CONSTRUCTION NOTES:

1. Remove vegetation prior to control planting and other landform vegetation within this planting area. Note clear and removal of all unnecessary vegetation and trees with the specifications for vegetation control, reflected on the sheet. See specifications for vegetation control.

2. In conjunction with clearing and grading, the stumps and slash materials shall be cleared for the clearing for tree planting. See specifications for tree planting, clearing and brush control. The specified location of all unnecessary vegetation in the planting area, clear brush, and slash material. See a specification for list of unnecessary vegetation.

3. Use a amendment, place 3" of amendment and till to a depth of 12" in the planting area. See details on sheet MP4.

4. The combination of topsoil and placement of mulch shall be placed over entire surface of the planting area. See details on sheet MP4.

5. The combination of topsoil and placement of mulch shall be placed over entire surface of this planting area. See sheet MP4.

6. Wood chip mulch, place 3" layer of wood chip mulch onto the entire surface of the planting area.

GENERAL NOTES:

1. See sheet MP4 for planting details and instructions.

2. None trees and shrub areas shall be planted in the proximity of the construction, clearing, and grading areas. See project specifications for a depth of soil to be removed. See specifications for tree planting, clearing, and rough grades. See project specifications for the depth of soil to be removed. See specifications for tree planting, clearing, and rough grades. See project specifications for the depth of soil to be removed.

3. Loosen any soils in planting areas by incorporating a topsoil and around the area to a depth of 24".

4. Surfacing area and related planting locations shall be cleared of all trees and approved by the surfacing area and rough grades. See project specifications for surfacing area and rough grades.

5. Coraline, cleared will be provided electronically for a location of planting area, respectively.

6. Any changes to plant material, size, or spacing must be approved by the project representative prior to implementation.

TEMPORARY IMPACT MITIGATION PLAN

MP3
1 MITIGATION GOALS, OBJECTIVES, AND PERFORMANCE STANDARDS

1.1 Monitoring Goals

The mitigation goals are as follows:

1.1.1 Mitigation Goals

The mitigation goals are:

- Reduce fish habitat and enhance the fish habitat by creating a fish habitat structure on a TPR system 11 ft wide and 15 ft long. The fish habitat structure will be a fish exclusion device.
- Reduce the number of birds by creating a fish habitat structure.
- Reduce the number of butterflies by creating a fish habitat structure.
- Reduce the number of amphibians by creating a fish habitat structure.
- Reduce the number of reptiles by creating a fish habitat structure.
- Reduce the number of mammals by creating a fish habitat structure.
- Reduce the number of plants by creating a fish habitat structure.
- Reduce the number of insects by creating a fish habitat structure.
- Reduce the number of microorganisms by creating a fish habitat structure.

1.2 Monitoring and Maintenance

2.1 Monitoring

The mitigation area will be monitored during and after construction. Monitoring will ensure that the goals are met and that the site is maintained.

2.2 Maintenance

The mitigation area will be maintained during and after construction. Maintenance will ensure that the goals are met and that the site is maintained.

3.3 Contingency Measures

If monitoring indicates that the site is not meeting performance standards, contingency measures will be implemented. Site conditions will be evaluated to determine the cause of the problem and the most appropriate countermeasure.

4.0 Implementation

The implementation of the project will be monitored and maintained to ensure that the goals are met and that the site is maintained.

5.0 Mitigation Notes

Mitigation notes will be implemented to ensure that the goals are met and that the site is maintained.
