations - westbound trolley routes will board and alight passengers at the south entrance of the U-District Station, while eastbound trolley routes will board and alight passengers at the north entrance. When transferring no passengers will have to cross a major arterial - providing a major safety benefit for transit riders.

5. BUDGET REQUEST BASIS

The basis for the 2019-2020 request is based on previous years expenses for trolley project requests from our partners.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

This project has the potential to improve the reliability of Trolley Route 44 (a future RapidRide Line), therefore improving the operational reliability and success of Route 44 trips. While there may be some benefit in the operating budget for the Route 44, the majority of this benefit is going to be seen by passengers of Trolley Route 44, 49, and 48 - who will be able to seamlessly, safely, and conveniently make a transfer between bus-bus and bus-rail at the University District Station.

8. PROJECT STATUS

This is a new capital project request.

9. ALTERNATIVES ANALYSIS

University District Station is adjacent to three different streets - NE 43rd Street, Brooklyn Ave, and NE 45th Street. Brooklyn Ave was explored as an alternative pathway, but in coordination and compromise with the City of Seattle Brooklyn was established as a Green Street which is designed to be incompatible with Metro Buses. Sound Transit is at 100% design and will be re-building Brooklyn Ave in 2019 to be compatible with SDOT's Green Street Design. Therefore, Metro cannot and will not be able to use Brooklyn Ave as a Transit Pathway. Metro also looked briefly at the potential for two-way operations along NE 43rd Street, but do to community concerns about pedestrian activity along this pathway agreed to pursue an alternative approach.

Metro will therefore be using a combination of NE 45th Street in the eastbound direction and NE 43rd Street in the westbound direction for Trolley operations to provide a safe, convenient, seamless transfer for transit riders between bus-bus and bus-rail at the University District Station.

10. OTHER AGENCY INVOLVEMENT

Seattle Department of Transportation (SDOT), Seattle Office of Planning & Community Development (OPCD) and Sound Transit - All were involved in the creation of the U-District Green Street Concept Plan, University District Station Area Planning, and Metro CONNECTS.

11. ART ELIGIBILITY

NARRATIVES

TDC NRV BATTERY INFRASTR

1134277

1. CURRENT PROJECT SCOPE

Non-revenue Vehicle (NRV) Battery Infrastructure - This program is for the development and implementation of the electric infrastructure in support of battery electric vehicles in the non-revenue fleet. With the recent investment of new battery NRV vehicles and the expectation that this will continue to expand as part of the goal to be completely "Green" by 2040, this program is being developed to support the planning, design, and implementation of five to seven NRV infrastructure and chargers in the county for the 2019-2020 biennium.

2. PROGRAMMATIC PROJECT DISCUSSION

This program supports the implementation of the charging infrastructure in support of the non-revenue vehicles in the department.

3. PROJECT JUSTIFICATION

With the implementation of the Strategic Climate Action Plan (SCAP), the implementation of NRV battery charging infrastructure will allow the county to move closer to being totally "Green".

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC NRV BATTERY INFRASTR

1134277

4. PROJECT BENEFITS/OUTCOMES

Implementation of 5 to 7 NRV battery charging stations in the county for the 2019-2020 biennium.

5. BUDGET REQUEST BASIS

By reviewing past costs in support of similar programs (like the Trolley infrastructure project/program) the budget costs identified here are to support planning, design, and implementation of five to seven NRV chargers in the county.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

This is a new capital project.

9. ALTERNATIVES ANALYSIS

NA

10. OTHER AGENCY INVOLVEMENT

Various divisions within King County Metro, Seattle City Light.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The program that supports the implementation of the battery electric NRV Infrastructure and aligns with the climate action plan because it provides power to the zero emission fleet operated within the City of Seattle.

14. OTHER CONSIDERATIONS (OPTIONAL)

For the 2019-2020 biennium, NRV will be purchasing 5 new battery vehicles and this program/project will support the implementation of 5 to 6 Type 2 chargers and 1 Type 3 charger at the bus bases in support of those vehicles.

NARRATIVES

TDC BEB CHRGRS BB #2

1134278

1. CURRENT PROJECT SCOPE

Bellevue Base Battery Electric Bus Charger No.2 - This project involves planning, design and construction of a Battery Electric Bus (BEB) charger at Metro's Bellevue Base. The new charger will be capable of charging short-range battery electric buses, consistent with Metro's BEB fleet plan. The charger will be installed in Metro's fuel building at Bellevue Base to integrate with current bus maintenance procedures. This project is a continuation of the BEB infrastructure program initiated in 2017.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC BEB CHRGRS BB #2

1134278

3. PROJECT JUSTIFICATION

King County Metro is committed to implementing a world class zero-emission fleet as part of the County's strategic goal to improve the health and welfare of King County residents by reducing emissions from one of the largest greenhouse gas sources in the area. The BEB Infrastructure program works hand-in-hand with Metro's BEB fleet planning to ensure the infrastructure is in place to support expansion of the BEB fleet. The Proterra buses have been operating at the Bellevue Base/Eastgate for the last year with a single charger (based at Eastgate). With the implementation of the charger at the Bellevue Base, we will have redundancy in the system for the first time.

4. PROJECT BENEFITS/OUTCOMES

Metro's BEB program implements the County's Strategic Plan to protect the health of communities through improving environmental quality by reducing greenhouse gas emissions from County vehicles. This project supports the BEB expansion plan that Metro is undertaking. The installation provides redundancy in the system.

5. BUDGET REQUEST BASIS

The costs associated with this appropriation will allow for the implementation, testing, certification, operations, and closeout of this project and were developed using costs from previous BEB charger projects. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$1.5 M is being reappropriated from project 1129299 ELECTRIC BUS CHARGING INFRASTRUCTURE to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Operating cost for BEB charging includes power cost, employee training, and maintenance costs for the charging facilities. Operating costs are anticipated to be lower compared to Metro's current hybrid diesel buses when including cost of bus operation and maintenance. Data from Metro's initial BEB installations is being evaluated to assess operating cost impacts.

8. PROJECT STATUS

This project is completing the implementation phase, with a "go live" date of 08/01/2018 and will start the close out process in the next month.

9. ALTERNATIVES ANALYSIS

Alternatives analysis included evaluation of the BEB service plan to assess alternative configuration and charging capacity required to implement the 2018 BEB fleet deployment plan.

10. OTHER AGENCY INVOLVEMENT

Puget Sound Energy is supporting Metro's power service needs.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Metro's BEB implementation program is one of the most powerful programs under the County's SCAP, with projected emission reductions that will achieve measureable air quality improvements as the fleet transition increases, with consequent improvement in health and welfare of King County residents.

NARRATIVES

TDC BEB CHRGRS BB #3

1134279

1. CURRENT PROJECT SCOPE

Bellevue Base Battery Electric Bus Charger No.3 - This project involves planning, design and construction of the third full-service Battery Electric Bus (BEB) charger at Metro's Bellevue Base. The new charger will be capable of charging long- or short-range battery electric buses, and will provide redundant charging capability to improve service reliability, consistent with Metro's BEB fleet plan.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

King County Metro is committed to implementing a world class zero-emission fleet as part of the County's strategic goal to improve the health and welfare of King County residents by reducing emissions from one of the largest greenhouse gas sources in the area. The BEB Infrastructure program works hand-in-hand with Metro's BEB fleet planning to ensure the infrastructure is in place to support expansion of the BEB fleet.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC BEB CHRGRS BB #3

1134279

4. PROJECT BENEFITS/OUTCOMES

Metro's BEB program implements the County's Strategic Plan to protect the health of communities through improving environmental quality by reducing greenhouse gas emissions from County vehicles. This project supports the BEB expansion plan that Metro is undertaking.

5. BUDGET REQUEST BASIS

The costs associated with this appropriation will allow for the implementation, testing, certification, operations, and closeout of this project and were developed using costs from previous BEB charger projects. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$1 M is being reappropriated from project 1129299 ELECTRIC BUS CHARGING INFRASTRUCTURE to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Operating cost for BEB charging includes power cost, employee training, and maintenance costs for the charging facilities. Operating costs are anticipated to be lower compared to Metro's current hybrid diesel buses when including cost of bus operation and maintenance. Data from Metro's initial BEB installations is being evaluated to assess operating cost impacts.

8. PROJECT STATUS

The project is currently in the planning and pre-design phase under consultant contract.

9. ALTERNATIVES ANALYSIS

Alternatives analysis will include evaluation of the rapidly-evolving BEB fleet technology to determine the type and capabilities of the new chargers, including evaluation of long- and short-range bus charging options.

10. OTHER AGENCY INVOLVEMENT

Puget Sound Energy will support Metro's power service needs.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Metro's BEB implementation program is one of the most powerful programs under the County's SCAP, with projected emission reductions that will achieve measureable air quality improvements as the fleet transition increases, with consequent improvement in health and welfare of King County residents.

14. OTHER CONSIDERATIONS (OPTIONAL)

The 2018 Bellevue Base Charging Station project will install sufficient power service capacity for this additional charger, avoiding this significant component of the implementation cost.

NARRATIVES TDC BEB CHRGRS EASTGATE PR #2 1134280

1. CURRENT PROJECT SCOPE

Eastgate Park & Ride Battery Electric Bus Chargers No 2 & 3 - This project involves planning, design and construction of the second and third Battery Electric Bus (BEB) chargers at Metro's existing Eastgate BEB charging station. The new chargers will be capable of charging short-range battery electric buses, consistent with Metro's BEB fleet plan. The project includes a new multi-charger gantry, switchgear, and new power service to the site. The existing charger at Eastgate will be relocated to the new gantry for operational efficiency.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC BEB CHRGRS EASTGATE PR #2

1134280

3. PROJECT JUSTIFICATION

King County Metro is committed to implementing a world class zero-emission fleet as part of the County's strategic goal to improve the health and welfare of King County residents by reducing emissions from one of the largest greenhouse gas sources in the area. The BEB Infrastructure program works hand-in-hand with Metro's BEB fleet planning to ensure the infrastructure is in place to support expansion of the BEB fleet. The Proterra buses have been operating at the Bellevue Base/Eastgate for the last year with a single charger (based at Eastgate). With the implementation of the additional charger at the Eastgate Park n Ride, we will have redundancy at the site for the first time.

4. PROJECT BENEFITS/OUTCOMES

Metro's BEB program implements the County's Strategic Plan to protect the health of communities through improving environmental quality by reducing greenhouse gas emissions from County vehicles. This project supports the BEB expansion plan that Metro is undertaking. This project provides charging infrastructure redundancy at the site for the first time.

5. BUDGET REQUEST BASIS

Historical data from previous charger implementations was used to develop this request. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$3.4 M is being reappropriated from project 1129299 ELECTRIC BUS CHARGING INFRASTRUCTURE to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Operating cost for BEB charging includes power cost, employee training, and maintenance costs for the charging facilities. Operating costs are anticipated to be lower compared to Metro's current hybrid diesel buses when including cost of bus operation and maintenance. Data from Metro's initial BEB installations is being evaluated to assess operating cost impacts.

8. PROJECT STATUS

The project is currently in implementation and construction is intended to start in mid-2018, with in-service date in late 2018 to early 2019.

9. ALTERNATIVES ANALYSIS

Alternatives analysis included evaluation of the BEB service plan to assess alternative configuration and charging capacity required to implement the 2018 BEB fleet deployment plan.

10. OTHER AGENCY INVOLVEMENT

The Eastgate site is owned by WSDOT, and an inter-agency agreement is in process for the new charging station. Puget Sound Energy is supporting Metro's power service needs.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Metro's BEB implementation program is one of the most powerful programs under the County's SCAP, with projected emission reductions that will achieve measureable air quality improvements as the fleet transition increases, with consequent improvement in health and welfare of King County residents.

14. OTHER CONSIDERATIONS (OPTIONAL)

The power demanded requires connection to the power grid with adequate power capacity, which in some cases is a significant distance from the charging station.

NARRATIVES

1. CURRENT PROJECT SCOPE

South Base Battery Electric Bus Chargers - This project involves planning, design and construction of nine new Battery Electric Bus (BEB) chargers at Metro's South Base. The new chargers will be capable of charging long-range battery electric buses, which Metro will be testing in the next years, as well as placing long-range BEB into revenue service consistent with Metro's BEB fleet plan. The project includes a new multi-charger site area, switchgear, and new power service to the site.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC BEB CHRGRS SB TEST FACIL

1134282

3. PROJECT JUSTIFICATION

King County Metro is committed to implementing a world class zero-emission fleet as part of the County's strategic goal to improve the health and welfare of King County residents by reducing emissions from one of the largest greenhouse gas sources in the area. The BEB Infrastructure program works hand-in-hand with Metro's BEB fleet planning to ensure the infrastructure is in place to support expansion of the BEB fleet.

4. PROJECT BENEFITS/OUTCOMES

Metro's BEB program implements the County's Strategic Plan to protect the health of communities through improving environmental quality by reducing greenhouse gas emissions from County vehicles. This project supports the BEB expansion plan that Metro is undertaking.

5. BUDGET REQUEST BASIS

The costs associated with this appropriation will allow for the planning, design, implementation, testing, certification, operations, and closeout of this project. The budget was developed using costs from previous BEB charger projects. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$1.6 M is being reappropriated from project 1129299 ELECTRIC BUS CHARGING INFRASTRUCTURE to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Operating cost for BEB charging includes power cost, employee training, and maintenance costs for the charging facilities. Operating costs are anticipated to be lower compared to Metro's current hybrid diesel buses when including cost of bus operation and maintenance. Data from Metro's initial BEB installations is being evaluated to assess operating cost impacts.

8. PROJECT STATUS

The project is currently in the implementation phase with permitting and construction intended to start in late 2018, with an in service date of early 2019.

9. ALTERNATIVES ANALYSIS

Alternatives analysis included evaluation of the BEB service plan to assess alternative configuration and charging capacity required to implement the 2018 BEB fleet deployment plan. Alternative locations for the charging station were also evaluated.

10. OTHER AGENCY INVOLVEMENT

Seattle City Light is supporting Metro's power service needs.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Metro's BEB implementation program is one of the most powerful programs under the County's SCAP, with projected emission reductions that will achieve measureable air quality improvements as the fleet transition increases, with consequent improvement in health and welfare of King County residents.

14. OTHER CONSIDERATIONS (OPTIONAL)

In the 2019-2020 biennium, not only was Metro testing three different vendors long range Battery Electric buses, but we are also testing the infrastructure necessary to support battery electric bus charging at the base. The chargers that will be tested at South Base are for extended-range buses that will be able to go in excess of 140 miles between charges and return to the base for charging each day, not requiring on-route charging. This is different than the short range chargers at Eastgate, Redmond, or Bellevue Base that require on-route charging.

NARRATIVES

TDC BEB CHRGRS SDOT G LINE PR

1134283

1. CURRENT PROJECT SCOPE

Madison/G Line RapidRide Battery Electric Bus Charger - This project involves planning, design and construction of the Battery Electric Bus (BEB) charger(s) in support of potential use of battery electric buses on the Madison/G Line. Based on testing and more extensive review of the feasibility of 60-ft battery electric buses on this steep route, hybrid buses may be used to open this new RapidRide line and the charging infrastructure may be delayed until industry technology can reliably be used on this route. When feasible, the new chargers will be capable of charging battery electric buses and be located on the bus route and/or at a Metro Base. The project includes new infrastructure, switchgear, and new power service to the charging sites.

2. PROGRAMMATIC PROJECT DISCUSSION

1134283

3. PROJECT JUSTIFICATION

King County Metro is committed to implementing a world class zero-emission fleet as part of the County's strategic goal to improve the health and welfare of King County residents by reducing emissions from one of the largest greenhouse gas sources in the area. The BEB Infrastructure program works hand-in-hand with Metro's BEB fleet planning to ensure the infrastructure is in place to support expansion of the BEB fleet.

4. PROJECT BENEFITS/OUTCOMES

Metro's BEB program implements the County's Strategic Plan to protect the health of communities through improving environmental quality by reducing greenhouse gas emissions from County vehicles. This project supports the BEB expansion plan that Metro is undertaking.

5. BUDGET REQUEST BASIS

The costs associated with this appropriation will allow for the planning, design, implementation, testing, certification, operations, and closeout of this project. The budget was developed using costs from previous BEB charger projects. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$4 M is being reappropriated from project 1129299 ELECTRIC BUS CHARGING INFRASTRUCTURE to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Operating cost for BEB charging includes power cost, employee training, and maintenance costs for the charging facilities. Operating costs are anticipated to be lower compared to Metro's current hybrid diesel buses when including cost of bus operation and maintenance. Data from Metro's initial BEB installations is being evaluated to assess operating cost impacts.

8. PROJECT STATUS

The project is currently the planning phase under consultant contract.

9. ALTERNATIVES ANALYSIS

Alternatives analysis will include evaluation of the capability of implementing BEB, trolley, or diesel hybrid buses on this route, with specific focus on the BEB charging requirements, route facilities, and base facilities required to implement the BEB infrastructure for the G Line.

10. OTHER AGENCY INVOLVEMENT

SDOT will construct and own the G-Line route facilities, and Metro will own and maintain the BEB buses and charging infrastructure. Seattle City Light will support Metro's power service needs.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Metro's BEB implementation program is one of the most powerful programs under the County's SCAP, with projected emission reductions that will achieve measureable air quality improvements as the fleet transition increases, with consequent improvement in health and welfare of King County residents.

14. OTHER CONSIDERATIONS (OPTIONAL)

The power demand requires connection to the power grid with adequate power capacity, which in some cases is a significant distance from the charging station.

NARRATIVES TDC RT 48 TROLLEY 1134287

1. CURRENT PROJECT SCOPE

Route 48 Trolley - This project is a partnership project with the City of Seattle, is coordinated with the City roadway infrastructure improvements along 23rd Ave, and is in advance of future Rapid Ride improvements in this area. The trolley wire project installs two segments along 23rd Avenue in conjunction with Seattle Department of Transportation's project to improve this high ridership transit corridor. Each segment is just under a mile long. When complete, Route 48 Trolley will provide trolley service capability (now diesel) from Mt Baker Station to the University of Washington. This effort involves Metro completing the design, securing permits, bidding the work, and constructing the trolley infrastructure to complete the electrification.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC RT 48 TROLLEY

1134287

3. PROJECT JUSTIFICATION

Trolley infrastructure improvements along Route 48 (23rd Avenue) will advance the goal of providing a zero emissions fleet, leverages our infrastructure investments through partnerships and grant opportunities, and will set in place a supportive trolley system infrastructure in advance of the deployment of the RapidRide K Line project 1132327. It is important to complete the more complex trolley work in advance of the RapidRide corridor project to meet RapidRide program service commitments.

4. PROJECT BENEFITS/OUTCOMES

When complete, Route 48 will provide trolley service from Mt Baker Station to the University of Washington.

5. BUDGET REQUEST BASIS

The 2019 - 2020 budget is based on past years expense trend for implementation of other trolley projects. Costs include design, securing permits, bidding the work, and constructing the trolley infrastructure to complete the electrification.

6. FUNDING AND REVENUE DISCUSSION

Metro will provide the capital for the trolley wire work. SDOT has agreed to provide \$4M in FTA funds to offset some of the costs.

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

The combined 23rd Avenue street/trolley projects have been contemplated by SDOT and Metro for the last three years with funding being the major obstacle. SDOT has finished street improvements on 23rd from Jackson Street to the University of Washington, including trolley poles. Phase II to from Jackson Street to Rainier Avenue will start construction this year.

9. ALTERNATIVES ANALYSIS

The alternative option would be to wait for the RapidRide Program to do the trolley and street level improvements. The consensus within Metro sees a benefit to starting trolley service now.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The program that supports the operation of the trolley system power infrastructure and aligns with the climate action plan because it provides power to the zero emission fleet operated within the City of Seattle.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES TDC TROLL MAST DRAW PRGRM 1134288

1. CURRENT PROJECT SCOPE

Trolley Master Drawing Program - This program is in support of the development of a complete set of trolley infrastructure design drawings. Through the project, Transit will hire a consultant that will partner with internal staff to develop drawings both in a hard copy format as well as in standard CAD system software format. There is over 90 miles of Trolley Infrastructure including poles, wire, switches, sub stations, power transformers, etc., and Transit has no complete system of record for the infrastructure of this \$1B asset. Once established, the master drawings will be reviewed and updated at least every 5 years.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC TROLL MAST DRAW PRGRM

1134288

3. PROJECT JUSTIFICATION

There is over 90 miles of Trolley Infrastructure including poles, wire, switches, sub stations, power transformers, etc., and Transit does not have complete As-Built system drawings of the Trolley Infrastructure. and we have no complete system of record for the infrastructure of this \$1B asset. This asset value combined with various divisions planning trolley projects and external partners looking for changes to the Trolley system, there is a need for a Trolley Master System Drawing (MSD) Program to create and maintain a complete set of drawings. There are multiple types of existing drawings (not a complete MSD) in various levels of detail, and there are risks associated with a loss of continuity, understanding of the existing infrastructure, and a trolley system knowledge. Also, with the recent investment of new trolley buses, the goal to be off of diesel buses by 2035, the expansion of the trolley infrastructure and environment, and the implementation of the Rapid Ride system, it is important to develop a Trolley Master System Drawing to address the increasing workload, complexity, and planning for the future of trolley in the department.

4. PROJECT BENEFITS/OUTCOMES

The benefits of this Program is to increase efficiency and enhance Metro Transit's ability to provide current functional records of the trolley bus infrastructure system for planning, design, review and implementation uses by clients and stakeholders. Also, this Program proposes to address the need for a consolidation of data typically accessed by Transit Power & Facilities' Trolley System Program, Transit Service Planning's Passenger Facilities Program, Seattle's Department of Transportation and Department of Construction and Inspections.

5. BUDGET REQUEST BASIS

Estimated costs fund a consultant and internal staff development drawings both in a hard copy format as well as in standard CAD system software format for the over 90 miles of Trolley Infrastructure including poles, wire, switches, sub stations, power transformers, etc.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

With the development of the Trolley MSD Program, there will be a need for long term investment needs on the Operations budget to support continued maintenance and refresh of the MSD.

8. PROJECT STATUS

This is a new capital project request.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

SDOT, City of Seattle Dept. of Construction & Inspection

11. ART ELIGIBILITY

Not Art Eligible, capital planning project

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This program supports the trolley overhead system, which aligns with the climate action plan because it provides power to the zero emission fleet operated within the City of Seattle.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

TDC TROLLEY PROGRAM

1134289

1. CURRENT PROJECT SCOPE

Trolley Program Planning - This program is for the development of a functioning Trolley Program. With the recent investment of new trolley buses, the goal to be off of diesel buses by 2035, the expansion of the trolley infrastructure and environment, and the implementation of the Rapid Ride system, it is important to develop a Trolley Program Planning project within King County Metro to address the increasing workload, complexity, and planning for the future of trolley in the department.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

With almost a \$1B in asset value, various divisions planning trolley projects, and external partners looking for changes to the Trolley system, there is a need for a formalized Trolley Program planning. Without the establishment of a formalized Trolley program with a clear strategic vision there is a risk that Metro Transit's Trolley System will not be optimized and there will be missed opportunities.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC TROLLEY PROGRAM

1134289

4. PROJECT BENEFITS/OUTCOMES

A clear strategic vision for trolley planning, operation, and implementation. Having a dedicated individual/program will allow for understanding and guidance of the departments' Trolley program.

5. BUDGET REQUEST BASIS

This budget request is based on staffing in the capital planning and program management organization chart responsibility for the capital planning and program management duties for this body of work.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

This is a new capital project request.

NARRATIVES

TDC TOTEM LAKE EASTGATE RR

1134292

1. CURRENT PROJECT SCOPE

Totem Lake Eastgate RapidRide - This project is a planned RapidRide line for Routes 234/235/271 and extends from Totem Lake Transit Center to Eastgate in Bellevue, passing through the cities of Kirkland and Bellevue. This project would plan, design and implement the necessary infrastructure improvements to launch RapidRide service. These infrastructure projects include passenger facilities, roadway, signal and intelligent transportation system improvements which result in better transit speed and reliability, access to transit projects which reduce barriers for people to reach transit and necessary communication and technology efforts to support the service. This budget also includes the associated costs for public outreach and marketing (launch of the service). This budget does not include vehicles.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC TOTEM LAKE EASTGATE RR

1134292

3. PROJECT JUSTIFICATION

This project is part of the METRO CONNECTS RapidRide Expansion Program and will be led by King County Metro. This project supports Metro's strategic service goals and is identified in METRO CONNECTS as a RapidRide corridor in the 2025 network. The project will result in improved service and ridership along the corridor and support regional growth. The Totem Lake-Eastgate RapidRide Line was prioritized for implementation based on criteria developed in METRO CONNECTS, including:

- Geographic balance
- Equity and social justice factors
- Ridership growth potential
- Implementation complexity
- Partnership opportunities and commitments
- Grant funding opportunities
- High capacity transit network connectivity

4. PROJECT BENEFITS/OUTCOMES

This project will create a new RapidRide corridor. Historically RR corridors have been a successful way to increase ridership within a corridor area. Most of the previous 6 RapidRide lines have increase daily trips by more than 50% within the first few years of operations.

5. BUDGET REQUEST BASIS

Detailed estimates for project costs have been developed using past agency experience delivering the six original RapidRide lines, along with a detailed work breakdown structure and resource-loaded project schedule identifying the cost associated with each individual component of RapidRide delivery. The requested budget will move the project through the planning phase of project delivery.

6. FUNDING AND REVENUE DISCUSSION

This project is funded primarily through Metro funds. The total spending authority being request is approximately 90% of the Metro Connects cost estimate with approximately 50% of the project funds coming from assumed, yet to be identified, grants. The remaining 10% of the cost estimate assumed by Metro Connects is assumed to come from Partner Agency contributions and or projects carried out by partners.

7. OPERATING BUDGET AND OTHER IMPACTS

This capital project will create assets which need to be maintained along the corridor. These assets include shelters, real time information signs, trash bins and ORCA fare collection equipment.

8. PROJECT STATUS

This project is currently in the pre-planning stage. This project is expected to be advertised for a consolidated planning and design contract in 2019.

9. ALTERNATIVES ANALYSIS

Alternative Analysis is anticipated to be carried out during the pre-design phase and will include a substantial public engagement element. A preferred alignment will then be approved via the existing King County Metro Council alignment approval process.

10. OTHER AGENCY INVOLVEMENT

This project will require the involvement of other agencies where work will be conducted for permitting and potentially funding partnership. The METRO CONNECTS proposed 2025 network was discussed both regionally and locally with the impacted jurisdictions. As the project enters the pre-design phase, other agency involvement will significantly increase.

11. ART ELIGIBILITY

N/A, Art eligible

12. EQUITY AND SOCIAL JUSTICE IMPACT

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC TOTEM LAKE EASTGATE RR

1134292

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project directly supports Goal Area 1 (Transportation and Land Use) in King County's Strategic Climate Action Plan and overall reduction in emissive pollution by promoting transit along these proposed RapidRide corridors. Capital assets built and installed along the corridor will meet King County's Green Building ordinance where required and allowable.

NARRATIVES

TDC MCDP CORRIDOR #1

1134293

1. CURRENT PROJECT SCOPE

Metro Connects Development Plan Corridor #1 - This project will improve transit performance and quality of service on a new line connecting Covington to SeaTac airport via Kent Station, comparable to existing Routes 180 and 168 (Line 1514 per METRO CONNECTS service network). Improvements include traffic signal retiming, traffic operation changes at selected intersections, signal queue jumps and bypass lanes for buses to get ahead of queued traffic at busy signalized intersections, improved bus access, layover circulation and facilities, and bus zone improvements.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC MCDP CORRIDOR #1

1134293

3. PROJECT JUSTIFICATION

The METRO CONNECTS Development Plan identifies route 1514 as one of the frequent transit corridors to receive capital investments. The capital investments on Route 1514 are expected to improve transit reliability and quality of service for Metro riders by reducing route travel times by five to ten percent. In addition, this project distributes capital investment to promote social and geographic equity.

4. PROJECT BENEFITS/OUTCOMES

Speed and reliability improvements for this corridor will defer the need to deploy additional service hours for a few years.

5. BUDGET REQUEST BASIS

The level of effort covered in this biennium will include planning work. The amount requested is based on estimates of previous planning project costs.

6. FUNDING AND REVENUE DISCUSSION

The County will seek regional, state, and federal grants for city partnership and city-led projects, when possible. Local and non-eligible grant funds come from the Public Transportation Fund, capital sub fund.

7. OPERATING BUDGET AND OTHER IMPACTS

Transit signal priority (TSP) technology deployment will require ongoing operation and maintenance (O&M). The level of effort will be depending on the number of TSP installations and type of technology selected for deployment.

8. PROJECT STATUS

Pre-planning work is currently underway to reach out to local jurisdictions for their support, interest, and concurrence in identifying needs to improve transit service in this corridor. Note that the implementation of capital investments to improve transit speed and reliability relies on a city's availability to review and approve plans, install equipment, and sometimes perform construction.

9. ALTERNATIVES ANALYSIS

To be determined after pre-planning work has been completed.

10. OTHER AGENCY INVOLVEMENT

NARRATIVES TDC MCDP LCL AGENCY PARTSHIP 1134296

1. CURRENT PROJECT SCOPE

Metro Connects Development Plan Local Agency Partnerships - This project is designed to invest in transit operational improvements utilizing two scenarios. Scenario 1) This fund is designated as Metro's contribution to local agency partners. Metro will provide speed and reliability capital investment for frequent, express, and local services. The local agency will lead the planning, design, and implementation for speed and reliability improvements. Scenario 2) Metro will lead capital project delivery for capital investments. Each local partner agency will have the option to select the capital delivery mechanism, assuming Metro has staff resources and capacity to deliver.

2. PROGRAMMATIC PROJECT DISCUSSION

This program focuses on working with local agency partners to deliver capital investment to benefit transit along METRO CONNECTS transit corridors. This fund is allocated as a local match Metro's contribution, or a Metro-led project in seeking future grant funding in addition to local funding. If the local agency is anticipated to lead the planning, design, and implementation phases, Metro and the local agency will execute an interagency agreement to document the project scope of work, budget, schedule and Metro's contribution to each project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC MCDP LCL AGENCY PARTSHIP

1134296

3. PROJECT JUSTIFICATION

The program supports Transit Strategic Goal 5.1- Service Excellence, Strategy 5.1.3; "Improve transit speed and reliability by maintaining or improving bus travel times and reliability through capital investments." This program focuses on working with local agency partners to deliver capital investment to benefit transit along METRO CONNECTS transit corridors. This fund is allocated as a local match Metro's contribution, or a Metro-led project in seeking future grant funding in addition to local funding. If the local agency is anticipated to lead the planning, design, and implementation phases, Metro and the local agency will execute an interagency agreement to document the project scope of work, budget, schedule and Metro's contribution to each project.

4. PROJECT BENEFITS/OUTCOMES

This project will further strengthen local jurisdictional partnerships and improve the METRO CONNECTS service network throughout King County.

5. BUDGET REQUEST BASIS

The amount requested is based on estimates from past project experiences.

6. FUNDING AND REVENUE DISCUSSION

This project will seek future grant funding with local agency partners.

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

New project. Activities are expected to begin in early 2021.

9. ALTERNATIVES ANALYSIS

To be determined

10. OTHER AGENCY INVOLVEMENT

King County Roads, Washington State Department of Transportation (WSDOT), Sound Transit, and City partners throughout King County.

11. ART ELIGIBILITY

Not Art Eligible, capital planning project and contribution to roadway projects with technology equipment elements.

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

The participation of local agency partners depends on their capacity, prioritization within their agency, and availability to lead or actively participate in capital planning, design, and implementation. Grant competition is also a factor in a city's ability to secure project funding.

NARRATIVES

TDC SPEED AND RELIAB PLANNING

1134297

1. CURRENT PROJECT SCOPE

Speed and Reliability Planning - This project supports capital planning efforts for the Speed and Reliability (S&R) Sub Portfolio. The S&R Sub Portfolio contains the following programs: RapidRide, frequent, express and local service improvements, and spot improvements. The program management activities of staff will include prioritization of projects within programs, feasibility studies, exploration of funding and partnership opportunities, and consideration of benefits of the various projects within the programs. Staff will monitor projects for progress and changes in scope, schedule and budget. In addition, they will adapt other projects within the programs to maintain the anticipated program benefits in a coordinated and complimentary manner. Staff will track interdependencies and coordinate with projects in other programs.

2. PROGRAMMATIC PROJECT DISCUSSION

This program will provide program management monitoring for Metro-led capital projects. It will work with other internal divisions, sections, and workgroups to help prioritize future capital investment and identify resource needs to meet biennium goals and objectives.

3. PROJECT JUSTIFICATION

Program coordination is critical to leverage funding opportunities with agency partners and implementing routes and customer experience improvements that support existing and expanded service. All activities are devoted to expeditiously move capital projects and programs forward into design and delivery with capital fund support.

4. PROJECT BENEFITS/OUTCOMES

All activities are devoted to expeditiously moving capital projects and programs forward into design and delivery with capital fund support. This sets projects on a path of steady progress towards completion. Where possible, flaws and risks are identified and addressed before a project is passed to project manager for design. Improvements to scope and schedule will help define staff resource needs so that projects do not move into design before resources are available. Partners will often conduct the final implementation of the capital projects, saving Metro staffing resources.

5. BUDGET REQUEST BASIS

This budget request is based on staffing in the capital planning and program management organization chart responsible for the capital planning and program management duties within the Regional Transit Integration Sub Portfolio. Modest amounts of professional services are expected to augment staff expertise.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

NARRATIVES

TDC C-D RR LINE ENHANCEMENT

1134298

1. CURRENT PROJECT SCOPE

C & D-Line RapidRide Enhancement - This project will support the implementation of speed and reliability improvements and improved passenger amenities along the existing RapidRide C and D Lines.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

This project is being funded by Sound Transit and will improve ridership and trip quality along the C and D lines during the period prior to light rail implementation in these corridors. Because of the distant date of light rail implementation, this funding brings needed improvement to the corridor prior to light rail opening. Without this funding, Sound Transit would move forward with planning improvements to Metro RapidRide service without Metro participation.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC C-D RR LINE ENHANCEMENT

1134298

4. PROJECT BENEFITS/OUTCOMES

Improved ridership and better service on two of Metro's highest performing routes.

5. BUDGET REQUEST BASIS

This project is being funded by Sound Transit. This budget funds the project through Predesign. This project is the direct result of the Sound Transit 3 vote and is characterized by Sound Transit as an early win project. This categorization is given to projects which are anticipated to be complete prior to 2024. King County funding is only appropriated for the planning phase. Further appropriation may be needed for implementation if the planning phase results in a recommendation that Sound Transit fund King County Metro to lead design and construction of the improvements.

6. FUNDING AND REVENUE DISCUSSION

This project is being funded by Sound Transit.

7. OPERATING BUDGET AND OTHER IMPACTS

This capital project will create assets which need to be maintained along the corridor. These assets include shelters, real time information signs, trash bins and ORCA fare collection equipment.

8. PROJECT STATUS

This project is currently in the Early Concept stage and is being led in partnership between Metro, ST and SDOT. A lead has not been designated.

9. ALTERNATIVES ANALYSIS

An alternatives analysis will be developed during the upcoming biennium.

10. OTHER AGENCY INVOLVEMENT

SDOT and ST will be involved in decision making for this project along with Metro. WSDOT may also be involved where this effort impacts WSDOT facilities.

11. ART ELIGIBILITY

Not Art Eligible, planning project only

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project directly supports Goal Area 1 (Transportation and Land Use) in King County's Strategic Climate Action Plan and overall reduction in emissive pollution by promoting transit along these proposed RapidRide corridors. Capital assets built and installed along the corridor will meet King County's Green Building ordinance where required and allowable.

NARRATIVES TDC 2021-22 SHELTER REFURB 1134330

1. CURRENT PROJECT SCOPE

2021-2022 Shelter Refurbishment - This is a placeholder project for investments in 2021-2022 associated with the ongoing state of good repair maintenance program to refurbish 140 - 160 shelters annually. Bus shelters have a lifecycle of 10 years, depending on the use in the area where shelters are located. Refurbishment work can involve component repairs and replacements, repainting, new roof standards, built-in lighting upgrades, panel upgrades, and specialized installments such as public art and Rapid Ride components that have more electrical and electronic systems. Specific locations will be developed in the next budget cycle.

NARRATIVES

TDC HUBS DESIGN & IMPL

1134334

1. CURRENT PROJECT SCOPE

2021+ Transit Hubs Design and Implementation - This is a placeholder project for future investment in support of METRO CONNECTS 2025 and 2040 program needs. METRO CONNECTS identifies improvements at 85 existing and new transit centers and at more than 4,500 bus stops. This investment will support development and implementation of a portion of the identified locations. Specific investments will be identified in subsequent budget cycles.

NARRATIVES	TDC HASTUS UPGRADE 2023	1134387
------------	-------------------------	---------

1. CURRENT PROJECT SCOPE

HASTUS Scheduling System Upgrade - This placeholder project will upgrade the current HASTUS Transit Scheduling and Operational Support system to the current vendor version in 2023. The upgrade will primarily consist of the vendor (GIRO) applying customizations that are specific to King County Metro and that continue to be required to meet specific business requirements and labor agreements to the base HASTUS modules. King County Metro staff will test the updated system extensively to verify that all required functionality works correctly. Investments are intended to improve the lifecycle management of information technology used by Metro.

NARRATIVES TDC OS LAYOVER UNFORESEEN 1134660

1. CURRENT PROJECT SCOPE

Unforeseen Off-Street Layover Design - The Off street Layover Unforeseen project provides for design work to address off street layover needs that emerge during the 2019-2020 biennium. This funding will provide for staff and consultant resources as needed to explore alternative solutions to address layover needs, and to begin design work for implementing changes.

2. PROGRAMMATIC PROJECT DISCUSSION

This programmatic project is complimentary and discrete from other layover planning projects, allowing the layover program to be successfully staffed with resources as needed to respond to business needs during the biennium.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC OS LAYOVER UNFORESEEN

1134660

3. PROJECT JUSTIFICATION

Layover locations are needed for buses at the beginning and end of routes to provide operators with breaks in their shifts and to maintain adherence to route schedules and predictable headways. Increasingly, in congested urban streets, use of the right of way for parking a bus increases congestion and cities are asking Metro to find off street layover locations. Metro cannot always anticipate when such a situation will occur; it can be prompted by congestion, street construction, adjacent development, change in land use or land due to complaints. As a good partner, Metro needs to have resources to, in good faith, respond to the need for changes in layover location.

4. PROJECT BENEFITS/OUTCOMES

This project allows Metro to maintain good relationships with cities by having resources available to be responsive to concerns about layover locations. Layovers in good locations provide acceptable working conditions for operators, to maintain adherence to route schedules and predictable headways. These benefits contribute to on-time performance and improved customer satisfaction.

5. BUDGET REQUEST BASIS

This is a rough order of magnitude estimate of the resources that would be needed to react to up to three problem layover locations over the biennium. Initial work would be to understand the problem, explore alternative on-street locations with the city, explore off-street opportunities in suitable locations, begin developing project for future budget action if funding would exceed available amount in this project. If no situations arise, the project funds will not be used.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Operating budget and other impacts will be evaluated on a per project basis.

8. PROJECT STATUS

This is a new standalone project. If no situations arise, the project funds will not be used.

9. ALTERNATIVES ANALYSIS

Alternatives analysis will be done on a project by project basis, when and if the need arises.

10. OTHER AGENCY INVOLVEMENT

Solutions will be explored in coordination with the host city.

11. ART ELIGIBILITY

Not Art eligible, planning project only

NARRATIVES TDC SGR UNFORESEEN PRJ 1134661

1. CURRENT PROJECT SCOPE

Unforeseen State of Good Repair - This project provides for design work to repair or replace unforeseen damage or failures of Transit's assets such as facilities and infrastructure. This project is for staff and consultant resources as needed to determine the criticality of taking action to fix an issue with an asset within the current biennium. Further, the project funding is available to explore alternative solutions to address the repair or replacement of the facility or infrastructure component and begin implementing the fix until budget action can be taken to obtain appropriation to finish the work.

2. PROGRAMMATIC PROJECT DISCUSSION

NA

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC SGR UNFORESEEN PRJ

1134661

3. PROJECT JUSTIFICATION

Metro Transit's facilities and vehicle infrastructure must be kept in good working order and are critical to efficient and safe operation of bus service and other Metro activities. Metro Transit performs "state of the practice" asset management under the Transit Asset Management Program (TAMP). This involves inspection and monitoring the condition of all Metro's assets, inventorying the remaining useful life of all assets and planning for timely replacement. The planned replacement of assets is included in Metro Transit's Capital Improvement Program in a category or program of projects known as State of Good Repair (SGR). With Metro Transit's large and complex portfolio of assets, despite diligent and effective asset management practices, facility and infrastructure components can fail prematurely and need a capital repair or replacement before it is planned. This project provides funding to allow for prompt investigation and early design work for such situations and ensure that critical asset issues are kept in good working order.

4. PROJECT BENEFITS/OUTCOMES

Completion of this project will result in a renewed asset with a refreshed lifecycle. Asset replacement is a normal part of asset maintenance and is essential to maintaining our system in a state of good repair to minimize unexpected corrective maintenance or emergency replacement cost and prevent service disruptions or challenges for our customers.

5. BUDGET REQUEST BASIS

The budget request is based on a rough order of magnitude estimate of the resources that would be needed to react to up to three problem asset repair or replacement issues that arise during the biennium. If no situations arise, the project funds will not be used.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Effective Asset Management and Lifecycle Replacement will reduce operational maintenance cost for unplanned and corrective maintenance.

8. PROJECT STATUS

This project is included in the capital improvement program to respond to emergent and unforeseen needs to repair or replace Metro Transit assets. If no situations arise, the project funds will not be used.

9. ALTERNATIVES ANALYSIS

Alternative solutions will be explored on a project by project basis, when and if the need arises.

NARRATIVES

TDC N SEATTLE SR INVSTMNTS

1134664

1. CURRENT PROJECT SCOPE

North Seattle Speed & Reliability Investment - This project will make speed and reliability improvements along the Routes 40, 44, 48 within the City of Seattle. These improvements may include, signal enhancement, intersection/roadway modifications, bus stop enhancements (including bus bulbs). Metro will work in partnership with the Seattle Department of Transportation to make these improvements. In the 2019-2020 biennium, the project will initiate the pre-planning effort to identify specific needs of speed and reliability improvements along route 40.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC N SEATTLE SR INVSTMNTS

1134664

3. PROJECT JUSTIFICATION

The program supports Transit Strategic Goal 5.1 Service Excellence, Strategy 5.1.3 - "Improve transit speed and reliability by maintaining or improving bus travel times and reliability through capital investments." If this project is not approved, Metro's ability to reactively maintain and improve transit speed and reliability on these routes will be limited. Metro will no longer be able to leverage and shape improved outcomes along these routes and will rely heavily on city partners. Therefore, as the region continues to grow, the level of congestion will increase, and transit on-time performance will be negatively impacted.

4. PROJECT BENEFITS/OUTCOMES

Defer service hours deployment to improve service reliability for a period of time on the targeted routes.

5. BUDGET REQUEST BASIS

The budget request is based on the past project for pre-planning phase.

6. FUNDING AND REVENUE DISCUSSION

This project is fully funded through a State of Washington legislative grant for \$3 million on each of the routes 40, 44, 48. \$9 million total.

7. OPERATING BUDGET AND OTHER IMPACTS

To be determined -transit signal priority (TSP) technology deployment will require ongoing operation and maintenance - this effort may be part of ongoing TSP O&M for all corridors including RapidRide program. The level of effort will be depending on the number of TSP installation and type of technology selected for deployment.

8. PROJECT STATUS

This project has not begun the planning phase yet.

9. ALTERNATIVES ANALYSIS

Each of the targeted corridors will under go a planning effort which will include the studying of alternatives to determine the optimal investments along the corridor.

10. OTHER AGENCY INVOLVEMENT

The City of Seattle will be a major partner in this effort and is desired to lead the construction and other phases of this work.

11. ART ELIGIBILITY

Not Art Eligible, roads, airport runways, sewers and solid waste landfills

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

The implementation of transit priority investments relies on a city's availability to review and approve plans, install equipment, and sometimes perform construction. On occasion, a city cannot implement the project within the given timeframe because of their project prioritization.

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

NARRATIVES TDC 3RD AVE IMPROVEMENTS 1135061

1. CURRENT PROJECT SCOPE

Third Avenue Transit Corridor Improvement and RapidRide Facilities - This project provides bus stop, streetscape and transit street priority improvements to the region's primary transit corridor – Third Avenue between S. Jackson Street and Denny Way in Seattle. This is an existing project with work already completed, including 30% design for the entire corridor between Jackson and Denny. Upcoming work will include design and construction of a new transit-only signal and trolley wire at the intersection of Third Ave and Denny Way, which will allow all buses traveling north on Third Ave to turn left to westbound Denny Way instead of following the current pathway on Broad St and 1st Ave.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC 3RD AVE IMPROVEMENTS

1135061

3. PROJECT JUSTIFICATION

The project will improve speed and reliability through the north end of the Third Avenue corridor. Currently, at the north end of the corridor, northbound buses turn left onto Broad St from Third Ave, turn right onto First Ave, and then turn left onto Denny Way or head through on First Ave. This project would allow northbound buses to proceed on Third Ave directly to Denny Way via a new traffic signal at the intersection of Third Ave and Denny Way. Trolley wire would be installed to facilitate the movement by trolleybuses. This project is consistent with speed and reliability improvements called for in METRO CONNECTS. By improving speed and reliability, service will become more attractive, resulting in increased ridership. In addition, the project may allow Metro to save operating dollars that could be used for more service.

4. PROJECT BENEFITS/OUTCOMES

Traffic modeling estimates that the project will reduce travel time for northwestbound buses by 20 seconds for routes heading outbound on First Ave and over 60 seconds for routes heading outbound on Western Ave. Travel time for southeastbound buses will remain unchanged. These travel time improvements will improve overall speed and reliability for bus routes traversing this segment.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$3.3M is being reappropriated from project "1116745 TD 3RD AVE IMPROVEMENTS" to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Additional operating costs of the new elements of the trolley infrastructure are addressed in the operating budget of the maintaining unit.

8. PROJECT STATUS

New.

9. ALTERNATIVES ANALYSIS

N/A.

10. OTHER AGENCY INVOLVEMENT

The final design contract will be led by the City of Seattle, as will construction contracts, minimizing permitting requirements. FTA procurement and reporting requirements will be followed. Project planning and development will be coordinated with the City of Seattle's efforts to enhance Third Avenue as a more attractive, safe, and convenient environment for visitors, commuters, and residents, with specific consideration to the City's Third Avenue Streetscape Conceptual Design Plan. Interests of local stakeholders, including the Downtown Seattle Association, various neighborhood groups, and adjacent private property owners will be considered in the final design and construction phases. and 2)The project includes significant work expected to be completed by the City of Seattle. Under an interagency agreement between agencies, King County will pass through FTA grant funds to the City of Seattle to fund pre-design, design and construction costs associated with this project.

11. ART ELIGIBILITY

Not Art Eligible, technology or vehicle project that does not consist of major physical infrastructure construction.

12. EQUITY AND SOCIAL JUSTICE IMPACT

NARRATIVES

TDC WSDOT 40' HYBRD OR BAT BRT

1130164

1. CURRENT PROJECT SCOPE

WSDOT 40-ft Hybrid or Battery Electric Bus - This project funds the replacement of King County Metro's existing fleet of 40-ft hybrid buses for the biennium. These new hybrid buses will feature all electric accessories. The first of the 65 new 40-ft Hybrid buses will be placed into service starting in mid-2019. The new fleet of 40-ft Hybrid buses will be low-floor buses with an FTA service life of 12 years. The buses will be purchased from the Washington State Department of Transportation (WSDOT) Consortium contract. The budget also includes funding for over 100 units delivered in 2018.

2. PROGRAMMATIC PROJECT DISCUSSION

This program is established for the procurement of 40-ft buses for both replacement and expansion of Transit's bus fleet. This program meets the requirements of Federal Transit Administration's State of Good Repair goals and is required to meet Transit's service growth needs.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC WSDOT 40' HYBRD OR BAT BRT

1130164

3. PROJECT JUSTIFICATION

This project provides for the replacement and expansion of revenue service buses. This supports the Transit goal of Financial Stewardship, and maintaining assets in a state of good repair. Bus replacement is based on the Fleet Plan, which is based on the service plan and the expected useful life of the asset. A low floor bus will also meet the Human Potential goals, by being easier for passengers in mobility aid devices (low floor buses use a ramp compared to the lift in the forward door on the present buses) to enter and exit the buses.

4. PROJECT BENEFITS/OUTCOMES

The replacement of diesel and hybrid buses with hybrid buses featuring all-electric accessories reduces fuel consumption and advances King County's commitment to low- and no-emission transit and contributes toward the Environmental Sustainability goal.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, approximately \$163 M is being reappropriated from project 1130286 TDC 40' HYBRID BUDGET to fund or partially fund this project. The request is based upon 40-ft Hybrid bus pricing derived from a competitive request for proposals for transit buses issued by the State of Washington Department of Enterprise Services on behalf of WSDOT. The request also includes funding for the requisite capital acquisition costs associated with the purchase and placement into service of rolling stock assets. These capital acquisition costs include transit fleet procurement team costs, in-plant and post-delivery inspection of buses, after-market equipment acquisition and installation, service preparation and commissioning, and training.

6. FUNDING AND REVENUE DISCUSSION

Federal grant funds support this project.

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

Manufacturing and assembly of the new 40-ft hybrid buses is expected to start in January of 2019. All 151 buses are expected to be delivered and placed into service before the end of 2019, or Q1 of 2020. Bus payments, factory inspection costs, post-delivery inspection costs, service preparation and commissioning costs will be incurred and paid during 2019 and 2020.

9. ALTERNATIVES ANALYSIS

Alternative: Purchase Battery Electric Buses - The purchase of 40-ft battery electric buses as a complete fleet replacement has yet to be demonstrated as a viable alternative to hybrid buses. Testing and evaluation of the battery electric bus as an equivalent replacement for a hybrid bus is being expanded to analyze extended range battery electric buses. The timing and impact of capital decisions regarding the selection, design and construction of charging infrastructure will significantly influence the timing of the purchasing decisions for the battery electric buses as fleet replacement vehicles.

10. OTHER AGENCY INVOLVEMENT

The State of Washington through its Department of Enterprise Services acting on behalf of the Washington State Department of Transportation has put in place a contract for a consortium of Washington State transit agencies to purchase heavy duty transit buses. King County has been an active member of and participant in the Washington State Purchasing Cooperative for several years. King County Metro was a major contributor to the development of technical specifications for the WSDOT Consortium contract over the past few years. King County Metro will purchase the 40-ft hybrid buses through the WSDOT Consortium contract.

11. ART ELIGIBILITY

Not Art Eligible, technology or vehicle project that does not consist of major physical infrastructure construction.

12. EQUITY AND SOCIAL JUSTICE IMPACT

NARRATIVES

TDC WSDOT 60' HYBRID OR BAT

1130165

1. CURRENT PROJECT SCOPE

WSDOT 60-ft Hybrid or Battery Electric Bus - This project funds the replacement of King County Metro's existing fleet of 60-ft hybrid buses. The new 60-ft hybrid buses will feature all electric accessories. The biennial request covers 60-ft. Bus Rapid Transit (BRT) buses for the RapidRide program to be delivered in 2019. The new fleet of 60-ft hybrid buses will be low-floor buses with an FTA service life of 12 years. The buses will be purchased from the Washington State Department of Transportation (WSDOT) Consortium contract.

2. PROGRAMMATIC PROJECT DISCUSSION

This program is established for the procurement of 60ft Hybrid Battery Electric buses for both replacement and expansion of Transit's bus fleet. This program meets the requirements of Federal Transit Administration's State of Good Repair goals and is required to meet Transit's service growth needs.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC WSDOT 60' HYBRID OR BAT

1130165

3. PROJECT JUSTIFICATION

This project provides for the replacement of revenue service buses. This supports the Transit goal of Financial Stewardship, and maintaining assets in a state of good repair. Bus replacement is based on the Fleet Plan, which is based on the service plan and the expected useful life of the asset. A low floor bus will also meet the Human Potential goals, by being easier for passengers in mobility aid devices (low floor buses use a ramp compared to the lift in the forward door on the present buses) to enter and exit the buses.

4. PROJECT BENEFITS/OUTCOMES

The replacement of diesel and hybrid buses with hybrid buses featuring all-electric accessories reduces fuel consumption and buses advances King County's commitment to low- and no-emission transit and contributes toward the Environmental Sustainability goal. Operating costs should remain flat or decrease with the replacement of vehicles. The new hybrid vehicles with electrically-driven accessories will provide improved fuel economy compared to the existing fleet of hybrids and diesels, and accordingly will improve energy efficiency.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted to a master programmatic project or to a standalone project. Approximately \$60 M is being reappropriated from project 1130287 TDC 60' HYBRID BUDGET to fund or partially fund this project. The budget request covers the cost of 50 vehicles - 22 units received in 2018 and an additional 28 to be delivered in 2019. The amount of the request is based upon 60-ft Hybrid bus pricing derived from a competitive request for proposals for transit buses issued by the State of Washington Department of Enterprise Services on behalf of WSDOT. The amount of the request also includes funding for the requisite capital acquisition costs associated with the purchase and placement into service of rolling stock assets. These capital acquisition costs include transit fleet procurement team costs, in-plant and post-delivery inspection of buses, after-market equipment acquisition and installation, service preparation and commissioning, and training.

6. FUNDING AND REVENUE DISCUSSION

Federal grant funds support this project. Remaining funds come from the Public Transportation Fund, revenue fleet sub fund.

7. OPERATING BUDGET AND OTHER IMPACTS

Annual operating costs are recovered through operating revenue.
Year operating costs will begin: 2019

8. PROJECT STATUS

Manufacturing and assembly of the 2019 60ft hybrid buses is scheduled to begin in February 2019. All 2019 buses are expected to be delivered and placed into service for the September 2019 service change. Bus payments, factory inspection costs, post-delivery inspection costs, service preparation and commissioning costs will be incurred and paid during 2019.

9. ALTERNATIVES ANALYSIS

Alternative: Purchase Battery Electric Buses - The purchase of 60-ft battery electric buses as a complete fleet replacement has yet to be demonstrated as a viable alternative to hybrid buses. Testing and evaluation of the battery electric bus as an equivalent replacement for a hybrid bus is being expanded to analyze extended range battery electric buses. The timing and impact of capital decisions regarding the selection, design and construction of charging infrastructure will significantly influence the timing of the purchasing decisions for the battery electric buses as fleet replacement vehicles.

10. OTHER AGENCY INVOLVEMENT

The State of Washington through its Department of Enterprise Services acting on behalf of the Washington State Department of Transportation has put in place a contract for a consortium of Washington State transit agencies to purchase heavy duty transit buses. King County has been an active member of and participant in the Washington State Purchasing Cooperative for several years. King County Metro was a major contributor to the development of technical specifications for the WSDOT Consortium contract over the past few years. King County Metro will purchase the 60ft hybrid buses through the WSDOT Consortium contract.

11. ART ELIGIBILITY

Not Art Eligible, technology or vehicle project that does not consist of major physical infrastructure construction.

NARRATIVES TDC WSDOT 60' HYBR OR BATT BUS 1130166

1. CURRENT PROJECT SCOPE

WSDOT 60-ft Hybrid Bus - This project funds the replacement of King County Metro's existing fleet of 60-ft hybrid buses. These new hybrid buses are 60-ft standard design (non-BRT) buses that will feature all electric accessories. This request funds 89 unit in 2018-2019 and 45 units in 2020. The buses will be low-floor buses with a Federal Transit Administration (FTA) service life of 12 years. King County Metro will issue a new Request for Proposal (RFP) to acquire these buses.

2. PROGRAMMATIC PROJECT DISCUSSION

This program is established for the procurement of 60-ft Hybrid buses for both replacement and expansion of Transit's bus fleet. This program meets the requirements of Federal Transit Administration's State of Good Repair goals and is required to meet Transit's service growth needs.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC WSDOT 60' HYBR OR BATT BUS

1130166

3. PROJECT JUSTIFICATION

This project provides for the replacement of revenue service buses. This supports the Transit goal of Financial Stewardship, and maintaining assets in a state of good repair. Bus replacement is based on the Fleet Plan, which is based on the service plan and the expected useful life of the asset. A low floor bus will also meet the Human Potential goals, by being easier for passengers in mobility aid devices (low floor buses use a ramp compared to the lift in the forward door on the present buses) to enter and exit the buses.

4. PROJECT BENEFITS/OUTCOMES

The replacement of diesel and hybrid buses with hybrid buses featuring all-electric accessories reduces fuel consumption, as well as advances King County's commitment to low- and no-emission transit fleet, and contributes toward the Environmental Sustainability goal.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$220 M is being reappropriated from project 1130287 TDC 60' HYBRID BUDGET to fund or partially fund this project. The budget request covers past expenditures as well as the purchase of 134 unit in 2019-2020. The amount of this request is based upon 60ft Hybrid bus prices derived from a competitive request for proposals for transit buses issued by the State of Washington Department of Enterprise Services on behalf of WSDOT. The amount of the request also includes funding for the requisite capital acquisition costs associated with the purchase and placement into service of rolling stock assets. These capital acquisition costs include transit fleet procurement team costs, in-plant and post-delivery inspection of buses, after-market equipment acquisition and installation, service preparation and commissioning, training, technical publications and manuals, diagnostic equipment, special tools and project contingency.

6. FUNDING AND REVENUE DISCUSSION

Federal grant funds support this project.

7. OPERATING BUDGET AND OTHER IMPACTS

Operating costs should remain flat or decrease with the replacement of vehicles.

8. PROJECT STATUS

Manufacturing and assembly of the new 60-ft hybrid buses is expected to start in early 2019. All buses are expected to be delivered by the end of 2020. Buses will enter service as they complete the service preparation and commissioning process. Bus payments, factory inspection costs, post-delivery inspection costs, service preparation and commissioning costs will be incurred and paid during 2020.

9. ALTERNATIVES ANALYSIS

Alternative: Purchase Battery Electric Buses - The purchase of 60-ft battery electric buses as a complete stand-alone fleet replacement solution has yet to be demonstrated as a viable alternative to hybrid buses. Testing and evaluation of the battery electric bus as an equivalent replacement for a hybrid bus is being expanded to analyze extended range battery electric buses. The timing and impact of capital decisions regarding the selection, design and construction of charging infrastructure will significantly influence the timing of the purchasing decisions for the battery electric buses as fleet replacement vehicles.

10. OTHER AGENCY INVOLVEMENT

The State of Washington through its Department of Enterprise Services acting on behalf of the Washington State Department of Transportation has put in place a contract for a consortium of Washington State transit agencies to purchase heavy duty transit buses. King County has been an active member of and participant in the Washington State Purchasing Cooperative for several years. King County Metro was a major contributor to the development of technical specifications for the WSDOT Consortium contract over the past few years. King County Metro may purchase these 60-ft hybrid buses through the WSDOT Consortium contract.

NARRATIVES TDC 60' TROLLEY 5DR SDOT 1130167

1. CURRENT PROJECT SCOPE

60-ft 5-Door Trolley SDOT - This project funds 13 additional electric trolley buses with 5 doors to serve the City of Seattle's planned Bus Rapid Transit (BRT) route for Madison Street. The addition of the Madison BRT trolleys will bring the 60-ft. trolley fleet to 77 buses. All of the new fleet of 60-ft electric trolley buses will be low-floor buses with an Federal Transit Authority (FTA) service life of 15 years and will feature a battery pack that provides the capability to travel off-wire for a limited range. If King County Metro is unable to acquire 5-door 60-ft electric trolley buses, the City has indicated their preference for 5-door 60-ft battery electric buses. Alternatively, if a suitable 5-door 60-ft trolley is not available, then King County Metro may acquire 5-door 60-ft hybrid buses instead. The viability of a 60-ft battery electric bus on this route has not been demonstrated. Testing and evaluation of the 60-ft battery electric bus is planned for September 2018.

2. PROGRAMMATIC PROJECT DISCUSSION

This program is established for the procurement of 60-ft Trolley buses for both replacement and expansion of Transit's bus fleet. This program meets the requirements of Federal Transit Administration's State of Good Repair goals and is required to meet Transit's service growth needs.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC 60' TROLLEY 5DR SDOT

1130167

3. PROJECT JUSTIFICATION

This project provides for the expansion of revenue service buses. This supports the Transit goal of Financial Stewardship, and maintaining assets in a state of good repair. Bus replacement is based on the Fleet Plan, which is based on the service plan and the expected useful life of the asset. A low floor bus will also meet the Human Potential goals, by being easier for passengers in mobility aid devices (low floor buses use a ramp compared to the lift in the forward door on the present buses) to enter and exit the buses. The addition of low-floor electric trolley buses, or in the alternative, battery electric buses off-wire travel, advances King County's commitment to zero-emission transit and contributes toward the Environmental Sustainability goal.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, approximately \$21.5 M is being reappropriated from project 1130288 TDC 60' TROLLEY BUDGET to fund or partially fund this project. The amount of the request is based upon 60ft trolley bus prices derived from a competitive request for proposals for 60ft electric trolley buses. The capital acquisition costs also include transit fleet procurement team costs, in-plant and post-delivery inspection of buses, after-market equipment acquisition and installation, service preparation and commissioning, training, technical publications and manuals, diagnostic equipment, special tools and project contingency. This budget request seeks new funding for 13 additional trolleybuses to serve the City of Seattle's planned BRT route for Madison Street scheduled to begin service in 2021. The amount this budget requests is sufficient to purchase 13 battery electric buses should that be the ultimate decision. However, this budget request does not address the capital investment required for the associated battery electric charging infrastructure to support the Madison Rapid Ride Corridor service.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

Manufacturing and assembly of these 13 new buses is expected to start in 2020. The buses are expected to be delivered and placed into service by fall of 2021. Bus payments, factory inspection costs, post-delivery inspection costs, service preparation and commissioning costs will be incurred and paid during 2020 and 2021.

9. ALTERNATIVES ANALYSIS

Alternative #1: Purchase Battery Electric Buses -The purchase of 60-ft battery electric buses as a complete stand-alone fleet replacement solution has yet to be demonstrated as a viable alternative to hybrid buses. Testing and evaluation of the battery electric bus as an equivalent replacement for a hybrid bus is being expanded to analyze 60-ft extended range battery electric buses. The timing and impact of capital decisions regarding the selection, design and construction of charging infrastructure will significantly influence the timing of the purchasing decisions for the battery electric buses as fleet replacement vehicles.

Alternative #2: Purchase hybrid Buses - If the 60-ft Battery Electric Bus and the charging infrastructure to support is not deemed viable within this project's time frame, hybrid buses will be purchased.

10. OTHER AGENCY INVOLVEMENT

King County Metro is partnering with City of Seattle on this project.

11. ART ELIGIBILITY

Not Art Eligible, technology or vehicle project that does not consist of major physical infrastructure construction.

12. EQUITY AND SOCIAL JUSTICE IMPACT

NARRATIVES TDC 40' BATTERY EL BUS 1130168

1. CURRENT PROJECT SCOPE

40ft Battery Electric Bus - This project funds the expansion of King County Metro's existing fleet of eleven 40-ft battery electric buses. The planned purchases will be based on results of pilot testing of extended range buses in 2018 and 2019. This project will add up to 32 more 40-ft battery electric buses by 2021, if available bus technology meets the requirements of our chosen routes for this deployment. These new buses, unlike their predecessors, will use extended-range technology providing the capacity to operate the buses for up to 140 miles between charges. On board batteries will be required to charge in four hours or less. The two buses should enter service in late 2019 or early 2020, while the other 30 should enter service in 2021. These new 40-ft battery electric buses will be low-floor buses with an FTA service life of 12 years.

2. PROGRAMMATIC PROJECT DISCUSSION

This program is established for the procurement of 40-ft Battery Electric buses for both replacement and expansion of Transit's bus fleet. This program meets the requirements of Federal Transit Administration's State of Good Repair goals and is required to meet Transit's service growth needs.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC 40' BATTERY EL BUS

1130168

3. PROJECT JUSTIFICATION

This project provides for the expansion of revenue service buses. This supports the Transit goal of Financial Stewardship, and maintaining assets in a state of good repair. Bus replacement is based on the Fleet Plan, which is based on the service plan and the expected useful life of the asset. A low floor bus will also meet the Human Potential goals, by being easier for passengers in mobility aid devices (low floor buses use a ramp compared to the lift in the forward door on the present buses) to enter and exit the buses. The addition of battery electric trolley buses advances King County's commitment to zero-emission transit and contributes toward the Environmental Sustainability goal. Not implementing the project would affect delay the expansion of the battery electric bus fleet and delay the advancement of zero-emission transit vehicles.

4. PROJECT BENEFITS/OUTCOMES

This project will allow us to test the viability of 40-ft extended-range battery electric buses, and help us refine specifications for future procurement of 40-ft extended-range battery electric buses.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$9 M is being reappropriated from project 1130289 TDC BATTERY BUS BUDGET to fund or partially fund this project. The amount of the request is based upon 40-ft battery electric bus costs derived from a competitive request for proposals for 40-ft battery electric buses issued by the State of Washington Department of Enterprise Services on behalf of WSDOT. The amount of the request also includes funding for the requisite capital acquisition costs associated with the purchase and placement into service of rolling stock assets. These capital acquisition costs include transit fleet procurement team costs, in-plant and post-delivery inspection of buses, after-market equipment acquisition and installation, service preparation and commissioning, and training.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

Manufacturing and assembly of the two new buses is expected to start in 2019. Both buses are expected to be delivered and placed into service before the end of 2019. Bus payments, factory inspection costs, post-delivery inspection costs, service preparation and commissioning costs will be incurred and paid during 2019.

9. ALTERNATIVES ANALYSIS

King County Metro is continuing to evaluate the feasibility and viability of the battery electric bus. This budget request expands the battery bus fleet and enables us to test the extended-range battery electric buses. This will allow more comprehensive testing of the electric bus operating in actual conditions 24/7. Meaningful and measurable results can be compared to the historic performance of diesel and hybrid buses under similar operating conditions.

10. OTHER AGENCY INVOLVEMENT

The State of Washington through its Department of Enterprise Services acting on behalf of the Washington State Department of Transportation has put in place a contract for a consortium of Washington State transit agencies to purchase heavy duty transit buses. King County has been an active member of and participant in the Washington State Purchasing Cooperative for several years. King County Metro was a major contributor to the development of technical specifications for the WSDOT Consortium contract over the past few years. King County Metro intends to purchase the 40-ft battery electric buses through the WSDOT Consortium contract.

11. ART ELIGIBILITY

Not Art Eligible, technology or vehicle project that does not consist of major physical infrastructure construction.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC 40' BATTERY EL BUS

1130168

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project involves the purchase of battery electric buses which is in alignment with the SCAP. As Metro Transit transitions to the use of battery electric buses the overall emissions produced by Metro operated buses will be reduced until Metro is eventually operating a zero emissions fleet.

NARRATIVES

TDC VANPOOL VEHICLE PURCHASE

1130169

1. CURRENT PROJECT SCOPE

Vanpool Vehicle Purchase - This project funds the purchase of new vans needed to support Metro Transit's Vanpool Program. New vans are purchased to replace vans at the end of their useful vanpool life and to expand service. This project provides efficient, safe and dependable vans for vanpool customers.

2. PROGRAMMATIC PROJECT DISCUSSION

Since 2012, vanpool service levels increased by 415 groups; an average increase of 69 groups per year. More than 3.6 million trips are projected in 2018. This rate of increase provides the basis for the growth in 2019 and 2020 at 70 per year. From 2019 through 2028, the number of daily vanpool customers is projected to increase 39% from 10,906 to 15,140.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC VANPOOL VEHICLE PURCHASE

1130169

3. PROJECT JUSTIFICATION

The Vanpool Vehicle Purchase project helps meet the growing need for transportation services throughout the county and is consistent with the County's Strategic Plan goal of Economic Growth and Built Environment and Metro Transit's direction of providing integrated, equitable and accessible mobility services.

4. PROJECT BENEFITS/OUTCOMES

The Vanpool Vehicle Purchase project helps meet the growing need for transportation services throughout the county and is consistent with the County's Strategic Plan goal of Economic Growth and Built Environment and Metro Transit's direction of providing integrated, equitable and accessible mobility services. The Vanpool Program is a cost-effective and flexible alternative to single-occupant vehicle travel and is particularly successful in areas not well served by fixed route transit. This project provides efficient, safe and dependable vans for vanpool customers.

5. BUDGET REQUEST BASIS

During the biennium, 523 vans reach the end of their useful life and will be replaced. In addition, the number of operating vanpool groups is expected to increase by 140 groups and based on this level of service, this project provides for the purchase of 70 expansion vans in each year of the biennium.

6. FUNDING AND REVENUE DISCUSSION

Fares from vanpool riders cover the cost of replacement vans. King County Code requires that vanpool rider fares recover 100 percent of capital costs, 100 percent of operating expenses and at least 25 percent of administrative costs. During 2019-2020, it is also projected that the State of Washington will reimburse the Department approximately \$4.2 million, based on the average reimbursement from WDSOT since 2006. Revenue from the sale of vans is estimated at \$2.9 million for the biennium.

7. OPERATING BUDGET AND OTHER IMPACTS

A service plan based on the number of operating vanpool and van share groups projects operating costs for the program, including maintenance, gasoline, and insurance. Biennial operating expenditures estimated at \$11.5 million.

8. PROJECT STATUS

This is an on-going project where the number and type of vehicles changes yearly based on projected service assumptions, customer usage and preference, and vehicle manufacturer capacity and availability. Each budget year, a multi-year fleet plan is created that identifies the quantity, seating capacity and unit cost of vans. 83 replacement and 130 expansion vans were purchased in 2017. The vanpool program expands its review of alternative fuel vehicles in 2018 as it continues to develop a long-term alternative fuel fleet plan. In 2018, 336 replacement vans and 10 expansion vans have been ordered. Of the 336 replacement vans, 20 are all-electric 5-passenger Nissan Leafs. The 10 expansion vans are 7-passenger electric/gas Chrysler Pacificas. The ten Pacificas will be deployed through a pilot program to help us evaluate their performance across various commute groups (low, mid and high mileage; urban commuting – stop & go; and primarily highway use). The program will use the data and analysis provided by the pilot to determine the sustainability of this platform in vanpool fleet operations. The Nissan Leaf is a proven, cost effective Electric Vehicle platform for fleet applications. However, as a vanpool it has passenger capacity limitations. The rear seat has 50" of available passenger hip room. This does not provide a comfortable seating arrangement for three passengers, in order to have at least five passengers total, a vanpool requirement.

9. ALTERNATIVES ANALYSIS

Replacement van purchases are projected by the age of vehicles and their seating capacity. Annual purchase recommendations may alter the size of a vehicle purchased based on current customer trends and vehicle size preferences and availability and cost of vehicles in the marketplace. Replacement vans orders are typically placed first and in times when demand for new groups is difficult to gauge. The Washington State contract for passenger vehicles is analyzed for vehicles that may be appropriate for vanpool use. The program has also used an Invitation to Bid process to obtain the most competitively priced vehicles capable of meeting the requirements of the program.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, technology or vehicle project that does not consist of major physical infrastructure construction.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC VANPOOL VEHICLE PURCHASE

1130169

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The project has the opportunity to advance Metro's sustainable infrastructure and fleet goals.

14. OTHER CONSIDERATIONS (OPTIONAL)

Metro Transit operates the largest publicly owned commuter van program in the nation. A vanpool is a group of five to fifteen people commuting to work together in a van provided by Metro Transit. Each vanpool group has at least two volunteer drivers (not Metro Transit employees) plus a bookkeeper. Fares are based on the length of the commute, the size of the van, the group's work schedule, and the number of group members. Vans are kept at a driver's house and group members determine their routes and operating rules. Vanpool fares are set to recover the direct cost of the service along with 25% of indirect operating costs, making this a largely revenue backed service.

During the 2019/2020 biennium 140 expansion vans and 523 replacement vans will be purchased. Of those, 40 are expected to be 7-passenger electric/gas Chrysler Pacificas, pending early results from the ten unit Pacifica pilot in 2018. Five all-electric 5-passenger Nissan Leafs are planned, but could be replaced with the Chrysler Pacifica and or a different alternative fuel vehicle making its way to the marketplace. Metro Transit staff have been in discussion with Mercedes Benz concerning their all electric 7/8 passenger light duty van, which will be released in the North American market in model year 2020. The program may evaluate this platform against what was learned with the Chrysler Pacifica Hybrid pilot in 2018.

NARRATIVES

TDC ADA VAN PROCUREMENT

1130170

1. CURRENT PROJECT SCOPE

American with Disabilities Act (ADA) Van Procurement - This project funds the purchase of new vehicles needed to support Metro Transit's Access Paratransit service. New vehicles are purchased to replace vehicles at the end of their useful life and to expand or enhance the service.

2. PROGRAMMATIC PROJECT DISCUSSION

This is an on-going effort where the number and type of vehicles changes yearly based on projected service assumptions and replacement of vehicles that reach the end of the useful life. Each budget year, a multi-year fleet plan is created that identifies the quantity and unit cost of vans. Access Paratransit services are provided in accordance with the ADA requirements and King County Ordinances. This project is projected to procure a total of 214 vehicles, 178 replacement and 36 expansion in 2019-2020.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC ADA VAN PROCUREMENT

1130170

3. PROJECT JUSTIFICATION

Metro Transit provides accessible regular bus service for persons with disabilities. Metro Transit also offers free transit instruction that teaches persons with disabilities how to ride regular public transportation, including use of lifts and ramps. In addition, for persons whose disabilities prevent them from using accessible non-commuter fixed route bus service, Metro Transit provides transportation through its Access Paratransit service. This is a shared-ride service using smaller vehicles equipped to carry a range of mobility devices. Metro Transit provides vehicles for use by contractors who schedule and operate the service. The service is complementary to the fixed route system with respect to location and frequency of service and is above and beyond the ADA minimum by offering expanded service in some areas; extended hours; hand-to-hand assistance were contracted drivers escort riders to/from the vehicles into the hands of another responsible party, a subscription service; and reservations up to seven days in advance.

4. PROJECT BENEFITS/OUTCOMES

Replacing older vehicles minimizes service delays caused by vehicle breakdowns and safety concerns. Scheduled vehicle replacement is based on age, mileage accumulation, vehicle downtime or availability and functionality. These criteria are designed to minimize the number of road calls, ensure availability and maintain service quality and productivity. Fleet expansion is based on growth predictions and/or changes in service.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$7.8 M is being reappropriated from project 1130290 TDC ADA PARATR BUDGET to fund or partially fund this project. Estimated costs include all associated procurement costs including labor, vehicles, inspections, licensing and preparation up to the in-service date required for operation.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Operating costs for the Access Paratransit fleet (fuel and maintenance) are included in the Access operating budget. Maintenance expenses are included in the contracted Access service providers' rates.

8. PROJECT STATUS

The project is ongoing and updated as service demands fluctuate and vehicles reach the end of their useful life.

9. ALTERNATIVES ANALYSIS

An alternative to replacing vehicles within the prescribed mileage and useful life guidelines is to continue using the vehicles in service. This is not recommended because of increases in operating costs, break downs and the risk of equipment failure. These costs would be directly passed to Metro Transit from the contracted service providers as the current contract specifically states the projected replacement age and miles of the fleet. The ability to meet service levels may also inconvenience customers. The evaluation of the current use of Liquid Propane Gas (LPG) in the Access fleet is in progress. Recommendations, including the feasibility of expanding the use of LPG, are pending.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, technology or vehicle project that does not consist of major physical infrastructure construction.

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The project has the opportunity to advance Metro's sustainable infrastructure and fleet goals.

NARRATIVES

TDC CAT VEHICLES PROCUREMENT

1130171

1. CURRENT PROJECT SCOPE

Community Access Transportation (CAT) Vehicles Procurement - This project funds the purchase of new vehicles needed to support Metro Transit's CAT Program. New vehicles are purchased to replace vehicles at the end of their useful life, to "right-size" the fleet, to reduce expenses, and to expand or enhance the service.

2. PROGRAMMATIC PROJECT DISCUSSION

This is an on-going project where the number and type of vehicles changes yearly based on projected service assumptions, vehicles unexpectedly lost due to service issues/accidents and replacement of vehicles that reach the end of the useful life. Each budget year, a multi-year fleet plan is created that identifies the quantity and unit cost of vans. This project is projected to procure a total of 34 vehicles, 22 replacement and 12 expansion. Based on these vehicles not being parked at any central location and primarily operated by social service agencies, establishing fueling infrastructures and availability to offsite fueling creates dynamic challenges regarding how to provide alternative fuel vehicles for this program.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC CAT VEHICLES PROCUREMENT

1130171

3. PROJECT JUSTIFICATION

The CAT program partners with community agencies that serve people with special transportation needs. Metro Transit provides operating funds, technical support, and vehicles, helping agencies set up their own transportation services customized to meet their clients' needs. This program includes the Hyde Shuttle which is a door-to-door van service for adults with disabilities in areas around the King County.

4. PROJECT BENEFITS/OUTCOMES

Replacing the older vehicles minimizes service delays caused by vehicle breakdowns and safety concerns. Scheduled vehicle replacement is based on age, mileage accumulation, vehicle downtime or availability and functionality. These criteria are designed to minimize the number of road calls; insure availability and maintain service quality and productivity. Fleet expansion is based on growth predictions and/or changes in service.

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$5 M is being reappropriated from project 1130290 TDC ADA PARATR BUDGET to fund or partially fund this project. The estimated costs include all associated procurement costs including labor, vehicles, inspections, licensing and preparation up to the in-service date required for operation.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Operating costs for the CAT fleet are included in the Accessible Services operating budget.

8. PROJECT STATUS

The project is ongoing and expanding when resources are available. Vehicles are replaced when they reach the end of their useful life.

9. ALTERNATIVES ANALYSIS

One alternative to replacing vehicles within the prescribed mileage and useful life guidelines is to continue using the vehicles in service. This is not recommended because it increases operating costs, break downs and the risk of equipment failure. These cost would be directly passed to King County from the contracted service providers as the current contract specifically states the projected replacement age and miles of the fleet. This may also follow with the inability to provide the same level of service currently being provided.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, technology or vehicle project that does not consist of major physical infrastructure construction.

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

A full feasibility assessment comparing propulsion options has not been conducted. At this time Metro staff are not aware of any electric vehicles that meet the service requirements of the access fleets – travel a minimum of 200-250 on a single charge. There are also infrastructure challenges – vehicles are owned by contractors, storage facilities where EV infrastructure would be required is not owned by Metro, some vehicles are parked at locations of social service agency providers. LPG will expand alternative fuel use.

NARRATIVES

TDC 40' HYBRID BUDGET

1130286

1. CURRENT PROJECT SCOPE

This project funded the continuation of the replacement and expansion of King County Metro's existing fleet of 40-ft hybrid buses.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The procurement is done according to Transit's fleet plan that reflects changes in service and addresses the need to replace coaches that reach end of life.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being discontinued and/or some budget from this project is being reappropriated to new standalone or smaller programmatic projects. Specifically, approximately \$163 M is being disappropriated from this project and reappropriated to 1130164 TDC WSDOT 40' HYDBID BUS, with the remaining existing appropriation in this budget being disappropriated.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

Ongoing procurement of 40 foot buses will continue. With the creation of the new projects and transfer of funds, this project will be closed.

NARRATIVES

TDC BATTERY BUS BUDGET

1130289

1. CURRENT PROJECT SCOPE

Battery Bus Budget - This project funded the expansion of King County Metro's fleet of three 40-ft battery electric buses.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The procurement is done according to Transit's fleet plan that reflects changes in service, as well as strategic decisions around fleet electrification.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being discontinued and/or some budget from this project is being reappropriated to new standalone or smaller programmatic projects. Specifically, approximately \$9 M is being disappropriated from this project and reappropriated to the 1130168 TDC 40' BATTERY EL BUS.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

Ongoing procurement of 40 foot electric buses will continue. With the creation of the new standalone projects and transfer of funds, this project will be closed.

NARRATIVES

TDC LEASED EL BUS TESTING

1132837

1. CURRENT PROJECT SCOPE

Leased Electric Bus Testing - This Project leases up to 10 extended-range battery electric buses (six 40-ft and four 60-ft buses) for the purpose of testing and evaluating extended-range battery electric buses under King County Metro operating conditions. The project plan calls for leasing two 40-ft battery electric buses from each of the following transit vehicle manufacturers: BYD, New Flyer, and Proterra; and leasing two 60-ft battery electric buses from BYD and New Flyer. In addition to determining if these buses can meet our operating requirements, the test will help KCM refine its technical specifications for future battery electric bus procurements.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC LEASED EL BUS TESTING

1132837

3. PROJECT JUSTIFICATION

This project will help determine actual range and charging time under King County Metro operating conditions, demonstrate bus performance on hills and inclines, and evaluate and assess the reliability of the vehicles of three different battery electric bus manufacturers. The evaluation and testing will provide valuable information to be used in the development of future battery electric bus procurements.

4. PROJECT BENEFITS/OUTCOMES

This project will help determine actual range and charging time under KCM operating conditions, demonstrate bus performance on hills and inclines, and evaluate and assess the reliability of the vehicles of three different battery electric bus manufacturers. The evaluation and testing will provide valuable information to be used in the development of future battery electric bus procurements.

5. BUDGET REQUEST BASIS

This budget request seeks to fund the leasing of extended-range battery electric buses for testing and evaluation purposes, and costs are based upon current market offerings for bus selling prices, charging equipment pricing, estimated operational costs for the lease term, and estimated cost of money. As part of Metro's move to have fewer large programmatic projects to improve transparency and accountability, this project is being converted from a subproject to a master programmatic project or to a standalone project. Approximately \$2 M is being reappropriated from project 1130287 TDC 60' HYBRID BUDGET to fund or partially fund this project.

6. FUNDING AND REVENUE DISCUSSION

No federal grant funds will be used to support this project.

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

KCM is in the process of securing the leases for the above mentioned buses and the associated charging equipment. KCM plans to test each bus for one year, accordingly, we expect to incur expenditures during 2019 and 2020, with a modest amount of expenditure incurred in 2018. Lease allows KCM to extend term for up to six additional months if needed.

9. ALTERNATIVES ANALYSIS

KCM chose to lease vehicles for this test instead of purchasing them outright to limit our overall investment and to forego ownership of the test vehicles.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, technology or vehicle project that does not consist of major physical infrastructure construction.

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES TDC 60' BATTERY EL BUS 1133710

1. CURRENT PROJECT SCOPE

60-ft Battery Electric Bus - This project funds King County Metro's first ever fleet of 60-ft battery electric buses. The initial order is planned for a quantity of 45 extended range buses, dependent on successful pilot testing of industry-available technology in 2018 and 2019 for meeting the demands of our routes, climate, and topography. The buses are scheduled to enter service in late 2020 and are also dependent on new base and charging capacity being in place by that time. The new fleet of 60-ft battery electric buses will be extended charge, low-floor buses with an Federal Transit Administration (FTA) service life of 12 years. King County Metro will issue a new Request for Proposal (RFP) to acquire these buses.

2. PROGRAMMATIC PROJECT DISCUSSION

This program is established for the procurement of 60-ft battery electric buses for both replacement and expansion of Transit's bus fleet. This program meets the requirements of Federal Transit Administration's State of Good Repair goals and is required to meet Transit's service growth needs.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

TDC 60' BATTERY EL BUS

1133710

3. PROJECT JUSTIFICATION

This project provides for the expansion of revenue service buses. This supports the Transit goal of Financial Stewardship, and maintaining assets in a state of good repair. Bus replacement is based on the Fleet Plan, which is based on the service plan and the expected useful life of the asset. A low floor bus will also meet the Human Potential goals, by being easier for passengers in mobility aid devices (low floor buses use a ramp compared to the lift in the forward door on the present buses) to enter and exit the buses. The addition of battery electric buses advances King County's commitment to zero-emission transit and contributes toward the Environmental Sustainability goal. Not implementing the project would affectively delay the expansion of the battery electric bus fleet and delay the advancement of zero-emission transit vehicles.

4. PROJECT BENEFITS/OUTCOMES

The addition of battery electric trolley buses advances King County Metro's commitment to zero-emission transit and contributes toward the Environmental Sustainability goal.

5. BUDGET REQUEST BASIS

This budget request represents the first large-scale fleet purchase of 60-ft battery electric buses program expansion project. The amount of the request is based upon the unit price of a 60-ft battery electric bus derived from a competitive request for proposals in 2015 with adjustments for more recent market activity and inflation. The amount of the request also includes funding for requisite capital acquisition costs associated with the purchase and placement into service of rolling stock assets. These capital acquisition costs include transit fleet procurement team costs, in-plant and post-delivery inspection of buses, after-market equipment acquisition and installation, service preparation and commissioning, and training.

6. FUNDING AND REVENUE DISCUSSION

Federal grant funds support this project.

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

This project is in its early planning stages. Buses will be purchased through a new RFP expected to be issued in 2019.

9. ALTERNATIVES ANALYSIS

Alternative: Purchase 60-ft hybrid buses –Testing and evaluation of the battery electric bus as an equivalent replacement for a hybrid bus is being expanded to analyze 60-ft extended range battery electric buses. The timing and impact of capital decisions regarding the selection, design and construction of charging infrastructure will significantly influence the timing of the purchasing decisions for the battery electric buses as fleet replacement vehicles. Metro Transit is also evaluating the extent to which purchase of 40-ft battery electric buses as a complete stand-alone fleet replacement solution would be a viable alternative, given our route capacity needs. If the 60-ft Battery Electric Bus and the charging infrastructure to support is not deemed viable within this project's time frame, hybrid buses may be purchased.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Not Art Eligible, technology or vehicle project that does not consist of major physical infrastructure construction.

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project involves the purchase of battery electric buses which is in alignment with the SCAP. As Metro Transit transitions to the use of battery electric buses the overall emissions produced by Metro operated buses will be reduced until Metro is eventually operating a zero emissions fleet.

NARRATIVES TDC FIXED RT PROG MGMT 1134163

1. CURRENT PROJECT SCOPE

Fixed Route Program Management - This project is a programmatic effort to support the Revenue Fleet Sub Portfolio capital planning efforts. The Fixed Route Vehicle Sub Portfolio contains the following programs: purchasing of hybrid, diesel, battery electric and trolley buses and onboard systems. Program management activities include ensuring adequate coordination with Vehicle Maintenance and Facility Maintenance Divisions and Fleet Purchasing and Fixed Asset program groups internal to Metro to meet their needs and mitigate impacts to operations during design and construction. Program management activities also include: prioritization of purchases within programs; feasibility studies; exploration of funding and partnership opportunities; consideration of benefits of the various projects within the programs; monitoring projects for progress and changes in scope, schedule, and budget and adapting other projects within the programs to maintain the program benefits anticipated; and tracking interdependencies and coordinating with projects in other programs.

2. PROGRAMMATIC PROJECT DISCUSSION

This programmatic project manages the capital program for the following programs: Purchasing of Hybrid, Diesel, Battery Electric and Trolley buses and Onboard Systems.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

TDC FIXED RT PROG MGMT

1134163

3. PROJECT JUSTIFICATION

Coordination of these programs is critical to leveraging funding opportunities with other agency partners, meeting target dates for zero emission fleet goals and ensuring reliable operations of our fixed route fleet to support existing and expansions of service. All activities are devoted to moving capital projects and programs forward expeditiously into design and completion of delivery and are supported by capital funds.

4. PROJECT BENEFITS/OUTCOMES

All activities are devoted to moving capital projects and programs forward expeditiously into design and completion of delivery and are supported by capital funds. Benefits include setting projects on a path of steady progress towards completion, identifying and addressing flaws and risks where possible in advance of passing on to a project manager for design. Work done to improve scope and schedule will help define needed staff resources so that projects do not move into design prematurely until resources are available. In many cases, programming will work to package projects so they can be implemented concurrently, minimizing impact to operations to the extent possible.

5. BUDGET REQUEST BASIS

Based on staffing in the capital planning and program management organization chart responsible for the capital planning and program management duties within the Fixed Route Vehicle Sub Portfolio. Modest amount of professional services are estimated to augment staff expertise.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Ten percent of the staffing costs are assumed to be born by the operation budget.

8. PROJECT STATUS

Program management activities will begin in Q3 2018 to be ready for robust implementation January 1, 2019.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

No other agencies are involved in this project.

11. ART ELIGIBILITY

Not Art Eligible, capital planning project

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Strategic Climate Action Plan goals are considered as part of the prioritization process of projects and the benefits expected from project implementation. Program managers are responsible for ensuring benefits are achieved through implementation of projects within the programs.

NARRATIVES

TDC EMERG NEED CONT FUND 3642

1134670

1. CURRENT PROJECT SCOPE

Emergent Need Contingency - This project provides a mechanism for allocating additional appropriations to existing capital projects within the same fund in the event of unforeseen circumstances which cause existing appropriations on a project to be insufficient. This project requests emergent need contingency budget for Transit revenue fleet capital fund 3642. If needed, the appropriation authority in this project would be transferred to other projects within the capital fund.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

The budget request represents the maximum amount allowed per King County Code. The maximum amount is requested based on the size of Transit's capital program.

6. FUNDING AND REVENUE DISCUSSION

NARRATIVES

WLMR CAO MR MASTER

1047594

1. CURRENT PROJECT SCOPE

Critical Areas Mitigation Reserves Program Master - This project supports an "in-lieu-fee" compensatory mitigation program which provides a service to developers and other permittees whose projects require mitigation for impacts to aquatic resources. In lieu of completing their own mitigation, permittees can pay a mitigation fee to King County. The county then uses the fee to implement mitigation projects in places where projects will have the most benefit to the watershed in which the impact occurred. This is a master project which holds budget authority until developer fees are received and appropriate receiving sites are identified and approved through a multi-jurisdictional review team consisting of King County Department of Natural Resources, Washington State Department of Ecology, Army Corps of Engineers and local tribes.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The Mitigation Reserves Program was created in 2005 with the adoption of King County's Critical Areas Ordinance. The program offers developers a way to transfer mitigation obligations by paying a fee to King County in lieu of completing their own mitigation. Changes in federal mitigation rules in 2008 required King County to develop a Program Instrument, which is a guidance document consistent with the federal rules and also a contract with the US Army Corps of Engineers (Corps) and the Washington State Department of Ecology (Ecology). King County Ordinance 17254 authorized the King County Executive to sign the Program Instrument. On March 12, 2012, the Corps was the last of the three parties to sign the Program Instrument, thereby authorizing the program under the 2008 federal rules. The newly authorized program continues to offer developers a simple way to meet mitigation obligations for unavoidable impacts to aquatic resources.

4. PROJECT BENEFITS/OUTCOMES

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WLMR CAO MR MASTER

1047594

5. BUDGET REQUEST BASIS

The Mitigation Reserves Program (MRP) has a focus on providing ecologically superior mitigation projects that offer an option for developers with unavoidable wetland and aquatic resource impacts to pay a fee to King County in-lieu of completing their own mitigation project. MRP projects are located in important ecological areas and address watershed needs. Larger projects that provide functions more quickly are preferred because they provide greater ecological benefits. In the current budget biennium, three large projects are planned for construction with important benefits to wetlands as well as salmonids in the Green River/Duwamish Watershed and the Cedar River/Lake Washington/Sammamish Watershed.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by \$2.5M from the City of Tacoma approved in ordinance 14755. The funds mitigated for impacts as a result of the Tacoma Second Supply Pipeline passing through this area.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact.

8. PROJECT STATUS

Ongoing project.

9. ALTERNATIVES ANALYSIS

Alternatives considered are: Single Alternative.

10. OTHER AGENCY INVOLVEMENT

N/A

11. ART ELIGIBILITY

1% for Arts does not apply to Mitigation Fees received.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Open to general public.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This program helps King County meet its 2015 Strategic Climate Action Plan (SCAP); the Environmental Resource mitigation and preservation projects benefit climate change response by sequestering CO2 in trees and other vegetation, reducing anticipated future flooding impacts through preserving or increasing flood storage capacity, which enhances the ability of the ecosystem to adapt to changing climate.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

WLMR CARBON CREDITS LAND ACQ

1134299

1. CURRENT PROJECT SCOPE

Mitigation Reserve Carbon Credits For Land Acquisitions - This project generates funding which will be contributed to eligible open space acquisitions throughout the County and cities. There is a three step process to generate funds: 1) Quantification of carbon sequestration benefits of forest preservation resulting from open space acquisitions, 2) External verification of these benefits (creating tradeable carbon "credits"), and 3) Sale of credits to businesses and other non-government entities wishing to offset their greenhouse gas emissions. Generated funds will be contributed to eligible open space acquisitions which meet the requirements of external carbon credit protocols. In general terms, acquisitions funded with revenues from carbon credit sales must at minimum permanently protect forest that is at risk of cutting for either timber production or conversion to a non-forest land use.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project was one of several new private (non-tax) funding strategies for land conservation recommended by the King County Land Conservation Initiative Advisory Group in their Final Report (December 2017). This project helps the County and cities conserve land by generating revenue from the private sector and minimizing the cost burden on taxpayers.

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

As noted above under Project Justification, this project was one of several new private (non-tax) funding strategies for land conservation whose development was recommended by the King County Land Conservation Initiative Advisory Group in their Final Report (December 2017). Legislation has been proposed to allow for the fund to generate revenue from carbon credit sales. This project request uses those funds as matching funds for eligible open space acquisitions.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

WLMR CARBON CREDITS LAND ACQ

1134299

6. FUNDING AND REVENUE DISCUSSION

This project is funded by carbon credit sales. Due to requirements of the external credit verification process, the revenue generated from sale of carbon credits can only be used for eligible open space acquisitions and the administrative expenses incurred to create the credits.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact.

8. PROJECT STATUS

New project.

9. ALTERNATIVES ANALYSIS

The alternative to this request is not authorizing this project and thus foregoing the associated new private funding for land conservation.

10. OTHER AGENCY INVOLVEMENT

No other agencies involved with this project.

11. ART ELIGIBILITY

This project is not eligible for 1% Art. Project is for real estate acquisition only.

12. EQUITY AND SOCIAL JUSTICE IMPACT

The project will help provide public green space accessible to the general public, help ensure retention of tree canopy and its public benefits, preserve or enhance health, and/or provide scenic amenities from a public park, open space, or right of way.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project helps King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years by increasing permanent conservation of remaining high-priority forested land. By protecting trees at risk of cutting for either timber production or conversion to a non-forest land use, this project keeps more CO2 stored in trees and soils. This also lets forests keep growing and continue sequestering carbon out of the atmosphere.

NARRATIVES

PSB REET2 TRANSFER TO PARKS

1134869

1. CURRENT PROJECT SCOPE

REET 2 transfer to Parks - this project transfers REET2 funds to the various Parks funds for REET2 funded projects.

2. PROGRAMMATIC PROJECT DISCUSSION

This project funds projects in the Parks Capital Program consistent with RCW 82.46.010 and King County Code 4A.200.580.

3. PROJECT JUSTIFICATION

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

This project includes under allocated revenues from prior years and revenues based on the OEFA July 2018 estimate of 2019-2020 REET revenues.

6. FUNDING AND REVENUE DISCUSSION

N/A

7. OPERATING BUDGET AND OTHER IMPACTS

Operating impacts will be discussed within the individual projects within the Parks CIP.

8. PROJECT STATUS

NARRATIVES

WLTD TDR BANK

1033971

1. CURRENT PROJECT SCOPE

Transfer of Development Rights (TDR) Bank - This project acts as a revolving fund to accomplish land preservation through the buying, holding, and selling of Development Rights authorized by the TDR Program in King County Code 21A.37. Revenues are received from the sale of TDR credits to developers.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The Transfer of Development Rights (TDR) program is a market-based system to transfer growth potential from rural and resource lands to urban areas where infrastructure exists to support new growth. Rural landowners realize economic return through the sale of transferable development rights (TDRs) either to King County or to private developers. When King County buys and sells the TDRs, the benefits are twofold: the land generating the TDRs is permanently protected, and King County can use the revenue from the sale of TDRs for additional land protection.

4. PROJECT BENEFITS/OUTCOMES

N/A

5. BUDGET REQUEST BASIS

The TDR program operates under King County Code 4A.200.730 to permanently protect rural and resource lands in King County, and to transfer, through the sale of TDRs, the development potential removed from conservation sites typically farm and forest lands) to urban areas where infrastructure can accommodate higher density development. Revenues from sale of TDRs are used to pay for future conservation acquisitions, which are determined in close coordination with program staff in the Agriculture and Forest Incentives Program (which includes the voter-approved Farmland Protection Program) and planning staff in Water and Land Resources and Parks and Recreation Divisions. These prioritization decisions are based on conservation values, risk of conversion, and known opportunity. This budget request will fund farmland acquisitions in the Snoqualmie, Enumclaw, and Green Agricultural Production Districts, as well as several Vashon farms.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

WLTD TDR BANK

1033971

6. FUNDING AND REVENUE DISCUSSION

This project is funded by revenues from selling Development Rights authorized by the TDR Program in King County Code 21A.37.

7. OPERATING BUDGET AND OTHER IMPACTS

No operating impact.

8. PROJECT STATUS

Ongoing project.

9. ALTERNATIVES ANALYSIS

Alternatives considered are: Single Alternative.

10. OTHER AGENCY INVOLVEMENT

N/A

11. ART ELIGIBILITY

The project is related to the sale of real estate development credits

12. EQUITY AND SOCIAL JUSTICE IMPACT

Open to general public.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The Transfer of Development Rights (TDR) program helps King County meet its 2015 Strategic Climate Action Plan (SCAP) goals within 30 years by (1) permanently conserving remaining high-priority farm, forest, and other open spaces and (2) by redirecting growth into urban areas. Climate change response benefits of protecting open space through TDR include the capture of CO2 emissions in trees and other site vegetation, reducing anticipated future flooding impacts through preserving or increasing flood storage capacity, and providing a vast network of contiguous protected forest to increase the ability of the ecosystem to adapt to changing climate. Focusing growth in urban areas reduces the need for infrastructure in rural and resource areas, and reduces vehicle miles traveled by concentrating new residential and commercial growth near urban centers with transit options.

NARRATIVES

KCIT INFO SECURITY/PRIVACY

1047289

1. CURRENT PROJECT SCOPE

King County Information Technology (KCIT) Information Security/Privacy Project included acquisition and implementation of a number of tools that shared the overarching goal of improving the County's system for information security and privacy. The project was completed in 2014.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

This project had a goal of risk minimization, namely the risk of malicious traffic and activities penetrating the KC network and causing major issues and the risk of sensitive information on mobile devices becoming compromised.

4. PROJECT BENEFITS/OUTCOMES

The project was successful. The following results were achieved:

- Acquired and put in place managed services (with Dell SecureWorks) for log management and security information monitoring (SIEM). These services are essential for achieving payment card industry (PCI) compliance.
- Improved management of vulnerability in workstations and servers environment by replacing McAfee Vulnerability Management with Rapid7 Nexpose. The replacement consolidated 3 physical servers and 6 physical scanning engine down to 2 systems in SVE.
- Implemented an Intrusion Detection/Prevention System (IDPS) to monitor traffic flow through the network.
- Implemented a cloud-based solution (MDM - Mobile Device Management) to protect King County information on mobile devices (mobile phones, tablets, etc.).
- Upgraded the County's endpoint protections system (anti-virus and other components to protect workstations and servers).
- Migrated to server virtual environment (from physical servers).

NARRATIVES

KCIT Assessors Tablet PC Repla

1111959

1. CURRENT PROJECT SCOPE

King County Information Technology (KCIT) Assessors Tablet Personal Computers (PC) Replacement Project included two elements: replacement of old tablet PC devices used by County appraisers and creation of a web-based application to run on the new tablet PC devices, allowing real time synchronization between tablets and the real property database and enabling use of the GIS to map site visits while in the field. The project capitalized on the investment King County had already made in this mobile approach and allowed to capture even more efficiencies and productivity gains by taking fuller advantage of the capabilities offered by tablet devices. The project was completed in 2015.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

The project was completed in 2015. Prior to the project, DOA appraisers were using 5-year-old Tablet PC devices to collect important data related to commercial and residential property assessment calculations. The Tablet PC devices allowed appraisers to enter this data directly into an electronic platform, as opposed to collecting the data in paper form and entering it into the electronic database later. This improved productivity and efficiency in operations and also improved accuracy in the collection of data. This is vitally important to citizens and government as the property assessment is what the property tax collection is based on. However, the Tablet PC devices used by DOA appraisers were at the end of their useful life and were outdated from a technological and performance standpoint. For example:

- * The devices were not a fully "mobile" tool in that the DOA appraisers used them to collect data in the field, but they still had to upload the information from the device into the database when they got back to the office.

- * The battery life for the devices was about 2 hours, while newer tablet devices had a battery life of up to 10 hours. This was important when considering that the appraisers work in the field, all over the county, and not in an office, collecting data.

In addition, the old devices were 4 times more expensive than the newer devices available on the market.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

KCIT Assessors Tablet PC Repla

1111959

4. PROJECT BENEFITS/OUTCOMES

The project enabled DOA's real estate appraisers to collect property-based data using the iPad and enter it directly into the Real Property database/Computer Assisted Mass Appraisal (CAMA) application. The iRP application works in disconnected mode with a subset of countywide data stored locally, because adequate-bandwidth, affordable, wireless or satellite coverage to all parcels in King County does not exist and is not anticipated in the immediate future. iRP has the ability to synchronize data with DOA servers and Azure Cloud when wireless, Wi-Fi, or Ethernet connections are available.

Efficiency gains:

- * Paperless input of field data with immediate validation
- * Integrated camera for adding photos to each property
- * Integrated GPS and GIS for efficient navigation to assigned work

5. BUDGET REQUEST BASIS

This is a request to disappropriate unused budget authority. The project was completed and closed out by the Project Review Board.

6. FUNDING AND REVENUE DISCUSSION

\$60,512 of the funds received from the General Fund for this project but not used will be transferred back to the General Fund.

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

Completed.

9. ALTERNATIVES ANALYSIS

If the Tablet PC devices were not replaced, DOA essentially had two choices for field data collection:

- * Purchase laptop computers for each of the appraisers in lieu of Tablet PC devices -- at increased capital costs, but with lower performance in many key areas.
- * Go to a paper-based system in which appraisers write down field notes on paper, and bring them back to the office for entry into the database. This would have lowered productivity, reduced efficiency and accuracy in the assessment process. Reduced accuracy in the assessment process could lead to more appeals of property valuations, and less property tax revenue for the county, other local governments, and the state.

NARRATIVES

Two-factor Authentication

1116899

1. CURRENT PROJECT SCOPE

Two-Factor Authentication Project scope included acquisition of hardware and software, training, and technical staff support to fully deploy an advanced authentication solution that satisfied the FBI security requirements. The project was completed.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

On February 9, 2011, the FBI released Version 5.0 of their CJIS Security Policy, CJISD-ITS-DOC-08140-5.0. This policy outlined security requirements for any law enforcement/criminal justice agencies that access criminal justice information through the State or FBI CJIS Systems and therefore, must comply with the CJIS policy. King County was impacted by this policy and had to implement advanced authentication by September 30, 2013.

4. PROJECT BENEFITS/OUTCOMES

The project provided a solution with dual factor authentication (password plus proximity card or fingerprint swipe) when accessing a mobile computer, such as officers' wireless laptops that are carried around in their vehicle or in any unsecured location. The solution was needed to enable King County to comply with the U.S. Department of Justice Federal Bureau of Investigation (FBI) Criminal Justice Information Services (CJIS) Security Policy Version 5.0, Section 5.6.2.2.

5. BUDGET REQUEST BASIS

This is a request to disappropriate the remaining, unused budget authority from a completed project.

6. FUNDING AND REVENUE DISCUSSION

The residual funds were refunded in 2016.

NARRATIVES

DOA PTAS

1123944

1. CURRENT PROJECT SCOPE

Department of Assessments' (DOA) Property Tax Administration System (PTAS) - The PTAS project is a modernization effort to implement a tax administration solution that utilizes a modern data and technology architecture to support current and future business needs. The new system will provide a stable environment to deliver tax revenue for the County and the multiple jurisdictions that the County serves.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

The current property tax system lacks a single system of record and has grown from a database and software running on the County's mainframe computing platform to several complex applications to encompass all the needs of the DOA and Treasury. Several home-grown applications, such as RealProperty, iRealProperty (the mobile version), eAppeals, Senior Exemptions, and others, have significantly extended the capabilities of internal staff to manage the county's property records, tax roll, and tax collection. While the current system allows the collection of nearly \$6 billion in property tax revenue annually, the application code has reached its life limit and is very difficult to maintain.

4. PROJECT BENEFITS/OUTCOMES

The primary benefit is avoidance of catastrophic failure of the County's system to collect billions in tax revenues. Additional benefits of replacing the PTAS system are greater efficiency, simplified workflows, higher satisfaction rates, increased accuracy, and better reliability. Examples include:

- Taxpayers: Basic services such as refunds, name and address changes, and senior citizen exemption application decisions currently take between 3 to 6 months. The new system will reduce time to four to six weeks and also allow for online self service.
- IT Staff: A large portion of time for KCIT and DOA IT staff is currently spent keeping outdated systems running. The new system is expected to be easier to manage, easier to configure, and easier to support. Outdated systems are more vulnerable to outages and security breaches. Modernizing the system will result in fewer emergency situations for IT Staff.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

DOA PTAS

1123944

5. BUDGET REQUEST BASIS

The current appropriation request of \$18M includes: \$234k to complete the planning and design phases of the project; \$14.8 for implementation and \$3M for contingency. The planning and design phases were initially estimated at \$896k, but due to extended Proof of Concept and extension of external consultant (Core MC2) the project needs another \$234k to reimburse KCIT for staff time and external consultant time. The \$14.8M will cover the costs of the technology solution (\$10M), KCIT resources (\$3.8M), DOA and Treasury TLT resources (\$820k), and Core MC2 (\$180k). The \$10M assumed for the solution is based on RFI responses. KCIT and Treasury provided inputs to the cost estimate. Note: a portion of the requested appropriation (\$234K) will be used to repay KCIT for the deferred costs incurred during the RFP phase of the project.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

N/A -- The entire request will be bond-financed.

8. PROJECT STATUS

The PTAS Project hired a consultant to review DOA's business, technical, and functional requirements for a new PTAS system. Additionally, DOA conducted a Request for Information (RFI) and an RFP (Request for Proposal) and, by the time of Council approval, will have selected a suitable vendor for full system implementation. The scope for full implementation has not changed.

9. ALTERNATIVES ANALYSIS

A more detailed analysis will be provided once the vendor is selected. Generally, there are two options, a "vertical" approach provided by legacy vendors; or a "horizontal" approach using Microsoft Dynamics BPM.

10. OTHER AGENCY INVOLVEMENT

Implementation of a new PTAS will have an impact on DOA and Treasury's agency partners, Records and Licensing Services (RALS), the Department of Permitting and Environmental Review (DPER), and King County Information Technology (KCIT), including their Geographic Information Services (GIS) functions. The agencies noted below will be included in the project's kick-off meeting, integration planning meetings, project status meetings, and user acceptance testing. Timing for these activities is yet to be determined.

From a functionality perspective, RALS has an application which accesses DOA parcel information via a DOA IT provided web service. When the location of the web service changes, the URL within the RALS application will need to change. DOA IT also provides the web service which supports the GIS application called Parcel Viewer. The URL within Parcel Viewer will need to change, similar to the RALS application. Additionally, DOA IT pushes data to a GIS database; the database would need to allow access from the PTAS system. For DPER, DOA has access to a DPER SQL database to pull new construction permits. Permissions to the database would potentially need to change to allow the PTAS system access. Also, the new PTAS will be integrated with many KCIT supported systems such as Oracle EBS, iLinx Content & Document Storage, eTax, Active Directory, and Landmark (Recorder's Office).

11. ART ELIGIBILITY

IT project

12. EQUITY AND SOCIAL JUSTICE IMPACT

An equity impact review is required and will be completed by the end of 2018.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

NARRATIVES

DOA PTAS

1123944

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

- 1) This project will directly contribute to Effective Digital Systems by increasing value to taxpayers through high quality digital systems that meet their needs.
- 2) This project will also directly contribute to Data Driven objectives through improved workplace efficiency due to better performing business applications and reporting, better response to rapidly changing business needs, and allowing taxpayers to engage with King County where and when it is best for them.

16. PROJECT COMPLEXITY

The project has a total of 511 business requirements (90% driven by law) that span DOA and Treasury. There are seven re-hosted mainframe core applications that will be replaced, 27 DOA IT supported desktop applications to be replaced, migration from Excel spreadsheets to supported system tables, and nine web based applications to be updated.

Additional complexity is due to:

1. Integration with partner systems that will not be replaced.
2. Updates to Web applications that will not be replaced.
3. Data migration from legacy systems.
4. Decommission of the legacy applications and systems.
5. Significant change management efforts.

Mitigation: The project team will include a Data Architect, Integration Architect, and Software Quality Assurance Analysts to address the risks associated with the technical complexity. The County's expectation is that the selected vendor will have a technical team to assist in data and system integrations.

17. CAPACITY TO IMPLEMENT THE PROJECT

Prior Technology Projects: DOA CAMA system (RealProperty) is a native application built by DOA IT staff. Additionally, DOA assisted Core MC2 with the development of an iPad application, iRealProperty. Finally, DOA and Treasury were part of the re-hosted mainframe project.

Agency Leadership: The project is sponsored by King County Assessor John Wilson, DES Administrator Carolyn Whalen, and KCIT CIO Tanya Hannah. Agency staff allocated to the project include DOA IT resources, Treasury subject matter experts, and an external technical consultant (Core MC2) who will remain on the project through implementation.

Stakeholder Management: The project includes an Executive and Steering Committee which includes Agency leadership to help drive the success of this project.

KCIT support includes: IT PM, IT BA, Data Architect, and other technical resources.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

DOA PTAS

1123944

18. PROJECT RISKS

HIGH RISK: Complexity

Replacing the complete set of interdependent applications with PTAS is a significant endeavor. Some existing software has been around for over 25 years, and significant knowledge and history has been accumulated over this period. Additionally, the systems have dependencies upon each other, so replacing any component in this system has a repercussion over other components.

Mitigation: Detailed plans for data migration, change management, implementation, and decommission.

HIGH RISK: Cost

The project has a designated budget which may not garner RFP responses from vertical vendors giving the county limited solutions to choose from.

Mitigation: Change management board established

HIGH RISK: Schedule

The project has a designated schedule of 24 months. This may be difficult to achieve given the complexity of the project.

Mitigation: Complete technical specifications in parallel to RFP process.

Finally, as with any project, availability of subject matter experts is always of concern. For PTAS, there are a few key subject matter experts within DOA and Treasury that may be retiring prior to the end of the project. This is a known and documented risk. DOA and Treasury are mitigating this risk through succession plans that are part of normal operations. Multiple people are being trained on the work processes performed by the people anticipated to retire.

NARRATIVES

KCIT Regional Aerials

1124187

1. CURRENT PROJECT SCOPE

King County Information Technology (KCIT) Regional Aerials Project was a continuation of the County's digital imagery acquisition program, which collects high-resolution orthophotography for the King County region at two- to three-year intervals to support the business needs. The project replaced the County's 2012 aerial imagery (vertical photos taken from aircraft which are geometrically corrected to create an accurate representation of the earth's surface). The project was completed in 2016.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The project replaced the county's 2012 aerial imagery which had aged beyond the desired two year replacement cycle established by the King County Geographic Information System Technical and Oversight committees. There had been significant development activity in King County since 2012 and the new imagery was needed to provide county agencies with a detailed view of up-to-date ground conditions to help make better informed decisions to serve the public. Aerial imagery is a key data component for agencies in performing mapping, query, analysis and decision-making in support of their business functions such as facilities management, natural resource conservation, property assessment, building permit and land development review, and situational awareness during emergency operations. For example, King County Assessments depends heavily on aerial imagery to determine changes to real property, and the Road Services Division uses the imagery to map maintained infrastructure increasing the accuracy of their asset inventory and reducing the need for field visits.

As the accuracy of the 2012 imagery diminished, land use decision making was going to suffer, emergency situational awareness was going to decline, needless site visits were to be scheduled, asset management was to suffer, property appraisal was to become more difficult, etc. The degradation was already impacting some groups due to rapid urban development changes impacting various infrastructure areas include utilities (due to asset relocation, impacting their maintenance and disaster response costs); planning and permitting; tax assessments; storm water runoff calculations; etc.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

KCIT Regional Aerials

1124187

4. PROJECT BENEFITS/OUTCOMES

- * Through regional collaboration, this project successfully replaced outdated KC GIS & Participant GIS Imagery and Data with current and higher quality imagery and data, and achieved 'substantially complete' implementation in December of 2016.
- * The updated imagery and data have enabled KC GIS and participant agencies to perform more accurate mapping, query, analysis and decision-making in support of their business functions, such as facilities management, natural resource conservation, property assessment, building permit and land development review, and situational awareness during emergency operations.
- * The total cost of the project was \$1,506,386. King County's cost share came to \$582,533 or 39% of the total. The target goal of a 60% cost reduction was met.
- * By taking a regional collaboration approach, both King County and the Participants received deeper pricing discounts than would be realized individually or through smaller volume projects.
- * This collaborative approach allowed product Quality Assurance, Project Management & Oversight, and Project Close-out costs to be shared by all the involved agencies.
- * Lower unit costs allowed KC and participants to maximize their budgets and avoid having to exclude highly desired deliverables, or on the other hand using savings to order 'nice to have' deliverables in addition to those needed.

NARRATIVES

DCHS DDD Financial System

1124221

1. CURRENT PROJECT SCOPE

Department of Community and Human Services (DCHS) Developmental Disabilities Division (DDD) Financial System Project had the objective of streamlining and automating data flow for the preparation of provider billing, fiscal reporting, and contract management by implementing a similar system currently used by the DCHS Mental Health, Chemical Abuse & Dependency Services (MHCADS) Division. The project was discontinued in early 2017.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

DCHS DDD supports people with developmental disabilities and their families, managing over ten different types of service provided by approximately 48 contractors with six different funding streams. The processes for preparing contractor billing, developing fiscal reports, and managing the contract process are manually intensive and involve multiple systems filled with repetitive procedures and error prone. DDD utilizes ClientTrack, a third party SQL-server, on-premise based client management system to track contracts and bill submittals. Contractors do not have access to ClientTrack, so they submit their billings to DCHS who then manually enters them into ClientTrack. There is no interface between ClientTrack and the county's financial system, Oracle EBS, so payment data must be manually entered into EBS.

4. PROJECT BENEFITS/OUTCOMES

The project documented current and future state workflows, documented the new requirements reflective of future state needs, and conducted a gap analysis to evaluate whether ClientTrack can be reconfigured to meet the new requirements.

The project was to develop a solution that would have provided contractors a way to enter billing information directly into the billing database via a web-based interface, as well as provide enhanced reporting capabilities for analysis and decision making. Due to concerns with the vendor's ability to deliver a timely and responsive product, the CIO, in consultation with the PRB and the agency sponsor, determined that it was in the County's best interest to discontinue this project. DCHS will come back with a future request for a new project to complete this work. The business rules developed as part of this project will be used for a future procurement process to solicit a new vendor.

NARRATIVES

DES BRC EBS Upgrade

1126544

1. CURRENT PROJECT SCOPE

Department of Executive Services (DES) Business Resource Center (BRC) EBS Upgrade Project upgraded the County's Oracle EBS system from version 12.1.3 to 12.2.5 and replaced the aging hardware infrastructure (EBS servers and disk storage controllers). The upgrade allowed the County to renew premier vendor support for its financial system. Additionally, the project updated existing EBS tools: Discoverer and BI Publisher, improving their performance. The project was completed in 2017.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

King County implemented Oracle EBS in 2012 and needed to upgrade to the existing release to keep current and ensure maximum benefit to the county for its investment. King County's version of Oracle EBS was to enter extended support in January 2017. Oracle follows a 5 year/3 year support policy, meaning that they provide premiere support for 5 years from the general availability release date followed by 3 years of extended support for an additional cost. Incremental cost increases are applied each year extended support is leveraged.

The EBS servers and storage were acquired in Q1 2009, with additional servers in Q1 2011. At the time the project was requested, the servers were reaching their maximum lifespan and needed to be replaced. BRC needed to improve system performance and plan for peak period loads that happen between December and early March each year. Additionally, BRC/County had exceeded the capacity of the disk storage controllers. These were often running at 100% load impacting all EBS instances. There were constant disk usage and CPU alerts. Oracle experts had told BRC that the County had maxed out our CPU utilization at 75% of the time and they also noted that disk I/O performance was challenged. The EBS servers needed more upgraded processors. The storage system needed to be replaced to address the disk bottleneck issues.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

DES BRC EBS Upgrade

1126544

4. PROJECT BENEFITS/OUTCOMES

The project was completed in 2017. Some of the achieved benefits include:

- Continued vendor support for the County's financial system
- Reduced security risks associated with older Java versions that had to be used due to the old version of Discoverer
- Significant improvement of system performance including improved reporting performance and reduction in time to complete EBS jobs
- Reduced infrastructure management costs for BRC while improving response times for hardware configuration changes
- Reduced support requirements for KCIT

5. BUDGET REQUEST BASIS

This is a disappropriation request. The project was completed and closed out by the Project Review Board. The project was implemented under budget.

6. FUNDING AND REVENUE DISCUSSION

\$1.3 million will be transferred back to the BRC fund 5490 and \$1.5 million will stay in fund 3771 to be used for the DES BRC Reporting Project 1126545.

NARRATIVES

PSB PIC Green Bldg Module

1127457

1. CURRENT PROJECT SCOPE

Performance, Strategy, and Budget (PSB) Project Information Center (PIC) Green Building Module Project had the objective of improving the County's capacity to implement the King County Green Building Ordinance 17709 adopted by the County Council in 2013. The project was to set up a centralized database to collect and store green building rating checklists with data sorting, filtering, and extraction functionalities utilizing the County's existing capital budget and reporting system, PIC. The project was discontinued on determination that another system, PRISM, which several parts of the Department of Natural Resources and Parks (DNRP) already use for green building reporting purposes, should be expanded for broader County use.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

The County needs a centralized database to efficiently fulfill the reporting requirements under the Green Building Ordinance. Such database would eliminate the current paper-based system, improve the accuracy of total number of capital projects and compliance of those projects, enable the ability to roll up reporting information and produce quantitative results needed for annual reports and performance measures, and institutionalize a location that documents how capital projects are implementing the Green Building Ordinance. The current process of tracking hundreds of capital projects from multiple divisions and determining project compliance is very time consuming. In addition, it is difficult to roll up existing information to obtain quantitative countywide results. There is no easy mechanism to sort, search or view all projects.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

PSB PIC Green Bldg Module

1127457

4. PROJECT BENEFITS/OUTCOMES

The primary benefits sought by the project included:

- 1) Improved transparency in green building and sustainable development implementation by producing quantitative results,
- 2) Less time for projects managers and other involved staff to complete and collect reporting requirements, and
- 3) Reduced reliance on side-systems.

Other benefits included:

- * Cost avoidance from time spent collecting reports from multiple divisions and all project managers, verifying correct documents are received, and matching Scorecards with annual reporting forms,
- * Improved accuracy of data reported,
- * Improved transparency of green building and sustainable development implementation,
- * Increased consistency in reporting,
- * Improved ability to monitor program compliance and address audit concerns.

5. BUDGET REQUEST BASIS

This request is to disappropriate the unused budget appropriation. The project was discontinued by PRB.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

8. PROJECT STATUS

The project was discontinued in early 2018. The project sponsor and PRB determined that the PRISM capital system will be used for Green Building Module data collection and reporting requirements. The majority of current PRISM users are familiar with green building reporting and utilize the system for the annual reporting. DNRP will add users to create one streamlined process rather than pursuing the IT option.

NARRATIVES

DAJD DAN Phase III

1129762

1. CURRENT PROJECT SCOPE

Department of Adult and Juvenile Detention (DAJD) Distributed Antenna Network (DAN) Phase III is a follow-on effort to DAN Phase I and DAN Phase II. All three projects were scoped to eliminate the 800 MHz communication "dead spots" throughout the King County Correctional Facility (KCCF) and connect the facility to the Seattle Simulcast System. The dead spots (in areas such as the elevators and stairwells) do not allow DAJD staff to communicate with KCCF's Central Control, resulting in a public safety issue. Completed in 2012, DAN Phase I provided the design for a small scale proof of concept and addressed the 800 MHz "dead spots" on floors 1-3. Completed in 2016, DAN Phase II addressed the dead spots on floors 5-7. DAN Phase III will address the remaining floors 4 and 8-12, replace the equipment on floors 1-3 and 5-7, and connect to the Seattle Simulcast System, which will serve all 12 floors of the building. The connection to the Seattle Simulcast System will enable DAN to transition to the PSERN system when PSERN goes live.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

DAJD has experienced radio communication ineffectiveness, or "dead spots" within KCCF. The "dead spots" in the building do not allow DAJD staff to effectively communicate with KCCF's Central Control during critical and emergent situations, resulting in a staff and public safety issue. At the time of the original budget request for DAN III, DAN Phase I and II had installed a distributed antenna system on floors 1-3 and 5-7, leaving floors 4 & 8-12 that still needed compatible 800MHz communication. The hardware vendor for Phase I and II went out of business in Oct. 2016. There is no support available in the event that the equipment needs to be repaired or replaced and there's no support for the changes required to transition to PSERN in 2020.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

DAJD DAN Phase III

1129762

4. PROJECT BENEFITS/OUTCOMES

This project will significantly improve the safety of our operations by standardizing the 800 MHz communication capabilities within KCCF. This project will install a distributed antenna system on floors 4 & 8-12 and replace the equipment on floors 1-3 and 5-7 which will enable KCCF to be connected to the Seattle Simulcast system that provides the capacity to support our broader set of customers including Seattle Police, King County Sheriff, Seattle Firefighters, and other broader emergency services. Connection to the Seattle Simulcast System will also enable radio coverage to continue to be available within KCCF after PSERN goes live in 2020.

Expected measurable results:

1. Radio coverage is available on floors 1-12 as well as the related stairwells and elevators.
2. Vendor support will be available for the equipment on floors 1-12.
3. Talk groups will increase from 8 to 20 channels.

5. BUDGET REQUEST BASIS

The estimated total cost at completion has increased to \$1,862,566. This includes a 20-percent contingency. The cost increase is due to adding to the Phase III scope floors 1-3 and 5-7 (which were previously covered in DAN I and DAN II but have since lost vendor support) and floor 4 (which was not included in the prior projects due to the belief that the signal from the adjacent floors would be strong enough to cover the floor). The hardware and related consulting costs are based on estimates from the professional engineering firm that designed the system. KCIT labor costs are based on KCIT project management and radio labor rates. DAJD escort costs were estimated based on prior history. Consultant labor costs were calculated based on the average labor rate adjusted for a medium-security facility with escort. Non-labor costs include other equipment and were based on the list price. This additional authority will be used in the implementation and closeout phases of the project.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

No significant impact on the operating budget is anticipated.

8. PROJECT STATUS

Phase of the Project: Design

Major milestones completed to date:

- Project Kick-off - November 2017
- Project Initiation - January 2018
- Design services contract signed - January 2018

Current Project Status - on track

9. ALTERNATIVES ANALYSIS

The following alternatives were considered:

A. Utilize the Hatfield and Dawson consulting firm and complete the full scope as defined. Builds on what has already been implemented by DAN Projects I & II. Provides DAJD and other King County departments with an 800MHz infrastructure that will support known present and planned communication requirements. Preferred solution (long-term, low risk solution; supported by DAJD and the KCIT Regional Radio Service; higher cost due to connection to the Seattle Simulcast System).

B. Implement DAN Phase III excluding the linkage to Seattle Simulcast System. DAN III would rely on the existing King County repeater located in the Courthouse to support the KCCF 800 MHz communication until PSERN goes live (a lower cost alternative but a short-term solution as King County will eventually need to swing over to the Seattle Simulcast System).

C. Do Nothing – Continue to use the existing 800MHz capability, which would imply that 800 MHz communication risks will be unmitigated.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

DAJD DAN Phase III

1129762

10. OTHER AGENCY INVOLVEMENT

The project will connect the in-building system to the City of Seattle's Simulcast System. The project has been in communication with the City. In addition, the project is coordinating with the County's Enhanced Wireless Project in order to reduce escort costs.

11. ART ELIGIBILITY

IT project

12. EQUITY AND SOCIAL JUSTICE IMPACT

N/A

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

N/A

14. OTHER CONSIDERATIONS (OPTIONAL)

CIO and PSB Critical Success Factors:

- 1) Coordinate with the Enhanced Wireless for MRJC and Downtown buildings so escort costs across two projects can be minimized. Provide to PRB an integrated schedule for all three projects.
- 2) CIO/PRB conditions.

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

The project will address the strategic initiative of IT Mobility by improving the operability and performance of the mobile hand-held radios that are utilized by DAJD staff and emergency personnel. This project will support the transition to the new, state of the art public safety radio communications system, the Puget Sound Emergency Radio Network (PSERN). The project will also address the Effective Systems objective by replacing equipment that is no longer supported. This reduces the risk of failure of infrastructure equipment and components due to lack of vendor support.

16. PROJECT COMPLEXITY

This project complexity is low. The project approach that was used to successfully complete Phase I and II is being used for Phase III. The engineering firm that designed the original distributed antenna network was hired to update the design for Phase III.

17. CAPACITY TO IMPLEMENT THE PROJECT

- Prior Technology Projects: This is Phase III of the implementation. The previous 2 phases were completed successfully.
- Agency Leadership: The project is sponsored by DAJD Director William Hayes and is supported by the KCCF Commander and the Administrative Captain.
- KCIT support includes: IT Project Manager and IT Radio Communication Specialists

18. PROJECT RISKS

1. The project schedule including start/end dates and project duration may be delayed due to competing demands for KCIT resources, vendor availability, and stipulations around coordination with KCCF operations. Mitigation: The implementation schedule will be determined when the contract is negotiated with the vendor with input from DAJD and KCIT resource managers so that all parties are aware of the dates that resources need to be available. The project includes a 20% contingency that should address this risk if the mitigation is unsuccessful.

2. The hardware vendor may go out of business. Mitigation: A much larger hardware vendor (Cobham) that is publicly traded on the London Stock Exchange was recommended by the design vendor. Communication systems are one sector of Cobham's diverse business portfolio. Cobham was also selected to supply the distributed antenna system hardware for the Sound Transit tunnel project.

NARRATIVES

DAJD Jail Management System

1129763

1. CURRENT PROJECT SCOPE

Department of Adult and Juvenile Detention (DAJD) Jail Management System (JMS) project will replace dozens of disjointed applications that have been in place since 1974 and hundreds of highly inefficient, manual processes with a new, comprehensive and integrated jail management system that will help DAJD to achieve more effective and efficient jail operations. For example, the new system will automate calculation of inmate release date, increase data accuracy, and reduce time spent on locating files and manual processing.

2. PROGRAMMATIC PROJECT DISCUSSION

n/a

3. PROJECT JUSTIFICATION

DAJD's ability to effectively provide adult and juvenile detention services and alternatives to secure detention is its highest priority and is negatively impacted by

- Staff time wasted from redundant data entry in multiple systems
- Inefficient business processes due to a mix of computer and hand-written steps
- High infrastructure and support costs due to antiquated systems
- Not meeting essential service 24-hr disaster recovery requirement

DAJD currently operates with ~40 automated interfaces, which will either become obsolete or will have to be modified to adapt to the new JMS. Failure to modify these crucial interfaces will produce a massive disruption to jail & partner operations and require implementation of manual processes.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

DAJD Jail Management System

1129763

4. PROJECT BENEFITS/OUTCOMES

1. Reduction of the risk of imminent system failure is the primary benefit for this project. DAJD estimates that the current SIP/SeaKing systems are reaching a critical stage. These 40 year old systems were developed using the COBOL programming language and developed for mainframe data systems. Neither of these technologies are supported by mainstream developers. Currently KCIT supports these systems internally, however, the key personnel performing this support are nearing retirement or have the potential to leave KCIT employment at any time. The loss of this support would be problematic for DAJD and the agencies integrated with SIP/SeaKing.

2. The proposed JMS will reduce IT investment costs by reducing the current number of applications and systems currently in use by DAJD that have O&M cost incurred from KCIT. DAJD should realize an estimated saving of \$500,000 annually. DAJD should realize these saving within the first year of new JMS implementation planned for Q4 2020.

Expected outcomes:

1. Reduced risk of legacy system failures
2. Improved operational efficiency across jail operations (i.e., improved business processes; transition from paper to electronic workflow; and reduction of time spent entering data, fixing errors, locating pertinent offender information found on paper documents or log books; calculating accurate inmate good time, assessing inmate classification and offender risk, etc.)
3. Improved visibility to operational data
4. Reduced integration complexity and cost
5. Maintain current data exchanges (uninterrupted) with partner agencies after the new JMS is deployed

5. BUDGET REQUEST BASIS

The Council approved \$3.92 million--half of the requested amount--in the 2017-2018 3rd Omnibus. This biennial budget request covers the remaining half. The additional budget is needed to cover (i) an increase in the vendor costs, which are re-estimated based on the bids received in response to a completed RFP, (ii) costs not included in the previous estimate (updating partner systems and standardizing/cleansing the rehosted mainframe data), and (iii) other costs previously underestimated (implementation of a modern interface approach that reduces ongoing support and KCIT resources). This appropriation will be used in the project's implementation and closeout phases.

6. FUNDING AND REVENUE DISCUSSION

The project is being bond funded.

7. OPERATING BUDGET AND OTHER IMPACTS

The implementation of the JMS will reduce the costs of IT support and interface changes and enhancements (around \$500K/year), allowing DAJD to focus its resources on its core business.

8. PROJECT STATUS

Ongoing. The project is in preliminary design. Major milestones completed to date include:

- Advertised RFI & Conducted Demonstrations - May 2017
- Procured third-party Quality Assurance Vendor - July 2017
- Performed Analysis and Documentation of Current Business Requirements - September 2017
- Met with Partners to Document Current and Desired Data Exchanges and Interfaces - September 2017
- Advertised RFP - October 2017
- Received 5 proposals from 3 vendors - Feb 2018
- Announced apparent successful proposer - June 2018

9. ALTERNATIVES ANALYSIS

The project reviewed five alternatives received in response to the recently completed RFP and selected Tribridge Offender 360, based on the Dynamics 365 platform and hosted in the MS Government Cloud. The evaluation scoresheets have been provided to the County's Procurement.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

DAJD Jail Management System

1129763

10. OTHER AGENCY INVOLVEMENT

The project has been coordinating with the following county partner agencies that will be impacted by the new JMS:

- Superior Court
- Prosecuting Attorney's Office
- District Court
- Judicial Administration
- Jail Health Services
- AFIS
- DCHS

11. ART ELIGIBILITY

IT project

12. EQUITY AND SOCIAL JUSTICE IMPACT

The new JMS will improve DAJD's access to operational data to help with ensuring equitable access to services and other Equity and Social Justice initiatives (e.g., program access, etc.). An equity impact review is required for this project and will be completed before the end of 2018.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

n/a

14. OTHER CONSIDERATIONS (OPTIONAL)

Implementation of the new JMS provides DAJD with a huge opportunity to further increase operational efficiency with their criminal justice partners by developing new interfaces as well as sharing more data which is currently not possible due to technological constraint. Here are examples of new data exchanges that could be developed as part of the new JMS implementation. The benefiting agencies are in parenthesis.

1. FBI# and SID# for every detainee (DAJD): Reduces risk of wrongful detainment, errors in housing, and sentencing.
2. Fingerprint confirmation (DAJD): Quickly identify detainees against records outside the County jails during booking and before releasing them.
3. Commitments and pre-commitment orders (KCDC,DAJD): Do away with faxes and print outs.
4. Inmates/offenders custody status (DJA,DAJD,PAO): Sharing data proactively thereby reducing manual intervention like preventing KCDC from issuing warrants for people in custody
5. Bail bond data (DJA,DAJD,PAO): Sharing data proactively thereby reducing manual intervention
6. Credit for time served (KCDC,DAJD,KCSC): No manual intervention in requesting, calculating and sending back this data to the partners.
7. Court documents (DJA,DAJD,KCDC): Direct link to documents generated by different courts; Eliminate the need to verify data from various sources.
8. Airborne and Contact Isolation/Medical Alerts (DAJD,JHS): Notification to alert operations about critical medical needs requiring immediate medical intervention for detainees.
9. Tentative Release Date; Facility Location for Juvenile; Homelessness status; Latino and Transgender status (DCHS,DAJD): All these new data exchanges would help DCHS coordinate with their providers more proactively to provide mental health and substance abuse services to the detainees leading to an overall reduction in the jail use.

DPD is gearing up to implement a new system for their agency to better serve the inmates. They will soon be requesting funding from the Council for this effort and funding for developing interface with DAJD to get all the necessary details will be a part of that project. However, in the interim, DAJD will work with DPD to create reports in the new JMS and send them to DPD for their daily operations like booking recap, release recap, and location/facility for juvenile.

CIO and PSB Critical Success Factors and Conditions:

- 1) EIR is to be completed before the end of 2018
- 2) CIO/PRB conditions

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

DAJD Jail Management System

1129763

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

The JMS system will support the "Effective Digital Systems" objective by:

1. Eliminating unnecessary operational and labor costs for replacing existing automated data exchanges with manual processes by developing a comprehensive and robust data exchange system.
2. Streamlining communications in the shared business processes between DAJD and partner agencies.
3. Automating and streamlining juvenile detention processes to provide quality and comprehensive services to youth.
4. Enabling the exchange of data in a standardized format with lower risk.

16. PROJECT COMPLEXITY

High technical complexity due to:

1. Integration with partner systems and DAJD systems that will not be replaced
2. Updates to DAJD systems that will not be replaced
3. Data migration from the legacy systems
4. Decommission of the legacy systems
5. Compliance with CJIS requirements
6. Essential service that must be recoverable within 24 hours

MITIGATION: The project team includes a Data Architect, Integration Architect, and Software Quality Assurance Analysts to address the risks associated with the technical complexity.

High business complexity due to:

1. Significant change management effort to re-engineer jail management processes
2. Complex stakeholder environment that includes internal and external partners and 13 collective bargaining units
3. 24 x 7 x 365 operation with ~900 uniformed and administrative staff

MITIGATION: The change management and communications efforts are being led by DAJD's Sr. Business Analyst with support from 5 FTEs from DAJD operations.

17. CAPACITY TO IMPLEMENT THE PROJECT

Prior Technology Projects: The successful mainframe re-host project to move DAJD's primary applications and data from mainframe technologies into up-to-date technologies was completed in 2015. The lessons learned from this project were used to determine the agency resources that needed to be dedicated to the JMS project.

Agency Leadership: The project is sponsored by DAJD Director William Hayes and is supported by all levels of DAJD management and is welcomed throughout the organization. The agency staff allocated to the project are a dedicated Senior Business Analyst, 5 FTE staff.

Stakeholder Management: The project includes an Executive and Steering Committee as well as a Stakeholder Communications Committee. An external quality assurance firm is also tracking the project throughout its lifecycle and reporting on the various progress and risks along the way.

KCIT support includes: IT PM, IT BA, Data Architect, and other technical resources.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

DAJD Jail Management System

1129763

18. PROJECT RISKS

1. (HIGH) Multiple partners need to adapt and change their systems to continue to exchange data with the JMS using new, modern technologies and the partners' development schedule may not be aligned with DAJD's schedule.

MITIGATION: Communications with partners began in July 2017 and a work group will be established in Q3 2018 to provide a forum for ongoing communication and coordination of the timeline for development and testing.

2. (HIGH) There is significant scope for the vendor to replace multiple legacy systems, implement new interfaces, and address data conversion requirements and the vendor may not perform as expected.

MITIGATION: An extensive vendor evaluation process was followed to select the vendor. The vendor contract will include liquidated damages to address performance issues. An Agile process will be followed that encourages a high level of collaboration between DAJD, KCIT, and the vendor as well as enables the review of deliverables at regular intervals.

NARRATIVES

KCIT DSS REPLACEMENT

1047605

1. CURRENT PROJECT SCOPE

King County Information Technology (KCIT) Distributed System Services (DSS) Replacement Project will replace enterprise infrastructure equipment and agencies' server systems that are at the end of their expected useful life.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

This equipment replacement project is in line with KCIT's internal policies and industry best practice related to replacing capital equipment that has reached the end of its useful life.

4. PROJECT BENEFITS/OUTCOMES

The project will replace end of life equipment in order to prevent business disruptions due to equipment failure.

5. BUDGET REQUEST BASIS

The request amount is based on the 2019-2020 funding available for infrastructure equipment replacement. End-of-life equipment will be replaced in the order of its business priority and criticality up to \$1,841,000 being requested in this budget. A detailed inventory list planned for replacement is provided as supplemental documentation.

6. FUNDING AND REVENUE DISCUSSION

KCIT rate in 2019-2020 and outyears, plus fund balance in 2021.

NARRATIVES

KCIT IP Fax Service Project

1124575

1. CURRENT PROJECT SCOPE

King County Information Technology (KCIT) IP Fax Service Project procured and implemented a modern, digital, countywide IT Fax Service, decommissioning and retiring the County's physical fax machines that were migrated to the IT fax service. This project was completed in 2017.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

Machine-based faxing is an outdated technology originally invented in 1843. Almost all organizations have chosen to replace fax machines over the past 25 years. Modern technology enables online (IP) fax services, which both transmit and receive documents in a digital format. This reduces the risk of having confidential hard copy documents exposed to unauthorized access. Inbound documents are routed to a recipient's workstation, where they can be saved, archived, and/or printed. Outbound documents can be sent digitally from a workstation, or scanned and sent from a printer/scanner. Adopting such technology enhances user operations and capabilities, enables a more mobile workforce, reduces environmental impact, and allows the County to reduce the fax telephony infrastructure, hardware, and associated maintenance costs. The average life-cycle replacement for fax machines is 5-7 years.

4. PROJECT BENEFITS/OUTCOMES

- Converted 293 lines or 36% of total to the IP Fax solution
- Decommissioned 344 lines or 42% of total, saving an average of \$6,880 a month
- Fax services remaining on-site 168 lines or 21% of total

5. BUDGET REQUEST BASIS

This request is to disappropriate an unused appropriation balance from a completed project.

NARRATIVES

KCIT I-Net ER

1129570

1. CURRENT PROJECT SCOPE

King County Information Technology (KCIT) Institutional Network (I-Net) Equipment Replacement (ER) Project will replace I-Net equipment that are approaching the anticipated end of life.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

The project is to replace end of life I-Net equipment, in line with KCIT's internal policies and industry best practice related to replacing capital equipment that reached the end of its useful life.

4. PROJECT BENEFITS/OUTCOMES

The request is to replace end of life equipment in order to prevent business disruptions due to equipment failure.

5. BUDGET REQUEST BASIS

The request amount is based on the 2019-2020 funding available for I-Net equipment replacement. Equipment at the end of life will be replaced in the order of business priority and criticality. A detailed inventory planned for replacement is provided as part of supplemental documentation.

6. FUNDING AND REVENUE DISCUSSION

I-Net rate

7. OPERATING BUDGET AND OTHER IMPACTS

N/A

8. PROJECT STATUS

Ongoing equipment replacement project.

NARRATIVES

KCIT KC.Gov Web Presence

1134308

1. CURRENT PROJECT SCOPE

King County Information Technology (KCIT) Kingcounty.gov Web Presence project will upgrade the obsolete version of the SiteCore platform used by the County for managing content on its kingcounty.gov website. The platform is used by over 200 county staff to create and manage webpages on the County website. Archiving and content cleanup are outside of the project scope. The project scope and duration are only for the upgrade, which will enable future content cleanup and archiving activities.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

KingCounty.gov is our broadest-reaching communications tool for constituents and is an essential service for King County communications. The website is a primary source of information for members of the community, government agencies, King County Employees, and the general public. The website receives traffic of over 14M users who view more than 89M pages a year. There are over 200 employees that manage content on the site.

The current version of the Website Content Management System (WCMS) is obsolete, and will be out of support in the next year. It needs to be upgraded. Since the current version is out of date, the staff spends a lots of time on break/fix issues and is not able to work on much needed improvements that have been in a backlog for the past two years. The upgrade will eliminate that unplanned and resource demanding work.

Furthermore, we need to prepare for countywide support of ESJ initiatives, including ADA compliance and language translation. The upgraded system will support these needs.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

KCIT KC.Gov Web Presence

1134308

4. PROJECT BENEFITS/OUTCOMES

The primary benefit category (per the Benefit Achievement Plan) is "Maintaining service levels by replacing or upgrading older technology." The project will also improve operational efficiency and external/public services. Specific benefits and measures include:

-- People with disabilities will be able to consume and navigate KC.gov with access to more content and improved results from assistive technologies than is available today.

Measure: Reduction of pages with issues found as well as reduction of the issues

-- Most content in KC.gov will be in compliance with ADA requirements.

Measure: Significant reduction of pages with ADA compliance issues.

-- Reduced time on break-fixes that need to be run outside of the business hours in order to keep the platform running

Measure: Staff hours per quarter spent on break-fixes

-- Users will be able to find information more easily, spending less time looking for it.

Measure: Reduction in the number of web pages published.

5. BUDGET REQUEST BASIS

KCIT staff were involved in developing both the estimate and the approach for this project. There are two labor components to this modernization effort: internal and external. Internal resources (\$398k) include KCIT labor (project manager, business analyst, developer, and user experience analyst), as well as the cost of quality assurance. External resources (\$667k) include the cost of consultants with deep experience in this specific platform and migration path. KCIT does not have existing resources that can undertake a migration as complex as this one. The project costs also include \$57k for software/hardware. The total estimate of \$1.3 million assumes a 20-percent contingency. Based on the project risks, the certainty of this cost estimate is approximately 75 percent.

6. FUNDING AND REVENUE DISCUSSION

Countywide IT investment rate

7. OPERATING BUDGET AND OTHER IMPACTS

N/A

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

To be completed once the project is initiated (as part of the project's planning and design phases).

10. OTHER AGENCY INVOLVEMENT

-- This upgrade impacts all departments that have a web presence on Kingcounty.gov. KCIT will run automated scripts to convert pages that contain both content and HTML/code. There will be some pages where the automated process will not be effective. Each department will need to assist with correcting any web pages that could not be converted successfully via automation. KCIT will provide a list of pages to revise, and will also assist with guidance on how to make the updates. The level of effort for each department is impossible to predict prior to beginning this project, as each subsection of the site is unique.

-- KCIT will also work with Records Management to define and publish guidelines for retention as well as archiving.

-- KCIT Divisions: Engineering and IT Delivery will be participating in the project.

Upon approval, the project will work with agencies and departments to assist them in the migration of their content. The Project Sponsor will lead the county-wide communication to assure that all agencies and departments are engaged and participate. The project scope and duration is only for a platform upgrade that will enable the above activities.

11. ART ELIGIBILITY

IT project

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

KCIT KC.Gov Web Presence

1134308

12. EQUITY AND SOCIAL JUSTICE IMPACT

By the end of 2018, KCIT will conduct a comprehensive equity impact review (EIR) for this technology solution. EIR is required for this project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

N/A

14. OTHER CONSIDERATIONS (OPTIONAL)

CIO and PSB Critical Success Factors and Conditions:

- 1) Include approach and design to "archive/retire/ clean-up" agency web pages before porting to new platform in coordination with RALS - Records Mgmt.
- 2) Project Schedule/Duration to include agency migrations.
- 3) Provide to PRB a clear scope statement what the project will provide to agencies and agency migration/clean-up schedule and estimated effort.
- 4) EIR is required.

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

Digital Civic Engagement - Leverage IT platforms and tools as a channel to increase the opportunities, convenience and audience engaging with government

- Faster / convenient delivery of services to the public
- Improved customer understanding / satisfaction with King County
- Increased equity of participation

Effective Digital Systems - Increase value to customers through high quality digital systems to meet their needs using standard components and continuous process improvement

- Capturing continuous improvement through systems with higher quality, lower risk and better usability
- Faster speed to implement business process changes
- Increased service quality due to increased standardization and reduced downtime

16. PROJECT COMPLEXITY

This project will have broad impact, but will be somewhat self-contained in that it doesn't integrate with other systems. Security requirements are already in place, and will remain stable with this upgrade.

The biggest risk with this project is in the migration of content from the old platform to the upgraded platform. We will have a test environment in place to ensure minimal disruption before publishing live content.

The replaced system will remain in place (available) until all content is migrated to the upgraded platform.

We will be using as much automated verification / testing tools as possible.

17. CAPACITY TO IMPLEMENT THE PROJECT

KCIT is proposing to work with an outside resource that has deep experience and expertise in this specific WCMS platform (including migrating to this particular version). They are well-versed in our existing environment, have been providing guidance in supporting our existing system. We have done a similar upgrade in the past as well.

Sharon Potts, KCIT Delivery Director and Tanya Hannah, KCIT CIO are both in support of this effort, and we will be committing in-house Enterprise Web Developer resources to this effort for the duration (in addition to external experienced consultants.)

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

KCIT KC.Gov Web Presence

1134308

18. PROJECT RISKS

Risk 1: The platform architecture is based on old technology, and will include hardware, software and configuration. We will encounter unforeseen challenges.

Probability of occurrence: High

Mitigation: We are creating a test environment (a "sandbox") to work in prior to migration. This will help us resolve issues without affecting the public-facing site, and allow the technical team to familiarize themselves with the new platform before project start.

Risk 2: Content ownership is decentralized and not consistent. It is impossible to understand the volume of pages that will need to be rebuilt manually.

Probability of occurrence: High

Mitigation: We will be migrating content by subsection to contain the work, identifying consistent issues, and building automation to reduce manual work. We will also provide reports of broken pages to the departments, providing support for fixing broken pages and working with content owners to reduce unused content. This will be a follow up after the platform upgrade project is completed.

Capital Appropriation Proposal

NARRATIVES

KCIT Network Security Plan

1134699

1. CURRENT PROJECT SCOPE

King County Information Technology (KCIT) Network Security Plan Project will develop a plan for the implementation of network capabilities within the data center in order to provide modern network technologies that are dynamic, manageable, cost-effective, and adaptive. The envisioned capabilities will provide network segmentation for regulatory and security requirements.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

Lack of network segmentation is a current 2018 audit finding on both PCI and HIPAA external audits requiring a corrective action plan (CAT). The data center network is an essential support service that provides connectivity to all services inside the Data Center. This project will produce a plan to identify requirements and design a solution to address the modernization of the network and deploying Application Centric Infrastructure (ACI). This change will enable the network to adapt to application needs, accelerating application deployment and changes, and enabling the application to define the security needs, restricting access to only resources that need it, enabling compliance with the PCI/HIPAA requirements.

4. PROJECT BENEFITS/OUTCOMES

Develop a high-level design--to be approved by the county's Architecture Review Team (ART)--identifying technical requirements and accurate costing to deploy ACI in the data center and update network technology to offer simplified provisioning of network services, the separation of networks for regulatory and security purposes. The primary beneficiaries of ACI are Network Operations, Security, departments and agencies that provision systems in the data center, software development, and owners of data that fall under compliance regulations such as HIPAA, PCI, CJIS. The success of this planning effort will be measured in two ways:

- (1) Successful Architecture Review gate sign off for the solution design of the segmentation and
- (2) Successful implementation of the design confirmed by external auditor's acceptance of our corrective action plan. A full design approved by the ART will be the target for this initial phase.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

KCIT Network Security Plan

1134699

5. BUDGET REQUEST BASIS

In addition to the current capital budget request, KCIT will make an in-kind contribution of \$77k, which will include the cost of internal operating staff to be assigned to this effort. The capital request includes \$210k for consulting services (an estimate based on prior experience with projects of a similar complexity), \$18k for KCIT project management and business analysis services, and a 5-percent contingency.

6. FUNDING AND REVENUE DISCUSSION

Countywide IT Investment Rate

7. OPERATING BUDGET AND OTHER IMPACTS

In-kind Agency Operating Contribution - \$77,211 in 2019

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

To be completed after the project is initiated (as part of the project's planning and design phases).

10. OTHER AGENCY INVOLVEMENT

Planning the design and implementation of ACI will have minimal impact on other agencies. Departments and agencies that provision systems in the data center or fall under regulatory and security requirements will need to participate in requirement gathering.

11. ART ELIGIBILITY

IT project

12. EQUITY AND SOCIAL JUSTICE IMPACT

N/A

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

N/A

14. OTHER CONSIDERATIONS (OPTIONAL)

Responses to the critical success factors:

- The project will involve the county architecture review team (ART). It is part of the architecture requirement that an approved solutions design for enterprise network segmentation passed the ART review. This would occur as part of the KCIT Delivery Framework.
- Corrective action plans will be developed to address any audit findings. Audit activities are part of operations and not part of this capital project request. This report will be submitted to the governance body that is overseeing the respective audit. KCIT will share the draft with Risk Management when it is available.
- A security technology roadmap is provided in SharePoint as supplemental documentation. The roadmap outlines all ongoing and recent additional investments to improve the county's cybersecurity system and how this proposed project fits in.

CIO and PSB Critical Success Factors and Conditions:

- 1) ART review is required for final design;
- 2) Provide to PRB an updated Security Roadmap and Document Progress on Security Roadmap this project will deliver to include the corrective action plan from item 4 below upon completion of the planning phase
- 3) External QA reporting to CIO/PRB required from the project start, including the planning phase; Collaborate with PRB staff and KCIT Procurement for external QA Scope of work and Contract
- 4) Deliver a Corrective Action Plan on PCI and HIPAA and CJIS 2018 audit compliance findings, and Risk Mgmt Framework by TBD per the Roadmap

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

KCIT Network Security Plan

1134699

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

This proposal is to support all level of the strategic information technology objectives from the IT security perspective. It particularly support the following:

Effective Digital System: This project will identify requirements to allow network segmentation on various applications. Not only this will meet the regulatory requirements (eg. HIPAA, CJIS, PCI), this separation will provide further protection on applications.

16. PROJECT COMPLEXITY

This project is to cover only the planning phase of the network segmentation to comply with the regulatory regulatory requirements and enhance system security. We will leverage the county's current network system (Cisco) and will engage Cisco in developing the plan and identify requirements to ensure compatibility. Minimal complexity and risk are expected on this phase.

17. CAPACITY TO IMPLEMENT THE PROJECT

KCIT has been implementing many IT projects. This project is only for the planning phase. KCIT will work with consultant to identify the requirements/architecture and implementation plan to guide the next step of the project

18. PROJECT RISKS

The risk is low. This is a planning phase only to identify, architect, and guide the next step. PM and BA will support this effort. KCIT will request another project to implement network segmentation project based on this plan.

Capital Appropriation Proposal

NARRATIVES	SW CAP EQUIPMENT	1133925
------------	------------------	---------

1. CURRENT PROJECT SCOPE

Solid Waste Capital Equipment: This project replaces two current Capital Equipment Recovery Program (CERP) projects, SW CERP Capital Repairs-1033485 and SW CERP Eq Replacement Purchase-1033487. This project consolidates those two projects into a programmatic project for efficiency purposes. The purpose of the CERP program is provide adequate resources for replacement, rehabilitation, and major maintenance of solid waste rolling stock and stationary compactors. This project supports the replacement and rehabilitation of Solid Waste equipment purchased after 1981. A separate fund was created and annual contributions are made to it from the operating fund for replacement and major maintenance of heavy equipment items as scheduled in the Equipment Replacement Plan.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

SW CAP EQUIPMENT

1133925

3. PROJECT JUSTIFICATION

This project provides funding to replace or rebuild equipment at or near the end of its economic life. Rebuilding certain classifications of equipment has been determined to be a cost effective way to extend their useful life. If an equipment rebuild is not a preferred option, then equipment replacement will take place. By accumulating funds in the CERP, the division ensures that it is able to cover the variable expenditures that come with replacing needed equipment even while revenue fluctuates.

4. PROJECT BENEFITS/OUTCOMES

This project will benefit Solid Waste by rebuilding or replacing equipment scheduled in the Equipment Replacement Plan allowing for more efficient machinery to be operated.

5. BUDGET REQUEST BASIS

The requested budget amount is based on the SWD transfers from the operating fund based on potential forecasted revenues. This project will assume the combined roles of two existing projects SW CERP Capital Repairs-1033485 and SW CERP Equipment Replacement Purchase-1033487. Those projects will continue under their existing appropriation while this new project will have appropriation going forward.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Catch up on the deferred replacement of assets requires increased contributions to the CERP Fund. CERP contributions from SWD rates in the operating fund (A72000). The contribution level is calculated to cover planned expenditures, rehabilitate equipment, and maintain fund balance in an amount approximating 15% of the replacement value of all equipment in the program.

8. PROJECT STATUS

N/A

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

DOT/Fleet assists with vehicle purchases.

11. ART ELIGIBILITY

No. Maintenance and equipment replacement.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Equipment purchases are coordinated through King County procurement using established procedures to be fair and equitable.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Equipment purchased under this project will allow for more fuel efficient machinery in Solid Waste operations.

NARRATIVES

WLR Farmland Acquisition

1116281

1. CURRENT PROJECT SCOPE

Farmland Acquisition - This project will acquire Farmlands and Open Space Lands within designated areas of the Sammamish, Lower Green, Upper Green, Snoqualmie Valley, and the Enumclaw Plateau Agriculture Production Districts, and other agricultural lands of County significance.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The fund was specifically set up to hold and track bond proceeds associated with the 1979 King County Farmland and Open Space Bond issue per Ordinance 4341. Long-term goals for the Farmland Preservation Program, which is an integral component of the Land Conservation Initiative, has identified 10,500 acres of farmland that are the highest priority for protection through acquisition of conservation easements.

4. PROJECT BENEFITS/OUTCOMES

Consolidation of remaining funding into one county-wide farmland preservation acquisition project per the King County Agricultural Commission meeting on October 12, 2018.

5. BUDGET REQUEST BASIS

Long-term goals for the Farmland Preservation Program, which is an integral component of the Land Conservation Initiative, has identified 10,500 acres of farmland that are the highest priority for protection through acquisition of conservation easements. Current plans include the sale of the Carnation Fields farm and use the proceeds for acquisitions in or near the Snoqualmie and Enumclaw Agricultural Production Districts.

6. FUNDING AND REVENUE DISCUSSION

This project is funded by the 1979 King County Farmland and Open Space Bond issue per Ordinance 4341.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES	WLR Farmland Acquisition	1116281
7. OPERATING BUDGET AND OTHER IMPACTS		
No operating impact.		
8. PROJECT STATUS		
Ongoing project.		
9. ALTERNATIVES ANALYSIS		
Alternative would be to abandon project, however that would be unwarranted, because there are willing sellers.		
10. OTHER AGENCY INVOLVEMENT		
No other agencies involved with this project.		
11. ART ELIGIBILITY		
This project is not eligible for 1% Art. Project is for real estate acquisition only.		
12. EQUITY AND SOCIAL JUSTICE IMPACT		
This project provides farming opportunities to the general public.		
13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT		
This project directly contributes toward the 2015 Strategic Climate Action Plan (SCAP) goal to protect and conserve high-priority agricultural land. Funds from the program will protect existing farmland and contribute toward the target of adding an additional 400 acres of productive farmland annually through 2024. Enhanced management of King County owned farmland will increase farm production potential and acres suitable for farming as well as provide technical assistance to private farmers leasing those lands to support sustainable farming practices. Increased production of farm products in King County significantly reduces energy consumption required to transport similar products from distant production regions.		
14. OTHER CONSIDERATIONS (OPTIONAL)		
ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY		
15. STRATEGIC IT PLAN ALIGNMENT		
16. PROJECT COMPLEXITY		
17. CAPACITY TO IMPLEMENT THE PROJECT

NARRATIVES

RSD GRANT CONTINGENCY 3855

1129583

5. BUDGET REQUEST BASIS

On average, Roads receives approximately \$5 million annually in grant funds. This budget will provide sufficient contingency to allow the division to apply for and receive grants between budget cycles and for emergent needs, such as storm events. Grant contingency allows Roads to pursue grant funding as opportunities arise since many granting agencies require demonstration of sufficient budget authority to apply for funds.

NARRATIVES

1. CURRENT PROJECT SCOPE

Countywide Program - This project allows Roads to respond to emerging needs of citizens and the roadway system. The Quick Response countywide project supplies funds for sub-projects that require immediate attention, including emergency repairs associated with storm damage or other infrastructure deterioration or damage, unanticipated pedestrian or vehicle needs, or other emerging issues.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Given the current financial situation and the accelerating rate of decline of the condition of the system, Roads by necessity is becoming a more reactive rather than proactive agency. The Quick Response countywide project will supply funds for sub-projects that arise during the year that require immediate attention. Projects can include emergency repairs associated with storm damage or other infrastructure deterioration or damage, unanticipated pedestrian or vehicle safety needs or other emerging issues.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

4. PROJECT BENEFITS/OUTCOMES

Benefits are not known at this time.

5. BUDGET REQUEST BASIS

This is the maximum that can be supported by the financial plan.

6. FUNDING AND REVENUE DISCUSSION

39782 Contribution -- County Road Fund

7. OPERATING BUDGET AND OTHER IMPACTS

Operating impacts are not known at this time.

8. PROJECT STATUS

Responding to emergent needs is an ongoing body of work.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

N/A

11. ART ELIGIBILITY

Roads, airport runways, sewers or solid waste landfill projects are exempt.

12. EQUITY AND SOCIAL JUSTICE IMPACT

As these countywide program is intended to cover emergent and unanticipated needs, Quick Response project locations are currently unknown. Project design and construction will be executed in alignment with the ESJ principles and requirements incorporated within the Sustainable Infrastructure Scorecard.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Quick Response activities may be aligned with the Strategic Climate Action Plan, Goal Areas 3 (Green Building) and 4 (Consumption and Materials Management).

Quick Response activities will identify opportunities to achieve sustainable infrastructure scorecard requirements for energy, greenhouse gas emissions, stormwater management, materials selection, and construction demolition materials diversion. Coordinated waste reduction strategies may result in re-use of materials on-site where possible, salvaging of materials off-site, disposal of hazardous waste (if applicable), and recycling. Fleet and fuel efficiencies may be gained through judicious project management, logistics, and reduction in travel times.

NARRATIVES RSD CWP ROADWAY PRESERVATION 1129585

1. CURRENT PROJECT SCOPE

Countywide Program Roadway Preservation - This program preserves roadway infrastructure by applying cost-effective resurfacing and rehabilitation treatments to extend the life of existing roadways.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

RSD CWP ROADWAY PRESERVATION

1129585

3. PROJECT JUSTIFICATION

Two of the goals in the 2014 Strategic Plan for Road Services are to address safety concerns, and to preserve the existing roadway network. This program serves these goals by applying preservation treatments that improve roadways' functional performance and that address their physical deterioration. Applying the most cost-effective treatment at the right time extends a roadway's useful life. With more than 1 million trips per day serving residents, connecting incorporated areas, and moving freight, the county road system is a critical component of the regional economy. As such, preserving its overall condition and functionality aligns with the County Executive's priority of Regional Mobility. If these treatments are not applied, repercussions may include higher lifecycle costs, user delays, and increased risks.

4. PROJECT BENEFITS/OUTCOMES

Key benefits/desired outcomes of the Roadway Preservation program include the following (with particular emphasis on major arterials and other key routes): to have all lanes open to traffic; for all lanes of traffic to have a smooth surface that is free of hazards; and no decline in capacity, speed limits, or safety.

5. BUDGET REQUEST BASIS

Lists of roadway projects are being developed using criteria including pavement condition score, functional designation (e.g., major or minor arterial), and other factors. A final candidate list will be set in late 2018 for construction in the 2019-2020 biennium. In addition, one subproject--218th Avenue SE Reconstruction, which will be partially funded by grants -- is included in the budget request.

6. FUNDING AND REVENUE DISCUSSION

39782 Contribution -- County Road Fund
39789 Contribution - REET
33341 F.A.U.S. Road Grant

7. OPERATING BUDGET AND OTHER IMPACTS

Minor positive operating impacts due to improvement of the asset(s).

8. PROJECT STATUS

This is an ongoing program, and Roads is currently developing and evaluating a priority array.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

Washington State Department of Transportation

11. ART ELIGIBILITY

Roads, airport runways, sewers or solid waste landfill projects are exempt.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Project locations will be identified at the end of 4th Quarter 2018 for the new year. Project design and construction will be executed in alignment with the ESJ principles incorporated within the Sustainable Infrastructure Scorecard.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project is aligned with the Strategic Climate Action Plan, Goal Areas 3 (Green Building) and 4 (Consumption and Materials Management).

This project will undergo early and ongoing project review to identify opportunities to achieve sustainable infrastructure scorecard requirements for energy, greenhouse gas emissions, stormwater management, materials selection, and construction demolition materials diversion. Coordinated waste reduction strategies may result in re-use of materials on-site where possible, salvaging of materials off-site, disposal of hazardous waste (if applicable), and recycling. Fleet and fuel efficiencies may be gained through judicious project management, logistics, and reduction in travel times.

NARRATIVES RSD CWP DRAINAGE PRESERVATION 1129586

1. CURRENT PROJECT SCOPE

Countywide Program Drainage Preservation - This program funds replacement and preservation of aging drainage systems and associated roadway features in compliance with current codes and standards. Projects include replacing failed systems as well as implementation of new pipe or catch basins to collect water that is adversely affecting the road system or private property.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

RSD CWP DRAINAGE PRESERVATION

1129586

3. PROJECT JUSTIFICATION

Two of the goals in the 2014 Strategic Plan for Road Services are to address safety concerns, and to preserve and maintain the existing roadway network. This program will protect road users, and improve and maintain the roadway structure by eliminating failed or failing drainage systems, restoring structural capacity, and preventing water damage to public and private properties. Generally, the solution is replacing the failed system but it could also include new pipe or catch basins to collect water that is adversely affecting the road system or private property.

Another goal of the strategic plan is to meet regulatory requirements or standards. The program's work is regulated by federal statutes, state laws and regulations, and King County Code.

If the road drainage system is not maintained, there could be possible injuries to road users, damage to public and private property, liability for water flow that is displaced as a result of system failure, icy road conditions in the winter, premature failure of the roadway due to soil saturation and road closures.

4. PROJECT BENEFITS/OUTCOMES

The goals of the Drainage Preservation program are to have minimal water on the roadway with little to no impact on travelers, and no water damage to infrastructure or private property.

5. BUDGET REQUEST BASIS

A list of projects from the existing backlog is chosen at the beginning of each year based on the priority array. However, water is a very powerful erosive force, and can cause significant damage during or as a result of storm events if existing systems are not in good condition. Because the county's system is old, and many parts are at or near the end of their design life, new drainage problem sites continually arise and are added to the priority array. Some of these will have high priority scores and may supplant the projects originally planned for the year. Projects supplanted will be revisited in the next review or if their priority score increases.

6. FUNDING AND REVENUE DISCUSSION

39721 Contribution - Surface Water Management
39782 Contribution -- County Road Fund

7. OPERATING BUDGET AND OTHER IMPACTS

Minor positive operating impacts due to improvement of the asset(s).

8. PROJECT STATUS

This is an ongoing program and Roads is currently monitoring the priority array and updates it with new projects as necessary.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

King County Department of Natural Resources and Parks Surface Water Division

11. ART ELIGIBILITY

Roads, airport runways, sewers or solid waste landfill projects are exempt.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Drainage project locations are selected at the beginning of each year. Individual projects will be designed and constructed in alignment with the ESJ principles incorporated within the Sustainable Infrastructure Scorecard.

NARRATIVES RSD CWP GUARDRAIL PRESERVATION 1129587

1. CURRENT PROJECT SCOPE

Countywide Program Guardrail Preservation - This program identifies and prioritizes existing guardrail to be refurbished or upgraded to current standards. Program work includes installing guideposts on the guardrail according to federal standards, upgrading or installing end terminals, and raising guardrail to current standard height recommendations.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

RSD CWP GUARDRAIL PRESERVATION

1129587

3. PROJECT JUSTIFICATION

The division's top priority in the 2014 Strategic Plan for Road Services is to address safety concerns on the roadway network. This program will improve the safety of the system by upgrading existing guardrail and guardrail end terminals. This includes identifying and replacing existing end terminals that do not meet current standards. This project will also install guideposts on the guardrail according to federal standards. Other work includes raising guardrail to current standard height recommended by WSDOT Design Standards. Upgrading existing guardrail and guardrail end terminals will make the road safer and may lessen the severity of crashes.

4. PROJECT BENEFITS/OUTCOMES

The goal of the 2019-2020 Guardrail Preservation program is to have no decline in safety on major arterials and other key routes.

5. BUDGET REQUEST BASIS

A priority array is being developed based on a listing of locations where existing guardrail and guardrail end terminals are located which need to be refurbished or upgraded. Priority projects on some of the higher volume roadways in the county system will be selected for design and construction from this array.

6. FUNDING AND REVENUE DISCUSSION

39782 Contribution -- County Road Fund

7. OPERATING BUDGET AND OTHER IMPACTS

Minor positive operating impacts due to improvement of the asset(s).

8. PROJECT STATUS

This is an ongoing program and Roads is currently developing a priority array.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

N/A

11. ART ELIGIBILITY

Roads, airport runways, sewers or solid waste landfill projects are exempt.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Guardrail preservation projects will not have any direct impacts to ESJ communities. Individual drainage projects will be designed and constructed in alignment with the ESJ principles incorporated within the Sustainable Infrastructure Scorecard.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project is aligned with the Strategic Climate Action Plan, Goal Areas 3 (Green Building) and 4 (Consumption and Materials Management).

This project will undergo early and ongoing project review to identify opportunities to achieve sustainable infrastructure scorecard requirements for energy, greenhouse gas emissions, stormwater management, materials selection, and construction demolition materials diversion. Coordinated waste reduction strategies may result in re-use of materials on-site where possible, salvaging of materials off-site, disposal of hazardous waste (if applicable), and recycling. Fleet and fuel efficiencies may be gained through judicious project management, logistics, and reduction in travel times.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES RSD CWP BRIDGE PRIORITY MAINT 1129588

1. CURRENT PROJECT SCOPE

Countywide Program Bridge Priority Maintenance - This project funds high priority preservation and maintenance projects to keep the aging bridge inventory serviceable and safe for the traveling public. Project activities may include load upgrades, scour mitigation, re-decking, bridge rail repairs or retrofits, superstructure and substructure repairs, painting, etc.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

RSD CWP BRIDGE PRIORITY MAINT

1129588

3. PROJECT JUSTIFICATION

Two of the goals in the 2014 Strategic Plan for Road Services are to address safety concerns, and to preserve and maintain the existing roadway network. With limited revenues and many unfunded transportation needs in King County, emphasis is placed on keeping the existing bridge infrastructure serviceable and safe for the traveling public. Regular federally mandated routine inspections identify repairs for the bridges. These repairs are prioritized based on: structural safety, traffic safety and the potential to reduce frequent maintenance. These repairs may include load upgrades, scour mitigation, redecking, bridge rail repairs or retrofits, superstructure and substructure repairs, painting, etc. Preserving the county's bridges will benefit mobility, aligning with the County Executive's priority of Regional Mobility. If they are not repaired or maintained, these structures will degrade faster, and will need to be posted for load restrictions or closed to the public.

4. PROJECT BENEFITS/OUTCOMES

The goals of the Bridge Priority Maintenance program are to have all bridges opened, with no restrictions on bridges on major arterials and other key routes.

5. BUDGET REQUEST BASIS

Each year, bridge engineers analyze the backlog of work orders and determine which bridges will be worked on based on priority of the required work, need, and structural and traffic safety issues. As often as possible, multiple work orders for a bridge are bundled into one project. Routine, day-to-day projects are scheduled in the operating fund, and projects to maintain the useful life of the asset are scheduled in Bridge Priority Maintenance.

6. FUNDING AND REVENUE DISCUSSION

39782 Contribution -- County Road Fund

7. OPERATING BUDGET AND OTHER IMPACTS

Minor positive operating impacts due to improvement of the asset(s).

8. PROJECT STATUS

This is an ongoing program, and Roads develops and continuously evaluates projects each year according to the priority of the needed repairs.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

NARRATIVES

RSD CWP CLEAR ZONE SAFETY

1129589

1. CURRENT PROJECT SCOPE

Countywide Program Clear Zone Safety - This program promotes the safety of the roadway network by removing roadside obstacles within the clear zone of the road right-of-way. This program will identify and remove or mitigate non-yielding or non-breakaway objects that are more than 6 inches high, such as trees, boulders, stumps, mailboxes, fences and utility poles in the clear zone. The clear zone is an area clear of objects for a minimum of 10 feet from the outside painted lane edge line on roads without curbing.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The division's top priority in the 2014 Strategic Plan for Road Services is to address safety concerns on the roadway network. The program identifies and removes or mitigates objects next to roadways that vehicles leaving the roadway might otherwise hit, creating clear zones. These zones create space for a driver to stop safely or regain control of a vehicle that has left the road, increasing the possibility of a safe recovery and reducing the instances and severity of crashes. This program will identify and remove or mitigate non-yielding or non-breakaway objects that are more than 6 inches high, such as trees, boulders, stumps, mailboxes, fences and utility poles in the clear zone. The clear zone is an area clear of objects for a minimum of 10 feet from the outside painted lane edge line on roads without curbing.

NARRATIVES

RSD CWP HIGH COLLISION SAFETY

1129590

1. CURRENT PROJECT SCOPE

Countywide Program High Collision Safety - This program improves the safety of the roadway network by making improvements to reduce the rate of collisions on roads in unincorporated King County. Improvements include, but are not limited to, traffic control signs and pavement markings.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The division's top priority in the 2014 Strategic Plan for Road Services is to address safety concerns on the roadway network. This program will improve the safety of the system by making improvements which are intended to reduce the occurrence of collisions at locations or on road segments that will be identified in the 2020 High Collision Safety report.

4. PROJECT BENEFITS/OUTCOMES

The goal of the High Collision Safety program is to reduce collisions at locations or on road segments that have been identified as a high collision location.

5. BUDGET REQUEST BASIS

The budget request will allow Roads to begin making improvements that will be recommended in the 2020 High Collision Safety report. In addition, funding is included to begin sightline improvements at the intersection of SE Covington Sawyer Road and 164th Place SE.

6. FUNDING AND REVENUE DISCUSSION

39782 Contribution -- County Road Fund

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES	RSD CWP HIGH COLLISION SAFETY	1129590
-------------------	--------------------------------------	----------------

7. OPERATING BUDGET AND OTHER IMPACTS

Significant reduction in liability risk due to improvement of the asset(s).

8. PROJECT STATUS

This is an ongoing program and the next High Collision Safety report will be released in 2020.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

N/A

11. ART ELIGIBILITY

Roads, airport runways, sewers or solid waste landfill projects are exempt.

12. EQUITY AND SOCIAL JUSTICE IMPACT

A subset of high collision projects may be completed in the vicinity of ESJ communities; these projects will produce positive impacts to the community due to improved safety. All high collision projects will be designed and constructed in alignment with the ESJ principles incorporated within the Sustainable Infrastructure Scorecard.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project is aligned with the Strategic Climate Action Plan, Goal Areas 3 (Green Building) and 4 (Consumption and Materials Management).

This project will undergo early and ongoing project review to identify opportunities to achieve sustainable infrastructure scorecard requirements for energy, greenhouse gas emissions, stormwater management, materials selection, and construction demolition materials diversion. Coordinated waste reduction strategies may result in re-use of materials on-site where possible, salvaging of materials off-site, disposal of hazardous waste (if applicable), and recycling. Fleet and fuel efficiencies may be gained through judicious project management, logistics, and reduction in travel times.

NARRATIVES RSD CWP SCHOOL ZONE SAFETY 1129591

1. CURRENT PROJECT SCOPE

Countywide Program School Zone Safety - This program improves the safety of students, pedestrians and others using roads near schools in unincorporated King County by implementing traffic calming measures as needed, including safety-related signs, marked crosswalks, radar activated speed signs, flashing beacons, or paved sidewalks or pathways.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

RSD CWP SCHOOL ZONE SAFETY

1129591

3. PROJECT JUSTIFICATION

The division's top priority in the 2014 Strategic Plan for Road Services is to address safety concerns on the roadway network. This multi-decade program uses a variety of approaches to improve the safety of pedestrians and other users in school zones in unincorporated King County. These approaches include, but are not limited to, marked crosswalks, radar activated speed signs, flashing beacons, or paved sidewalks or pathways. Implementing these traffic calming measures will help to protect all users of the roadway network within school zones.

4. PROJECT BENEFITS/OUTCOMES

The goal of the School Zone Safety program is to reduce collision involving vehicles and pedestrians, and reductions in speeding in school zones.

5. BUDGET REQUEST BASIS

The program prioritizes schools for mainly signage improvements and flashing beacon installation based on input from school districts coupled with other screening criteria, such as speed counts, collision rates and other characteristics unique to each school. Walkway locations were first prioritized based on field observations and analysis for future development considerations. A secondary set of criteria was used, such as level of walking activity, current walking surface conditions, width of the paved walking surface, presence of nearby schools where siblings may attend, and level of school bus service.

6. FUNDING AND REVENUE DISCUSSION

39782 Contribution -- County Road Fund

7. OPERATING BUDGET AND OTHER IMPACTS

Minor positive operating impacts due to improvement of the asset(s).

8. PROJECT STATUS

This is an ongoing program and Roads is currently developing a priority array.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

N/A

11. ART ELIGIBILITY

Roads, airport runways, sewers or solid waste landfill projects are exempt.

12. EQUITY AND SOCIAL JUSTICE IMPACT

A subset of school zone safety projects may take place in the vicinity of ESJ communities, and these projects will positively impact members of the community by addressing multiple determinants of equity including: community and public safety, and healthy built and natural environments. All school zone safety projects will be designed and constructed in alignment with the ESJ principles incorporated within the Sustainable Infrastructure Scorecard.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project is aligned with the Strategic Climate Action Plan, Goal Areas 3 (Green Building) and 4 (Consumption and Materials Management).

This project will undergo early and ongoing project review to identify opportunities to achieve sustainable infrastructure scorecard requirements for energy, greenhouse gas emissions, stormwater management, materials selection, and construction demolition materials diversion. Coordinated waste reduction strategies may result in re-use of materials on-site where possible, salvaging of materials off-site, disposal of hazardous waste (if applicable), and recycling. Fleet and fuel efficiencies may be gained through judicious project management, logistics, and reduction in travel times.

NARRATIVES RSD CWP FLOOD CONTROL DISTRICT 1131333

1. CURRENT PROJECT SCOPE

Countywide Program Flood Control District - To perform projects to address locations where recurring flood events have impacted or have the potential to impact local communities.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The King County Flood Control District is a special purpose government created to provide funding and policy oversight for flood protection projects and programs in King County. The District and the Road Services Division partnered together on identifying projects to address locations where recurring flood events have impacted or have the potential to impact local communities. Projects include flooded roadway mitigation and bridge scour projects.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES	RSD CWP FLOOD CONTROL DISTRICT	1131333
-------------------	---------------------------------------	----------------

4. PROJECT BENEFITS/OUTCOMES

The goal of the Flood Control District program is to reduce flooding which impact local communities or have resulted in bridge scour.

5. BUDGET REQUEST BASIS

Staff from Roads and the King County Flood Control District partnered together on identifying projects to address locations where recurring flood events have impacted or have the potential to impact local communities.

6. FUNDING AND REVENUE DISCUSSION

44179 Road C E SWM

7. OPERATING BUDGET AND OTHER IMPACTS

Minor positive operating impacts due to improvement of the asset(s).

8. PROJECT STATUS

In 2019-2020, Roads will begin working on a Concept Development Report to address chronic flooding on NE 8th Avenue at Lake Allen Outlet, will finish designing and then construct a solution to a failed culvert on SE 162nd Avenue at SE 166th Court, and will complete repairing a scoured riverbank near SE David Powell Road.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

King County Flood Control District

11. ART ELIGIBILITY

Roads, airport runways, sewers or solid waste landfill projects are exempt.

12. EQUITY AND SOCIAL JUSTICE IMPACT

These projects will not impact ESJ communities. All projects will be designed and constructed in alignment with the ESJ principles incorporated within the Sustainable Infrastructure Scorecard.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project is aligned with the Strategic Climate Action Plan, Goal Areas 3 (Green Building) and 4 (Consumption and Materials Management).

This project will undergo early and ongoing project review to identify opportunities to achieve sustainable infrastructure scorecard requirements for energy, greenhouse gas emissions, stormwater management, materials selection, and construction demolition materials diversion. Coordinated waste reduction strategies may result in re-use of materials on-site where possible, salvaging of materials off-site, disposal of hazardous waste (if applicable), and recycling. Fleet and fuel efficiencies may be gained through judicious project management, logistics, and reduction in travel times.

NARRATIVES

1. CURRENT PROJECT SCOPE

Countywide Program 2018 Bridge Safety - To replace bridges affected by new federal requirements. These requirements have resulted in restrictions on heavy vehicles, which pose public safety concerns if not promptly and systematically addressed. Four bridges will be replaced in the 2018 Bridge Safety program:

- S 277th Street Bridge #3126
- Ames Lake Trestle Bridge #1320A
- Coal Creek Bridge #3035A
- Upper Tokul Bridge #271B

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

RSD CWP 2018 BRIDGE SAFETY

1133447

3. PROJECT JUSTIFICATION

Following a bridge collapse, and, more importantly, a recent decision by FHWA to allow heavier trucks on roadways, the Federal Highway Administration (FHWA) developed new calculations for determining the weight that a bridge can safely carry.

King County owns and maintains 178 vehicular bridges and, as mandated, is evaluating each of them using current bridge condition information and the new federal standards to calculate bridge weight carrying capacity between now and the federal deadline of 2022. If necessary, Roads is placing new vehicle weight restrictions on some of the bridges.

One immediate impact from load limiting these bridges is that trucks will detour onto roads less appropriate for heavy truck traffic, for example, through residential areas or onto narrow, winding, or steep roads. Another concern is that emergency responders may be delayed if certain types of fire apparatus are unable to cross a bridge on the most direct route. There is also the risk that, despite the county's best efforts to enforce weight restrictions, some overweight trucks will not comply with posted weight restrictions and cross bridges, resulting in structural damage, or even a potential bridge collapse.

Structural damage from violations of the weight conditions could lead to unsafe conditions for travelers and/or the need to close bridges indefinitely to all traffic, resulting in significant consequences for communities and the transportation system. To reduce risks to public safety and regional mobility, it is imperative that the county initiate a bridge replacement program.

4. PROJECT BENEFITS/OUTCOMES

The goal of the 2018 Bridge Safety program is to replace four weight restricted bridges with new assets which will be designed and constructed to current standards.

5. BUDGET REQUEST BASIS

This project was adopted in Ordinance 18744, but because it did not receive unanimous approval from the King County Council, per County Road Advisory Board rules, it was unable to be implemented. These bridge replacement projects are currently included in the proposed 2019-2020 Bridge program.

6. FUNDING AND REVENUE DISCUSSION

39782 Contribution -- County Road Fund
33343 Federal Bridge Grant

7. OPERATING BUDGET AND OTHER IMPACTS

Minor positive operating impacts due to improvement of the asset(s).

These projects will not directly impact ESJ communities but will be designed and constructed in alignment with the ESJ principles incorporated within the Sustainable Infrastructure Scorecard.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

RSD CWP 2018 BRIDGE SAFETY

1133447

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The Bridge Safety Program projects will be evaluated using the Sustainable Infrastructure Scorecard. Each bridge replacement project is targeted to achieve a Platinum certification. Projects will undergo early and ongoing project review to identify opportunities to achieve sustainable infrastructure scorecard requirements for energy, greenhouse gas emissions, stormwater management, materials selection, and construction demolition materials diversion. Coordinated waste reduction strategies may result in re-use of materials on-site where possible, salvaging of materials off-site, disposal of hazardous waste (if applicable), and recycling. Fleet and fuel efficiencies may be gained through judicious project management, logistics, and reduction in travel times. Mitigation strategies will be identified in consultation with permitting and compliance activities, to maximize use of native plant materials and other outcomes that benefit salmon recovery and other habitat goals.

NARRATIVES RSD FACILITIES LED CONVERSION 1134082

1. CURRENT PROJECT SCOPE

Facilities LED Conversion - To upgrade existing lighting at four King County Roads maintenance facility campuses to LED technology. Approximately 2,000 interior and exterior light fixtures, lamps and sensors will be upgraded at the Black Diamond, Fall City, Renton, and Skykomish maintenance campuses. LED conversion advances the energy conservation goals stated within Goal Area 2 (Buildings and Facilities Energy) of the 2015 King County Strategic Conservation Plan.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

RSD FACILITIES LED CONVERSION

1134082

3. PROJECT JUSTIFICATION

Energy-efficient LED lighting significantly conserves energy and reduces greenhouse gas emissions. According to the U.S. Department of Energy, LED bulbs use 75 percent less energy and last 25 times longer than incandescent bulbs. A primary impact of this investment will be energy conservation and efficiency at Roads maintenance facilities. Secondly, this investment contributes to achieving a countywide goal of LED conversion by 2020.

4. PROJECT BENEFITS/OUTCOMES

Upgrade of approximately 2,000 interior and exterior light fixtures, lamps and sensors at four Road Services maintenance facilities.

5. BUDGET REQUEST BASIS

This will fund the cost of converting approximately 2,000 light fixtures, lamps and sensors to LED in order to meet the King County goal of 100 percent conversion to LED by 2020.

6. FUNDING AND REVENUE DISCUSSION

Roads intends to pursue a Fund to Reduce Energy Demand (FRED) loan for this project.

7. OPERATING BUDGET AND OTHER IMPACTS

Decline in energy consumption which will convert to savings. These savings will be used to repay the cost of the loan.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

There are no alternatives; the King County goal is to convert to 100 percent LED by 2020.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

Project is not visible to the public.

12. EQUITY AND SOCIAL JUSTICE IMPACT

N/A

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project is aligned with the Strategic Climate Action Plan, Goal Area 2 (Buildings and Facilities Energy). Investing in the conversion of internal and external lights at Roads maintenance facilities to LED will result in improved energy efficiency, a reduction in greenhouse gas emissions, and cost savings. This project is anticipated to be completed by 2020 and will contribute to the SCAP goal of 100 percent LED conversion of county-owned facilities by 2020.

NARRATIVES

RSD COVINGTON WAY SE IMPROVE

1134083

1. CURRENT PROJECT SCOPE

Covington Way SE Improvement - To study alternatives for improving Covington Way SE / SE Covington Sawyer Road between SE Wax Road and 100 feet south of the intersection with 164th Place SE with the goals of improving mobility and safety along this roadway.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

This project will improve the safety of vehicles and other roadway users in the community outside of Covington. SE Covington-Sawyer Road is a minor arterial carrying about 14,100 vehicles per day. Westbound SE Covington-Sawyer Road intersects with 164th Place SE on a horizontal and vertical curve. This alignment makes it difficult for westbound motorists to see the queue building up east of the intersection. In addition, motorists traveling northbound on 164th Place SE do not have adequate sightline to see westbound vehicles on SE Covington Sawyer Road and judge the gaps between the vehicles.

NARRATIVES RSD CWP OBSOLETE IT SYS RPLMNT 1134094

1. CURRENT PROJECT SCOPE

Road Services Division (RSD) Countywide Program (CWP) Obsolete IT System Replacement - Evaluate five obsolete legacy applications used by RSD, determine the best option for replacing each (e.g., leverage existing County systems, buy or build), then implement the selected best option.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

RSD CWP OBSOLETE IT SYS RPLMNT

1134094

3. PROJECT JUSTIFICATION

The obsolete systems in need of replacement are: 1) Capital Improvement Program database; 2) Cultural Resources database; 3) BizDocs; 4) Roads Map Vault; and 5) Scales database. They are built on old technology no longer supported by King County Information Technology (KCIT), making them difficult and expensive to support and increasing business risk. Further, they are not able to be integrated with other Roads or County systems, cannot leverage geospatial capabilities, and lack functionality needed by the business. The state of these applications results in decreased productivity and efficiency, requires manual processes, and causes staff to spend time detecting and correcting errors. There is also an ongoing risk of system failure and loss of business continuity.

4. PROJECT BENEFITS/OUTCOMES

The primary benefit is reducing risk of system failure/business disruption and maintaining service levels by replacing obsolete technology.

Additional benefits of modernizing these applications include:

1. Improved services for both internal and external customers due to enhanced functionality and usability for planning, budgeting, performance monitoring, engineering and maintenance activities;
2. Cost savings for support and maintenance activities;
3. Streamlined and integrated systems that deliver operational efficiencies by reducing redundant processing and labor intensive work and rework, and allowing users to perform other, more critical work;
4. Greater compatibility with other Roads and County software and systems;
5. Increased efficiency in complying with regulatory mandates; and
6. Improved ability to leverage systems and data for more informed analysis, reporting and decision making -- both within Roads and across the County.

5. BUDGET REQUEST BASIS

Roads must manage its funds and projects very carefully, which is why it is limiting this effort to \$1.2 million. The core assumption is that Roads will pursue a strategy that evaluates the best solutions with emphasis on leveraging existing county systems (e.g., PRISM or Masterworks for CIP, Paradigm for Scales DB, iLinx for RMV) and purchased applications. KCIT and Roads are confident that leveraging existing automation and pursuing commercial solutions offers substantial savings compared to a custom development effort. However, Roads will carefully assess the potential solutions and costs for each replacement in order to maximize its investment and minimize the risk of insufficient funding.

6. FUNDING AND REVENUE DISCUSSION

39782 Contribution -- County Road Fund

7. OPERATING BUDGET AND OTHER IMPACTS

Reduction in risk of system(s) failure(s), reduction in the number of systems needed to complete work, and reduction in staff time spent manipulating multiple parallel processes, fixing errors and troubleshooting system problems.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

Roads will evaluate existing county systems (e.g., PRISM or Masterworks for CIP, Paradigm for Scales DB, iLinx for RMV) and purchased applications as preferred solutions. Custom development is a last resort due to its high cost, long timeline, and significant risk. A detailed alternatives analysis is to be completed as part of the project.

10. OTHER AGENCY INVOLVEMENT

- KCIT - partner
- WLRD and other agencies as needed - owners of potential County software that may present opportunities for solutions
- DNRP - user of Cultural Resources Database

11. ART ELIGIBILITY

This is a technology project that does not consist of major physical infrastructure construction.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

RSD CWP OBSOLETE IT SYS RPLMNT

1134094

12. EQUITY AND SOCIAL JUSTICE IMPACT

N/A

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

N/A

14. OTHER CONSIDERATIONS (OPTIONAL)

CIO and PSB Critical Success Factors and Conditions:

- 1) Leveraging existing County systems (MBP, ESRI, etc.) is required for all five applications so that system architecture/platforms are consistent with KCIT standards.
- 2) Complete a gap analysis if any existing County system doesn't meet business requirements.
- 3) Discuss with DPER if DPER has a business need for any of these databases and address accordingly.--report outcomes to PRB.
- 4) Identify possible synergies to the remaining 27 systems as you evaluate leveraging existing county systems, and identify those out of 27, that may potentially be addressed by solutions for these 5 applications and the existing county platforms.
- 5) ART review required.

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

1. Effective digital systems - replacing the existing systems with modern, standardized and platform-based applications will reduce risk and enable Roads to more effectively meet customer needs/expectations through improved service delivery.
2. Workforce empowerment - existing systems are an impediment to effective processes and maturity. Modernizing these systems will enable staff to perform more valuable activities - including business process improvements - rather than focusing on break-fix.
3. Data driven - modern and integrated applications will enable Roads to better understand its current environment, assess opportunities, measure results and make more informed decisions. BizDocs and RMV will also improve public access to data.

16. PROJECT COMPLEXITY

The project's complexity is LOW, based on four areas using the complexity matrix tool ("Complexity Scoring" - 1 is low, 5 is high):

- A. Business impact and scope - the project impacts operations within a division or medium/large team, and the teams to be impacted are generally in support of the need for change (Score: 1).
- B. Business leadership and visibility - the project sponsor is Roads Director Brenda Bauer with authority to manage change to the division's operations (Score: 1).
- C. Technology impact and risk - the project will upgrade technology but with only a minor impact to technology services/operations (Score: 1).
- D. Technical solution approach - there are vendor options and in-house options for each application, but the direction of each will be determined by the project (Score: 3). KCIT will work with Roads to conduct thorough options analysis for each system in order to determine the most desirable solution approach.

17. CAPACITY TO IMPLEMENT THE PROJECT

The project was based on Roads' IT Roadmap for 2018-2020. Roads has supported this effort by leveraging KCIT's on-demand project proposal service to validate scope, identify risks and mitigation plans, estimate costs, etc. Roads will form a steering committee including a cross section of division leaders and managers, as well as the division's IT Service Delivery Manager. This will help ensure that the project is successfully managed and expresses Roads' full commitment to its success.

Roads has substantial IT project implementation experience. Its IT portfolio is comprised of almost 30 systems, a handful of which are publicly accessible and core to Roads' operations. Roads understands the value of robust IT systems and the criticality of implementing them on-time, within scope, and with the full involvement of division leadership.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

RSD CWP OBSOLETE IT SYS RPLMNT

1134094

18. PROJECT RISKS

Schedule -- Low Risk

The project length of two years is generous. To minimize this risk, the project will pursue each application replacement as a separate effort. None of the systems are dependent on one another. This project will also make every attempt to leverage existing automation and/or platforms to minimize time and cost.

Cost -- Low Risk

KCIT estimated costs for custom developing the applications instead of leveraging existing applications/platforms. Custom development is extremely time consuming and expensive. The County already has viable, modern applications for Roads' most complex systems (CIP, Roads Map Vault/BizDocs, Scales database) which can be piloted and implemented much more quickly and inexpensively than custom applications. This project includes an options analysis for all applications that will consider one-time and recurring costs. Roads will target the highest priority systems first and may defer replacement for other systems if necessary.

NARRATIVES RSD CWP CLVRT RPLCMT FISH PASS 1135045

1. CURRENT PROJECT SCOPE

Countywide Program Culvert Replacement and Fish Passage - Increase the safety and condition of the road system and enhance fish passage by replacing culverts that are in poor or failing condition, or undersized, with new culverts of fish passable design.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

RSD CWP CLVRT RPLCMT FISH PASS

1135045

3. PROJECT JUSTIFICATION

"This program supports the Road Services Division's drainage asset management need to replace culverts at end of lifecycle and King County Executive Dow Constantine's Clean Water and Healthy Habitat agenda.

Culverts that are in poor condition or undersized pose a risk of failure that can result in collapse of the roadway, landslides, flooding, damage to public and private property, and associated risks to life safety. When culverts reach the end of their life cycle they need to be replaced with new infrastructure designed to current standards in order to mitigate risk and provide appropriate drainage functionality.

Culverts that are not designed to be fish passable block access to important upstream habitat necessary for the sustainability of fish species. Roads' proposed Culvert Replacement and Fish Passage project is one component of Executive Constantine's broader county fish passage program (led by the Water and Land Resources Division), which complements the county's collaboration with tribal governments and long-standing support for watershed-based salmon recovery efforts. The county is initiating work with federal, state, and tribal officials to develop a fish passage program for watersheds within its jurisdiction. Originally conceived in late 2017, the program took on greater meaning following a June 2018 U.S. Supreme Court ruling that required the state of Washington to fix state-owned fish passage barriers within the Puget Sound area in order to avoid violating tribal treaty rights. "

4. PROJECT BENEFITS/OUTCOMES

The benefits of culvert replacement include safe and effective conveyance of surface water under roadways, protecting the road infrastructure from water damage, and allowing migrating fish unimpeded access to upstream habitat.

5. BUDGET REQUEST BASIS

"The Water and Land Resources Division (WLRD) and Roads collaborated to develop a preliminary, planning level list of culvert replacement projects that are a priority for both the safety and condition of the public road system and fish passage purposes. That list may be subject to change, based on WLRD's proposed habitat and condition assessment, additional feasibility analysis, preliminary design work, and consultation with tribes and Washington Department of Fish and Wildlife (WDFW).

Culvert replacement projects will be designed using a combination of Roads engineering staff resources and consultant services. Some culvert project construction will be done by the existing Roads drainage crew and, when the crew's capacity is exceeded, contractors will be used.

In 2019-2020, the apportionment of the Road drainage crew funding is approximately 80 percent from the Drainage Preservation Program and 20 percent from the Roads Culvert Replacement and Fish Passage Programmatic Project funding. Combined, this funds Roads existing drainage crew, which also performs many other types of essential drainage repair and preservation activities, such as replacing collapsing or failing pipe systems, culvert replacements, storm response, and emergent needs response. (It should be noted that drainage work requires a full crew complement; it is not possible to operate with a partial crew.)

6. FUNDING AND REVENUE DISCUSSION

The revenue supporting this program is generated as a result of WLRD's proposed Surface Water Management (SWM) fee 20 percent increase. The 2021-2024 out-year program was developed based on an estimate of potential SWM revenue available (accounting for projected annexations). These amounts could change once more information is obtained from WLRD's proposed assessment, discussions with stakeholders, and preliminary design. Additional outside funds, such as grants, are also anticipated to be necessary to fully implement the culvert program. WLRD and Roads will continue to work together to determine the prioritization of fish-passable culvert design and construction and to strategically pursue additional funding sources.

7. OPERATING BUDGET AND OTHER IMPACTS

Minor positive impacts due to the improvement of the asset(s).

8. PROJECT STATUS

New

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

RSD CWP CLVRT RPLCMT FISH PASS

1135045

9. ALTERNATIVES ANALYSIS

Roads Services Division worked with WLRD to evaluate potential projects based on an assessment of road safety and environmental factors. The proposed list of projects represents sites that rank high from the safety perspective while providing meaningful benefits in restoring unimpeded fish access to upstream parts of the respective watersheds.

10. OTHER AGENCY INVOLVEMENT

WLRD – Leads county’s overall fish passage, habitat, and water quality programs
Indian Tribes – Fisheries co-manager with Washington Department of Fish and Wildlife (WDFW)
WDFW- Fisheries co-manager with tribes

11. ART ELIGIBILITY

Roads, airport runways, sewers or solid waste landfill projects are exempt.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Individual fish passage project locations will be selected as informed by best available safety and habitat information. It is not anticipated that these projects will have any direct impact to ESJ communities. Individual projects will be designed and constructed in alignment with the nine ESJ credits that were incorporated within the Sustainable Infrastructure Scorecard in 2018.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Individual projects will produce outcomes that are beneficial for the natural environment, including enhanced fish passage in the vicinity of roads that formerly included physical barriers to migrating salmon. Each culvert project will undergo early and ongoing project review, as part of project delivery, to identify opportunities to meet or exceed Sustainable Infrastructure Scorecard requirements associated with energy, greenhouse gas emissions, storm water management, materials selection, and construction demolition materials diversion. Coordinated waste reduction strategies may result in re-use of materials on site where possible, salvaging of materials offsite, disposal of hazardous waste (if applicable), and recycling. Fleet and fuel efficiencies may be gained through judicious project management, logistics, and reduction in travel times.

3. PROJECT JUSTIFICATION

"Road maintenance facilities are necessary to support the division's mission. The location and functionality of these facilities is critical for emergency response and efficient ongoing operations. The ability to respond to incidents and emergencies 24 hours a day, seven days a week is an important part of operating a road network. Emergency response capability also helps to keep the road system safe and operational during severe weather, and after earthquakes or other events. Examples of emergency response activities include responding to significant collisions that impede travel; sanding, plowing and ice prevention on snowy or icy roads; removing downed trees and clearing other debris caused by landslides, storms or flooding; managing flood-related or other types of emergency road closures; and completing storm-related repairs to roadways and other assets such as drainage systems, shoulders, and adjacent slopes. Additionally, staff at these sites are responsible for initial inspection and closures as needed of bridges, roads and other infrastructure after earthquakes, storms, collisions, or other emergencies.

Maintenance activities keep the county's road-related assets in working condition to maximize the public's investment and provide for the safety of users. Some common activities include the routine maintenance and repair of pavement, bridge components, ditches, culverts, shoulders, and guardrail, as well as vegetation management, debris removal, maintenance of traffic control devices and road striping. A significant number of environmental and regulatory compliance activities are also associated with road maintenance. Adequate maintenance facilities located in the right places and in good condition are necessary to support the efficient provision of vital services to the traveling public.

This project addresses failures at Building D, located at the Road's Maintenance Headquarters in Renton. The work includes replacing a deteriorated roof and the building envelope. This project is a high priority project as the current structure does not provide adequate heat or ventilation for staff, including for the Materials Lab, which provides testing services in support of Roads' capital projects to ensure materials are adequate and safe, and information about soils conditions and landslide monitoring, among other services. The lab is one of only two public materials labs in the state and provides services for cities and other agencies as well. The Materials Lab works with delicate testing equipment that can be temperature sensitive, equipment that produces high temperatures, and does work that produces toxic dust and fumes. The current HVAC systems are limited in their ability to address the temperature conditions and ventilation safety needs of the equipment and staff. Upgrades to the building's roof and exterior will also result in improved energy efficiency.

The Building D project was initially funded through the 2015-2016 CIP budget and is fully designed and permitted. The procurement phase for this project has been challenged by an exceptionally active and competitive construction market for buildings/facilities, higher labor rates and escalating material costs. As a result, the county is receiving bids that are significantly higher than engineer's estimates of the likely labor and materials costs that were estimated for the project budget. Few bids are coming in for facilities projects, and bidders report difficulty in getting key subcontractors and materials without paying premium prices, and even when available, these goods and services may come with costly time delays. This proposed budget request will complement the existing project and support completion of the overall Building D Project, in conjunction with remaining 2015-2016 funds. The original funding source will be used to complete interior portions of the Building D project, such as replacing mechanical and HVAC systems.

4. PROJECT BENEFITS/OUTCOMES

The benefits of the Building D project include safer, warmer, and drier interior building conditions that ensure compliant workplace safety conditions and better support for staff and critical Roads functions. Additionally, the building renovation will result in improved energy efficiency, which in turn results in lower energy bills and ultimately a reduction in greenhouse gas emissions.

5. BUDGET REQUEST BASIS

This budget request reflects 100 percent design and 100 percent engineer's estimate documentation.

6. FUNDING AND REVENUE DISCUSSION

Funding provided from one-time REET (39789 Contribution) balance as identified by the Office of Performance, Strategy and Budget.

7. OPERATING BUDGET AND OTHER IMPACTS

Minor positive impacts due to the improvement of the asset(s).

8. PROJECT STATUS

9. ALTERNATIVES ANALYSIS

No alternatives were considered as the current structure does not provide adequate heat or ventilation for staff.

10. OTHER AGENCY INVOLVEMENT

City of Renton -- building permits

11. ART ELIGIBILITY

12. EQUITY AND SOCIAL JUSTICE IMPACT

The Building D project will not negatively impact ESJ communities and the forthcoming contracting/procurement process will follow procedures for certified Small Contractors and Suppliers, and other measures intended to solicit project engagement by traditionally under-represented businesses and other members of the ESJ community.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Building D construction phase will result in a building that is more energy efficient, as renovations include a new roof and building envelope. This project will meet or exceed Sustainable Infrastructure Scorecard requirements associated with energy, greenhouse gas emissions, materials selection, and construction demolition materials diversion. Coordinated waste reduction strategies may result in re-use of materials on site where possible, salvaging of materials offsite, disposal of hazardous waste (if applicable), and recycling. Fleet and fuel efficiencies may be gained through judicious project management, logistics, and reduction in travel times

NARRATIVES RSD CWP 2019-20 BRIDGE SAFETY 1135073

1. CURRENT PROJECT SCOPE

Countywide 2019-2020 Bridge Safety Program - To replace bridges affected by new federal requirements, or which have been prioritized for replacement to correct structural or functional deficiencies. These requirements have resulted in restrictions on heavy vehicles, which pose public safety concerns if not promptly and systematically addressed. Five bridges will be replaced in the 2019-2020 Bridge Safety program:

- S 277th Street Bridge #3126
- Ames Lake Trestle Bridge #1320A
- Baring Bridge #509A
- Coal Creek Bridge #3035A
- Upper Tokul Bridge #271B

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

RSD CWP 2019-20 BRIDGE SAFETY

1135073

2. PROGRAMMATIC PROJECT DISCUSSION

Please see the programmatic project information.

3. PROJECT JUSTIFICATION

"Following a bridge collapse, and, more importantly, a recent decision by FHWA to allow heavier trucks on roadways, the Federal Highway Administration (FHWA) developed new calculations for determining the weight that a bridge can safely carry.

King County owns and maintains 178 vehicular bridges and, as mandated, is evaluating each of them using current bridge condition information and the new federal standards to calculate bridge weight carrying capacity between now and the federal deadline of 2022. So far, Road Services has evaluated 57 bridges and determined new vehicle weight restrictions are necessary for 21 of those bridges.

One immediate impact from load limiting these bridges is that trucks will detour onto roads less appropriate for heavy truck traffic, for example, through residential areas or onto narrow, winding, or steep roads. Another concern is that emergency responders may be delayed if certain types of fire apparatus are unable to cross a bridge on the most direct route. There is also the risk that, despite the county's best efforts to enforce the weight restrictions, some overweight trucks will not comply with posted weight restrictions and cross bridges, resulting in structural damage, or even a potential bridge collapse.

Structural damage from violations of the weight conditions could lead to unsafe conditions for travelers and/or the need to close bridges indefinitely to all traffic, resulting in significant consequences for communities and the transportation system. To reduce risks to public safety and regional mobility, it is imperative that the county initiate a bridge replacement program.

This initial appropriation request will fund preliminary design and acquisition of right-of-way property."

4. PROJECT BENEFITS/OUTCOMES

The goal of the 2019-2020 Bridge Safety program is to replace five bridges with new assets which will be designed and constructed to current standards.

5. BUDGET REQUEST BASIS

The 2019-2020 Proposed 6-Year Capital Plan budget request is based on currently available estimates to begin design and right-of-way activities.

6. FUNDING AND REVENUE DISCUSSION

33343 Federal Bridge Grant
39782 Contribution -- County Road Fund
39789 Contribution -- REET 1

7. OPERATING BUDGET AND OTHER IMPACTS

Minor positive operating impacts due to improvement of the asset(s).

12. EQUITY AND SOCIAL JUSTICE IMPACT

These projects will not directly impact ESJ communities but will be designed and constructed in alignment with the ESJ principles incorporated within the Sustainable Infrastructure Scorecard.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The Bridge Safety Program projects will be evaluated using the Sustainable Infrastructure Scorecard. Each bridge replacement project is targeted to receive a Platinum certification. Projects will undergo early and ongoing project review to identify opportunities to achieve sustainable infrastructure scorecard requirements for energy, greenhouse gas emissions, stormwater management, materials selection, and construction demolition materials diversion. Coordinated waste reduction strategies may result in the re-use of materials on-site where possible, salvaging of materials off-site, disposal of hazardous waste (if applicable), and recycling. Fleet and fuel efficiencies may be gained through judicious project management, logistics and reduction in travel times. Mitigation strategies will be identified in consultation with permitting and compliance activities to maximize use of native plant materials and other outcomes that benefit salmon recovery and other habitat goals.

NARRATIVES

RSD ROADS-COUNTY ROAD CONST

1114792

1. CURRENT PROJECT SCOPE

Roads County Road Construction - This is the default administrative project for Fund 3860 - County Road Construction.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

Appropriation to transfer fund balance out of the legacy construction fund. This amount was determined using the balances of revenue-backed project disappropriations and projected fund balance at the end of the biennium. In order to move fund balance between funds Finance (FBOD) requires that an administrative project be charged. Approximately \$2.2 million of this is programmed to as revenue to support projects in Fund 3855, the rest will transferred as more projects reach completion or are closed out.

NARRATIVES

RSD EMERGENT NEED 3865

1129592

1. CURRENT PROJECT SCOPE

Emergent Need - This project provides funding for existing projects that experience unforeseen circumstances such as delay, match for additional grant funding or required accelerations.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

This project allows Roads flexibility with project implementation. It is to cover costs for unforeseen circumstances and developments not anticipated at the time of budget adoption. If Roads did not have the flexibility of this project to expediently transfer appropriation, the ability of the division to proactively manage projects would be limited.

4. PROJECT BENEFITS/OUTCOMES

Benefits are not known at this time.

5. BUDGET REQUEST BASIS

The maximum appropriation as allowed by King County Code is being requested.

6. FUNDING AND REVENUE DISCUSSION

39782 Contribution -- County Road Fund

7. OPERATING BUDGET AND OTHER IMPACTS

Operating impacts are not known at this time.

NARRATIVES

RSD GRANT CONTINGENCY 3865

1129593

1. CURRENT PROJECT SCOPE

Grant Contingency - This project provides appropriation authority reflecting potential grant contingent sources that may be awarded.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

This project allows Roads the flexibility to accept emergent grant funds.

4. PROJECT BENEFITS/OUTCOMES

Benefits are not known at this time.

5. BUDGET REQUEST BASIS

On average, Roads receives approximately \$5 million annually in grant funds. This budget will provide sufficient contingency to allow the division to apply for and receive grants between budget cycles and for emergent needs, such as storm events. Grant contingency allows Roads to pursue grant funding as opportunities arise since many granting agencies require demonstration of sufficient budget authority to apply for funds.

NARRATIVES

RSD CWP GUARDRAIL CONSTRUCTION

1129594

1. CURRENT PROJECT SCOPE

Countywide Program Guardrail Construction - This program designs and constructs new guardrail systems.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The division's top priority in the 2014 Strategic Plan for Road Services is to address safety concerns on the roadway network. This program will design and construct new guardrail systems where warranted to improve the safety of the roadway system. Barriers will be installed in locations in an attempt to reduce the number and severity of "run off the road" collisions.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

RSD CWP GUARDRAIL CONSTRUCTION

1129594

4. PROJECT BENEFITS/OUTCOMES

The goal of the Guardrail Construction program is to design and construct new guardrail systems where warranted in an effort to reduce the number and severity of "run off the road" collisions.

5. BUDGET REQUEST BASIS

This is an ongoing program and Roads is currently developing a priority array.

6. FUNDING AND REVENUE DISCUSSION

39782 Contribution -- County Road Fund

7. OPERATING BUDGET AND OTHER IMPACTS

Minor positive impacts due to the improvement of the asset(s).

8. PROJECT STATUS

This is an ongoing program, and Roads is currently developing and evaluating a priority array.

9. ALTERNATIVES ANALYSIS

N/A

10. OTHER AGENCY INVOLVEMENT

N/A

11. ART ELIGIBILITY

Roads, airport runways, sewers or solid waste landfill projects are exempt.

12. EQUITY AND SOCIAL JUSTICE IMPACT

All guardrail projects will be designed and constructed in alignment with the ESJ principles incorporated within the Sustainable Infrastructure Scorecard.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project is aligned with the Strategic Climate Action Plan, Goal Areas 3 (Green Building) and 4 (Consumption and Materials Management).

This project will undergo early and ongoing project review to identify opportunities to achieve sustainable infrastructure scorecard requirements for energy, greenhouse gas emissions, stormwater management, materials selection, and construction demolition materials diversion. Coordinated waste reduction strategies may result in re-use of materials on-site where possible, salvaging of materials off-site, disposal of hazardous waste (if applicable), and recycling. Fleet and fuel efficiencies may be gained through judicious project management, logistics, and reduction in travel times.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES

RSD SE176&SE171 WAY ROUNDABOUT

1130261

1. CURRENT PROJECT SCOPE

SE 176th Street and SE 171st Way Roundabout - This project designs and constructs a mini-roundabout at the intersection of SE 176th Street and SE 171st Way, modifies sidewalks and reconstructs ramps to be compliant with the Americans with Disabilities Act.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

This project will improve the safety of vehicles and other roadway users in the Fairwood community. SE 176th Street connects multi-family residential developments with a busy commercial area. The intersection was identified as a High Collision Location in King County's reports in 2013 and 2016. The geometry of this intersection is complex and may be confusing for users. In addition, SE 171st Way intersects with SE 176th Street at a skewed angle. Traffic on this segment of SE 176th Street exceeds the posted speed limit, according to a recent speed study. Mini-roundabouts have been effective at reducing collision rates at intersections and they are also effective at reducing conflicts resulting from a skewed intersection such as this.

4. PROJECT BENEFITS/OUTCOMES

Manage congestion and improve operation of the intersection, improve system reliability and improve safety by reducing the number and severity of collisions.

5. BUDGET REQUEST BASIS

The project has reached 90 percent design and Roads anticipates advertising for construction bids in late 2018. However, based on recent bid results for another similar project, Roads anticipates that additional funding is needed to complete the project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

RSD SE176&SE171 WAY ROUNDABOUT

1130261

6. FUNDING AND REVENUE DISCUSSION

Current request -- 39782 Contribution County Road Fund

Previous funding (2017-2018 CIP) --

33436 Washington State Department of Transportation = \$312,412

39782 Contribution County Road Fund = \$27,196

7. OPERATING BUDGET AND OTHER IMPACTS

Minor positive impacts due to the improvement of the asset(s).

8. PROJECT STATUS

The project has reached 90 percent design and Roads anticipates advertising for construction in late 2018 with construction in early 2019.

9. ALTERNATIVES ANALYSIS

Mini-roundabouts have been effective at reducing collision rates at intersections and they are also effective at reducing conflicts resulting from a skewed intersection such as this.

10. OTHER AGENCY INVOLVEMENT

Washington State Department of Transportation

11. ART ELIGIBILITY

Roads, airport runways, sewers or solid waste landfill projects are exempt.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project is taking place within the Fairwood community, a potential annexation area located within urban unincorporated King County. The project, as constructed, will result in a safer conditions for motorists, pedestrians and other members of the community. It is not anticipated to negatively impact ESJ communities and it is anticipated to result in improved safety.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project has benefitted from early and ongoing project review as part of the design process. A 30% ecocharette was held to identify opportunities to meet or exceed Sustainable Infrastructure Scorecard requirements associated with energy, greenhouse gas emissions, storm water management, materials selection, and construction demolition materials diversion. Coordinated waste reduction strategies may result in re-use of materials on site where possible, salvaging of materials offsite, disposal of hazardous waste (if applicable), and recycling. Fleet and fuel efficiencies may be gained through judicious project management, logistics, and reduction in travel times.

2. PROGRAMMATIC PROJECT DISCUSSION

S 360th Street and Military Road Roundabout - This project will improve the safety of motorized and non-motorized users in south King County. This intersection was identified as a High Collision Location in King County's report in 2016. It is currently controlled by a two-way stop. However, northbound left turning traffic and eastbound left turning traffic must compete with heavy southbound traffic on Military Road during the afternoon commute. Roundabouts have been effective at reducing collision rates at intersections, and providing traffic calming for the local neighborhood.

3. PROJECT JUSTIFICATION

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

This is a technical change to update the scope of the project to include a concept development report and revise the project schedule.

NARRATIVES

RSD SW 102 ST&8 AVE SW RNDABT

1131237

1. CURRENT PROJECT SCOPE

SW 102nd St. and 8th Ave. SW Roundabout - This project designs and constructs a roundabout at the intersection of SW 102nd Street and 8th Avenue SW.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

This project will improve the safety of motorized and non-motorized users in the White Center community and aligns with the County Executive's priorities of Equity and Social Justice, and Regional Mobility. The White Center Elementary School is located on the northeast corner of the intersection, the White Center Heights Park is on the southeast corner and METRO bus stops for two routes are just north of the intersection. In addition, the intersection is part of a walk to school route for the White Center Heights Elementary School and the Cascade Middle School. These destinations result in regular pedestrian traffic at the intersection. On-site observations by Road Services Division staff indicate that many drivers exhibit unsafe driving behaviors around large numbers of pedestrians -- many of which are students. In addition, congestion at the location during drop off and pick up times for the elementary school also creates a safety concern for pedestrians and other users of the intersection.

4. PROJECT BENEFITS/OUTCOMES

Manage congestion and improve operations of the intersection, improve system reliability and improve safety by reducing the number and severity of collisions.

5. BUDGET REQUEST BASIS

The project is approaching 90 percent design and Roads anticipates advertising for construction bids in late 2018. However, based on recent bid results for another similar project, Roads anticipates that additional funding is needed to complete the project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

RSD SW 102 ST&8 AVE SW RNDABT

6. FUNDING AND REVENUE DISCUSSION

Current request -- 39782 Contribution -- County Road Fund

Previous funding (2017-2018 CIP) --

33436 Washington state Department of Transportation = \$358,396

39782 Contribution County Road Fund = \$39,822

7. OPERATING BUDGET AND OTHER IMPACTS

Minor positive impacts due to the improvement of the asset(s).

8. PROJECT STATUS

The project is approaching 90 percent design and Roads anticipates advertising for construction in late 2018 with construction in early 2019.

9. ALTERNATIVES ANALYSIS

The White Center Elementary School is located on the northeast corner of the intersection, the White Center Heights Park is on the southeast corner and METRO bus stops for two routes are just north of the intersection. In addition, the intersection is part of a walk to school route for the White Center Heights Elementary School and the Cascade Middle School. These destinations result in regular pedestrian traffic at the intersection. A mini-roundabout was chosen to improve safety for all modes of travel, and to improve operations of the intersection while reducing travel delay.

10. OTHER AGENCY INVOLVEMENT

Washington State Department of Transportation

King County Department of Natural Resources and Parks -- Parks

11. ART ELIGIBILITY

Roads, airport runways, sewers or solid waste landfill projects are exempt.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project is taking place within the White Center community, a potential annexation area located within urban unincorporated King County. The project is located near a school and will result in a safer conditions for motorists, pedestrians and other members of the community. It is not anticipated to negatively impact ESJ communities and it is anticipated to result in improved safety.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project has benefitted from early and ongoing project review as part of the design process. A 30% ecocharette was held to identify opportunities to meet or exceed Sustainable Infrastructure Scorecard requirements associated with energy, greenhouse gas emissions, storm water management, materials selection, and construction demolition materials diversion. Coordinated waste reduction strategies may result in re-use of materials on site where possible, salvaging of materials offsite, disposal of hazardous waste (if applicable), and recycling. Fleet and fuel efficiencies may be gained through judicious project management, logistics, and reduction in travel times.

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

RSD KENTKANGLEY LNDSBRG RNDABT

1134079

3. PROJECT JUSTIFICATION

This project will improve the safety of road users in the Maple Valley and Black Diamond area. The intersection is a high crash location and also requires an improvement to the layout of the intersection. SE Kent-Kangley Road runs east to west and is a major arterial. Landsburg Road SE intersects with SE Kent-Kangley Road on the north and is also a major arterial. Ravensdale Way intersects with SE Kent-Kangley Road from the southwest, and is major arterial.

The intersection is seeing an increase in traffic volume requiring increased traffic control between 4 and 8 hours a day. Between 2013 and 2017, there were a total of 25 collisions at this intersection. The collision rate is 1.99 per million entering vehicles, making this a high collision location in need of improvement (a collision rate over 1 million per entering vehicles is considered a high crash location). Of these, 24 collisions were correctable by a roundabout or signal with turn channelization. The USDOT and FHWA's Manual on Uniform Traffic Control Devices recommends a roundabout be considered prior to a traffic signal; therefore a roundabout is the proposed improvement.

In addition, the layout of the intersection needs to be improved. Ravensdale Way intersects with Kent-Kangley from the south at a 50-degree angle, rather than the 85 to 95 degrees required in the King County Road Design and Construction Standards. This acute angle makes it difficult for motorists on Ravensdale Way to look west onto SE Kent-Kangley Road. In addition, it makes it difficult for trucks traveling east on SE Kent-Kangley Road to turn right onto southbound Ravensdale Way. Because of this angle, trucks drivers seeking to reach businesses to the south or SR-169 will use 268th Avenue SE, which is a 20-foot-wide, local roadway without centerlines or edge lines, serves a residential community and abuts the King County Ravensdale Park.

4. PROJECT BENEFITS/OUTCOMES

To manage congestion and improve operation of the intersection, improve system reliability and improve safety by reducing the number and severity of collisions.

5. BUDGET REQUEST BASIS

The budget request is based on currently available estimates for designing and constructing the project. Funding for preliminary design is requested in 2019-2020, and funding for final design, acquisition, implementation and closeout is anticipated to be requested in 2021 -2022.

6. FUNDING AND REVENUE DISCUSSION

39782 Contribution -- County Road Fund

7. OPERATING BUDGET AND OTHER IMPACTS

Minor positive operating impacts due to improvement of the asset(s).

8. PROJECT STATUS

New

NARRATIVES

RSD WDDUV SNOQ VALLEY IMPROVE

1134080

3. PROJECT JUSTIFICATION

To improve the safety of road users in north King County. This intersection is a high crash location, and other improvements are also needed, such as removing and replacing a temporary steel bridge, and significant drainage improvements to Tuck Creek. NE Woodinville Duvall Road is a major arterial traveling east to west between the cities of Duvall and Woodinville. West Snoqualmie Valley Road NE runs in a north-south direction between the Snohomish County line to near Ames Lake, and is also a major arterial.

Between 2013 and 2017, there were 28 collisions at this intersection. The collision rate at this intersection is 1.3 per million entering vehicles, making this a high collision location in need of improvement (a collision rate over 1 million per entering vehicles is considered a high crash location).

In addition, at this intersection both roads are designated as urban minor collectors and ADT ranges between 6,000 and 10,500 vehicles per day. Peak hour backups can be significant at this intersection. The light signals, box culvert and steel bridge currently in place were installed as a temporary measure and warrant permanent replacement.

4. PROJECT BENEFITS/OUTCOMES

To manage congestion and improve operation of the intersection, improve system reliability and improve safety by reducing the number and severity of collisions.

5. BUDGET REQUEST BASIS

The budget request will update alternative analysis for improvements to the intersection, and design the project. Funding to update the alternatives analysis is requested in 2019-2020, funding for preliminary design is anticipated to be requested in 2021-2022 and final design in 2023-2024. Funding for construction will be requested beyond the current 6-year plan.

6. FUNDING AND REVENUE DISCUSSION

39782 Contribution -- County Road Fund

7. OPERATING BUDGET AND OTHER IMPACTS

Minor positive operating impacts due to improvement of the asset(s).

This project will undergo early and ongoing project review to identify opportunities to achieve sustainable infrastructure scorecard requirements for energy, greenhouse gas emissions, stormwater management, materials selection, and construction demolition materials diversion. Coordinated waste reduction strategies may result in re-use of materials on-site where possible, salvaging of materials off-site, disposal of hazardous waste (if applicable), and recycling. Fleet and fuel efficiencies may be gained through judicious project management, logistics, and reduction in travel times.

3. PROJECT JUSTIFICATION

Redmond Ridge Drive NE is a major arterial and runs north to south. It is located east of the City of Redmond, and intersects with NE Novelty Hill Road, which is also a major arterial.

This project will support the anticipated build-out of the Redmond Ridge Business Park and its associated economic benefits. Once the business park is developed to its projected capacity, vehicle delay at the intersection will significantly increase. The roundabout is intended to improve intersection level of service, and neighborhood pedestrian safety for area residents, including children traveling to the nearby park and a planned middle school.

4. PROJECT BENEFITS/OUTCOMES

To manage congestion and improve operation of the intersection, improve system reliability and improve safety by reducing the number and severity of collisions.

5. BUDGET REQUEST BASIS

The budget request is based on the amount of a grant awarded by the Washington State Legislature.

6. FUNDING AND REVENUE DISCUSSION

333436 WA ST Dept of Transportation

7. OPERATING BUDGET AND OTHER IMPACTS

Minor positive operating impacts due to improvement of the asset(s).

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

No other alternatives were considered.

10. OTHER AGENCY INVOLVEMENT

Washington State Department of Transportation

11. ART ELIGIBILITY

Roads, airport runways, sewers or solid waste landfill projects are exempt.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will not directly impact ESJ communities but will be designed and constructed in alignment with the ESJ principles incorporated within the Sustainable Infrastructure Scorecard.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project is aligned with the Strategic Climate Action Plan, Goal Areas 3 (Green Building) and 4 (Consumption and Materials Management).

This project will undergo early and ongoing project review to identify opportunities to achieve sustainable infrastructure scorecard requirements for energy, greenhouse gas emissions, stormwater management, materials selection, and construction demolition materials diversion. Coordinated waste reduction strategies may result in re-use of materials on-site where possible, salvaging of materials off-site, disposal of hazardous waste (if applicable), and recycling. Fleet and fuel efficiencies may be gained through judicious project management, logistics, and reduction in travel times.

NARRATIVES

RSD VASHON MAINT FACILITY REPL

1135042

3. PROJECT JUSTIFICATION

"Road maintenance facilities are critical to support the division's mission. The location and functionality of these facilities is critical for emergency response and efficient ongoing operations. The ability to respond to incidents and emergencies 24 hours a day, seven days a week is an important part of operating a road network. Emergency response capability also helps to keep the road system safe and operational during severe weather, and after earthquakes or other events. Examples of emergency response activities include responding to significant collisions that impede travel; sanding, plowing and ice prevention on snowy or icy roads; removing downed trees and clearing other debris caused by landslides, storms or flooding; managing flood-related or other types of emergency road closures; and completing storm-related repairs to roadways and other assets such as drainage systems, shoulders, and adjacent slopes. Additionally, staff at these sites are responsible for initial inspection and closures as needed of bridges, roads and other infrastructure after earthquakes, storms, collisions, or other emergencies.

The Vashon site has failed buildings that don't address critical crew needs, and the site has inadequate space for safely storing and maneuvering equipment and materials used for emergency responses and regular maintenance activities.

Maintenance activities keep the county's road-related assets in working condition to maximize the public's investment and provide for the safety of users. Some common activities include the routine maintenance and repair of pavement, bridge components, ditches, culverts, shoulders, and guardrail, as well as vegetation management, debris removal, maintenance of traffic control devices and road striping. A significant number of environmental and regulatory compliance activities are also associated with road maintenance. Adequate maintenance facilities located in the right places and in good condition are necessary to support the efficient provision of vital services to the traveling public

This project will relocate and replace the maintenance facility on Vashon that includes the old Vashon Island jail. This facility serves all of Vashon and Maury islands and is located on Southwest Cemetery Road near the Vashon Commons area. The facility is old and deteriorated, and the site is severely undersized at just two acres. The building that houses the crew room is covered in corrugated metal panels with a corrugated metal roof that show signs of rust and wear and is past its useful life. In addition, the building envelope risks water intrusion and damage as it fails. The building and rooms are inadequately heated and temperatures often alternate between excessively cold or hot. Crews working in extreme weather need facilities to dry off and where they can warm or cool depending upon the season. A crew size of about a dozen men and women are sharing one toilet. There is inadequate yard space to efficiently and safely move equipment or store tools and materials. Materials are uncovered, risking leaching into the environment, degradation of the material, and delays, like when frozen salt and sand must be broken up by hand before loading into snowplows.

Maintenance shops need adequate space for crews, vehicles, multiple pieces of equipment, and materials storage and stockpiling, as well as functions such as waste disposal, truck washing and other similar activities. Analysis from the division's facility master planning effort in 2014 determined that a fully functional maintenance shop site requires significantly more acreage for all of the storage and operating functions required to provide maintenance services for a geographic service area.

In 2017, Roads engaged Otak, Inc., to assess facility site alternatives for the Vashon Island maintenance facility. The assessment generated site alternatives based on criteria developed by Otak with input by division staff, as well as guidance from Roads' 2014 facilities planning effort. There are a limited number of suitable parcels on Vashon in terms of size, location, allowable zoning, and site conditions; it is important to pursue acquisition of one of these sites, from the few identified as viable in the consultant study, before there are no options left for replacing the failing facilities on the island. In the 2019-2020 biennium, Roads proposes to acquire one of the recommended site alternative properties. Design of the new facility is anticipated to occur in 2021-2022 and construction in 2023-2024.

4. PROJECT BENEFITS/OUTCOMES

This project will include the purchase of suitable land, and design and construction of a replacement maintenance facility in the new location. Funding for the land acquisition will come from sale of the Raging River Pit surplus properties in 2018. Design and construction of the new facility will be funded by sale of additional surplus maintenance facility properties over the next several years. Per financial policies and the facilities guiding principles in the Strategic Plan for Road Services, surplus operating property sales proceeds should be allocated to support facility needs, upgrades, and/or construction.

Capital Appropriation Proposal

5. BUDGET REQUEST BASIS

The budget request is based on currently available estimates for acquiring property, and designing and constructing the new facility. Funding for property acquisition is requested in 2019-2020, funding for design is anticipated to be requested in 2021-2022, and funding for implementation and closeout is anticipated to be requested in 2023-2024.

6. FUNDING AND REVENUE DISCUSSION

39512 Sale of Land

7. OPERATING BUDGET AND OTHER IMPACTS

Roads anticipates a positive impact to the operating budget due to improved asset(s); estimates will be calculated when the project is closer to implementation.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

The 2014 facility master plan concluded that many of the county's existing road maintenance facilities are old and require significant capital improvements or have exceeded their useful lives and require replacement, such as the current facility on Vashon Island.

10. OTHER AGENCY INVOLVEMENT

11. ART ELIGIBILITY

12. EQUITY AND SOCIAL JUSTICE IMPACT

NARRATIVES

1. CURRENT PROJECT SCOPE

Northeast Maintenance Facility Replacement - Acquire land and construct a new, centrally located maintenance facility to serve northeastern King County, replacing the existing Cadman facility that is mislocated to meet current road maintenance needs. The Cadman facility is inside the City of Redmond in an urbanized area with significant development pressures on the horizon that are not compatible with long-term operation of a roads maintenance facility which needs to respond to incidents and emergencies 24 hours a day, seven days a week. Due to past annexations and incorporations, it is also at the far western edge of the remaining northeastern unincorporated area and not centrally located to meet the needs for timely and efficient service to a large, spread out rural service area. Long travel times from the current location to many portions of the service area can impede quick response to emergency events such as storms, flooding, earthquakes, and collisions. It also results in inefficiencies and higher costs for planned maintenance activities. This project would construct a new facility at a more centrally-located site in the rural area and include adequate space for crews, vehicles and multiple pieces of equipment, and materials storage and stockpiling, as well as functions such as waste disposal, truck washing and other similar activities.

NARRATIVES RSD PRSTN MAINT FACILTY BLDOUT 1135044

1. CURRENT PROJECT SCOPE

Preston Maintenance Facility Buildout - Complete buildout of the Preston maintenance facility. Development and occupation of the facility has been impacted and delayed by Washington state litigation on water rights. Construction costs to build out the facility have also been affected by an exceptionally active and competitive regional construction market for buildings/facilities, higher labor rates, and escalating material costs, and additional funding is required to complete the project. This phase of the project will include water system upgrades to allow full use and occupation of the facility, and completion of site development and buildings and other structures that support staff, equipment, materials and operations. Once the project is complete, additional functions can be moved from the existing Fall City facility to Preston. The Fall City location is comprised of failing facilities that are undersized, including an old barn without any heat or cooling that serves as a locker room. In addition, the site is impacted by flooding.

NARRATIVES

SW SOUTH COUNTY RECYCLING & TS

1033497

1. CURRENT PROJECT SCOPE

South County Recycling and Transfer Station: This project will site, design, permit, and construct a new transfer and recycling facility to replace the Algona Transfer Station.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

The need to replace the 1960s-era Algona Transfer station with a new solid waste transfer and recycling station was identified in the 2006 Solid Waste Transfer and Waste Management Plan (Transfer Plan). The Transfer Plan subsequently underwent County Council review and refinement as a result of discussions among cities, Council staff, the auditor and the Division. In 2014 the Transfer Plan Review Final Report was submitted to Council via Motion 14145, recommending that the Division "continue siting evaluations", and, if an alternative is selected that calls for a new South County Recycling and Transfer Station (SCRTS), the Division proceed with the project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

SW SOUTH COUNTY RECYCLING & TS

1033497

4. PROJECT BENEFITS/OUTCOMES

The new facility would provide the following primary benefits: Room to offer recycling services for materials such as yard waste, wood, appliances and scrap metal; Room to install trash compactors to accurately and efficiently load the collected garbage, thereby reducing the number of trucks hauling garbage from the recycling and transfer station to the landfill by as much as 30 percent; Adequate space for customer vehicles on-site parking; and An enclosed transfer building, which contains noise, odor and dust.

5. BUDGET REQUEST BASIS

Project schedule determined cashflow and budget needs. Factoria was used as basis for cost estimates and schedule. As of May 2018 the Project has a Budget Carryover of \$10,925,991. This amount is carried forward through project closeout. Although it appears this approximately \$11M is beyond what is needed for the Project, (estimate at completion is \$133M), the Project is just starting Preliminary Design and has yet to be baselined. There are numerous variables such as conditions that the City of Algona may place on the Project during land use permitting, incorporation of new green building requirements (LEED Platinum or Living Building Challenge sustainability programs), and the construction bidding climate in the year 2020 or beyond that may impact the total at completion. Therefore, the recommendation is to wait until the 2023-2024 budget cycle to assess whether the \$11M carryover can be dropped.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

When the station is complete, anticipated to be in the 2023-2024 biennium, two Transfer Station Operators (one per shift) will be required to operate the pre-load compactor(s) at the station. Two additional TSOs (also one per shift) and some additional equipment (bins, forklifts, etc.) will be required to support recycling, because the existing transfer station does not offer any recycling services.

8. PROJECT STATUS

At present, the project is in the planning phase and the 30% design is planned to start in June 2018.

9. ALTERNATIVES ANALYSIS

A siting process was conducted to generate a short-list of candidate sites. An Environmental Impact Statement was prepared for the project. The EIS considered two action alternatives (one in the City of Algona and one in the City of Auburn) and a no-action alternative (maintain the existing Algona Transfer Station). The Algona site was identified as the preferred alternative and was selected as the project site. During the Pre-design Phase, as part of the Basis of Design Task, the design consultant will develop conceptual site options for SWD evaluation.

10. OTHER AGENCY INVOLVEMENT

Public Health - Seattle and King County and the Washington State Department of Ecology are regulators. The City of Algona is the jurisdiction issuing Conditional Use, Building, and Occupancy Permits. The US Army Corp of Engineers will also be involved.

11. ART ELIGIBILITY

Art has been contributed at the full 1% amount of total budget request for 2019-2020. Future art contributions will be reduced by the exempted categories for projects over 10M.

12. EQUITY AND SOCIAL JUSTICE IMPACT

As part of siting the new facility, a Siting Report was prepared which documents the Economic and Equity and Social Justice Impacts of the project. The report looks at service area and associated demographic data, and evaluate economic development, construction and operational effects. During the Pre-design Phase ESJ impacts will be further evaluated. The SCRTS design consultant will assist with the SWD led development of the SCRTS Equity Impact Review Report. The Equity Impact Review Report will define qualitative and quantitative aspects of the Equity Impact review process and outline strategies and measurable implementation actions that are tied to the project phases. The SCRTS Equity Impact Review Report is anticipated to focus on the following activities: Engagement with the affected communities and will advance the "pro-equity" opportunities in SCRTS design and operation; Identification of approaches that best advance positive equity impacts and minimize or mitigated negative impacts. Communication and evaluation of impacts to provide effective responses to community priorities and concerns; Identification of opportunities to partner with stakeholders to influence site design, uses, features and access and overall benefits and impacts on affected populations and communities; and Refinement of project design to reflect community input and implement recommendations in Equity Assessment.

Capital Appropriation Proposal

NARRATIVES SW NORTHEAST RECYCLING & TS 1033498

1. CURRENT PROJECT SCOPE

Northeast Recycling and Transfer Station: This project will site, permit, design and construct a new transfer and waste processing facility to replace the Houghton Transfer Station. Although transfer station design on this project will not begin until after site selection and determination of project delivery in accordance with Ordinance 17437, the Solid Waste Division (SWD) has extensive recent experience constructing and operating modern solid waste recycling and transfer stations. SWD has completed three such facilities during the last decade including Shoreline, Bow Lake and Factoria. This facility will serve as a model for improving facility operation and reducing impacts on surrounding communities by including features like a fully enclosed transfer building, rainwater collection and other water conservation measures, maximizing use of natural lighting and other energy conservation strategies, and dust/odor management systems.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

SW NORTHEAST RECYCLING & TS

1033498

3. PROJECT JUSTIFICATION

The 2006 Solid Waste Transfer and Waste Management Plan (Transfer Plan) identified the replacement of the Houghton Transfer Station with a new solid waste transfer and recycling station located in the Northeast portion of the urbanized area of the county.

4. PROJECT BENEFITS/OUTCOMES

Budget Assumptions: 1) Project Delivery based on "Public Works Bidding" aka Design-Bid-Build; 2) Site Specific Project Delivery and Financing Study Report commences upon issuance of the Final EIS; 3) Design vendor procurement commences upon transmittal of Site Specific Project Delivery and Financing Study Report to Executive & Council (assumes no revisions or action by Council); 4) Assumes no appeal of the Final Environmental Impact Statement; 5) Assumes a station design similar to the Factoria Recycling and Transfer Station; and 6) Assumes no delays or difficulties in site purchase. The construction cost for this station was estimated using the Factoria construction contract and estimates performed at various phases of design.

5. BUDGET REQUEST BASIS

The recent Factoria Recycling and Transfer station project was used as basis for cost estimates and schedule. These were adjusted for inflation and aligned with this project's schedule to determine cashflow and budget needs.

6. FUNDING AND REVENUE DISCUSSION

The project will be primarily funded by bond issuances.

7. OPERATING BUDGET AND OTHER IMPACTS

SWD is proposing to repurpose the Demand Management appropriation (paid for with tipping fees) in its 2017-2018 budget to pay for the planning activities this biennia. During construction, costs to the SWD Operating Fund will be limited to debt service on the bonds used to design and construct the new station. Assuming a 4.5% interest rate and 20 year term, this results in a \$375,000 annual payment for each \$5 million borrowed. Once construction has been completed, the new station will require staff for the new services offered at the station.

8. PROJECT STATUS

SWD is awaiting adoption of the 2019-20 budget to begin this project. The project is part of the SWD Comprehensive Plan that will be submitted to the Executive and Council for their review and adoption.

9. ALTERNATIVES ANALYSIS

The division has explored the alternative of not building a new station through modeling where Houghton customers would likely go for transfer services and the impact on commercial haulers. With emphasis now returning to siting a new station, potential candidate sites for the project will be identified through a siting study. If the siting study identifies multiple viable locations the division will assess environmental, equity and social justice, and economic impacts to help the division finalize site selection.

10. OTHER AGENCY INVOLVEMENT

Solid Waste regulatory agencies include the state Department of Ecology and Public Health - Seattle and King County. The Department of Executive Services, Facilities Management Division, Real Estate Services section would be enlisted to acquire property for the new station. Depending on site selected, several host city agencies would be involved.

11. ART ELIGIBILITY

Art has been calculated at 1% of the total budget request for 2019-2020. This art amount includes land acquisition. Future art contributions will be reduced by the exempted categories for over 10M dollar projects (i.e. the amount of land acquisition will be taken off of the future art amounts in addition to the other exempted categories).

12. EQUITY AND SOCIAL JUSTICE IMPACT

As part of siting the new facility an Equity Impact Analysis will be required that will document the Economic and Equity and Social Justice impacts of the project on the surrounding community. The report will look at the service area and its associated demographic data, and evaluate economic development, construction and operational effects. The project will integrate ESJ opportunities such as increasing access to recycling services and cost reduction to customers with recycling rate versus only disposal rate. A project specific ESJ plan will be developed encompassing County ESJ guidelines.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This project will address Strategic Climate Action Plan (SCAP) Goal Area 3: Green Building, Measure 1: Percentage of King County-owned capital projects achieving a Platinum level certification using LEED, the Sustainable Infrastructure Scorecard, or an alternative green building rating system that demonstrates the same performance. The project will also explore achieving a Living Building Challenge certification. The target rating level required for this project under the Green Building Ordinance is LEED Platinum; the additional cost associated with achieving LEED is to be determined. The specific green building and sustainable development strategies employed in this project are to be determined. While green features for NERTS have not yet been determined, the benefits of green certification would be: a reduction in water usage by rainwater harvesting, less truck trips as a result of waste compaction and recycling services, waste heat recapture and reuse, natural lighting, more efficient fixtures and equipment and use of sustainable and recycled materials. While no measurements of beneficial impacts have been established (the project is in the planning phase) tools such as the King County Life Cycle Cost Analysis. Greenhouse Gas Calculator and Mitigation Guidelines Manual will be utilized.

NARRATIVES SW CEDAR FALLS ENV CNTRL SYS M 1116833

1. CURRENT PROJECT SCOPE

Cedar Falls Environmental Control Systems Modification: Investigation at the Cedar Falls closed landfill to implement landfill control system improvements to meet regulatory requirements under WAC 173-304; minimize custodial operations and maintenance requirements; and develop property for ultimate secondary use. This project includes planning, design, and construction for the upgrades.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Increased efficiency of landfill gas control and treatment and groundwater quality improvements, resulting in reduction of operational and maintenance costs. Improvements will reduce potential for both regulatory noncompliance due to malfunction of landfill control systems and misalignment with King County strategic goals.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

SW CEDAR FALLS ENV CNTRL SYS M

1116833

4. PROJECT BENEFITS/OUTCOMES

This project will increase the efficiency of landfill gas control and treatment and groundwater quality improvements, resulting in reduction of operational and maintenance costs. These improvements will keep King County in compliance with regulatory standards, ensuring alignment with King County strategic goals. Investments will additionally benefit the atmosphere by reducing fugitive emissions, and help SWD support ending post-closure care under the regulations. A goal of 10% improvement in key water quality parameter/year for Cedar Falls Landfill. The budget request for this iterative project will execute the recommendations for the initial investigation and mitigation. The iterative phases include: investigation, mitigation implementation, monitoring to determine whether additional mitigation is needed, future mitigation as needed to meet project goals.

5. BUDGET REQUEST BASIS

The budget requested in the 2019-2020 biennium will support the planning, preliminary design, final design and implementation phases in both years due to the cyclical nature of the closed landfill projects. The budget amount requested was based on similar work completed at the Enumclaw closed landfill. In 2019-20 biennium, the budget request is \$886,171.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Increased efficiencies in landfill gas control and treatment and groundwater quality improvements, resulting in reduced operational and maintenance costs. Achievement of negotiated agreement on program objectives with Seattle-King County Department of Public Health and WA Department of Ecology and completion of program objectives.

8. PROJECT STATUS

This project is ongoing.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

Public Health - Seattle and King County and the Washington State Department of Ecology. Ecology provides technical expertise to Health on projects and Health provides final approval and annual Landfill Operating Permit.

11. ART ELIGIBILITY

Closed landfill project

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will support the initiative goal of healthy built and natural environments.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The rating level targeted for this project is Platinum.

NARRATIVES SW ENUMCLAW ENV CNTRL SYS MOD 1116838

1. CURRENT PROJECT SCOPE

Enumclaw Environmental Control System Modification: Investigation at the Enumclaw Landfill to implement landfill control system improvements to minimize custodial operations and maintenance requirements and develop property for ultimate secondary use.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Increased efficiency of landfill gas control and treatment and groundwater quality improvements, resulting in reduced operation and maintenance costs. Improvements will reduce the potential for both regulatory non-compliance due to malfunction of landfill control systems and misalignment with King County Strategic Goals.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

SW ENUMCLAW ENV CNTRL SYS MOD

1116838

4. PROJECT BENEFITS/OUTCOMES

The benefits of this project are increased efficiency of landfill gas control and treatment and groundwater quality improvements resulting in reduced operation and maintenance costs. Improvements will reduce the potential for regulatory non-compliance due to malfunction of landfill control systems and maintain alignment with King County Strategic Goals. Investments will reduce the ongoing costs of landfill gas and water management, benefit the atmosphere by reducing fugitive emissions, and help SWD support ending post-closure care under the regulations. The goal is to reduce greenhouse emissions by 20% for the Enumclaw landfill. The budget requests for this iterative project will execute recommendations from initial investigation and mitigation. The iterative phases include: investigation, mitigation implementation, monitoring to determine whether additional mitigation is needed, future mitigation as needed to meet project goals.

5. BUDGET REQUEST BASIS

This project will address improvements to the environmental control systems at the Enumclaw closed landfill to meet regulatory requirements.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Increase efficiencies in landfill gas control and treatment and groundwater quality improvements resulting in reduction of operational and maintenance costs. Achievement of negotiated agreements on program objectives with Seattle-King County Department of Health and WA Department of Ecology and completion of program objectives.

8. PROJECT STATUS

This project is ongoing.

9. ALTERNATIVES ANALYSIS

Alternative analysis for the flare replacement has been completed and approved by regulators.

10. OTHER AGENCY INVOLVEMENT

Seattle-King County Public Health, and Washington Department of Ecology. Ecology provides technical expertise to Health on projects and Health provides final approval and annual Landfill Operating Permit.

11. ART ELIGIBILITY

N/A, solid waste landfill.

12. EQUITY AND SOCIAL JUSTICE IMPACT

N/A

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The rating level targeted for this project is Platinum.

NARRATIVES

SW HOBART LF COVER & GAS CTRL

1124104

4. PROJECT BENEFITS/OUTCOMES

The benefits of this project are increased efficiency of landfill gas control and treatment and groundwater quality improvements resulting in reduced operation and maintenance costs. Improvements will reduce the potential for regulatory non-compliance due to malfunction of landfill control systems and maintain alignment with King County Strategic Goals. Investments will reduce the ongoing costs of landfill gas and water management, benefit the atmosphere by reducing fugitive emissions, and help SWD support ending post-closure care under the regulations. The goal for Hobart is to reduce greenhouse emissions by 10% per year. The budget request for this iterative project is to execute recommendations from initial investigation and mitigation. The iterative phases include: investigation, mitigation implementation, monitoring to determine whether additional mitigation is needed, future mitigation as needed to meet project goals.

5. BUDGET REQUEST BASIS

This project will address improvements to the environmental control systems at the Hobart closed landfill to meet regulatory requirements. This project will proceed to implementation in 2019-2020 for the budgeted amount of \$821,509. The 2019-2020 budget request provides implementation for improvements to the landfill gas control and treatment system and groundwater monitoring networks to demonstrate a reduction in the risk for potential regulatory noncompliance and that the landfill conditions are aligning with the King county strategic goals to end the post closure phase. The 2019-2020 budget request is based on similar work completed at Cedar Hills and Enumclaw Landfills.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Increased efficiencies in landfill gas control and treatment and groundwater quality improvements resulting in reduced operational and maintenance costs. Achievement of negotiated agreements on program objectives with Seattle-King County Department of Public Health and WA Department of Ecology and completion of program objectives.

4. PROJECT BENEFITS/OUTCOMES

Increased efficiency of landfill gas control and treatment operations as long as needed, and produce groundwater quality improvements that result in reduction of operational and maintenance costs. Improvements will reduce greenhouse gas emissions reduction, and the potential for both regulatory noncompliance due to malfunction of landfill control systems and misalignment with King County strategic goals. Investments will reduce the ongoing costs of landfill gas and water management, benefit the atmosphere by reducing fugitive emissions and help SWD support ending post-closure care under the regulations. SWD will develop specific goals for the Duvall landfill. The budget request for this iterative project is to execute recommendations from initial investigation and mitigation. The iterative phases include: investigation, mitigation implementation, monitoring to determine whether additional mitigation is needed, future mitigation as needed to meet project goals.

5. BUDGET REQUEST BASIS

The 2019-2020 budget request is based on similar completed projects.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Increased efficiencies in landfill gas control and treatment and groundwater quality improvements, resulting in reduced operational and maintenance costs. Achievement of negotiated agreements on program objectives with Seattle-King County Department of Health and Washington Department of Ecology and completion of program objectives. Preparing the properties to support secondary beneficial uses.

8. PROJECT STATUS

This project is ongoing with a project charter under review.

9. ALTERNATIVES ANALYSIS

Alternatives will be developed during the preliminary design phase.

10. OTHER AGENCY INVOLVEMENT

Seattle -King County Public Health

11. ART ELIGIBILITY

Solid Waste Landfill

12. EQUITY AND SOCIAL JUSTICE IMPACT

There are no anticipated ESJ impacts to the project.

NARRATIVES SW HARBOR ISLAND DOCK DEMO 1129850

1. CURRENT PROJECT SCOPE

Harbor Island Dock Demolition: The derelict dock along the western shoreline of Harbor Island in the West Waterway at the mouth of the Duwamish River, occupies three tax lots. These parcels were purchased by King County in 2003 from Pendleton Flour Mills, LLC. The goal of this scope of work is to demolish the 64,000 square foot dock, remove the creosote-treated pilings and debris, install a sand cap at the demolition site, and thereby meet the requirements of the King County Solid Waste Division aquatic lease agreement with the Washington State Department of Natural Resources.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

SW HARBOR ISLAND DOCK DEMO

1129850

3. PROJECT JUSTIFICATION

Demolition of the dock is justified because of the advanced state of its deterioration. The dock is under Washington State Department of Natural Resources Lease No. 22-002757, a 30-year lease expiring in August 2022. The lease contains a contractual requirement requiring that the leasee keep and maintain the property in good order and repair and in safe condition. DNR has indicated that the aquatic lease for the property may not be renewed if the derelict dock is not removed or repaired. There does not appear to be an alternative to demolition; if the lease is not renewed, King County Solid Waste Division would lose marine access, a key rationale for acquisition of the property. Left as is, the existing creosote piles could potentially release polycyclic aromatic hydrocarbons into the Duwamish waterway, potentially impacting marine life.

4. PROJECT BENEFITS/OUTCOMES

By meeting the contractual requirements of Washington State Department of Natural Resources Lease No. 22-002757, the lease can be renewed in 2022 and King County Solid Waste Division would continue to have marine access, a key reason for the property acquisition. As the existing warehouse is also on leased land, extending the lease with DNR will also keep the warehouse legal (permitted).

5. BUDGET REQUEST BASIS

This budget request is based on a consulting firm's cost estimate.

6. FUNDING AND REVENUE DISCUSSION

N/A

7. OPERATING BUDGET AND OTHER IMPACTS

The removal of the derelict dock will reduce the maintenance demand on the operating budget.

8. PROJECT STATUS

Work is currently underway to procure a consulting firm through the RFP process for design, permitting, construction management, and related services for the demolition of the derelict dock.

9. ALTERNATIVES ANALYSIS

Washington State Department of Natural Resources (DNR) is requiring the demolition and removal of the condemned dock and creosote-treated pilings and debris. SWD obtained consultant estimates on replacement of the dock in addition to demolition, however the expense would be between \$20-30M. The decision was made to move forward with demolition (only) of the dock to avoid the possibility of DNR not renewing the marine lease. Dock demolition alternatives will be analyzed to determine the best option for removal.

10. OTHER AGENCY INVOLVEMENT

None anticipated.

11. ART ELIGIBILITY

This is a demolition project.

12. EQUITY AND SOCIAL JUSTICE IMPACT

N/A

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This is a demolition project. To the greatest extent possible materials will be recycled.

14. OTHER CONSIDERATIONS (OPTIONAL)

NARRATIVES SW PC PUY/KIT CNR ENV CTRL SYS 1129851

1. CURRENT PROJECT SCOPE

Post-closure Puyallup/Kit Corner Environmental Control Systems: Investigation at the Puyallup Landfill to evaluate the need for and implement environmental control system improvements to meet regulatory requirements under WAC 173-301 and SKCDPH Title 10; to minimize custodial operations and maintenance requirements; and to develop property for ultimate secondary use. This project includes planning, predesign, design, and construction for the upgrades.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

King County shall maintain the environmental control systems and perform environmental monitoring at Puyallup landfill until the demonstration of little to no settlement, leachate generation, landfill gas production, or impacts to groundwater, and receive regulatory approval from SKCDPH that this status has been achieved.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

SW PC PUY/KIT CNR ENV CTRL SYS

1129851

4. PROJECT BENEFITS/OUTCOMES

Increased efficiency of landfill gas control and treatment operations as long as needed, and produce groundwater quality improvements that result in reduction of operational and maintenance costs. Improvements will reduce greenhouse gas emissions reduction, and the potential for both regulatory noncompliance due to malfunction of landfill control systems and misalignment with King County strategic goals. Investments will reduce the ongoing costs of landfill gas and water management, benefit the atmosphere by reducing fugitive emissions, and help SWD support ending post-closure care under the regulations. SWD will develop goals for the Puyallup landfill. The budget request for this iterative project will execute recommendations from initial investigation and mitigation. The iterative phases include: investigation, mitigation implementation, monitoring to determine whether additional mitigation is needed and future mitigation as need to meet project goals.

5. BUDGET REQUEST BASIS

The 2019-2020 budget request is based on similar completed projects.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

Increased efficiencies in landfill gas control and treatment, and groundwater quality improvements, resulting in reduced operational and maintenance costs. Achievement of negotiated agreements on program objectives with Seattle-King County Department of Health and completion of program objectives. Preparing the properties to support secondary beneficial uses.

NARRATIVES

1. CURRENT PROJECT SCOPE

Facilities Relocation - The July 2010 final impact statement for the Cedar Hills Regional Landfill considered five action alternatives for extending the life of Cedar Hills. One of those included development of new disposal capacity in the southeast section of the site including the area currently containing administrative and maintenance facilities. Under this project, support facilities that are not essential to continuing landfilling in the southeast section will be relocated off site, and those functions and facilities that are mandatory to remain on site at Cedar Hills to continue landfilling will be relocated within the boundary of Cedar Hills. To the extent possible, Solid Waste will utilize property already within the division's possession to accommodate these new facilities.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

SW FACILITIES RELOCATION

1133918

3. PROJECT JUSTIFICATION

The remaining capacity of the Cedar Hills Regional Landfill (as of September 2017) is 14.3 million cubic yards. This capacity is expected to be exhausted in early 2025. Beyond 2025 the landfill will require a new cell developed in order to continue to operate in its current capacity. The facilities are currently located where the SW cell could be located and need to be relocated to support future landfilling efforts.

4. PROJECT BENEFITS/OUTCOMES

The project will give the SWD Operations section employees a workplace more aligned with other county employees, and will make space available at the Cedar Hills Regional Landfill for development of future landfill cells to provide additional capacity.

5. BUDGET REQUEST BASIS

A rough order magnitude estimate was developed by a consultant and the information here reflects that. At present, the division is developing alternatives and will prepare a new cost estimate under CIP 1124106 SW CH SUPPORT FACILITIES EVA, which also assessed the condition of the existing facilities and the feasibility of moving them to new locations. Unfortunately, that study concluded that most existing facilities had already served their useful life.

6. FUNDING AND REVENUE DISCUSSION

The project's funding will primarily come for bond issuances and some fund balance from the Construction Fund.

7. OPERATING BUDGET AND OTHER IMPACTS

Operating budget impact is one of the criteria being used to evaluate alternatives.

8. PROJECT STATUS

Not started.

9. ALTERNATIVES ANALYSIS

Three to five alternatives will be evaluated to identify the best possible and cost-effective options to relocate facilities from Cedar Hills while maintaining operational capabilities.

10. OTHER AGENCY INVOLVEMENT

The distribution for the 2010 final EIS included: City of Issaquah, City of Maple Valley, City of Renton, City of Newcastle, Department of Development and Environmental Services, Department of Natural Resources and Parks, Civil Division of the Prosecuting Attorney's Office, Wastewater Treatment Division, Seattle/King County Department of Public Health, Water District 90, Washington State Department of Ecology, Washington State Department of Archaeology and Historic Preservation, Washington State Department of Transportation, Washington State REgion 4 Department of Fish and Wildlife, Washington State Department of Energy, Bonneville Power Administration, Region 10 United States Environmental Protection Agency, and Puget Sound Regional Council. After completion of alternatives evaluation and selection of preferred alternatives, a comprehensive stakeholders list will be developed to determine appropriate agency involvement.

11. ART ELIGIBILITY

Yes, this project is eligible. Current art calculation is full 1% of 2019-2020 budget request. The future total art contribution on this project may be adjusted to account for exempted portions of projects over \$10M.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

SW FACILITIES RELOCATION

1133918

12. EQUITY AND SOCIAL JUSTICE IMPACT

This project will be focused on equity investments for SWD employees, which will be measured by comparing conditions of the workplaces of downtown based employees to operations based employees. This project is aimed at addressing, correcting the inequity in workplace conditions and would fulfill the Investing in You requirements. Regarding this project, a Requirements Traceability Matrix (Matrix) will be used to specifically hold the project accountable for addressing the needs of employees and equity between work groups. The Matrix ensures that the division has met or to some degree accomplished its goal of Equity and Social Justice among SWD employees. The SWD project team has engaged with employees since December 2017 to learn of the values of what to include in an ideal workplace. This engagement will continue as the Matrix is developed when the project proceeds. An Equity Impact Review (EIR) will be conducted to account for the actual improvement of facilities and workplace conditions of operations based employees. The review will be conducted by the project team comprising of representatives from SWD work units, labor unions and the division's ESJ program and will consider the division's ability to provide for an employee's basic needs regardless of workplace location. Another EIR will be conducted to look at benefits and burdens of surrounding communities for sites in question. SWD anticipates using a Community Workforce Agreement for this project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Green building ordinance requirements will be followed during the design development.

14. OTHER CONSIDERATIONS (OPTIONAL)

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

16. PROJECT COMPLEXITY

NARRATIVES

SW ENUM & VASH TS SOLAR EFFNCY

1135055

1. CURRENT PROJECT SCOPE

Enumclaw and Vashon Transfer Station Solar Efficiency: Completion of energy efficiency improvements at the Enumclaw and Vashon transfer Stations, expanding on already-completed LED lighting replacement work. The lighting work will include enhanced control of exterior lighting to turn off lights after the stations close each evening. Controls of the facility compactors will reduce operating hours and wear and tear on that equipment. Some mechanical equipment control improvements will also take place. Also includes ~220 kW of solar at Enumclaw and ~180 kW at Vashon, covering over half of the energy use at each site. Assumes \$540,000 of State Commerce grant dollars. The solar work will likely NOT be done if the state grant is not received. Final determination of solar costs will be dependent on utility interconnection fees to be provided by Puget Sound Energy at a future date.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Funding the work through a FRED loan offers the opportunity for the division to continue to fund its Capital Asset Management Program, while doing "more" work through this revenue neutral or revenue positive approach. The project will help the division meet its Strategic Climate Action Plan goals and progress toward its 2025 carbon neutral requirement.

4. PROJECT BENEFITS/OUTCOMES

- Net present value of \$599,644 (including a cost of carbon)
- 1,611 MMBTU/year of reduced energy use
- 301 metric ton per year greenhouse gas reduction

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES	SW ENUM & VASH TS SOLAR EFFNCY	1135055
------------	--------------------------------	---------

5. BUDGET REQUEST BASIS

The budget was generated resulting from initial facility walkthroughs and solar system size scoping at the Enumclaw and Vashon Transfer Stations.

6. FUNDING AND REVENUE DISCUSSION

\$1,176,000 total project budget. Assumed \$540,000 grant dollars to offset a portion of project costs.

7. OPERATING BUDGET AND OTHER IMPACTS

Annual energy savings of \$42,008 (year one figure)

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

The alternatives considered were other efficiency actions and various solar system sizes.

10. OTHER AGENCY INVOLVEMENT

State Department of Commerce and Puget Sound Energy for potential grants

11. ART ELIGIBILITY

No, equipment.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Neutral

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Direct and significant

14. OTHER CONSIDERATIONS (OPTIONAL)

The project will be a catalyst for other DNRP and county agencies to pursue advanced energy efficiency work and solar installations.

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

16. PROJECT COMPLEXITY

The efficiency work should be fairly straightforward, but will require staff engagement to operate the compactors efficiently. The solar work will be slightly more complex than previous county systems, since the installations will likely be roof and ground based, but the primary impact will be slightly higher cost. Determination will need to be made about re-roofing Enumclaw before any work would be completed.

17. CAPACITY TO IMPLEMENT THE PROJECT

The project will be able to be implemented through support of an Energy Savings Performance Contract, and support from the DNRP Director's Office.

18. PROJECT RISKS

Risks are primarily related to current uncertainties surrounding solar structural and electrical infrastructure issues at both sites, which should be known by the end of September.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES SW CH REV SITE DEV PLAN 1033516

1. CURRENT PROJECT SCOPE

Cedar Hills Revise Site Development Plan: The scope of this project is to revise the site development plan with the purpose of maximizing the life of the Cedar Hills Regional Landfill (from its current projected useful life of 2030) and also develop an Environmental Impact Statement (EIS) to evaluate the environmental impacts of continued development. Solid Waste (SWD) anticipates that the work will proceed in two phases as follows: first, devise a set of five alternatives which would allow further development of the landfill, and provide estimated costs per ton for that development; second, prepare an EIS report based on the selected five (5) alternative site development plan options following the State Environmental Policy Act (SEPA) review process including public consultation process, environmental studies, etc. Five environmental studies will be completed to supplement the existing 2010 EIS and providing inputs for the proposed EIS report and also to evaluate the impacts until 2040. These studies include Noise & Vibration Analysis, Odor and Air Quality, Visual and Aesthetic Impact, Traffic Impact study. In addition to the five site development plan alternatives, another site development plan with minimum relocation of the CHRLF support facilities will also be developed for providing cost-economic inputs to the project.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

SW CH REV SITE DEV PLAN

1033516

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

Current life of the Cedar Hills Regional Landfill is projected to 2027. There is a potential for extending the life of the landfill life for another 15 -20 years through adoption of the innovative technologies and landfilling practice and also better utilizing the remaining areas. Implementation of the project will revise the existing Cedar Hills Regional Landfill Site Development Plan to extend the life of the landfill to at least 2040.

4. PROJECT BENEFITS/OUTCOMES

The 2019 Solid Waste Comprehensive Plan identified continued landfilling at the Cedar Hills Regional Landfill as the long-term disposal option with the lowest rate impact. This planning project builds upon the analysis to identify the preferred method of landfill development of the five alternatives previously identified.

5. BUDGET REQUEST BASIS

The initial phase (conceptual design) of this project began in 2008 and was completed in 2010 with an appropriated budget of \$1.324 million. For the new biennium, Solid Waste will use the additional appropriation to add environmental studies (along with associated SWD oversight of the consultants) to explore the viability of the five options and which of the five should be further explored through a SEPA process which includes public comment. The findings will inform and be incorporated into the EIS. The budget also anticipates for preparing a response report on the comments during the public hearing process.

6. FUNDING AND REVENUE DISCUSSION

This project will be funded by landfill development funds within the landfill reserve fund.

7. OPERATING BUDGET AND OTHER IMPACTS

No significant changes in the current operating budget has been anticipated for any of the five alternatives.

8. PROJECT STATUS

Technical studies were completed in March 2018. Environmental Impact Statement (EIS) for the selected alternatives will be prepared in 2019.

9. ALTERNATIVES ANALYSIS

Five alternative site development plans have been developed and analyzed in terms of landfilling life (air space), capital investment (cell development and cell closure), operating cost, regulatory requirements. But no particular alternative has been selected yet until the environmental review (SEPA process) is completed.

10. OTHER AGENCY INVOLVEMENT

Public Health - Seattle and King County and the Washington State Department of Ecology are the regulators of landfill development at the Cedar Hills Regional Landfill.

11. ART ELIGIBILITY

Landfill exemption

12. EQUITY AND SOCIAL JUSTICE IMPACT

Implementation of this project will have equity and social justice impact through: Engaging an engineering consulting firm through soliciting open proposals; utilizing small contractors & suppliers (SCS) for conducting the investigative studies; maximizing utilization of the landfill space at Cedar Hills landfill thus saving rate payers money; outlining the best operational and management practices for future landfill area development.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

This is a planning level project only. SCAP is not applicable. Once the preferred alternative development plan is selected, a new landfill development project will be developed and implemented when green building aspect will be considered.

NARRATIVES

1. CURRENT PROJECT SCOPE

Cedar Hills Landfill Area 7 Closure: This project consists of a five-stage construction of final cover system over a projected surface area of about 60 acres of Refuse Area 7 between the year 2011 and 2020. The staged construction are planned in 2013, 2015, 2017, 2018, and 2020. The work includes preliminary and final design, preparation of contract documents, and the installation of liner, landfill gas, leachate, and surface water control facilities.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

SW CH AREA 7 CLOSURE

1033542

3. PROJECT JUSTIFICATION

The Washington State Administrative Code (WAC 173-351) requires that final cover be placed upon the completion of a landfill unit. A staged approach was selected for the construction of final closure facilities in order to increase the efficiency of the landfill gas collection system. Peak landfill gas production typically occurs about five years after placement of refuse. The installation of final cover in stages will enhance gas collection from the older in-place refuse and will reduce the generation of leachate. This project is also required to comply with permit conditions for operating the landfill issued by the Public Health - Seattle & King County.

4. PROJECT BENEFITS/OUTCOMES

Closure projects benefit protection of human health and the environment by minimizing fugitive emissions of landfill gas from the landfill areas, and by minimizing rainfall intrusion (and leachate generation) into refuse areas where the division is not currently working.

5. BUDGET REQUEST BASIS

A baseline cost estimate has been prepared for Stage 1 & 2 closure and a planning level order of magnitude cost estimate has been developed for the whole project. Basis of cost estimates: Construction cost estimate was based on the assumption that construction cost trend for the elements for the older CHRLF Areas 4, 5, and 6 closure will not change substantially unless the typical configuration of the cover system changes and except for normal inflation and lack of adequate competitions for the construction contractors. Being the most recent construction, Area 7 stage 1 & stage 2 closure actual construction cost were given more weight as the configuration of the cover system changed (Exposed Geomembrane) from the previously constructed typical cover system. The construction cost for interim exposed geomembrane cover based closure was approximately \$330,000 per acre. A team of experienced SWD staff reviewed and evaluated the historical closure costs of the Areas 4, 5, 6, and 7 (Stage 1 & 2 closure only) it was determined that, for typical closure cover system, the overall all interim, interim final, and final cover construction cost will be approximately \$250,000, \$330,000, and \$380,000 per acres (updated to 2015 price adjusted to the construction cost index as well as nominal inflation factor) respectively; Based on the above cost assumption, the total budget for the whole project has been estimated as Approx. \$40.92 million (inflated).

6. FUNDING AND REVENUE DISCUSSION

Landfill Reserve Funding# 3910

7. OPERATING BUDGET AND OTHER IMPACTS

No major changes in the current operating budget for the Area 7 is expected.

8. PROJECT STATUS

Stage 3 Closure was substantially complete on 11/11/2017. Stage 4 Closure substantial completion is expected on 9/30/2018. Stage 5 Closure is expected to begin in May 2019.

9. ALTERNATIVES ANALYSIS

Alternative design analysis for the whole project has been completed in 2012.

10. OTHER AGENCY INVOLVEMENT

Seattle-King County Department of Public Health, Department of Ecology and Puget Sound Clean Air Agency (PSCAA)

11. ART ELIGIBILITY

Landfill area.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Implementation of this project will bring the following Equity and Social Justice impacts: 1) Opportunities for the small contracting and suppliers (SCS) and women & minority firms to participate in every phases of the project; 2) Provide opportunities for apprentices program & employment; 3) This project is for compliance with the Federal, Department of Ecology (DOE), and County health and environmental control regulations; and 4) Will discharge its obligation for disposing the MSW following the best engineering method.

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

SW CH AREA 7 CLOSURE

1033542

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Strategic Climate Action Plan Alignment for this project will be done by taking measures on reducing green house (GHG) emissions, using increased percentage of recyclable materials, employing energy efficient construction equipment, utilizing onsite water conservatism (using stormwater for dust suppression during construction). The rating level targeted is for this project is Gold. The additional cost associated with achieving LEED or scorecard certification is 7,262 dollars. The green building and sustainable development strategies employed in this project are greenhouse gas (GHG) Emissions savings by installing geomembrane materials throughout the slopes; use of on-site soil materials. Use of on-site stormwater for dust control instead of using potable water, use of energy efficient construction equipment including dozers, excavator, grader, etc. Use of exposed geomembrane (EGC) as interim final cover thus avoid erosion loss. Installation landfill gas (LFG) collectors and captured GHG generated from the refuse disposed areas. Recycling of HDPE and other construction demolitions materials .

NARRATIVES SW LFR CAPITAL PROJ CNTRL SPRT 1033547

1. CURRENT PROJECT SCOPE

Landfill Reserve Capital Project Control Support: This project will fund support for SWD to implement standardized project management processes including CPMWG requirements to ensure compliance with Ordinance 16764 as well as Executive Order 8-1, 8-2, 8-3, and 8-4. This includes the update of project management manual, tracking performance, and implementation of a Project Management Document Management system for capital projects reporting. In order to standardize project management in Solid Waste Division (SWD), a Centralized Project Management Unit (CPMU) was formed in 2015. Standardized project management process, protocols, training for CPMU will be developed through this project. This project will fund the work associated with developing, updating, and maintaining Project Information System Management (PRISM) System to track, budget, and report capital projects performance. PRISM maintenance includes upgrade related costs, licensing fees, and WTD maintenance costs. On-call project control consultants are also included as part of this project.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

3. PROJECT JUSTIFICATION

This project is necessary to implement standardized project management processes for new and modified capital projects to meet capital project reporting and compliance of new Capital Project Management Working Group (CPMWG) requirements, Ordinance 16764, and Executive Orders 8-1 and 8-2. In order to improve project performance reporting, electronic document management, document control, and workflow management. This project will ensure compliance with the CPMWG and other King County policies and procedures related to project management and project control.

4. PROJECT BENEFITS/OUTCOMES

A project management process mapping will be conducted to improve workflow and efficiency.

5. BUDGET REQUEST BASIS

This budget request was developed based on the current needs, previous years actual expenditures, and anticipated future needs.

NARRATIVES

SW CH AREA 8 CLOSURE		1112415
1. CURRENT PROJECT SCOPE		
Cedar Hills Landfill Area 8 Closure: This project consists of a multistage construction of the final cover system over Refuse Area 8 between the years 2019 and 2027. The staged construction years still need to be determined. The work includes preliminary and final design, preparation of contract documents, and the installation of liner, landfill gas, leachate, and surface water control facilities.		
2. PROGRAMMATIC PROJECT DISCUSSION		

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

SW CH AREA 8 CLOSURE

1112415

3. PROJECT JUSTIFICATION

The Washington State Administrative Code (WAC 173-351) requires that final cover be placed upon the completion of a landfill unit. A staged approach was selected for the construction of final closure facilities in order to increase the efficiency of the landfill gas collection system. Peak landfill gas production typically occurs about five years after placement of refuse. The installation of final cover in stages will enhance gas collection from the older in-place refuse and will reduce the generation of leachate. This project is required to comply with permit conditions for operating the landfill.

4. PROJECT BENEFITS/OUTCOMES

Closure projects benefit protection of human health and the environment by minimizing fugitive emissions of landfill gas from the landfill areas, and by minimizing rainfall intrusion (and leachate generation) into refuse areas where the division is not currently working.

5. BUDGET REQUEST BASIS

Budget request is based on previous project experience.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

There are no anticipated operating budget impacts.

8. PROJECT STATUS

Project planning will start in 2019.

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

Agencies that provided input into the development of the facility included Ecology, King County Department of Health, and the Bonneville Power Administration (BPA). Ecology provides the Health department with expertise on project design issues and compliance with WAC requirements.

11. ART ELIGIBILITY

Landfill area

12. EQUITY AND SOCIAL JUSTICE IMPACT

Equity impact analysis will be performed during planning.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Strategic Climate Action Plan Alignment for this project will be done by taking measures on reducing green house (GHG) emissions, using increased percentage of recyclable materials, employing energy efficient construction equipment, utilizing onsite water conservation (using stormwater for dust suppression during construction).

14. OTHER CONSIDERATIONS (OPTIONAL)

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

NARRATIVES SW CHRLF PUMP STN REPAIR 1129844

1. CURRENT PROJECT SCOPE

Cedar Hills Regional Landfill Pump Station Repairs Project - The goal of this scope of work is to inspect, evaluate, design, and implement the repairs, calibrations, and improvements required to optimize pump capacities and ensure their continued safe and reliable operation to Cedar Hills Regional Landfill Pump Stations 1A, 2, 3, and 4. As part of the inspection, leachate inflows must first be measured in order to appropriately calibrate the pumps at each of the four pump stations. Additionally, a wet well leak test must determine if there are any outward flows of leachate from pump station 1A through any observed cracks, seams or panel joints.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

SW CHRLF PUMP STN REPAIR

1129844

3. PROJECT JUSTIFICATION

Past inspections of Pump Station 1A identified liner delamination and inlet valve issues. Personal communication with Solid Waste Division Operations and Facility, Engineering, and Science Unit staff has indicated that Pump Stations 1A, 2, 3, and 4 require inspection, and an evaluation and analysis of their pumps' ability to handle the average and peak leachate inflow into each pump.

4. PROJECT BENEFITS/OUTCOMES

The repairs implemented as a result of this inspect and evaluation will extend the life of the landfill, while managing leachate and ensuring environmental compliance.

5. BUDGET REQUEST BASIS

The budget was developed based on problems identified in an inspection report and personal communication with King County Operations and Solid Waste Facility, Engineering, and Science Unit (FESU) Staff on problems and requirements for Pump Stations 1A, 2 ,3 and 4.

6. FUNDING AND REVENUE DISCUSSION

A Public Works Board Construction loan has been awarded for this project. The loan amount equates to \$3,000,000, over a 20 year term, at an interest rate of 1.66%. Contract documents for this loan were submitted to King County Solid Waste Division on 4/18/8 for review and approval. Until this loan is approved, the project will be funded by the Landfill Reserve Fund's fund balance.

7. OPERATING BUDGET AND OTHER IMPACTS

The repairs planned for the pump stations will reduce the maintenance demand on the operating budget.

8. PROJECT STATUS

Work is currently underway to hire a firm to provide consulting and related services to identify and design repairs for PS 1A, 2, 3 and 4. The goal of the scope of work to be published, is to determine the level of repair, calibration, and improvement required to extend the life of the landfill, while managing leachate and ensuring environmental compliance.

9. ALTERNATIVES ANALYSIS

An alternatives analysis will be conducted to identify and evaluate two (2) to three (3) alternatives for the repairs, calibrations and improvements selected by the KCSWD for implementation.

10. OTHER AGENCY INVOLVEMENT

External Agencies: Department of Ecology and Department of Health. May need to coordinate with or obtain permits from these agencies.

11. ART ELIGIBILITY

Solid waste landfills projects are exempt from 1% for Art.

12. EQUITY AND SOCIAL JUSTICE IMPACT

An Equity and Social Justice Assessment and Action Plan will be developed and maintained for this project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Design alternatives will consider sustainable and energy efficient materials and equipment for the pump station repairs, calibrations and improvements.

14. OTHER CONSIDERATIONS (OPTIONAL)

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

NARRATIVES

SW CHRLF LEACHATE LAGOONS

1133921

1. CURRENT PROJECT SCOPE

Cedar Hills Regional Landfill Leachate Lagoons: This project will upgrade the leachate lagoons at Cedar Hills Regional Landfill. Improvements include bringing the liner system into current regulatory compliance, replacing the aerator system for improved energy efficiency, replacing aging effluent pumps, addressing any identified pre-treatment needs for permit discharge compliance and upgrading the electrical controls and wiring.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project will replace and upgrade aging infrastructure, address regulatory compliance, reduce energy demand and improve electrical safety at the site.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES	SW CHRLF LEACHATE LAGOONS	1133921
------------	---------------------------	---------

4. PROJECT BENEFITS/OUTCOMES

The project benefit is to meet permit compliance at Cedar Hills Regional Landfill

5. BUDGET REQUEST BASIS

Budget was based on costs of similar construction at the site. Lagoon costs were based on contaminated stormwater lagoon costs, treatment based on similar stormwater treatment and electrical based on consultant prepared estimate for similar work.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

With these improvements, operations should expect energy cost savings.

8. PROJECT STATUS

Proposed 2019-2020 project

9. ALTERNATIVES ANALYSIS

10. OTHER AGENCY INVOLVEMENT

KCIW defines the permit conditions for leachate discharge. Project team will coordinate for compliance Public Health and the Department of Ecology will be involved as the agencies monitoring compliance with the Solid Waste Handling Permit and the Stormwater permit Bonneville Power Authority (BPA) will be involved to permit work within the power line easement

11. ART ELIGIBILITY

1) Project is infrastructure at a landfill

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Project should reduce energy consumption at the leachate lagoons.

14. OTHER CONSIDERATIONS (OPTIONAL)

ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY

15. STRATEGIC IT PLAN ALIGNMENT

16. PROJECT COMPLEXITY

17. CAPACITY TO IMPLEMENT THE PROJECT

1. CURRENT PROJECT SCOPE

Cedar Hills Regional Landfill East Perched Zone Remediation Investigation and Feasibility Study: This project will complete the Remediation Investigation and Feasibility Study for the East Perched Zone. This effort began in the Environmental Control Systems Modifications project. The Department of Ecology recommended additional work beyond the scope of the original project.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

This project will complete work on the East Perched Zone and meet regulatory agency recommendations for investigation.

4. PROJECT BENEFITS/OUTCOMES

This project is part of the compliance process for the East Perched Zone remediation.

NARRATIVES SW CHRLF AREA 9 NAD 1133923

1. CURRENT PROJECT SCOPE

Cedar Hills Regional Landfill Area 9 New Area Development: The July 2010 impact statement for the Cedar Hills Regional Landfill considered five action alternatives for extending the life of Cedar Hills. One of those (Alternative 5) included development of new disposal capacity in the southeast section of the landfill by developing Area 9. Development of Area 9 would require excavation of approximately two million cubic yards of soil, construction of a retaining wall and bottom liner system. The Area 9 Development project will add 10.4 million cubic yards of disposal capacity to Cedar Hills.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

SW CHRLF AREA 9 NAD

1133923

3. PROJECT JUSTIFICATION

The remaining capacity of Cedar Hills Regional Landfill (as of September 2017) is 14.3 million cubic yards. This capacity is expected to be exhausted in early 2025. This condition leaves Cedar Hills with less than seven years of remaining capacity. Therefore, Area 9 development construction must be completed by the end of 2024 and must be ready to accept waste in early 2025.

4. PROJECT BENEFITS/OUTCOMES

This project will add new capacity to the landfill.

5. BUDGET REQUEST BASIS

The budget is based on prior projects that developed earlier sections of the landfill. The project is substantially similar to those previous landfill development projects. The budget is based on engineering quantity estimates of major items and application of appropriate contingency factors for estimates made at the planning information level.

6. FUNDING AND REVENUE DISCUSSION

Funding for this construction activity is collected through Solid Waste Rates, a portion of which is deposited into the Landfill Reserve Fund to pay for new area development.

7. OPERATING BUDGET AND OTHER IMPACTS

A related project will require relocation of support and administrative facilities to on and off-site locations. The project may have a short-term impact to the operating budget as some staff will transition from Area 8 to Area 9 which may involve additional staffing or overtime, and possibly equipment rental or contractor procurement.

8. PROJECT STATUS

This is a new project and will start in 2019.

9. ALTERNATIVES ANALYSIS

Area 9 was considered as an alternative for development of the Cedar Hills Regional Landfill site. It was estimated that about 7 to 8 years of disposal capacity would be gained by construction of Area 9. This landfilling option was analyzed in the 2010 Site Development Plan.

10. OTHER AGENCY INVOLVEMENT

Several agencies such as City of Issaquah, City of Maple Valley, City of Renton, City of Newcastle, Department of Development and Environmental Services, Department of Natural Resources and Parks, Civil Division of the Prosecuting Attorney's Office; Wastewater Treatment Division, Seattle/King County Department of Public Health, Water District 90, Washington State Department of Ecology, Washington State Department of Archaeology and Historic Preservation, Washington State Department of Transportation, Washington State Region 4 Department of Fish and Wildlife, Washington State Department of Health, United States Department of Energy Bonneville Power Administration, Region 10 United States Environmental Protection Agency, United States Fish and Wildlife Service, Puget Sound Clean Air Agency and Puget Sound Regional Council had input into the development of the project. Agencies that provided input in the development of the facility included the State Department of Ecology, King County Department of Health, Puget Sound Clean Air Agency and the Bonneville Power Administration. Ecology provides the Health Department with expertise on project design issues and compliance with WAC requirements. Health provides the final approval or project documents.

11. ART ELIGIBILITY

Landfill exemption.

12. EQUITY AND SOCIAL JUSTICE IMPACT

An equity impact review will be performed during the planning process. Review results will be incorporated during the design process into the project.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

The project will strive to reduce Green House Gas emissions during the construction phase. The project will encourage the usage of renewable energy fuel such as biofuels. Sustainability elements will be considered and aiming towards a platinum score card.

NARRATIVES SW CHRLF NFS ELECTRICAL 1133924

1. CURRENT PROJECT SCOPE

Cedar Hills Regional Landfill North Flare Station (NFS) Electrical: Replacement North Flare Station (NFS) Motor Control Center (MCC) will replace the existing control panels at the NFS. The new MCC will be in an enclosed building that will power and control the existing blowers and flares. The new building will be built outside the gas classification footprint that would require an explosion proof building, the classification is class 2 div 1. The existing electrical meter will also be moved out of the above mentioned classified area into a non-explosive gas classified area.

2. PROGRAMMATIC PROJECT DISCUSSION

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

SW CHRLF NFS ELECTRICAL

1133924

3. PROJECT JUSTIFICATION

The current control panes for the NFS gas collection system and the electric meter are in an explosive gas classified area. The current area is classified as class 2 div 1, all equipment in this area must be in an enclosure rated for this type of area. The current panel enclosures and electric meter are not rated for this area. The current system has been granted grandfather rights and can continue to operate. If there is a failure to the current system and an electrical permit is needed to perform this work, it will be denied. Any new work that needs a permit will not be allowed. If a problem occurs with the electrical that cannot be repaired without a permit, the NFS gas collection system will be shutdown.

4. PROJECT BENEFITS/OUTCOMES

The new MCC will be out of the class 2 div 1 area and will meet current electrical code requirements. This project also includes the replacement of the existing air compressor that controls the valves for the flares and also a new generator to maintain the station's ability to function during a power outage. This project also includes the addition of Variable Frequency Drives (VFD) to control the existing blowers. The addition of these VFDs will enable the system to control the speed at which the blowers are running. This will provide an energy cost savings and also the ability to control the collection of landfill gas more efficiently.

5. BUDGET REQUEST BASIS

A Solid Waste consultant created an engineering estimate for the construction of a new Motor Control Center. (MCC) The estimate provided to SWD is the amount requested for the biennial budget. The design for the MCC was covered under an earlier appropriation. The requested amount will support the RFP process for selecting a contractor and the construction of the MCC.

6. FUNDING AND REVENUE DISCUSSION

7. OPERATING BUDGET AND OTHER IMPACTS

There is not an anticipated cost increase to operate a new facility.

8. PROJECT STATUS

This is a new project.

9. ALTERNATIVES ANALYSIS

At 30 percent design there were alternatives that were proposed. The options were: 1) Maintain the existing facility as is; 2) Upgrade the existing facility; 3) Design a non-enclosed control center; and 4) Design an enclosed facility. The reasons for the choice made are: 1) SWD would not be able to make any upgrades or changes to the existing system that required a permit. SWD is anticipating upgrades to the NFS blower sytem by adding Variable Frequency Drives (VFD) to control the blowers. This upgrade cannot be performed with the existing panels. 2) Trying to upgrade the system while keeping the gas collection system functioning would not be possible. To upgrade the system the power to the existing panels that control the flares, blowers and the pipeline to BEW that would need to be shutoff for approximately a minimum of a week. This is not a viable option. 3) A viable option was to maintain the gas collection system and allow for future growth. The other options did not provide for the protection of employees working in this area during inclement weather. 4) This viable option allows for the continuance of the gas collection system and future growth. This options also provides for the protection of employees working in this area during inclement weather. This option also allows for the installation of a workstation for technicians to use for monitoring the system and to make any needed changes to the system. As a result, the option was selected.

10. OTHER AGENCY INVOLVEMENT

This project will have a positive impact on the way gas is delivered to Energy Washington (BEW), by installing VFDs, the landfill gas (LFG) system will be able to control the collection of gas more efficiently. This will also have a positive effect on the way the flare station is operated during high pressure situations. This will also allow for a more fluid transition during the stage change request from BEW.

11. ART ELIGIBILITY

Project located in landfill.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Not applicable to project.

5. BUDGET REQUEST BASIS

The Children and Family Justice Center project requires a 15% budget increase primarily due to permit approval lag time, soil quality remediation costs, and increased construction costs in a highly competitive local construction sector. Interim financing is available until the land parcels near the CFJC can be sold to reimburse the project.

6. FUNDING AND REVENUE DISCUSSION

This project will be funded using a combination of remaining levy proceeds and sale proceed revenue for properties that will be declared surplus to County needs when the project is completed.

7. OPERATING BUDGET AND OTHER IMPACTS

This budget increment request does not impact the operating budget.

8. PROJECT STATUS

On-going standalone project.

9. ALTERNATIVES ANALYSIS

Cost reduction options were considered in the development of the 2019-2020 budget request.

10. OTHER AGENCY INVOLVEMENT

The King County Information Technology department and the Prosecuting Attorney Office have been involved in the implementation of this project.

11. ART ELIGIBILITY

No. Cost containment allowed for projects over \$10 million.

12. EQUITY AND SOCIAL JUSTICE IMPACT

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

14. OTHER CONSIDERATIONS (OPTIONAL)

Compliance with proviso P15 of Ordinance 18239 as amended in Ordinance 18425 is contingent upon the availability of \$5.3 million of CFJC levy proceeds upon completion of the capital project. Due to the cost drivers described above, the project will require use of all available levy proceeds in addition to a share of the proceeds from the planned sale of Youth Service Center property to be declared surplus to the needs of King County. Since it is no longer feasible to satisfy the requirement of the proviso and because the \$5.3 million of budget authority and corresponding levy proceeds controlled by the proviso are necessary to complete the project, the \$5.3 million appropriation authority is no longer available and reappropriated in this capital project budget proposal. This procedure to restore the availability of the \$5.3 million is implemented in the project phase detail shown above. Excess property sale revenue may be available at the close of the project to partially satisfy the intended proviso outcome.

NARRATIVES

DES FMD PRELIM PLAN & DESIGN

1121771

1. CURRENT PROJECT SCOPE

This project provides the budget flexibility to address planning and preliminary design needs for projects not anticipated during the biennial budget process while requiring immediate action prior to inclusion in the omnibus supplemental budget ordinance process. Once this planning and preliminary design phase is complete using this project budget, then the full project is proposed by the Executive and adopted by the Council. The full project budget including the construction phase typically reimburses this project.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

NARRATIVES

DES FMD BRR EMER NEED-XSTG PR

1124202

1. CURRENT PROJECT SCOPE

This project provides contingent budget authority available to be used to supplement budget in other projects in the fund in the event that an unanticipated cost requires additional budget authority. The Facilities Management Division has a monthly internal process to review proposed use of this contingency budget. Approved usage is included in the quarterly report to the County Council.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

Projects that have had preliminary estimates developed for the 2019-2020 budget have varying levels of risk of a cost increase as more information is gathered in the pre-design and final design phases. Two projects have budgets based on preliminary planning level estimates and may need to access the requested Emergent Need budget.

1. CURRENT PROJECT SCOPE

Phase 1: Project Initiation; form Task Forces, Steering and Oversight Committees, hire consultant team; Develop Project Vision, Guiding Principles and Goals for the Strategic Plan, Identify KC Operational and Facilities Needs Assessment.

Phase 2: Analysis Phase: Perform Gap Analysis, Develop Alternatives; Evaluate Alternatives and make Recommendation; Select a Preferred Alternative; Develop Site Master Plan

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

Problem statement, risk: Many of King County's facilities in downtown Seattle are underutilized, functionally obsolete, or facing repairs that may be financially infeasible. With twenty-one agencies and over 2M sf of assets spanning eight downtown blocks, this presents an unmatched opportunity to holistically rethink how government can better serve through the places it has the ability to shape.

How should the County build for a future of effective and efficient service that is equitable and fair, financially sustainable, environmentally resilient, and regionally collaborative?

4. PROJECT BENEFITS/OUTCOMES

KC will have a Master Plan that strategic identifies an agreed upon plan on how to accommodate future growth and make financially responsible decision regarding KC owned facilities and the County's operational needs.

5. BUDGET REQUEST BASIS

To complete the planning effort as requested per the King County Council.

Capital Appropriation Proposal

NARRATIVES

DES FMD KCIT RADIO IN-BLDG

1132306

1. CURRENT PROJECT SCOPE

Department of Executive Services (DES) Facilities Management Division (FMD) and King County Information Technology (KCIT) Radio In-Building (In-Bldg) Coverage Project includes the following parts:

- (1) Replacement of the King County Courthouse (KCCH) 800 MHz Repeater and, potentially, all existing KCCH wiring/infrastructure. The KCCH repeater supports 800 MHz radio traffic for all radios users within all 12 floors of the KCCH building, including DAJD's court detail operations on the 12th floor, Work Education Release operations on the 10th and 11th floors, the DAJD ADMIN Division on the 2nd floor, FMD and Court House Security throughout the building, and the tunnel connecting KCCH to the Admin Building.
- (2) Replacement of the 800 MHz Bi-Directional Antenna (BDA) at Maleng Regional Justice Center (MRJC) Detention and, potentially, all existing MRJC wiring/infrastructure. The BDA is tied into a trucked radio system that supports DAJD operations.
- (3) Replacement of the 800 MHz BDA at MRJC Court Rotunda and, potentially, all existing wiring/infrastructure. The BDA is configured into a Distributed Antenna Network (DAN) that supports the Courts' area of the MRJC. The hardware supporting this DAN is outdated and not compatible with PSERN.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

DES FMD KCIT RADIO IN-BLDG

1132306

3. PROJECT JUSTIFICATION

It's 100% certain that after PSERN goes live, the current in-house radio systems in the MRJC and the Courthouse buildings will have a reduced functionality. Reduced functionality refers primarily to the rate of successful radio transmissions in a building. Law and public safety entities operating within these facilities use radios as their primary communication tool. Reduced radio coverage will result in safety hazards for local jurisdictions that use these facilities as part of their daily business operations. Approximately, 255 officers from DAJD/KSCO and 50 officers from 10 jurisdictions come in to MRJC or KCCH on a given day. Therefore, the upgrade project is a life/safety initiative. Below is the estimated impact of PSERN implementation with and without the proposed Radio In-Building Coverage project:

KCCH:

90-95% current (before PSERN)

40% without upgrade (live PSERN)

90-95% with upgrade (live PSERN)

MRJC Detention:

90-95% current (before PSERN)

10-20% without upgrade (live PSERN)

90-95% with upgrade (live PSERN)

MRJC Court area:

90-95% current (before PSERN)

50-60% without upgrade (live PSERN)

90-95% with upgrade (live PSERN)

4. PROJECT BENEFITS/OUTCOMES

This project will ensure reliable radio communication infrastructure compatible with the PSERN radio system project implementation.

5. BUDGET REQUEST BASIS

The consultant alternatives analysis report, which was funded with budget approved in a 2017 omnibus ordinance, will be completed in February 2019. FMD is awaiting the report to develop an estimate for the implementation phase of this project. In anticipation of the consultant report, a placeholder budget of \$2.5 million is proposed in the 2019-2020 budget. This additional appropriation will ensure that this high priority life safety project can proceed on an expedited schedule and reserve \$2.5 million of revenue backing that has been identified and pledged to this project. If the final total cost estimate turns out to be less than the prior appropriation combined with the \$2.5 million requested herewith, a supplemental budget ordinance will be submitted to cancel the unneeded budget. If the final total cost estimate is greater than \$2.5 million, the supplemental ordinance will request additional budget.

6. FUNDING AND REVENUE DISCUSSION

The proposed 2019-2020 budget increment is revenue backed using remaining bond proceeds for two other facility projects that had expenditures less than budget and thereby made the bond proceeds available for re-programming for a facility related project. Once the consultant report is received in February 2019, the total project costs will be determined and the \$2.5 million amount will be increased or decreased to match the remaining project implementation costs. The funding source will be determined at that time, though it is likely that any amount in excess of \$2.5 million will be bond-financed.

7. OPERATING BUDGET AND OTHER IMPACTS

This project is not likely to impact operating budgets once implemented.

8. PROJECT STATUS

The consultant has been selected to develop alternatives and design drawings in preparation for the implementation phase. The alternatives and design phase is consistent with the scope of the project budget approved in 2017. The consultant is scheduled to submit a report to King County in February of 2019.

9. ALTERNATIVES ANALYSIS

Alternatives analysis will be completed in February 2019.

Capital Appropriation Proposal

11. ART ELIGIBILITY		
IT project. The project is not visible to the public.		
12. EQUITY AND SOCIAL JUSTICE IMPACT		
N/A		
13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT		
N/A		
14. OTHER CONSIDERATIONS (OPTIONAL)		
ADDITIONAL QUESTIONS FOR IT PROJECTS ONLY		
15. STRATEGIC IT PLAN ALIGNMENT		
The \$2.5 million budget proposed in the 2019-2020 budget is a mechanism to reserve available funding for the eventual implementation. This section will be updated when the consultant report is completed in February 2019 and the final budget amount is determined and proposed.		
16. PROJECT COMPLEXITY		
This section will be updated when the consultant report is completed in February 2019 and the alternatives analysis is complete.		
17. CAPACITY TO IMPLEMENT THE PROJECT		
This section will be updated when the consultant report is completed in February 2019.		
18. PROJECT RISKS		
If budget is not available at the time of alternatives analysis completion there is risk that the implementation of the Radio In-Building Coverage project will not be completed in alignment with the PSERN project. This proposed \$2.5 million budget is proposed to address this risk. Project risks will be assessed when the project develops a project management plan for the implementation phase.

NARRATIVES DES FMD ITA COURT RELOC STUDY 1134616

1. CURRENT PROJECT SCOPE

Conduct a design program and real estate requirements study for relocation of the existing ITA Court operations. The study is to identify space requirements and adjacencies between Superior Court, the Public Defender and the Prosecuting Attorney's offices, and proximity to Harborview hospital. Over the course of time, the manner in which ITA Court cases are conducted has evolved. This new consultant-led study will focus on finding an alternative location, either nearby Harborview, or within the Ninth & Jefferson building where it is currently located. Results of the study will identify location alternates, space efficiencies, and expected costs for such a move.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

3. PROJECT JUSTIFICATION

ITA court is over crowded with no room for expansion posing a safety risk for patients and staff.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

DES FMD ITA COURT RELOC STUDY

1134616

4. PROJECT BENEFITS/OUTCOMES

A larger space will reduce the risk and improve court operations.

5. BUDGET REQUEST BASIS

ITA court hearings are increasing every year. A larger space is needed in the near term.

6. FUNDING AND REVENUE DISCUSSION

39780 General Fund

7. OPERATING BUDGET AND OTHER IMPACTS

Potential increase in operating budget with increased area.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

Study needed to identify alternatives.

10. OTHER AGENCY INVOLVEMENT

Internal Agencies; include DES/FMD with minor coordination with Tenant agency.

External Agencies; Include Building and Fire or other jurisdictions having authority in KC facilities.

11. ART ELIGIBILITY

No - Planning/study only - not visible to the public.

12. EQUITY AND SOCIAL JUSTICE IMPACT

This is a project to study alternative spaces for the ITA court. A new location will improve the services for mental health patients.

NARRATIVES DES FMD MAJOR OFFICE SP RE-ORG 1134624

1. CURRENT PROJECT SCOPE

The Department of Human Resources and the Finance and Business Operations Division require facility remodels to accommodate some staff growth, staff moves and to implement more efficient use of available space.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

DES FMD MAJOR OFFICE SP RE-ORG

1134624

3. PROJECT JUSTIFICATION

Facility remodels are necessary in order to handle new employees in the Human Resources Department, staff associated with the addition of two new divisions to the Department of Executive Services, for moves associated with ending of the Graybar lease, and for other agencies whose moves are related to the space these groups are locating. The purpose of this project is to handle moves associated with these organizational or space changes. This request includes County owned buildings and some leased space. The additional alternate contained in this proposal includes work

4. PROJECT BENEFITS/OUTCOMES

Improvements related to this effort will allow work group consolidation, make more efficient use of space or allow for the occupation of space that would otherwise remain vacation.

5. BUDGET REQUEST BASIS

This request is related to organizational needs of the new DHR and a FBOD proposal for space efficiency. The estimate is preliminary and will be refined in late 2018.

6. FUNDING AND REVENUE DISCUSSION

39780 - General Fund

7. OPERATING BUDGET AND OTHER IMPACTS

This project has an impact to the Internal Services Fund (County Owned Buildings) and the Long Term Lease Fund (Graybar and the Central Building). The Human Resource Department will likely have increased operating expenses over the Division costs that were previously paid. The Long Term Lease Fund impacts include a reduction in costs paid for at the Graybar Building but similar costs for groups being located to the Central Building or the Yesler Building. The additional work outside the base request will likely involve other funds

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

This program evaluated the various space needs, compared them to the spaces available (and the time period they are available) and designed a configuration that would make the best use of the spaces available at good value to the tenants. The additional work outside the base request may also include projects that are related to service improvements.

10. OTHER AGENCY INVOLVEMENT

Internal Agencies; include DES/FMD with minor coordination with Tenant agency.
External Agencies; Include Building and Fire or other jurisdictions having authority in KC facilities.

11. ART ELIGIBILITY

N/A (yes - this is Art eligible)

12. EQUITY AND SOCIAL JUSTICE IMPACT

The moves proposed are not expected to negatively impact citizens that use these services.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES	DES FMD MAJOR OFFICE SP RE-ORG	1134624
------------	--------------------------------	---------

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

There are numerous moves involved in this proposal both leased and County owned space. The planned change is not expected to increase negative impacts associated with climate change.

NARRATIVES DES FMD KC CONSOL WAREH PH2 1134629

1. CURRENT PROJECT SCOPE

Provide interior Tenant Improvements in leased warehouse and relocate additional warehouse Tenants. Construction includes 1200 sf office and bathroom fixtures and finishes, data cable, HVAC, electrical components, high stack pallet racking, FMD security electronics, and warehouse wire partitioning. The landlord will perform design and construction. This project also provides storage racking for FMD Stores, elections ballots, Department of Public Defense records and archival dark storage.

2. PROGRAMMATIC PROJECT DISCUSSION

N/A

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status: All, Is IT Proj? Both Yes and No

NARRATIVES

DES FMD KC CONSOL WAREH PH2

1134629

3. PROJECT JUSTIFICATION

This project will resolve the following storage issues and consolidates 5 warehouse operations into one leased facility.

Building Services stores lease expiration June 2019

Health Dept stores lease expiration March 2019

Elections ballot storage lease expiration Mar 2019

Archives operation over capacity at Fir St. warehouse

Dept Public Defense contract storage cost.

Funding this CAP will allow consolidation of 5 storage operations and reduce facility costs for the storage of records and maintenance inventories.

Potential staffing reduction.

This project is expected to meet the Strategy goal of "Best run Government" by creating operational efficiency across Divisions

Project risk is relatively low due to the phase one Records relocation project that setup design & implementation teams and process standards. Construction risk is minimized from minor improvements to leased building and risk sharing with a Landlord.

4. PROJECT BENEFITS/OUTCOMES

Benefits of this project include:

Reduced facility and lease costs.

Consistent management of Records

Warehouse process efficiency across multiple KC Divisions

5. BUDGET REQUEST BASIS

Budget is required now to meet a construction and relocation timeline that is ahead of lease expirations in the second quarter of 2019.

6. FUNDING AND REVENUE DISCUSSION

39780 - General Fund

7. OPERATING BUDGET AND OTHER IMPACTS

FMD, Health and DPD all support shuttling of supplies and records between outlying facilities, and carry staff positions to manage this distribution. Health and FMD Management are forecasting reduced transportation costs for the distribution of Clinic records and Building supplies. Additional savings are provided by the very good long term rental rate for space. Division management also anticipates a reduction of FTE positions by aligning similar process' across Divisions.

8. PROJECT STATUS

New

9. ALTERNATIVES ANALYSIS

During the selection of the leased Records warehouse, a property search identified 6-8 alternative facilities. This option was to lowest cost property that is close to downtown customers and south end facilities. This property is large enough to consolidate 5 or more King County warehouse operations.

The 20 year financial analysis behind this project included options for Status Quo extension of existing leases, south end and close-in leased properties and build-to-own warehouse projects. This proposed option proved significantly less costly over 10 and 20 years.

Capital Appropriation Proposal

Budget: 2019-2020 Biennial, Scenario: Executive Proposed, Agency: All, Fund: All, Project: All, Cap Status:All, Is IT Proj? Both Yes and No

NARRATIVES

DES FMD KC CONSOL WAREH PH2

1134629

10. OTHER AGENCY INVOLVEMENT

Internal Agencies; include DES/FMD with minor coordination with Tenant agency.
External Agencies; Include Building and Fire or other jurisdictions having authority in KC facilities.

11. ART ELIGIBILITY

NO, this is a minor rehabilitation in a non-county storage building. There will not be any Public business conducted on this site.

12. EQUITY AND SOCIAL JUSTICE IMPACT

Existing leased building, no other alternative.

13. STRATEGIC CLIMATE ACTION PLAN ALIGNMENT

Detailed study of operational change and savings has yet to be completed, however it appears that transportation costs and GHG emissions from delivery operations may be reduced by up to 40%.
The Tenant Improvement construction is planned to be Platinum, with recycled content building products, C+D waste stream diversion.

NARRATIVES DES FMD PH DOWNTOWN DENTAL 1135008

1. CURRENT PROJECT SCOPE

This project will renovate a portion of the fourth floor at Downtown PHC to create service delivery rooms and a client restroom with a lab pass-through for the expansion of the Buprenorphine program, and also create space to co-locate a mental health service provider which is viewed as a critical component of the Buprenorphine Pathways program. Space on the first floor would then be renovated to add two new dental operatories to expand the capacity of the homeless dental program at Downtown PHC to 8 operatories and make improvements to the spaces that support the Robert Clewis Center Needle Exchange program.

NARRATIVES

DES FMD PH RENTON DENTAL CLNIC

1135009

1. CURRENT PROJECT SCOPE

Tis project will build out a fourth dental operatory at the Renton Public Health Clinic. This expansion was planned during the original clinic construction and all of the necessary mechanical systems were extended and capped in order to bring a new operatory on line in the future. Space for this operatory is currently used for medical records storage. With the implementation of electronic health records our storage needs are much less and therefore we have sufficient space now to do this work.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

This estimate was based on the costs estimates for similar Public Health dental infrastructure work proposed in the 2017-2018 budget.

NARRATIVES

DES FMD LIGHTING EFF FRED

1135102

1. CURRENT PROJECT SCOPE

To convert lighting in 26 of its owned and managed buildings to Light Emitting Diode (LED) technology by the end of 2020. In addition, where possible lighting controls will be installed to turn lights off when spaces are unoccupied.

2. PROGRAMMATIC PROJECT DISCUSSION

3. PROJECT JUSTIFICATION

4. PROJECT BENEFITS/OUTCOMES

5. BUDGET REQUEST BASIS

FMD is requesting funds because of the expedited timeframe of the initiative to convert to LED lighting, and reductions in utility incentives. Capital funding is limited and will likely focus on life safety projects. In addition, the scope of this effort fits within the goals of the Fund to Reduce Energy Demand (FRED) with a package payback of less than 10 years.

6. FUNDING AND REVENUE DISCUSSION
