## 5 Reasons to celebrate that we have a 3rd highly safe and effective vaccine for COVID-19

The Johnson & Johnson (J&J) vaccine is extremely effective against hospitalization and death from COVID-19.

The clinical trials showed that J&J vaccine also provides strong protection against severe COVID-19, even the new variants from South Africa and Brazil.

The J&J shot does not require storage in freezing temperatures, so it can be easily given in many locations. That will help get vaccination to people in more places with more convenience!

You only need ONE SHOT of the J&J vaccine to be fully vaccinated. That means that you don't need to arrange a second appointment.

vacc ava th n pe vaccina and inimm

Now we have a new tool to support rapid vaccination. The availability of a third vaccine means more people can be vaccinated sooner and increases the immunity in our community!
