516 Third Avenue
Seattle, WA 98104

Signature Report

October 19, 2010

Ordinance 16949

Proposed No. 2010-0163.3

Sponsors

1 AN ORDINANCE relating to comprehensive planning and
2 permitting; amending Ordinance 263, Article 2, Section 1,
3 as amended, and K.C.C. 20.12.010.

4 **SECTION 1. Findings:** For the purposes of effective land use planning and
5 regulation, the King County council makes the following legislative findings:

6 A. King County has adopted the 2008 King County Comprehensive Plan to meet
7 the requirements of the Washington State Growth Management Act ("GMA");

8 B. The King County Code authorizes a review of the Comprehensive Plan and,
9 with some limited exceptions, only allows substantive amendments to the Comprehensive
10 Plan once every four years. Annual amendments are generally only allowed to address
11 technical updates and corrections to the Comprehensive Plan;

12 C. The King County Comprehensive Plan and the King County Code authorize
13 an annual amendment to the Comprehensive Plan to implement an amendment to a joint
14 interlocal/development agreement in existence on January 1, 2008 between King County,
15 another local government and one or more private parties, if the amendment contains
16 specified conditions;

17 D. The GMA requires that the Comprehensive Plan and development regulations
18 be subject to continuing review and evaluation by the county;

19 E. The GMA requires that King County adopt development regulations to be
20 consistent with and implement the Comprehensive Plan; and

21 F. The changes to zoning contained in this ordinance are needed to maintain
22 conformity with the King County Comprehensive Plan, as required by the GMA. As
23 such, they bear a substantial relationship to, and are necessary for, the public health,
24 safety and general welfare of King County and its residents.

25 SECTION 2. Ordinance 263, Article 2, Section 1, as amended, and K.C.C.
26 20.12.010, are each hereby amended to read as follows:

27 A. Under the King County Charter, the state Constitution and the Washington
28 state Growth Management Act, chapter 36.70A RCW, the 1994 King County
29 Comprehensive Plan is adopted and declared to be the Comprehensive Plan for King
30 County until amended, repealed or superseded. King County performed its first
31 comprehensive four-cycle review of the Comprehensive Plan. As a result of the review,
32 King County amended the 1994 Comprehensive Plan through passage of the King
33 County Comprehensive Plan 2000. King County performed its second comprehensive
34 four-cycle review of the Comprehensive Plan in 2004. As a result of the review, King
35 County amended the 2000 Comprehensive Plan through passage of the King County
36 Comprehensive Plan 2004. The Comprehensive Plan shall be the principal planning
37 document for the orderly physical development of the county and shall be used to guide
38 subarea plans, functional plans, provision of public facilities and services, review of
39 proposed incorporations and annexations, development regulations and land development
40 decisions.

41 B. The amendments to the 1994 King County Comprehensive Plan contained in
42 Appendix A to Ordinance 12061 (King County Comprehensive Plan 1995 amendments)
43 are hereby adopted.

44 C. The amendments to the 1994 King County Comprehensive Plan contained in
45 Attachment A to Ordinance 12170 are hereby adopted to comply with the Central Puget
46 Sound Growth Management Hearings Board Decision and Order in Vashon-Maury
47 Island, et. al. v. King County, Case No. 95-3-0008.

48 D. The Vashon Town Plan contained in Attachment 1 to Ordinance 12395 is
49 adopted as a subarea plan of the King County Comprehensive Plan and, as such,
50 constitutes official county policy for the geographic area of unincorporated King County
51 defined in the plan and amends the 1994 King County Comprehensive Plan Land Use
52 Map.

53 E. The amendments to the 1994 King County Comprehensive Plan contained in
54 Appendix A to Ordinance 12501 are hereby adopted to comply with the Order of the
55 Central Puget Sound Growth Management Hearings Board in Copac-Preston Mill, Inc., et
56 al, v. King County, Case No. 96-3-0013 as amendments to the King County
57 Comprehensive Plan.

58 F. The amendments to the 1994 King County Comprehensive Plan contained in
59 Appendix A to Ordinance 12531 (King County Comprehensive Plan 1996 amendments)
60 are hereby adopted as amendments to the King County Comprehensive Plan.

61 G. The Black Diamond Urban Growth Area contained in Appendix A to
62 Ordinance 12533 is hereby adopted as an amendment to the King County Comprehensive
63 Plan.

64 H. The 1994 King County Comprehensive Plan and Comprehensive Plan Land
65 Use Map are amended to include the area shown in Appendix A of Ordinance 12535 as
66 Rural City Urban Growth Area. The language from Ordinance 12535, Section 1.D., shall
67 be placed on Comprehensive Plan Land Use Map page #32 with a reference marker on
68 the area affected by Ordinance 12535.

69 I. The amendments to the 1994 King County Comprehensive Plan contained in
70 Appendix A to Ordinance 12536 (1997 Transportation Need Report) are hereby adopted
71 as amendments to the King County Comprehensive Plan.

72 J. The amendments to the 1994 King County Comprehensive Plan contained in
73 Appendix A to Ordinance 12927 (King County Comprehensive Plan 1997 amendments)
74 are hereby adopted as amendments to the King County Comprehensive Plan.

75 K. The amendments to the 1994 King County Comprehensive Plan contained in
76 the 1998 Transportation Needs Report, contained in Appendices A and B to Ordinance
77 12931 and in the supporting text, are hereby adopted as amendments to the King County
78 Comprehensive Plan.

79 L. The amendments to the 1994 King County Comprehensive Plan contained in
80 Appendix A to Ordinance 13273 (King County Comprehensive Plan 1998 amendments)
81 are hereby adopted as amendments to the King County Comprehensive Plan.

82 M. The 1999 Transportation Needs Report contained in Attachment A to
83 Ordinance 13339 is hereby adopted as an amendment to the 1994 King County
84 Comprehensive Plan, Technical Appendix C, and the amendments to the 1994 King
85 County Comprehensive Plan contained in Attachment B to Ordinance 13339 are hereby
86 adopted as amendments to the King County Comprehensive Plan.

87 N. The amendments to the 1994 King County Comprehensive Plan contained in
88 Attachment A to Ordinance 13672 (King County Comprehensive Plan 1999
89 amendments) are hereby adopted as amendments to the King County Comprehensive
90 Plan.

91 O. The 2000 Transportation Needs Report contained in Attachment A to
92 Ordinance 13674 is hereby adopted as an amendment to the 1994 King County
93 Comprehensive Plan, Technical Appendix C.

94 P. The Fall City Subarea Plan contained in Attachment A to Ordinance 13875 is
95 adopted as a subarea plan of the King County Comprehensive Plan and, as such,
96 constitutes official county policy for the geographic area of unincorporated King County
97 defined in the plan. The Fall City Subarea Plan amends the 1994 King County
98 Comprehensive Plan land use map by revising the Rural Town boundaries of Fall City.

99 Q. The amendments to the King County Comprehensive Plan contained in
100 Attachment A to Ordinance 13875 are hereby adopted as amendments to the King
101 County Comprehensive Plan.

102 R. The Fall City area zoning amendments contained in Attachment A to
103 Ordinance 13875 are adopted as the zoning control for those portions of unincorporated
104 King County defined in the attachment. Existing property-specific development
105 standards (p-suffix conditions) on parcels affected by Attachment A to Ordinance 13875
106 do not change except as specifically provided in Attachment A to Ordinance 13875.

107 S. The amendments to the 1994 King County Comprehensive Plan Land Use
108 Map contained in Attachment A to Ordinance 13987 are hereby adopted to comply with
109 the Central Puget Sound Growth Management Hearings Board Decision and Order on

110 Supreme Court Remand in *Vashon-Maury Island, et. al. v. King County*, Case No. 95-3-
111 0008 (Bear Creek Portion).

112 T. The 2001 transportation needs report contained in Attachment A to Ordinance
113 14010 is hereby adopted as an amendment to the 1994 King County Comprehensive Plan,
114 technical appendix C.

115 U. The amendments to the 1994 King County Comprehensive Plan contained in
116 Attachments A, B and C to Ordinance 14044 (King County Comprehensive Plan 2000)
117 are hereby adopted as amendments to the King County Comprehensive Plan. Attachment
118 A to Ordinance 14044 amends the policies, text and maps of the Comprehensive Plan.
119 Amendments to the policies are shown with deleted language struck out and new
120 language underlined. The text and maps in Attachment A to Ordinance 14044 replace the
121 previous text and maps in the Comprehensive Plan. Attachment B to Ordinance 14044
122 contains technical appendix A (capital facilities), which replaces technical appendix A to
123 the King County Comprehensive Plan, technical appendix C (transportation), which
124 replaces technical appendix C to the King County Comprehensive Plan, and technical
125 appendix M (public participation), which is a new technical appendix that describes the
126 public participation process for the King County Comprehensive Plan 2000. Attachment
127 C to Ordinance 14044 includes amendments to the King County Comprehensive Plan
128 Land Use Map. The land use amendments contained in Attachment C to Ordinance
129 14044 are adopted as the official land use designations for those portions of
130 unincorporated King County defined in Attachment C to Ordinance 14044.

131 V. The Snoqualmie Urban Growth Area Subarea Plan contained in Attachment A
132 to Ordinance 14117 is adopted as a subarea plan of the King County Comprehensive Plan

133 and, as such, constitutes official county policy for the geographic area of unincorporated
134 King County defined in the plan. Attachment B to Ordinance 14117 amends the King
135 County Comprehensive Plan 2000 land use map by revising the Urban Growth Area for
136 the City of Snoqualmie. Attachment C to Ordinance 14117 amends the policies of the
137 Comprehensive Plan.

138 W. The Snoqualmie Urban Growth Area Subarea Plan area zoning amendments
139 in Attachment D to Ordinance 14117 are adopted as the zoning control for those portions
140 of unincorporated King County defined in the attachment. Existing property-specific
141 development standards (p-suffix conditions) on parcels affected by Attachment D to
142 Ordinance 14117 do not change

143 X. The amendments to the King County Comprehensive Plan 2000 contained in
144 Attachment B to Ordinance 14156 are hereby adopted as amendments to the King County
145 Comprehensive Plan.

146 Y. The amendments to the King County Comprehensive Plan 2000 contained in
147 Attachment A to Ordinance 14185 are hereby adopted as amendments to the King
148 County Comprehensive Plan in order to comply with the order of the Central Puget
149 Sound Growth Management Hearings Board in *Green Valley et al, v. King County*,
150 CPSGMHB Case No. 98-3-0008c, Final Decision and Order (1998) and the order of the
151 Washington Supreme Court in *King County v. Central Puget Sound Growth Management*
152 *Hearings Board*, 142 Wn.2d 543, 14 P.3d 133 (2000).

153 Z. The amendments to the King County Comprehensive Plan 2000 contained in
154 Attachment A to Ordinance 14241 (King County Comprehensive Plan 2001

155 Amendments) are hereby adopted as amendments to the King County Comprehensive
156 Plan.

157 AA. The amendment to the King County Comprehensive Plan 2000 contained in
158 Attachment A to Ordinance 14286 is hereby adopted as an amendment to the King
159 County Comprehensive Plan in order to comply with the Central Puget Sound Growth
160 Management Hearings Board's Final Decision and Order in *Forster Woods Homeowners'*
161 *Association and Friends and Neighbors of Forster Woods, et al. v. King County*, Case
162 No. 01-3-0008c (Forster Woods), dated November 6, 2001.

163 BB. The amendments to the King County Comprehensive Plan 2000 contained in
164 Attachment A to Ordinance 14448 (King County Comprehensive Plan 2002
165 Amendments) are hereby adopted as amendments to the King County Comprehensive
166 Plan.

167 CC. The amendments to the King County Comprehensive Plan 2000 contained in
168 Attachment A to Ordinance 14775 (King County Comprehensive Plan 2003
169 Amendments) are hereby adopted as amendments to the King County Comprehensive
170 Plan.

171 DD. The amendments to the King County Comprehensive Plan 2000 contained in
172 Attachments A, B, C, D and E to Ordinance 15028 (King County Comprehensive Plan
173 2004) are hereby adopted as amendments to the King County Comprehensive Plan.
174 Attachment A, Part I, to Ordinance 15028 amends the policies, text and maps of the
175 Comprehensive Plan. Attachment A, Part II, to Ordinance 15028 includes amendments
176 to the King County Comprehensive Plan Land Use Map. The land use amendments
177 contained in Attachment A, Part II, to Ordinance 15028 are adopted as the official land

178 use designations for those portions of unincorporated King County defined in Attachment
179 A, Part II, to Ordinance 15028. Attachment B to Ordinance 15028 contains Technical
180 Appendix A (Capital Facilities), which replaces technical appendix A to the King County
181 Comprehensive Plan. Attachment C to Ordinance 15028 contains Technical Appendix B
182 (Housing), which replaces Technical Appendix B to the King County Comprehensive
183 Plan. Attachment D to Ordinance 15028 contains Technical Appendix C
184 (Transportation), which replaces Technical Appendix C to the King County
185 Comprehensive Plan 2000. Attachment E to Ordinance 15028 contains Technical
186 Appendix D (Growth Targets and the Urban Growth Area 2004).

187 EE. The 2004 transportation needs report contained in Attachment A to
188 Ordinance 15077 is hereby adopted as an amendment to the 2004 King County
189 Comprehensive Plan, technical appendix C.

190 FF. The amendments to the King County Comprehensive Plan 2004 contained in
191 Attachment A to Ordinance 15244 (King County Comprehensive Plan 2005
192 Amendments) are hereby adopted as amendments to the King County Comprehensive
193 Plan.

194 GG. Attachment A to Ordinance 15326, which is the King County
195 Comprehensive Plan Sammamish Agricultural Production District Subarea Plan dated
196 November 7, 2005, is hereby adopted as an amendment to the 2004 King County
197 Comprehensive Plan, as amended, in order to comply with the Central Puget Sound
198 Growth Management Hearings Board's Final Decision and Order in *Maxine Keesling v.*
199 *King County*, Case No. 04-3-0024 (Keesling III), dated May 31, 2005.

200 HH. The amendments to the King County Comprehensive Plan 2004 contained in
201 Attachments A, B, C and D to Ordinance 15607 are hereby adopted as amendments to the
202 King County Comprehensive Plan. Attachment A to Ordinance 15607 (Amendment to
203 the King County Comprehensive Plan 2004) amends the policies and maps of the King
204 County Comprehensive Plan. Attachment B to Ordinance 15607 contains technical
205 appendix O (Regional Trail Needs Report). Attachment C to Ordinance 15607 amends
206 King County Comprehensive Plan, Technical Appendix C (Transportation), by replacing
207 the transportation needs report. Attachment D to Ordinance 15607 amends King County
208 Comprehensive Plan, Technical Appendix C (Transportation), by replacing the arterial
209 functional classification map.

210 II. Attachment A to Ordinance 15772, which is the King County Comprehensive
211 Plan Juanita Firs Subarea Plan, dated February 20, 2007, is hereby adopted as an
212 amendment to the King County Comprehensive Plan as amended.

213 JJ. The amendments to the King County Comprehensive Plan 2004 contained in
214 Attachments A, B, C, D, E and F to Ordinance 16263 are hereby adopted as amendments
215 to the King County Comprehensive Plan. Attachment A to Ordinance 16263 amends the
216 policies, text and maps of the Comprehensive Plan and amends King County
217 Comprehensive Plan Land Use Zoning. The land use amendments contained in
218 Attachment A to Ordinance 16263 are adopted as the official land use designations for
219 those portions of unincorporated King County defined in Attachment A to Ordinance
220 16263. Attachment B to Ordinance 16263 contains Technical Appendix A (Capital
221 Facilities), which replaces Technical Appendix A to the King County Comprehensive
222 Plan 2004. Attachment C to Ordinance 16263 contains Technical Appendix B (Housing),

223 which replaces Technical Appendix B to the King County Comprehensive Plan 2004.
224 Attachment D to Ordinance 16263 contains Technical Appendix C (Transportation),
225 which replaces Technical Appendix C to the King County Comprehensive Plan 2004.
226 Attachment E to Ordinance 16263 contains the transportation needs report, which
227 replaces the transportation needs report in Technical Appendix C to the King County
228 Comprehensive Plan 2004. Attachment F to Ordinance 16263 contains Technical
229 Appendix D (Growth Targets and the Urban Growth Area 2008).

230 KK. The amendments to the 2008 King County Comprehensive Plan, contained
231 in Attachments A, B and C to this ordinance are hereby adopted as amendments to the
232 King County Comprehensive Plan. Attachment A to this ordinance is Technical and
233 Editorial Corrections, dated March 1, 2010. Attachment B to this ordinance is the King
234 County Issaquah Highlands Area Zoning Study, dated September 13, 2010. Attachments
235 A and B to this ordinance amend policies, text and maps of the Comprehensive Plan and
236 amend King County Comprehensive Plan Land Use Zoning. The land use amendments
237 contained in Attachment B to this ordinance are adopted as the official land use
238 designations for those portions of unincorporated King County defined in Attachment B
239 to this ordinance. Attachment C to this ordinance is the 2010 update of the
240 Transportation Needs Report and amends the 2008 King County Comprehensive Plan,
241 Technical Appendix C.

242 **SECTION 3. Work program.** The council hereby adopts the following work
243 program item as part of the 2010 King County Comprehensive Plan update:

244 A. As part of the 2012 Growth Management Comprehensive Plan update process,
245 the executive shall undertake a review of both Policy R-648 and K.C.C. 21A.24.381 and

246 recommend appropriate revisions to both the policy and code provision that will properly
247 balance the county's federal obligations with regard to salmon recovery efforts and the
248 goal of preserving productive agricultural soils the maximum extent possible. As of the
249 effective date of this section, both the policy and regulation do not explicitly recognize
250 the need for that balance. Proposed changes shall be included as part of the executive's
251 proposed 2012 Comprehensive Plan update.

252 B. As part of the 2012 Growth Management Comprehensive Plan update process,
253 the executive shall undertake an area zoning study regarding the application of form-
254 based code to parcels within the Rural Area that are zoned Neighborhood Business (NB).
255 The executive should consider, as part of that area zoning study, the potential piloting of
256 form-based codes for selected Neighborhood Business zoned parcels. The area zoning
257 study and any the pilot program shall be included as part of the executive's proposed
258 2012 Comprehensive Plan update.

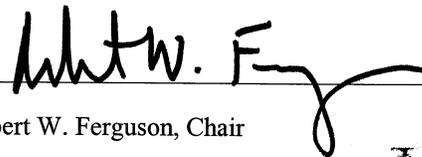

259 SECTION 4. If any provision of this ordinance or its application to any person or

260 circumstance is held invalid, the remainder of the ordinance or the application of the
261 provision to other persons or circumstances is not affected.
262

Ordinance 16949 was introduced on 3/8/2010 and passed as amended by the Metropolitan King County Council on 10/18/2010, by the following vote:

Yes: 9 - Ms. Drago, Mr. Phillips, Mr. von Reichbauer, Mr. Gossett,
Ms. Hague, Ms. Patterson, Ms. Lambert, Mr. Ferguson and Mr. Dunn

King County
2010 King County Comprehensive Plan Update
Editorial / Technical Corrections

Executive Recommended
Department of Development and Environmental Services

Summary

This staff report addresses several corrections to the adopted 2008 King County Comprehensive Plan (KCCP). These corrections are technical or editorial in nature. This report also addresses the Regional Trails Needs Report (RTN) that was adopted as part of the 2008 KCCP. A summary of additional analysis conducted by Executive staff that addresses equity and social justice is provided, along with edits to the footnotes for the RTN.

A. Editorial and Technical Corrections

1. Page 3-22, Rural and Resource Land Preservation Program text edit

Rural and Resource Lands face increasing development pressure, yet the county must simultaneously plan for, and allow, future development growth. This tension makes it incumbent on the county to strengthen its TDR ((s)) efforts. For this reason, King County seeks to increase the number of development right transfers and adopt an expanded Rural and Resource Land Preservation program to reduce and redirect rural development potential into the urban areas.

2. Page 8-21 Policy F-245 edit

F-245 In the Urban Growth Area, all new development shall be served by ((P)) public sewers

3. Page 8-32 Policy F-305 edits

F-305 King County shall:

- a. Continue to increase the use of renewable fuel in ((s)) and the efficiency of ((s)) county....

4. Page 8-42, 8-43 Eliminate duplicate policy F-337 (same as Policy F-334)

~~F-337 King County should promote the safety and reliability of the natural gas distribution pipeline systems by requiring developers, contractors, and excavators to notify the state, pipeline operators and utilities through the one-number locator service, before beginning excavation or construction.~~

Insert the following text: Policy F-337 has been deleted.

5. Page 9-6 Edit Policy ED-202 (delete underline, retain comma)

ED-202 King County supports programs and strategies, in partnership with the federal, state, and local governments and the private sector, that provide technical and financial assistance to businesses including ((s)) but not limited to:

6. Page 9-12 Text edit

King County will ((consider participation in)) (1) consider participation in regional economic development plans and projects that provide benefits to multiple jurisdictions or (2) require a partnership between the public and the private sector to be feasible. For either regional plans and projects or public-private partnerships, the county will base its investment decision upon a full and thorough analysis of the public costs and public benefits of proposed projects.

B. Social and Health Equity Assessments of the King County Regional Trail Network

Methods:

DNRP conducted a geospatial analysis to better understand how proximity to regional trails varies by health, income, and racial demographics. Household distance to the closest segment of regional trail was calculated using census block group mid-points. Income and race demographics are derived from the 2000 Census, and the health outcome of ‘percent sedentary residents’ was from the 2001-2005 weighted average responses from the CDC Behavioral Risk Factor Analysis Survey.

Findings:

- Distance to regional trail by income level are equitable
- Distance to regional trail by race very slightly disfavor neighborhoods with a higher percentage of non-white residents
- There is a slightly positive correlation between the health outcome (percent sedentary) and distance to a trail segment

Implications:

- The findings did not indicate a need to change the Regional Trails Needs report
- We will continue to look for opportunities to better leverage the backbone Regional Trail system to benefit neighborhoods with a higher percentage of non-white residents and areas with a greater percentage of sedentary residents.
- The King County Parks Division will continue to work with Cities and the Seattle/King County Public Health to increase residents’ awareness of and access to publically-funded facilities for physical activity, including the regional trail network.

Executive Recommendation: Make the following amendments to the Table Notes for the RTN:

Table Notes

1. Initial prioritization made using (five) <u>six</u> basic criteria - connectivity, aesthetic/scenic value, timing/relationship with other projects, public support, <u>social and health equity</u> , and urban/rural centers connections.
2. Second level prioritization - recognizes projects already underway (construction or design/permitting) and prioritizes to ensure continuity of development.
3. Third level prioritization recognizes continuity of corridor development
4. Priorities have been grouped as categories and do not necessarily correspond to listing number.
5. Eastside BNSF Trails appear in this listing but have not been prioritized.
6. GR-2.2 added to address missing link along 259th Street SE in Kent.
7. 2007 budget estimates based on fixed 6 percent inflation rate.

King County
Issaquah Highlands
Area Zoning Study

Revised September 13, 2010

King County

2010 King County Comprehensive Plan Update Issaquah Highlands Urban Growth Area Boundary Adjustment Area Zoning Study

(Revised September 13, 2010)

Department of Development and Environmental Services

Summary

This area zoning study addresses a 78 acre property, tax lot number 2624069032, owned by Grand-Glacier LLC. The subject property is currently designated rural and is zoned RA-5-P (rural area, one home per 5 acres with P-Suffix development conditions). This property is located at Issaquah Highlands and is adjacent to the Urban Growth Area (UGA) boundary.

The proposal is contained in a three party agreement between the City of Issaquah, Grand-Glacier LLC for the Issaquah Highlands and the County calls for the amendment of the King County Comprehensive Plan (KCCP) land use map by redesignating 35 acres of the 78 acre property from rural to urban. The remaining 43 acres of the 78-acre property would retain the existing rural land use designation, and be dedicated as parks or open space in perpetuity.

The 43 acres of park and open space land will be placed in a "New Conservation Easement Area," to be owned by Issaquah and the maintenance of which will be finalized by a subsequent agreement between Issaquah and the County.

In addition to the creation of 43 new acres of park land, the third amendment calls for extinguishing the development rights and placement in the New conservation Easement Area of at least 101 contiguous acres of land within the City of Issaquah or another 101 acres comprised of land mutually acceptable to both the City and the County and in the Issaquah vicinity that

provides substantially equivalent benefits in terms of linking Issaquah Alps open space, enhancing access to regional open space by both urban and rural residents, protecting forest cover in the Issaquah/Lake Sammamish Basin, and protecting salmon habitat. This will be accomplished by Transfer of Development Rights (TDR) to an urban receiving area. The 101 acre Park Point property is the preferred TDR sending area. Extinguishing the development rights on the 101 acre Park Point property or other mutually acceptable property, plus the 43 acre proposed new park site, will result in somewhat more than four times more open space and park land as the proposed 35 acres of new urban land ($35 \times 4 = 140$ acres required; $43 + 101 = 144$ acres provided).

Applicable King County Comprehensive Plan Policy:

RP-303 Except as otherwise provided in this policy, the annual cycle shall not consider proposed amendments to the King County Comprehensive Plan that require substantive changes to comprehensive plan policies and development regulations or that alter the Urban Growth Area (UGA) Boundary. Substantive amendments and changes to the UGA Boundary may be considered in the annual amendment cycle only if the proposed amendments are necessary for the protection and recovery of threatened and endangered species, to implement a proposal for a 4 to 1 project or to implement an amendment to a joint interlocal/development agreement in existence on January 1, 2008, between King County, another local government, and one or more private parties, only if the amendment to the joint interlocal/development agreement includes a provision to alter the UGA boundary to add areas to the Urban Growth Area, requires that an area four times the area that is added to the Urban Growth Area be permanently designated as park or open space and requires the transfer of development rights on terms as provided in the amendment (emphasis added).

(Emphasis added.)

Analysis:

KCCP Policy RP-303 allows consideration of a proposed change to the UGA boundary in an annual update of the KCCP in very narrowly defined circumstances. The relevant portion of Policy RP-303, underlined above, includes three provisions:

1. to implement an amendment to a joint interlocal/development agreement in existence on

- January 1, 2008, between King County, another local government, and one or more private parties; and
2. includes a proposal to alter the UGA and requires that an area four times the area that is added to the UGA be permanently designated as park or open space; and
 3. requires use of Transfer of Development Rights on terms as specified in the amendment to the three party agreement.

In this case, there is a third amendment to a joint interlocal/development agreement in existence on January 1, 2008, between King County, Issaquah, and Grand-Glacier LLC for the Issaquah Highlands. This amendment has already been executed by all three parties.

Specifically, the third amendment would provide for the transfer of development rights from the 144 acres of permanent park/open space land to the new 35 acre UGA consisting of 410 residential units in conjunction with the proposed UGA amendment.

The proposed land use changes include designation of 35 acres of new urban land, dedication of 43 acres of what is now private property as parks and open space, and the creation of at least an additional 101 acres of open space via transfer of development rights. The proposal to create 144 acres of park land and open space is more than four times the size of the proposed 35 acre addition to the UGA.

Transfer of development rights will be used to create at least 144 acres of open space and send 410 units of additional development capacity to the existing City of Issaquah.

This proposed UGA change meets the requirements of policy RP-303 for consideration of a UGA amendment in an annual update of the KCCP. The third amendment outlined above also satisfies the requirement of King County Comprehensive Plan policy RP-303 that an area four times the area added to the UGA is permanently designated as park or open space and that Transfer of Development Rights be used to create open space. Therefore, all three requirements of policy RP-303 are satisfied by this proposal.

Adding 35 acres of new urban land consistent with policy RP-303 creates the opportunity for efficient new housing development within the Urban Growth Area, as envisioned by the State Growth Management Act.

Extinguishing the development potential on the 101 acre Park Point property, or an equivalent

amount of other land mutually acceptable to the City and the County creates additional open space consistent with City and County planning goals.

Transfer of development rights to receiving sites within the Urban Growth Area will result in no net loss of development capacity as new open space is created within the UGA, also consistent with City and County planning goals.

Existing P-Suffix development conditions on the entire 78 acre property

ES-P2: The eastern portion of Grand Ridge shall retain its rural designation and is not included within the UGA. Zoning for this eastern portion shall require rural clustering. The western portion of Grand Ridge that is less environmentally constrained shall also be retained in a rural designation and is not within the urban growth area. Residential development within the western portion of Grand Ridge should require rural clustering. The western portion is substantially less constrained than the balance of Grand Ridge and redesignation to Rural may be considered through a plan amendment study, once the Issaquah Wellhead Protection Study is complete. Such plan amendment study also must comply with the Ground Water Management Plan when approved by the State Department of Ecology. Land use decisions should be compatible with the findings of the Wellhead Protection Study and the adopted Ground Water Management Plan.

ES-P9: *1. All new subdivisions and short subdivisions in the subarea, except those undergoing detailed drainage planning and review through the Master Drainage Planning (MDP) requirements of the King County Surface Water Design Manual, shall comply with the following conditions:*

a. Impervious Surfaces: Impervious surfaces within the subdivision or short subdivision, including surfaces associated with all structures, driveways, and roads within the development, shall be limited to a maximum of eight percent within areas draining to Patterson Creek and North Fork Issaquah Creek Wetland 7.

B. Clearing Limits: Clearing and vegetation retention restrictions in KCC 16.82.150(D) shall apply, except that the separate tract alternative shall be mandatory for all subdivisions and short subdivisions in areas draining to North Fork Issaquah Creek Wetland 7.

2. Subdivisions and short subdivisions within the Issaquah Creek basin in this subarea which are undergoing detailed drainage planning and review through the Master Drainage Planning (MDP) requirements of the King County Surface Water Design Manual, shall comply with the following conditions:

a. Impervious Surfaces: Impervious surfaces within the subdivision or short subdivision, including surfaces associated with all structures, driveways, and roads within the development, shall be limited to a maximum of eight percent.

b. Clearing Limits: Clearing and vegetation retention restrictions in KCC 16.82.150(b) shall apply, except that the separate tract alternative shall be mandatory.

c. Performance Goals: Alternate site and facility design standards may be approved by the SWM Division through the MDP process provided that it can be demonstrated that such standards would meet the following performance goals.

(1) Site development shall not result in a significant decrease in the diversity, productivity, resilience, or habitat value of North Fork Issaquah Creek Wetland 7; and

(2) Site development shall not result in a significant increase in phosphorus loading to the tributaries draining to the North and East Forks of Issaquah Creek; and

(3) Site development shall not result in a significant reuse in stream channel erosion or transport of sediment to the North and East Forks of Issaquah Creek; and

(4) Site development shall not result in a significant decrease in the diversity or abundance of anadromous fish in the North and East Forks of Issaquah Creek; and

(5) Site development shall not result in a significant increase in the frequency or duration of flood flows in the North and East Forks of Issaquah Creek.

ES-P12: *Any applications for development dated after January 9, 1995 for either the urban or rural portions of the property shall only be accepted and processed if they are consistent with the UPD development agreement.*

The rural open space portion of the subject property shall remain uncleared and shall be placed into a contiguous open space tract created and marketed pursuant to K.C.C. 21A.24.160 and K.C.C.21A.24.180 at the time of UPD approval. Limited alterations to the rural open space portion of the property including but not limited to clearing, grading, and timber removal shall be subject to review and approval by King County agencies responsible for parks, open space and surface water management and other agencies as appropriate for permit review. If the development agreement is denied, or not pursued by the property owner(s), then the pending rural applications will be processed and rezone to rural will be considered in the next comprehensive plan amendment.

Executive Staff Recommendation:

Amend the land use designation from rural to urban for the 35 acre area shown on the attached proposed land use map.

Amend the zoning for the 35 acre urban portion of the site from the existing RA-5-P zoning to UR-P, Urban Reserve with the following P-suffix conditions:

1. Annexation by the City of Issaquah of the 35 acre urban portion of the study area shall not occur until:

- The 43 acre portion of the site is dedicated for park and open space purposes in perpetuity; and
- At least 101 acres of additional open space is dedicated (or the dedication deed is held in escrow for recording concurrent with annexation) in perpetuity via the Issaquah TDR

program. The open space shall be created on the Park Point property or other property in the Issaquah vicinity mutually approved by the City and County that provides substantially equivalent benefits in terms of linking Issaquah Alps open space, enhancing access to regional open space by both urban and rural residents, protecting forest cover in the Issaquah/Lake Sammamish Basin, and protecting salmon habitat; and

- The development rights shall be transferred (or held in escrow until annexation) to receiving sites within Issaquah; and
- The three party agreement between Grand-Glacier LLC, the City of Issaquah, and King County is amended to allow development within the new 35-acre UGA of 400 residential units.

2. No development shall occur prior to annexation by the City of Issaquah.

Remove existing P-Suffix conditions ES-P2, ES-P12, and ES-P9 from the 35 acre urban portion of the site. These conditions are no longer necessary as the property will not be developed until it is annexed by the City of Issaquah.

Retain the rural land use designation for the remaining 43 acre portion of the 78-acre parcel, which is to be added to the Issaquah park system.

Retain the RA-5-P zoning for the 43 acre rural portion of the site.

Retain P-Suffix conditions ES-P9 and ES-P-12, which contains property-specific regulations and performance goals to protect the environment, for the 43-acre rural portion of the site.

Add a new P-suffix condition limiting the use of the 43 acre rural portion of the site to park-related uses and open space.

Delete P-Suffix condition ES-P2 for the rural portion of the site because residential lot clustering conditions are no longer necessary as the use of the property is limited to parks and open space.

Summary

of the

TNR

2010 Update of the Transportation Needs Report 2008

October 2010

INTRODUCTION

The Transportation Needs Report (TNR) is a long-term, comprehensive list of recommended improvements to serve unincorporated King County's transportation needs. In determining King County's needs, the Road Services Division uses professional engineering standards, safety records, adopted service levels and citizen comments. Defining transportation needs also takes into account projects and current studies in cities, adjacent counties, and on state highways. The transportation needs are those currently known (existing) as well as those that are forecast due to regionally-adopted targets for growth and development.

The Strategic Plan for Road Services (SPRS), now under development, will guide how the Road Services Division builds, operates and maintains the road system in the future. SPRS is anticipated to significantly change the way transportation needs are prioritized. SPRS replaces the Roads Operational Master Plan (ROMP) and aligns the Division's strategic planning with countywide planning and performance management requirements. In recommendations for the Division's service areas and deliverables, the ROMP Phase I report calls for these prioritized outcomes:

1. *Preservation* of the existing roadway facilities network
2. Managing and enhancing *mobility* through system efficiencies
3. Addressing concurrency-driven roadway *capacity* needs

In the accomplishment of these prioritized outcomes, enhancing the safety of the users of King County's roadways while meeting local, state and federal mandates is inherent in all of the Road Services Division's program areas and deliverables.

Another ROMP recommendation is to "Prioritize Asset Life Cycle in Rural Areas". This recommendation would encourage, in principle, investing in road reconstruction before the road is allowed to significantly deteriorate (and cost a greater amount of money to fix). Its implementation is subject to budget constraints.

The TNR is a functional plan of the King County Comprehensive Plan. Together with the Roads Six-Year CIP and the Roads annual budget, it fulfills the requirement of growth management legislation (RCW 36.70A.070) for a transportation capital facilities plan element of the King County comprehensive plan. The TNR was prepared consistent with all requirements of growth management legislation including:

1. It is based on the land use element of the comprehensive plan.
2. Its list of transportation needs and recommended improvements was developed using travel demand forecasts that are based on the regionally-adopted growth targets.
3. It includes a financial analysis that reflects the most recent land use changes, project amendments, costs, and financial revenue assumptions.

The TNR horizon year is 2022, which is consistent with regionally-adopted targets for population and employment growth.

The schedule for updating the TNR has been changed to coordinate with major updates to the Comprehensive Plan. Starting with the major Comprehensive Plan update of 2004, the TNR will be updated every four-years, with an optional technical update submitted in the second year between Comprehensive Plan updates. The TNR was last adopted in 2008, and this document will serve as a technical update to the TNR 2008.

PURPOSE

The TNR serves the following purposes:

Relationship to King County Comprehensive Plan 2008: A primary purpose of the TNR is to fulfill certain requirements of state growth management legislation for comprehensive planning. These requirements as outlined in state legislation (RCW 36.70A.070 (6)) are:

1. Specific actions and requirements for bringing into compliance locally-owned transportation facilities or services that are below an established level of service standard;
2. Forecasts of traffic for at least ten years based on the adopted growth targets and land use plan to provide information on the location, timing, and capacity needs of future growth;
3. Identification of state and local system needs to meet current and future demands;
4. An analysis of funding capability to judge needs against probable funding resources;
5. A multiyear financing plan based on the needs identified;

The TNR needs list and financial analyses fulfill these requirements. The needs list was developed using forecasts of traffic for the 2022 horizon year based on regionally-adopted growth targets and the land use element of the King County Comprehensive Plan 2008.

Transportation Planning and Funding: The TNR helps King County make decisions on planning and funding of transportation improvements. It provides guidance based on policies, strategies, and actions set forth in the Comprehensive Plan. It follows established processes linking land use planning with transportation needs.

The TNR plays a significant role in evaluating the difference between identified transportation needs and future expected revenues for King County. This analysis assesses the County's ability to keep pace with the demands of growth and assists in developing financial strategies to deal with unmet needs.

Recently the TNR has been used to assess the feasibility of areas proposed to annex into nearby cities (Potential Annexation Areas, or PAAs) or incorporate into new cities. The cities can use the TNR to see the future projects identified for the area and the potential future transportation cost that they might incur.

Coordination: The TNR helps to coordinate transportation improvements connecting King County with other jurisdictions including the Washington State Department of Transportation (WSDOT), adjacent cities, and counties. It also helps coordination between different divisions of the King County Department of Transportation. By clearly showing the location and scope of intended transportation

improvements as well as the priority of these improvements, the TNR provides other jurisdictions with information to use in appropriately coordinating project implementation. Additionally, the private sector development community can use the TNR to identify areas where future growth could be accommodated by improved facilities.

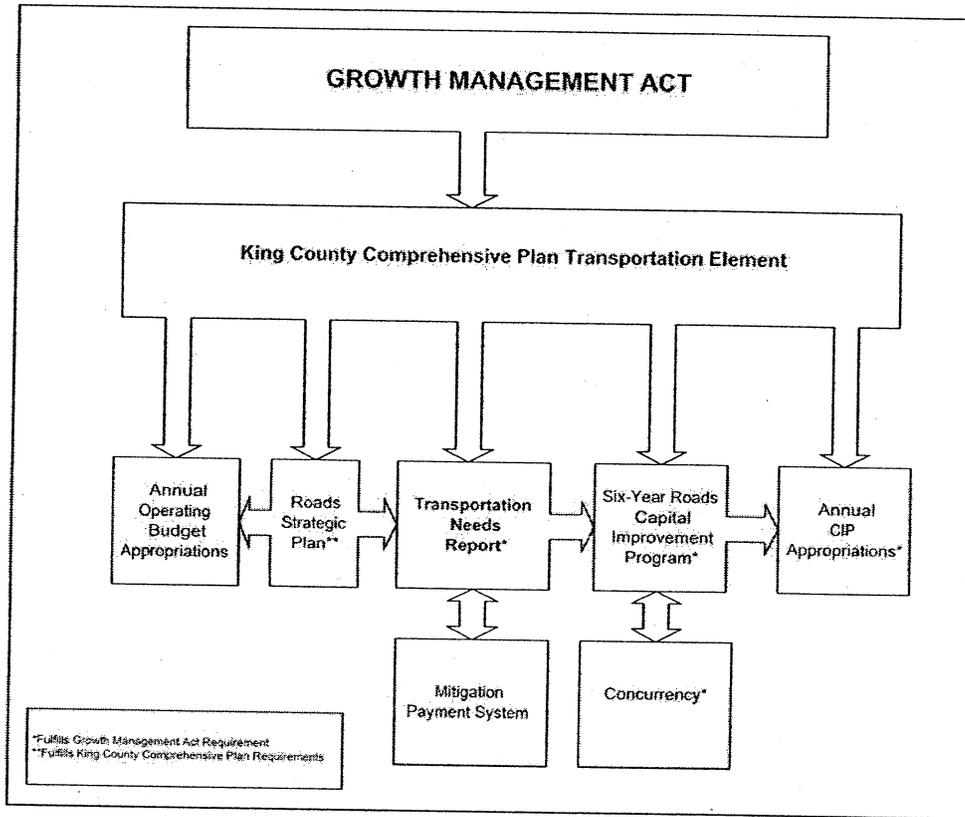

Development Review: The TNR serves as a major source of information in the review of proposed land developments and in determining appropriate mitigation measures required as a condition of new development approval.

Mitigation Payment System: King County has established a Mitigation Payment System (MPS) to charge developments for the transportation costs of their impacts. The MPS uses the TNR to identify growth-related projects that will be part of the impact fee system and receive the MPS fees.

Road Vacation: Property owners can petition King County to have portions of the County's unused road rights-of-way sold to them if the property is not needed for current or future transportation purposes. The TNR is used to indicate the location of future projects on the road system in this road vacation process.

Role Within the Road Services Division

The development of the TNR is part of a comprehensive planning process that is guided by state growth management legislation. This process, as depicted in the flow diagram below, links the guidance of the King County Comprehensive Plan and the Roads Strategic Plan with the development of the TNR, the six-year Roads Capital Improvement Program, and the Roads annual budget. The MPS program, which is authorized by growth management legislation and required by King County ordinance, is used to collect impact fees to help build growth-related road projects. The concurrency program identifies areas and roadways that are not meeting the County's level-of-service standard for traffic congestion, and this information on road deficiencies feeds into both the Transportation Needs Report and the Capital Improvement Program.

DEVELOPMENT OF THE TNR 2010

As the King County Comprehensive Plan undergoes a major update each four years, a major update to the TNR will occur at the same time. In the two year mid period, the TNR will be limited to technical updates which typically recognize recent project completions or new analysis which calls for new projects. As with the King County Comprehensive Plan, the two-year update will not include changes to transportation policies, growth targets or the horizon year of the plan.

For this update to the TNR, the following major changes were incorporated into the TNR 2010.

Countywide Guardrail Program

Following a technical analysis, several dozen guardrail corridors were eliminated from the TNR as no longer meeting guardrail warrants. Other locations were merged into existing corridors. The individual guardrail corridor changes are identified in the Change Report.

Annexations

Cities continue to annex portions of unincorporated King County, and when the annexed properties include TNR project locations, they are removed from the County’s TNR. The major annexations occurring since the TNR 2008 were located in the south White Center area (to the City of Burien), east North Bend (to the City of North Bend) and the Panther Lake area of Soos Creek (to the City of Kent). The City of Kirkland has recently voted to annex the Juanita, Finn Hill and Kingsgate areas, but this project change will not be reflected until the TNR 2012.

Capital Project Completions

Numerous capital projects were completed since the adoption of the Transportation Needs Report 2008, and these completed projects will be deleted from the needs list.

High Accident Locations (HAL) and High Accident Road Segments (HARS)

Following the publishing of the Transportation Needs Report 2008, the Road Services Division completed the High Accident Locations and Road Segments Analysis (Road Safety Audits), which identifies the locations that meet the criteria for a high number of collisions. These locations were determined from accident records which had a minimum of nine accidents per location over a three year period. Recommended solutions to the accident problems were developed and project costs and priorities were calculated. These were added to the TNR.

Signal Warrant Priority Array

The latest analysis of intersections was completed in January, 2009. Intersections which met at least one traffic warrant for a traffic signal were added to the TNR with the scope of the project as "Intersection Operational Improvement". When the highest priority locations receive funding, they will be evaluated for traffic signals, roundabouts, turn channels or other treatments.

Operational Intersection Improvements (OP-INT-)**

In an effort to streamline the recommendations for intersections, a number of locations which represented operational improvements have now been combined with the signal warrants needs for the same location. The improvement could cover a range of treatments, which will be decided upon further study. The previous TNR list had one recommendation for a traffic signal and a separate recommendation for possible turn lanes in the same intersection.

Prioritization Processes -- Healthscape

King County has been active in promoting the "Healthscape" initiative. Healthscape is a program which attempts to tie together the factors of land use, transportation, air quality and health to maximize the closely-correlated benefits of each. The County worked with a consultant in 2007 to develop a "Transportation Programming Tool" which evaluates the effectiveness of pedestrian projects and their potential for increasing pedestrian accessibility.

All pedestrian projects were evaluated with the new Transportation Programming Tool and assigned high, medium and low priorities. The priority list was further stratified into urban and rural projects.

A more detailed description of the Healthscape Transportation Programming Tool is found in the Appendix C of this document and also at the following internet location.

<http://www.kingcounty.gov/sites/transportation/healthscape/tools.aspx>

FINANCIAL ANALYSIS AND SHORTFALL

A financial analysis was developed to balance projected needs with anticipated revenue. Revenues were projected to the horizon year for the Road Fund, Federal, State, and MPS revenues. Revenues were adjusted to take into account the recent annexations of Panther Lake and the southern portion of White Center.

Projected needs were expressed in constant 2010 dollars and were totaled for the TNR program through the year 2022. The shortfall is calculated by subtracting the total projected needs by total projected revenues for the TNR time period.

Comparing projected revenues with projected needs reveals a shortfall of \$762,569 million to the year 2022. Summary cost and revenue estimates are included in Appendix D of this document. Different revenue assumptions for each edition of the TNR as well as different plan horizon years make a yearly trend line of the shortfall difficult to develop, but generally show a trend of increasing growth of the financial shortfall:

Much of the financial shortfall is comprised of project costs in the designated Urban area which will eventually become annexed into cities. The following table shows the breakdown of Rural project costs and Urban Potential Annexation Area (PAA) project costs.

Project Costs – Urban and Rural Areas
In thousands of dollars

URBAN AREA	Project Costs
Urban - East Federal Way PAA	\$68,479
Urban - East Renton PAA	\$17,518
Urban - Eastgate PAA	\$5,878
Urban - Fairwood PAA	\$21,790
Urban - Federal Way PAA	\$1,654
Urban - Issaquah PAA	\$26,768
Urban - Kirkland PAA (annexation effective July, 2011)	\$81,992
Urban - North Highline PAA (\$149,065 attributed to South Park Bridge)	\$171,651
Urban - Not in primary PAAs	\$27,599
Urban - West Hill PAA	\$16,214
Total URBAN Costs	\$439,543
Total RURAL Costs	\$688,572

The financial shortfall is an indication of King County's ability (or lack of ability) to serve the unincorporated area. This shortfall must be addressed by delaying improvements or by finding new sources of revenue or by some combination of the two strategies.

There are several methods available to address this shortfall. Additional revenue sources could be pursued. Implementation of needed improvements could be phased or delayed. Future development could be delayed, phased, or scaled back to assure the timely availability of needed infrastructure. These

and perhaps other strategies will be employed and incorporated into future TNRs, CIPs, and budgets to balance needs with available revenues.

TNR
NEEDS
LIST

NEEDS LIST for the Transportation Needs Report 2010

Needs are divided into chapters based on sub-areas of King County, in the following order:

- 1) Bear Creek
- 2) East King County
- 3) East Sammamish
- 4) Enumclaw
- 5) Federal Way
- 6) North Highline / West Hill
- 7) Newcastle
- 8) Northshore
- 9) Snoqualmie Valley
- 10) Soos Creek
- 11) Tahoma/Raven Heights
- 12) Vashon Island

LEGEND for Needs List

- Number - Unique identifier for project
- PAA - Potential Annexation Area (urban locations)
- Location - Where project is located
- Need - The primary purpose of the proposed project

PRIORITIES - determined by individual programs

- ITS - Intelligent Transportation Systems
- Safety - HAL HARS Signal programs
- Bridge - Bridge and structure priorities
- Reconst. - Major roadway maintenance
- Guardrail - Guardrail installation and repair
- Oper. - Traffic-oriented operational improvements
- Capacity - Road Widening
- Nonmotorized - Sidewalks and Walkways

Other data fields -

- Equestrian - "X" indicates the location within the designated "Equestrian Communities" of Rural King County.
- Cost-000 - Future cost to King County Road Services Division to complete the proposed project (2010 dollars in thousands)
- Comments - Preliminary elements of the proposed project.

TBD- Priority To Be Determined as future work program item

*PAA: Potential Annexation Area in Unincorporated King County Urban Area; **Bear Creek UPD; ***North Highline
 ****The Rural Cities' targets are for the current city limits and rural expansion area for each city. Thus the methodology for adjusting targets as annexations occur is not applicable to the rural cities.
 Editor's Note: Source for 2001 housing and job capacity figures for PAAs is the 2002 King County Buildable Lands evaluation. Subarea unincorporated targets were allocated to PAAs based on proportional capacity.

CAPACITY NEEDS

Forecast travel information was used to identify future capacity needs and potential improvements. The travel forecasting model was developed by King County DOT staff using EMME/2 travel demand forecasting modeling software.

The model was calibrated to base year 2000 conditions using 2000 census data, existing roadway information, and empirical traffic count data. Detailed documentation of this model resides in the offices of the King County Department of Transportation, Roads Services Division.

A forecast year of 2022 was chosen consistent with the land use element of the comprehensive plan as required by state growth management legislation (RCW36.70A.070(6)). The model was run with regionally-adopted, 2022 target land use data for population and employment distributed to the model's zonal system. Growth targets and land use assumptions are included in Appendix A of this document. The model road network was developed to represent existing conditions plus a limited number of capacity projects that were considered committed for development and therefore certain to be in place by 2022. The Washington State Department of Transportation's 20-year list of transportation improvements to the state highway system was included in the network as were city projects that were listed in the 20-year time horizon of the regional plan, Destination 2030. City and state projects are listed in Appendix B.

By forecasting future year travel demand on a roadway network comprised of only existing and committed projects, it is possible to highlight areas that lack the capacity needed to accommodate the travel demand associated with the target year. This capacity needs information was identified by analyzing model results using forecast traffic volumes and forecast ratios of traffic volumes to roadway capacity.

Once the areas of forecast needs were identified, additional capacity was coded into the network to represent projects that might accommodate those needs. The model was run again using 2022 land use data. The results were analyzed using forecast traffic volumes, forecast ratios of traffic volumes to roadway capacity, and existing traffic count data. Additional adjustments were made to model network capacity to optimize performance. This process was repeated several times to identify the best set of capacity projects for meeting forecast needs based on the assumptions and conditions represented in the model.

The resulting needs represents the network capacity increases added to the final or optimum model run. This list represents the roadway capacity needs for 2022 assuming the regionally-adopted land use forecasts for population, households, and employment used to develop the land use component of the King County Comprehensive Plan 2004. All needs identified through this process are included in the needs list section of this document. Needs are also shown on maps included in Section III.

Since the capacity needs clearly exceeded available revenues, a priority scoring methodology was developed to help balance needs with available revenue. This methodology incorporated existing, empirical data; forecast data for 2022 without an improved roadway network; and forecast data for 2022 with an improved roadway network. The following data elements were collected, calculated, and scored:

- Average weekday traffic
- Existing traffic volume to roadway capacity ratios
- 2022 forecast volume to capacity ratios (without capacity improvement)
- 2022 forecast traffic volumes with capacity improvements
- Ratio between 2022 traffic volumes to roadway capacity for the unimproved network compared with the volume to capacity ratio for the improved network
- Arterial Classification of the project need

A description of this scoring system is included in the following table.

Priority Scoring for Capacity Projects

EXISTING Average Daily Traffic (ADT) for project

5 groupings based on magnitude of ADT – from Count Station locations

ADT Value	Score
>20,000	5

FINAL SCORES AND GROUPING

Score 27 to 24 = High Priority Group
 Score 23 to 20 = Medium Priority Group
 Score 19 and below = Low Priority Group

NON-CAPACITY NEEDS

Non-capacity needs are prioritized by groups of like needs. Existing prioritization processes have been developed either in-house or by consultants for various categories including bridge, guardrail, high accident location, traffic signals, and others.

Existing prioritization processes used to develop the TNR are summarized below.

HIGH ACCIDENT LOCATION (HAL) AND HIGH ACCIDENT ROAD SEGMENT (HARS) NEEDS

In 2007 the King County Department of Transportation list of prioritized High Accident Locations (HALs) and High Accident Road Segments (HARSs) was updated. The first step in this process was to develop a list of candidate HAL and HARS for review and analysis. An initial list was compiled based on collision data from the three-year period from 2003-2005. The list was made up of locations that had nine or more recorded collisions during the three-year period.

Once the locations were identified, data such as collision types, traffic volumes, and roadway characteristics were collected for each location. This information was used to develop improvements intended to reduce the occurrence of collisions (“countermeasures”). There are a broad range of countermeasures, with approaches ranging from changing roadway geometrics to altering traffic signal timing. Countermeasures were selected based on predominant collision patterns, field observations, County practices, and the experience of the review team.

Countermeasures were developed for most but not all of the locations. Locations without countermeasures remain on the HAL and HARS list but are not included in this report. There were several reasons for not developing countermeasures for a given location. These include:

- Locations where recent improvements were judged likely to have a significant effect on the predominant accident patterns were omitted, as were locations slated for near-term improvements judged likely to have a significant effect on the predominant accident patterns.
- Any locations that had been recently annexed by other jurisdictions were excluded.
- Sites with no clear collision pattern and no noted deficiencies were excluded.

Once the countermeasures were developed, a benefit-cost analysis was prepared for each location. The benefit/cost ratio accounts for economics and therefore is frequently used to prioritize safety improvements. The benefit/cost ratio is equal to the benefit of the expected reduction in collision costs divided by the project cost. A benefit/cost ratio greater than 1 indicates the benefits of a proposed countermeasure are greater than the costs.

The expected reduction in collisions due to a given countermeasure was estimated using nationally published “reduction factors” with modifications based on King County’s past experience. The reduction factor was used in combination with typical collision costs to

determine the expected societal benefit (in dollars) of completing the improvement. The benefit was then "normalized" by converting to a present value based on the expected service life of the improvement. Finally, the normalized benefit was divided by a planning-level cost estimate to obtain the benefit-cost ratio for the project.

The results of the benefit/cost analysis and detailed documentation of the process used are contained in the report, *High Accident Locations and Road Segments Analysis, King County, Washington*; King County DOT, Traffic Engineering Section; December 2007.

BRIDGE NEEDS

Assessment of bridge needs begins with inspection. The inspection system, which is based on the National Bridge Inspection Standards (NBIS), calculates a sufficiency rating based on such factors structural adequacy and safety, serviceability and functional obsolescence, and how essential the bridge is for public use. The rating ranges from zero (worst) to 100 (best). Under this system, all bridges having a sufficiency rating less than or equal to 50 are either functionally obsolete or structurally deficient and are equally eligible for federal replacement funds. Any bridge with a sufficiency rating less than or equal to 80 that is functionally obsolete or structurally deficient is also eligible for rehabilitation funds.

Sufficiency rating alone establishes eligibility for federal funding, but it is inadequate to prioritize bridges for replacement or rehabilitation. It does not give enough weight to important criteria such as load limitations, hydraulics, geometric deficiency, and expected useful life. The priority process establishes the need for individual bridge replacement by score and rank using criteria approved by the King County Council (Ord. 11693).

The bridge seismic study completed in 1994 ranks the relative need of seismic retrofits for each bridge included in the study. Bridges scheduled for replacement or rehabilitation within 10 years were excluded. The study assigned equal weights to four criteria: structural vulnerability, importance, seismicity, and life hazard. The final assessment of which bridges to retrofit considers the potential for the bridge to become a viable replacement candidate and to be replaced within ten years. Consideration is given to such factors as whether the bridge provides a sole access and if the cost of the retrofit is a reasonable amount to invest for a limited period of protection prior to replacement.

Priority process rankings are used in the development of the annual six-year CIP. Highest priority projects are in the current CIP. Consideration for additions are guided by the following goals: add the highest priority bridges to the replacement program, continue with existing seismic retrofit program, establish a routine painting program, and provide for major maintenance and repairs that cannot be accomplished by Maintenance Operations.

The methodology for prioritizing bridge needs is documented in, "Proposed Prioritization Process for King County Bridge Needs," King County Department of Public Works, Roads and Engineering Division, July 1994 and "2002 Annual Bridge Report of the King County Department of Transportation, Road Services Division, Structural Design and Bridge Inspection Unit," April 2003.

SHORT-SPAN BRIDGE NEEDS

The Short-Span Bridge Program was started in 2006 to address the needs of short bridges nearing the end of their useful life. These bridges are less than twenty feet in length, and ineligible for federal or state bridge funds. The Road Services Division has identified over 50 bridges for this new program. The bridges have been inventoried and assigned a priority. It is expected that the bridge replacement program will last for a number of years, as several of the top ranked bridges will be implemented each year in a two year, design -- build schedule.

The priority array used for the Short-Span Bridge Program is the same priority array used for the other bridge needs.

ROADSIDE BARRIER (GUARDRAIL) NEEDS

The methodology for identifying and ranking potential sites for safety mitigation using roadside barriers, specifically guardrails and bridge rails, was revised in 2002-2003. The new methodology is quantitative and was used to develop priority arrays for each of three categories of barriers: new barriers, retrofits to existing barriers, and bridge rail upgrades.

The methodology has two principal considerations—risk potential and severity. The risk potential factor is a function of parameters that quantify the exposure and probability associated with vehicles running off the road. Severity is a function of parameters that quantify and rate personal injury potential. These factors were derived from current statistics and existing roadside features. Factors are based on accidents, average daily traffic (ADT), road functional classification, corridor geometry, bridge geometry, speed limit, need as defined by embankment slopes, and roadside obstacles. The algorithms for retrofit barriers and bridge rail upgrades also incorporate parameters for existing barrier and rail deficiencies.

The primary source for establishing potential new barrier locations was the existing barrier priority array initially established in 1988. All locations remaining on the list were included in the array. In addition, a comprehensive roadside hazard inventory was completed for the King County arterial roadway system and analyzed to identify locations that might require barriers. Twenty-one sites were identified for further investigation. Additional non-arterial sites suggested by citizens and county employees were also included.

All sites with existing roadside barriers that are not compliant with standards were included as candidates for barrier retrofit. About half the existing barriers are non compliant and were therefore included as candidates. Risk exposure and degree of deficiency were the primary considerations in the prioritization process. Severity was less of a concern than for new barriers because it was assumed that all barrier locations were warranted.

All bridges and culvert crossings maintained by King County were included as candidates for bridge rail upgrades. Many of the candidate bridges were built prior to 1964 and do not have bridge railings designed to current safety standards. The bridge rail array identifies locations with safety deficiencies and prioritizes their upgrade. Three specific bridge deficiency and difficulty factors were established: structural deficiency, difficulty of upgrade, and end transition deficiency. In addition, a risk potential factor (average daily traffic) and a severity factor (posted speed limit) were included.

Priority arrays were developed for each of the three categories of barrier using the appropriate factors and algorithms. Each priority array was fully tested following development. Statistically valid sample sizes were developed for each array, and engineers field reviewed and ranked the sites. In each case, rankings correlated 90% or better with the results of the priority arrays.

Detailed documentation of priority array development and methodology is available in the document, *King County Roadside Barrier Program Priority Array Development*; September 2003; Jacobs Civil Inc., TransCore ITS, Inc., Garry Struthers Associates, Inc.; for King County Department of Transportation Traffic Engineering Section.

TRAFFIC SIGNAL PRIORITY PROCESS

The process to prioritize signals conforms to the laws set forth by the federal government, adopted with amendments by state government, and presented in the *Manual on Uniform Traffic Control Devices* (MUTCD) published by the Federal Highway Administration and the U.S. Department of Transportation. The prioritization process evaluates signal warrants (tests) set forth in the MUTCD and assigns rating values to each warrant. The rating values assign weights to the individual warrants. The sum of the individual warrant rating values provides a basis for comparison to other potential signal locations.

Prioritization and selection of intersections for signalization starts with data collection. Traffic Engineering staff members collect data on vehicle and pedestrian volumes, prevailing speeds, and accident history at each intersection over the most recent three-year period. Each intersection is then evaluated using MUTCD warrants based on the number of approach lanes and the collected data.

The MUTCD states that the signal warrants define the minimum conditions under which installing a traffic control signal might be justified. However, selection and use of traffic control signals should be based on careful analysis of traffic operations, pedestrian and bicyclist needs and other factors, coupled with engineering judgment. Traffic signals should not be installed unless one or more of the eight signal warrants is met. Three of these warrants are based on traffic volumes at several periods during the day: the peak hour, the fourth highest hour, and the eighth highest hour. Another warrant examines the traffic accident history, focusing attention of accidents correctable by signalization (left-turn and right-angle types). Two warrants examine pedestrian activity to determine if pedestrian volumes warrant signalization. The final two

warrants examine whether signalization would improve traffic flow in a coordinated signal system or roadway network.

Four primary warrants are used in the evaluation of all intersections. The remaining warrants are most applicable to urban sites with frequent pedestrian activity. Such sites are less common in unincorporated King County.

The four primary warrants are:

1. Warrant #1 – Eight-Hour Vehicular Volume
 - Condition A: Minimum Vehicular Volume
 - Condition B: Interruption of Continuous Traffic
2. Warrant #2 – Four-Hour Vehicular Volume
3. Warrant #3 – Peak-Hour Vehicular Volume
4. Warrant #7 – Crash Experience

To the MUTCD warrants, King County adds a factor for proximity to school site. This additional factor does not replace the pedestrian-related warrants. For locations near schools, shopping, and other pedestrian attractors, the volume of pedestrian activity is examined as well as pedestrian warrants. The proximity to school factor addresses the potential for pedestrian activity outside the average-day activities.

Rating values representing the degree to which signal warrants are met are calculated for each warrant. Values are summed by intersection, and the list of intersections is sorted to separate those that meet signal warrants from those that do not. Intersections that meet warrants are sorted by rating value from the largest to the smallest and are then numbered according to their order in the list. The resulting list of rank-ordered intersections is commonly called the priority array. It provides a starting point for determining the locations to signalize.

Intersections on the top of the priority array undergo extensive evaluation of alternatives including existing and forecast traffic operational analyses to determine the effectiveness of each alternative, turn pocket lengths, and cost comparisons. Alternative measures to signalization include, but are not limited to, the construction of additional lanes, revising the intersection geometrics to channelize movements, installing street lighting, improving sight distance, roundabouts, measures to reduce approach speeds, changing lane use assignments, restricting movements, adding stop controls or intersection flashers. Particular attention is given to the predominant type of accident recurring at the intersection. A committee of signal design and maintenance staff reviews the information developed from these analyses and selects the improvement providing the safest, most cost-effective, long-term solution.

Detailed documentation of the signal prioritization process is contained in the report, *King County Countywide Signal Program, Signal Priority Process*, King County Road Services Division, Traffic Engineering Section, July 2004.

NONMOTORIZED NEEDS

King County has been active in promoting the “Healthscape” initiative. Healthscape is a program which attempts to tie together the factors of land use, transportation, air quality and health to maximize the closely-correlated benefits of each. The County worked with a consultant in 2007 to develop a “Transportation Programming Tool” (TPT) which evaluates the effectiveness of pedestrian projects and their potential for increasing pedestrian accessibility. The purpose of the TPT is to prioritize nonmotorized transportation improvements based on air quality, health, and transportation outcomes.

Using the new Transportation Planning Tool, all nonmotorized projects, with the exception of the School Pathway projects, were evaluated and scored and assigned high, medium and low priorities. The priority list was further stratified into urban and rural projects.

A more detailed description of the Transportation Programming Tool can be found at the following location.

<http://www.kingcounty.gov/sites/transportation/healthscape/tools.aspx>

Healthscape TPT Factors:

Transportation

Non-motorized projects have the potential to increase transit and non-motorized mode share and decrease vehicle mode share; and decrease per capita rates of vehicle use (hours/miles/trips/mode share), and increase per capita rates of walking, bicycling, and transit (hours/miles/trips/mode share) (Ewing & Cervero, 2001).

Safety.

Non-motorized projects can slow vehicle traffic (traffic calming), provide vehicle-free pathways, reduce vehicle conflicts with pedestrians (intersection redesign) and increase the number of users, all of which have been shown to reduce risk and/or the perception thereof.

Environmental

Non-motorized projects shift travel from polluting modes (vehicular) to those that have less or no health-damaging air pollutant emissions (NO_x, CO₂, VOCs, and hydrocarbons) and dramatically lower carbon dioxide and greenhouse gas releases. Moreover, the vehicle trips replaced are largely short trips, which are more frequently higher-polluting ‘cold starts’ (WSDOT, 2005 and LUTAQH, 2005).

Economic

Our economy benefits from more efficient, productive use of energy. Non-motorized travel is highly energy efficient, and increases as walkability increases (Frank et al. 2006). The increased physical activity is efficiently accomplished as part of daily routine trips to both work and non-work destinations. Moreover, the reduction in health care costs, as a result of facility improvements inducing physical activity, can be quantified (TRB, 2006).

Equity

Depending on where a project is located (close to a school, for example) it can improve access for sensitive populations or those who are less reliant on vehicle travel (for example, low income, youth and elderly).

Health

As noted above, non-motorized transportation projects generate more walking and bicycling travel. Such physical activity, whether for the purpose recreation or transportation, is associated with higher rates of physical activity, and lower rates of obesity and other chronic diseases (LUTAQH, 2005; McGinnis, 2002).

Healthscape TPT Measures:

Increased Route Directness (Connectivity).

Nonmotorized projects can create more direct routes between destinations for cyclists and pedestrians.

Connections to Transit

Although it is related to connectivity, access to transit is important to measure outside of the other connectivity measures. Transportation benefits are not exclusive to bicycling and walking - transit ridership is dependent on good access by nonmotorized modes. In the LUTAQH study, a measure of transit inaccessibility (distance from home to nearest bus stop) was found to be positively related to VMT, and each ¼ mile increase in distance to transit reduced the odds of someone reporting a transit trip to work by 16%. Another Puget Sound region study for WSDOT (2005) found each mile to a bus stop was associated with a 5% increase in VMT, and just over 4% increase in VHT.

Reduced Conflicts With Vehicular Modes

The various non-motorized level of service tools use measures like vehicle speeds, traffic volumes, number of lanes or roadway width, and separation from traffic, and crossing distance to score the safety/comfort conditions, many of which are statistically associated either with lower rates of collision or perception of reduced risk.

Size and Characteristics of Impacted Population

The size of the surrounding population – the ‘travelshed’ of the improvement - acts as a multiplier to the other benefits. Certain locations, such as those that have a high density or many destinations, may be more ‘ripe’ for nonmotorized transportation improvements. This is, essentially, the concept of latent demand for nonmotorized improvements.

Demographics of the impacted population may also change the equity benefits.

Healthscape TPT project evaluation criteria

The following are the individual data items which comprise the TPT scores. In most cases, the data item receives a value between 1 and 4 based on the raw score.

- Does the project address an accident location?
- Does the project address a known or perceived hazard?

- What is the traffic volume on the closest adjacent street?
- What is the traffic speed on the closest adjacent street?
- How many bus stops within a 1/4 mile?
- What is the transit LOS (level of service, as measured by bus stop boardings) within ¼ mile of the project?
- Does the project create a new connection to retail areas?
- Does the project create a new connection to transit?
- Does the project fill a gap in the street, pedestrian or bicycle network?
- Proximity to:
 - Elementary School
 - Middle or High School
 - Park
 - Hospital
 - Civic facility
- Does project meet ADA requirements?
- Percentage disabled households surrounding the project
- Percentage low-income households surrounding the project
- Percentage elderly households surrounding the project
- Percentage of residents under 18 surrounding the project
- Average residential density surrounding the project
- Retail Floor Area Ratio surrounding the project
- Land use mix surrounding the project
- Density of road intersections surrounding the project

INTELLIGENT TRANSPORTATION SYSTEM (ITS) NEEDS

The corridor projects provide an overall ITS improvement program for key regional corridors. The key corridors were identified from the 2004 Transportation Needs Report (TNR) and from stakeholder feedback regarding transportation needs in unincorporated King County. ITS improvements proposed for the identified corridors include cameras, vehicle detection, traffic signal equipment and timing upgrades, pavement conditions sensors, and other devices where needs warrant, as well as communications infrastructure to support these devices. For the most part, these corridors are linked to each other or to other King County ITS projects, allowing for communications continuity and the establishment of a regional ITS corridor network. The corridors include both urban arterials and smaller-capacity rural roads.

A total of 34 corridor projects were identified. As with any planned improvement program, all of the projects cannot begin at once, and a prioritization process is needed to determine which projects best meet the needs of the County based upon their ability to meet key criteria. Criteria for analyzing the project priorities were established based upon examples from the 2004 Transportation Needs Report (TNR), as well as other criteria specific to ITS projects and the needs of the County. Each criterion was analyzed on a scale of 1 – 5 points; no single criterion was weighted more heavily than another. Priorities were established by totaling the points

received by each project. A general priority level (Low, Medium, High) was then assigned by comparing the scores each project received.

It is recognized that actual project deployments are likely to be affected by such factors as funding availability and dependence on other projects, as well as require additional investigation into overall project feasibility. Therefore, the intent of the exercise was to provide a relative analysis of King County's ITS priorities, and not to establish a set order for deployment.

ITS Corridor Projects

The corridor projects include a broad cross-section of both urban and rural corridors, dispersed across the county. This section describes the process and criteria that was used to assign a relative (high, medium, low) priority to each project. These criteria were established with the purpose of providing a quantitative assessment of each project's alignment with King County needs and priorities. To the extent possible, the prioritization method was based upon criteria used in the 2004 TNR. The criteria include:

Average Daily Traffic (ADT): This criterion used the same traffic volume scale as capacity projects to assign priority to corridor projects along roads with the highest average daily traffic counts.

ADT Value	Score
>20,000	5
15,000 – 20,000	4
10,000 – 15,000	3
5,000 – 10,000	2
<5,000	1

Volume to Capacity Ratios: This criterion gave priority to roads whose volumes were approaching or exceeding capacity, based upon the following scale used in the TNR:

V/C Value	Score
> 1.2	5
1.0 – 1.2	4
.8 – 1.0	3
.6 -- .8	2
<.6	1

Accident Rates: Corridors with high accident rates were considered higher priority, using the following scale:

Accident Rate	Score
> 4.1	5
Below 4.0	4
Below 3.0	3
Below 2.0	2
Below 1.0	1

Transit Ridership: Corridors with greater volume of transit ridership were considered higher priority, using the following scale:

Average Weekday Ridership	Score
>400	5
300 – 400	4
200 – 300	3
100 – 200	2
1 -- 100	1

Potential for Annexation: Proposed and approved land annexations for 2004 and 2005 were reviewed as well as proposed future annexations. Corridors with little probability of annexation were considered higher priority using the following scale:

Proposed Annexation Year	Score
Rural	5
>2010	4
2009 – 2010	3
2007 – 2008	2
2005 -- 2006	1

Availability of Communications: Corridors with access to communications infrastructure were considered higher priority, using the following scale:

Communications	Score
King County fiber existing on corridor	5
King County or WSDOT fiber nearby	4
INET Hub Nearby	3
Other	2
None / Unknown	1

Links to Other Existing/Planned Projects: Higher priority was given to corridor projects that could coordinate or build off of other county ITS corridor projects, as follows:

Projects	Score
Links to Funded / Existing King County Corridor Project	5
Links to Other Strategic Plan Project	3

Hazard Areas: King County has identified a number of hazards along county roadways, including High Accident Road Segments (HARS), High Accident Locations (HAL), and areas prone to flooding, ice, and landslides. Corridors with two or more of these hazard locations were given a score of 5; corridors with one identified hazard were given a score of 3.

Hazard Areas	Score
Two or more hazards in corridor	5
One identified hazard in corridor	3

Final Priority Ranking

Total Corridor Priority	Total Score
High	Score > 23
Medium	Score 22 – 17
Low	Score <16

VULNERABLE ROAD SEGMENTS (VRS) STUDY

The Vulnerable Roadway Segments (VRS) study was instituted in 2005 to identify and address specific roadway funding needs throughout the County. A vulnerable road segment was defined as a road segment that requires abnormally expensive and/or frequent repairs. This includes roads with failing retaining walls, seawalls, roads with chronic settlement problems, or roadways close to rivers with repetitive erosion problems.

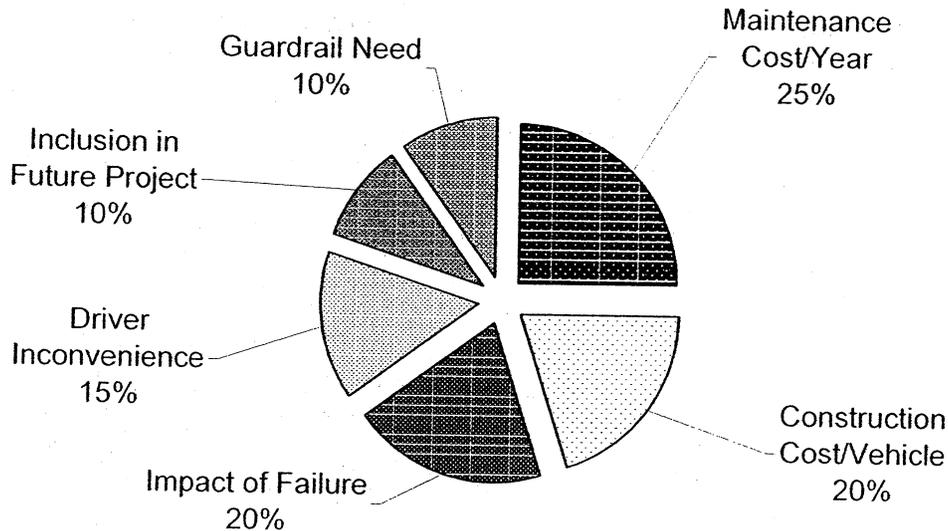

The first step of the study was to identify the vulnerable road segments throughout the County. The identification process consisted of a two-pronged effort; researching existing lists of problem roads as well as finding new segments. The data collected from researching existing lists and working with the Road Services Division Maintenance Section provided enough information to start compiling a comprehensive list of the roadway segments found.

Priority Array Description

The factors shown in the pie chart below were used in developing the priority rank formula for vulnerable roadway segments. The value assigned to each of the factors was either calculated or collected from various data sources. The percentage of influence each category has in producing the priority rank is shown in the pie chart below.

The factors were chosen by the project team and refined through an iterative process. After each iteration, the values and percentages of the factors, as well as the segment rankings were studied for reasonableness. The overall goal was achieved when the full numerical range of each factor was well distributed among the segments and the weighting percentage of each factor seemed to result in a logical ranking of segments.

Priority Ranking Factors

The Maintenance Cost / Year is the average estimated amount of money spent each year *repairing* the road segment to correct the identified problem in the short term. Projects with higher annual maintenance costs are given more priority.

$$\text{Factor} = \frac{M \times f}{20,000} \times 25$$

where M = estimated maintenance cost/year (in thousands of dollars)

f = the frequency of the maintenance each year

20,000 = the maximum maintenance cost/year

25 = the maximum number of points possible for this factor

The Construction Cost / Vehicle factor divides the cost of the *permanent* construction fix (i.e., not a maintenance repair) by the average daily number of vehicles that travel the road. Projects with a lower cost benefiting a higher number of vehicles are given a higher priority.

$$\text{Factor} = 20 - \frac{C / ADT}{1500} \times 20 \quad (\text{Factor} = 0 \text{ if formula results in negative value})$$

where C = cost of permanent construction fix

ADT = average daily traffic count on segment

1500 = highest C/ADT ratio, except for a few outliers (1500 chosen to keep this factor well distributed among segments)

20 = maximum number of points possible for this factor

The Impact of Failure factor accounts for the importance in correcting a vulnerable roadway segment. The project team made many field visits evaluating the majority of the vulnerable roadway segments, classifying the roadway problem, and performing a preliminary engineering assessment to score the roadway vulnerabilities. Each of the road segments was scored 1 to 5 addressing the predicted consequences if no action were taken to correct the problem. The scoring is as follows:

Score = 1 If problem is left uncorrected, total failure would likely occur, resulting in closure of the entire road.

Score = 2 If problem is left uncorrected, partial (or possibly total) failure of the road could occur, closing half (or all) of the road.

Score = 3 If problem is left uncorrected, partial failure of road could occur, closing a shoulder and/or possibly a lane of the road.

Score = 4 If problem is left uncorrected, minor loss of road function could occur in near future.

Score = 5 If problem is left uncorrected, maintenance would be necessary with no foreseeable loss of road function.

<i>If Score = 1, Factor = 20</i>	<i>Values of factors determined by an exponential function (as opposed to a linear function), to weigh full or partial road closures much more heavily than a minor loss of road function.</i>
<i>If Score = 2, Factor = 11</i>	
<i>If Score = 3, Factor = 6</i>	
<i>If Score = 4, Factor = 3</i>	
<i>If Score = 5, Factor = 0</i>	

The Driver Inconvenience factor of each road segment measures the overall level of driver inconvenience if a vulnerable road segment is closed. The detour length and the traffic volume on the segment is considered in this factor. Segments involving longer detours with higher traffic volumes are given more priority.

$$\text{Factor} = \frac{l \times \text{ADT}}{95,000} \times 15$$

where l = length of detour caused by closed road segment

ADT = average daily traffic on segment

95,000 = maximum l/ADT ratio (except for one outlier)

15 = maximum number of points possible for this factor

If a segment is part of a planned project in the CIP or TNR, the Inclusion in Future Project factor gives priority to such segments to account for the opportunity to complete two needs with one project.

Factor = 10 if segment included in other project

Factor = 0 if segment not included in other project

The Guardrail Need factor is a yes or no toggle identifying the need for guardrail on the vulnerable segment. Road segments slated for future guardrail projects are given more priority to account for the opportunity to fulfill two needs with one project.

Factor = 10 if guardrail is needed on segment

Factor = 0 if guardrail is not needed on segment

All of the priority ranking factors are then weighted to the percentages shown in the pie chart above and summed to produce a score between 0 and 100, ranking the different road segments and identifying the best project candidates. The road segments with the lower scores are the best candidates for road projects.

Sample calculation

The following sample calculation for vulnerable segment of NE Woodinville Duvall Road (steep slopes above and below roadway) will help illustrate how the final rating scores were calculated:

Maintenance Cost / Year (25 points max.)

$$\text{Factor} = \frac{M \times f}{20,000} \times 25 = (\$10,000 \times 0.5 \text{ times/year}) / 20,000 \times 25 = 6$$

Score is only 6 out of 25 due to relatively inexpensive repairs at infrequent frequency - once every two years.

Construction Cost / Vehicle (20 points max.)

$$\text{Factor} = 20 - \frac{C / ADT}{1500} \times 20 = 20 - (\$420,000 / 11,100 \text{ vehicles / day}) / 1500 \times 20 = 19$$

Score is a high 19 out of 20 due to relatively inexpensive permanent fix for large volume of vehicles.

Impact of Failure (20 points max.)

If Score = 3, Factor = 6

Score is only 6 out of 20 due to lower impact of problem, which would close a shoulder of the segment, or one lane at worst. Traffic would not need to be detoured.

Driver Inconvenience (15 points max.)

$$\text{Factor} = \frac{l \times ADT}{95,000} \times 15 = (8.5 \text{ mile detour} \times 11,100 \text{ vehicles / day}) / 95,000 \times 15 = 15$$

Score is a full 15 out of 15 due to lengthy detour affecting a large volume of vehicles.

Inclusion in Future Project (10 points max.)

Factor = 10 (segment included in operational project identified in TNR)

Score is a full 10 points because it has also been identified as a need in another study.

Guardrail Need (10 points max.)

Factor = 0 (guardrail is not needed on segment)

Factor is zero since there is no need for guardrail on this segment, meaning two projects cannot be completed due to action on this segment.

Total Score

$$6 + 19 + 6 + 15 + 10 + 0 = 56$$

Total Rating (lower score is better candidate for action)

$$100 - 56 = 44 \text{ (actually 43 due to rounding in spreadsheet)}$$

SMALL SCOPE OPERATIONAL PROJECTS

Program Description

Historically, small scope operational projects have been a lower consideration in the Road Services Division's CIP project development process, as these project are typically developed on an as-needed basis. In September 2005, the Division recognized the need to establish a program for these types of projects -- those that do not rate high enough to be funded from other prioritized program project lists. The goal for this program is to identify and support high benefit cost ratio projects that could address small scope traffic flow and safety issues. The focus of this effort is to develop a comprehensive list of pedestrian facilities, non-signal intersection improvements and roadway location projects with recommended improvements to serve unincorporated King County's transportation and pedestrian needs.

Program Development Process

As a new program and process, a statement of the programs goals and objectives was developed. A project recommendation and evaluation process was introduced that satisfied these goals and objectives. The project selection process used an objective methodology for ranking potential sites for safety and traffic improvements. Finally, a budget element was applied to make sure the most deserving projects are achieved first.

Goals and Objectives

The goal of this Small Scope Operational Program is to identify locations within unincorporated King County that could be enhanced by operational improvements, yet have not been implemented due to funding constraints. There are needs that have been identified for pedestrian facilities, non-signal intersection improvements and roadway locations that either do not fit the criteria of existing improvement programs or do not score high enough to be funded.. The objective of this program is to develop a prioritized list of small scale projects showing description of proposed work scope, limits and costs. Another common element of these projects is their short design and construction schedules, which makes this program highly responsive to emerging needs.

Project Selection Process

The staff from the Road Services Division's Traffic Engineering Section developed a logical, project-selection process for identifying, selecting and prioritizing projects. There are four tiers to this process:

- Identification of a candidate project
- Preliminary screening and scoping of candidate locations
- Determination of priority process score
- Evaluations of candidate locations

Identification of Candidate Projects

A list of potential improvements is compiled from recommendations by a number of sources including KCDOT engineering staff, businesses, community groups, and members of the general public.

Preliminary Screening and Scoping of Candidate Locations

A field review was conducted for candidate projects for scope verification, cost estimating, and identification of unique constraints and challenges. Field trips were made to most sites to collect relevant, up-to-date field information, site-specific data, create site diagrams and sketches and take photographs. In addition, King County traffic volume and accident data was included as part of the location-specific analysis.

The evaluation for each project was based on a preliminary screening of the project information obtained during data collection. Preliminary screening/feasibility analysis was undertaken prior to project development to assure a candidate project is feasible and satisfies program goals and criteria before it is evaluated. As each project was screened, it was assigned a relative (high, medium, low) priority to develop a preliminary ranking and determination of whether to advance formal prioritization process.

Determination of Priority Process Score

The priority process was developed with the purpose of providing a quantitative assessment of each project's merits for comparison with similar projects. Prioritization and selection of projects begins with project screening/feasibility analysis and ends with the prioritized project list. Data on vehicle and pedestrian volumes, vehicle speeds, existing and planned facility capacities and accident history at each location over the most recent three or five year period was also collected as part of the analysis process.

Each project is unique due to the specific issues addressed. Certain concerns are indicative of site deficiencies that can be addressed by specific countermeasures. Countermeasures are the improvements that address problems at a given location to improve the safety or traffic operations. Countermeasures at each location were developed for the three separate categories (pedestrian facilities, non-signal intersection improvements and roadway locations) based on the predominant problems, field observations, King County practices and standards, and the experience of the review team.

Pedestrian-oriented projects used the existing pedestrian priority array (see Pedestrian Priority Process earlier in this appendix). The algorithm for non-signal intersection improvements and roadway location projects was developed specifically by the Traffic Engineering staff to score projects in these categories. The potential improvements for these projects were rated on the following criteria:

NON-SIGNAL INTERSECTION IMPROVEMENT PROJECTS

5 MPH to 7 MPH	5
Less than 5 MPH	0

Evaluations of Candidate Locations

Scores for each location ranged from 0 to 100, with the following levels:

- 0 to 30 Low
- 31 to 50 Medium
- 51 to 100 High

Potential projects were reviewed with planning-level cost estimates and then subjected to a basic financial analysis. Low scoring projects or those with prohibitive costs are given less consideration. The highest scoring projects are prioritized and considered as best candidates for the Road Services Division’s Small Scope Operational Projects program.

Project Selection

The small scope operational projects include a broad cross-section of both urban and rural locations, and priority arrays were developed for each of the three categories. The final project selection will be based on the priority scores weighted based on an assessment of each project's

potential effectiveness. Consideration and higher priority was also given to such factors as whether the project could coordinate with or enhance other King County transportation needs and priorities.
